The City's current approach to monitoring, conserving and protecting native flora in Iluka-Burns Beach Foreshore Reserve is outlined below.

Site Assessments

Flora surveys are conducted approximately every 5-10 years in Iluka-Burns Beach Foreshore Reserve to record the occurrence and distribution of flora species and vegetation communities. Information obtained from flora surveys is used to monitor the ecological health of flora populations and vegetation communities on site.

Natural Area Initial Assessments are conducted approximately every 5-10 years in sites without Council endorsed management plans to assess site-specific ecological values, biodiversity significance and threatening processes, at a level that is consistent with regional scientific standards.⁴¹

Weed Management

The City undertakes an integrated approach to weed management, including:

- Preventing weed introduction through weed hygiene and other measures.
- Regular monitoring and reporting of weed populations.
- On ground weed control, including prioritisation of natural areas and priority weeds to target.
- Community education initiatives.
- Partnerships and research with external stakeholders.

Weed Monitoring

The following table outlines the various weed monitoring methods undertaken by the City in Iluka-Burns Beach Foreshore Reserve.

⁴¹ WALGA (2004)

Weed Monitoring Method	Detail
Bi-monthly weed inspections	Weed inspections are conducted at Iluka-Burns Beach Foreshore Reserve every two months to establish the extent and distribution of weed species and to identify priority weeds. Weed inspections are used to inform on ground weed management programs.
Annual weed percentage cover monitoring	The City monitors the percentage cover of environmental weeds in Iluka-Burns Beach Foreshore Reserve on an annual basis, measured by three transects within the reserve.
Flora surveys	Flora surveys are conducted every 5-10 years in Iluka-Burns Beach Foreshore Reserve. Flora surveys include mapping of priority weeds and a vegetation condition assessment. The vegetation condition assessment also informs weed management as the vegetation in the best condition can be prioritised for weed control. Comparisons will be made between flora surveys to assess site changes every 5-10 years.

Annual weed percentage cover monitoring is conducted in Iluka Foreshore Reserve, measured by three transects within the reserve. A significant increase in the percentage cover of weeds was recorded in 2019/20, as compared to 2018/19 due to an earlier winter rainfall in 2019/20 and a focus on hand weeding rather than herbicide use, as requested by the Friends of North Ocean Reef – Iluka Foreshore. In 2021/22 there was a significant reduction in weeds at Iluka Foreshore from 2019/20 and 2020/21 levels, as shown in Figure 25. This decrease was partly due to the Friends Group receiving funding to undertake contractor hand weeding and grass-selective sprays which may have reduced the percentage of weed cover.

Figure 25: Percentage Cover of Weeds in Iluka Foreshore Reserve 2014–2022

Weed Control

In accordance with the City's Annual Bushland Schedule, on ground weed management in Iluka-Burns Beach Foreshore Reserve occurs through weed spraying and hand weeding methods. In addition to this, contractors are engaged to spray weeds and hand weed. City of

Joondalup staff use a weed spraying procedure and conduct weed control trials periodically to evaluate the most effective weed management methods.

The Friends of North Ocean Reef - Iluka Foreshore also conduct substantial amounts of hand weeding within Iluka Foreshore Reserve.

Resources such as the DPaW's Florabase website, the *Western Weeds, A guide to the Weeds of Western Australia* book or *Southern Weeds and their Control* (DAFWA Bulletin 4744) are consulted in regards to weed control. Weeds on verges surrounding Iluka-Burns Beach Foreshore Reserve are managed by mowing and brush cutting to reduce seed spread, chemical weed control and spreading certified pathogen free mulch, where required.

The City's *Weed Management Plan 2023 - 2033* provides an integrated approach to the management of weeds in the City. The *Weed Management Plan 2023 - 2033* details actions to prevent, monitor, prioritise and control the introduction and spread of weeds in the City.

Pest Plant Local Law 2012

The purpose of the *Pest Plant Local Law 2012* is to prescribe pest plants within the City of Joondalup that are likely to adversely affect the value of property in the district or the health, comfort or convenience of the inhabitants of the district.

Pest plants are generally highly adaptable, out compete native species and spread easily, leading to quick establishment, particularly after a disturbance event such as fire, or through unrestricted access. If pest plants are allowed to establish they have the potential to decrease the City's unique floristic diversity.

The *Pest Plant Local Law 2012* requires the owner or occupier of private land within the City of Joondalup district to destroy, eradicate or otherwise control scheduled pest plants on notice by the City. Currently two weed species are listed as pest plants under the Local Law being Caltrop (*Tribulus terrestris*) and Golden Crownbeard (*Verbesina encelioides*). Caltrop has previously been identified on private property adjacent to Burns Beach Foreshore Reserve in 2015 and the owner notified. There is anecdotal evidence that Golden Crownbeard occurs in areas adjacent to the Iluka-Burns Beach Foreshore Reserves.

Community Education

A number of education initiatives are undertaken to raise the awareness of weeds in the community, these include:

- Delivery of Gardening Workshops, promoting the use of native species in residential gardens
- Development and distribution of brochures including *Environmental Weeds*, *Garden Escapees*, *Protecting our Natural Areas and Parks* and a series of *Growing Locals* brochures (available in hard copy and on the City's website)
- Weed Education Workshops for Local Friends Groups.

Revegetation

The City of Joondalup encourages natural bushland regeneration through weed management and conservation fencing, to allow natural regeneration to occur and vegetation to re-establish itself. This is important in maintaining species diversity and populations.

The City supports revegetation in degraded or completely degraded areas using direct seeding techniques with local provenance seeds and seedlings, as required. The Friends of North Ocean Reef – Iluka Foreshore have initiated numerous revegetation projects within Iluka Foreshore Reserve, supported by the City, resulting in increased native vegetation condition and biodiversity.

Recommended Flora Management Actions

To monitor, conserve and protect native flora in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Flora survey	Undertake a follow up flora survey in spring to supplement previous flora surveys, within 5-10 years. Make comparisons between flora surveys to assess site changes every 5-10 years.
Weed survey	Undertake a follow up weed survey in winter to supplement previous weed surveys, within 5-10 years.
Endangered flora conservation	Investigate the planting of the identified endangered flora species to maintain or enhance the population/s to ensure the species long-term preservation within Iluka-Burns Beach Foreshore Reserve.
Investigate planting trees (and vegetation) for habitat	Investigate planting other species of locally native trees and shrubs (such as Banksia and Hakea species) to provide opportunities for nesting sites and shelter for fauna.
Revegetation	Support revegetation being conducted in degraded or completely degraded areas using local provenance species, as required.
Restrict unauthorised access	Consider the installation of fencing or formal signage to prevent habitat degradation and weed spread from unauthorised walking/vehicle tracks.
Bi-monthly weed inspections	Conduct weed inspections every two months to establish the extent of weeds and to identify priority weed species.
Weed control	Undertake a coordinated approach to regular weed control by implementing the Annual Bushland Schedule.
Weed Control	Undertake a targeted approach to weed control of <i>*Asparagus asparagoides</i> (Bridal Creeper) within Iluka – Burns Beach Foreshore Reserve.
Weed Control	Undertake a targeted approach to weed control of <i>*Moraea flaccida</i> (One-leaf Cape Tulip) within Iluka reserve, to prevent its spread within the reserve and into surrounding reserves.
Weed Control	Undertake a targeted approach to weed control of <i>*Ricinus communis</i> (Castor Oil Plant) within Iluka Foreshore Reserve.
Weed control on verges	Conduct weed management of weeds on verges within and surrounding Iluka – Burns Beach Reserves including mowing of verges to reduce seed spread, spraying of weeds and spreading of certified mulch, where required.
Weed Management Plan	Implement the <i>City of Joondalup Weed Management Plan</i> to provide an ongoing strategic approach to the management of natural areas in order to reduce the incidence of weeds.

3.2 Fungi

It is estimated that there are 10 times more species of fungi than plants in the world, equating to approximately 140,000 fungi and 14,000 plant species in Western Australia.⁴² Many fungi are yet to be discovered and most are microscopic. Fungi is an important part of an ecosystem as they recycle and break down organic matter and debris to provide nutrients for plants. Many plants can thrive in poor soils because they have beneficial connections with fungi. The amount of species of fungi present in bushland can be an indicator of ecosystem health.⁴³ Fungi also provide food and habitat for mammals such as bandicoots and other fauna including invertebrates.⁴⁴

Research into the importance of fungi is leading to the discovery of how fungi can help reduce the likelihood of extinction of plants, animals and the loss of ecological communities.⁴⁴

Fungi surveys are important in providing baseline information and to highlight changes in fungi occurrence over time. Undertaking fungi surveys also enables the comparison of ecological data with other natural areas within the City of Joondalup.

Fungi Survey (2020)

Whilst undertaking the flora and fauna survey in September 2020, consultants Eco Logical Australia were also engaged to undertake an opportunistic fungi survey of the Iluka – Burns Beach Foreshore Reserve and record all incidental sightings of fungi.³⁵ The optimum time for fungi surveys is in autumn or winter after substantial rainfall.⁴² Due to time limitations, the incidental fungi survey was conducted in spring (dry conditions) and no fungi were recorded by the consultant.

In spring 2018 and 2019, the City engaged Natural Area Consulting to undertake a fungi survey at Ocean Reef Foreshore, located 1.8 kms from Iluka Foreshore Reserve. No species of fungi were recorded during this survey.

In spring 2013, the City engaged consultants, Natural Area Consulting, to undertake a fungi survey at Marmion Coastal Foreshore Reserve, located approximately 12 kms from Iluka Foreshore Reserve. Four species of fungi were recorded during this survey.

Fungi species recorded in the nearby natural areas of Marmion Foreshore Reserve are potentially likely to be present in Iluka – Burns Beach Foreshore Reserve. A list of fungi likely to occur in Iluka – Burns Beach Foreshore Reserves and photographic examples is provided in Appendix 11.

Current Management Approach

The City of Joondalup currently monitor fungi in Iluka – Burns Beach Foreshore Reserve through recording incidental sightings of fungi species during the City's 5-10 yearly flora and fauna surveys.

Recommended Fungi Management Action:

To monitor fungi health in Iluka – Burns Beach Foreshore Reserve, the following management action is proposed:

⁴² Bougher (2009)

⁴³ Robinson (no date)

⁴⁴ DPaW (no date a)

Action	Details
Fungi survey	Undertake a comprehensive fungi survey in autumn or winter after substantial rain, to supplement previous incidental fungi surveys, within 5-10 years.

3.3 Plant Diseases

Organisms such as fungi, bacteria and viruses that cause plant diseases are known as pathogens. Whilst some pathogens are naturally occurring within the soil, others have been introduced to the environment through the movement of plant materials and soils.⁴⁵

The symptoms produced by plants that are affected by pathogens vary depending upon the species of pathogen, host species, environment and climatic conditions. Some pathogens can live in the soil for a long period without impacting the health of plants, whilst others can cause rapid death or result in a slow, perennial decline in health.⁴⁵

Phytophthora dieback refers to the disease caused by the introduced plant pathogen *Phytophthora cinnamomi*. While there are numerous species of *Phytophthora*, the most widespread and destructive species affecting native plants throughout South-western Western Australia is *P. cinnamomi*.⁴⁶ Previously *Phytophthora* dieback was commonly referred to as 'Jarrah dieback' due to Jarrah (*Eucalyptus marginata*) trees being one of the first plant species observed to be impacted by *P. cinnamomi*.⁴⁷ However as the pathogen has become more widespread, up to 22% of native plant species in the south-west of Western Australia are likely to be susceptible to the pathogen.⁴⁸

Whilst *P. cinnamomi* is the most common species of *Phytophthora* dieback within Western Australia, other species of *Phytophthora* are common in urban areas of Perth.

Pathogen sampling of the City's parks, natural areas and coastal sites in accordance with the *City of Joondalup Pathogen Management Plan 2013-2016* has recovered a number of *Phytophthora* species, which include *P. alticola*, *P. arenaria*, *P. asparagi*, *P. boodjera*, *P. multivora*, *P. nicotianae* and *P. palmivora*. Of these *Phytophthora* species identified within the City, *P. multivora* and *P. nicotianae* are the most prevalent.

Phytophthora multivora is a common pathogen in urban areas of Perth, particularly along the inland dune systems. It is widespread throughout the south-west of Western Australia with a similar distribution to *P. cinnamomi*. *P. multivora* is named due to its wide host range, including *Banksia* and *Eucalyptus* species. *P. multivora* can cause rapid death of plants, or a slow, perennial decline in the health of the tree crown and is commonly associated with individual spot deaths and areas of tree decline.⁴⁹

Phytophthora nicotianae has been identified in herbaceous and woody plants used in agriculture and horticulture, although it is now considered established within natural ecosystems in Western Australia. The pathogen is widely found within nursery stock and therefore has a higher probability of infecting parks and reserves, rather than natural areas due to the introduction of nursery stock and soil through planting programs and the regular use of machinery and vehicles. *P. nicotianae* is associated with large lesions at the base of *Eucalyptus* trees and causes collar rot of *Grevillea* species. *P. nicotianae* has also been identified as causing fine root death of numerous other native plant species.⁴⁹

⁴⁵ City of Joondalup (2013)

⁴⁶ DBCA (no date a)

⁴⁷ DWG (2020)

⁴⁸ CPSM (2012)

⁴⁹ Barber (2012)

Armillaria luteobubalina has also been identified within a number of parks within the City of Joondalup. *Armillaria* is a fungus that causes root rot and wood decay of a wide variety of plants including many species of native flora. The fungus is native to Australia and can also cause major damage to natural ecosystems. *Armillaria luteobubalina* is commonly known as the “Honey Fungus” due to the colour of the fruiting body seen above the ground during certain times of the year, as shown in Figure 26. Fruiting bodies (mushrooms) are not evident at all infected sites.⁴⁹

Figure 26: Fruiting Bodies of *Armillaria luteobubalina* (sourced from City of Joondalup, 2013)

At present there is no reliable mechanism for the complete eradication of *Phytophthora* species and the control of *Armillaria luteobubalina* is both expensive and labour intensive.⁴⁹

Current Management Approach

The City has developed a *Pathogen Management Plan 2018-2028* to provide guidance on the management of pathogens within the City to protect biodiversity values and minimise the risk of pathogen introduction and spread within landscaped and natural areas. Strategies to engage the community and key stakeholders in order to raise the awareness of pathogens within the City are also identified within the Plan.

The City has further developed *Pathogen Hygiene Procedure for City staff and Contractors*, *Pathogen and Weed Hygiene Guidelines* and *Purchasing of Landscaping Materials Guidelines* to minimise the spread of pathogens.

Pathogen sampling was undertaken in Iluka Foreshore Reserve in March to April 2016 and December 2016 to January 2017 and in Burns Beach Park in May 2014. The only pathogen to have been identified in the pathogen mapping and sampling program is *Armillaria* which is suspected in Iluka Foreshore Reserve.

Although no pathogens have been confirmed through the pathogen mapping and sampling program at Iluka-Burns Beach Foreshore Reserve, a limited amount of pathogen sampling

has been undertaken several years ago. The City applies the precautionary approach and implements and encourages pathogen hygiene to prevent the introduction or spread of pathogens.

Recommended Pathogen Management Actions:

To prevent pathogen and weed spread and protect biodiversity values at Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Pathogen Management	Implement recommendations from the Pathogen Management Plan that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.
Hygiene Guidelines	Implement <i>Pathogen Hygiene Procedure for City staff and Contractors</i> , <i>Pathogen and Weed Hygiene Guidelines</i> and <i>Purchasing of Landscaping Materials Guidelines</i> to prevent the introduction or spread of weed or pathogens into Iluka-Burns Beach Foreshore Reserve.

3.4 Fauna

Fauna surveys document the occurrence, distribution and population of fauna species. Information from fauna surveys is used as a baseline to monitor the health of fauna species.

The City engaged consultants, Eco Logical Australia (ELA), to undertake a fauna survey of Iluka-Burns Beach Foreshore Reserve in November 2020. As part of the fauna survey, ELA reviewed data from previous surveys provided by City of Joondalup to compile a comprehensive data set to be used in the development of this Plan.

The fauna survey design was aligned with *EPA Technical Guidance: Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment* (2020), except there were three trapping nights rather than seven trapping nights.

Two conservation listed fauna species were recorded during the survey, including Carnaby's Black-Cockatoo (*Calyptrorhynchus latirostris*) and Quenda (*Isodon fusciventer*).

The fauna survey method included a variety of sampling techniques, both systematic and opportunistic. Systematic trapping was conducted over four nights; two in the Iluka area and two in the Burns Beach area; in October 2020 using a combination of pitfall traps, Elliot box traps, cage traps and funnel traps in six trapping transects. Other fauna survey methods included a bird survey during peak activity periods (e.g. after dawn), an acoustic survey using SM2 ultrasonic recorder for bat echolocation calls, hand searches, installation of motion sensor cameras (over four nights) and a nocturnal search (over one night), in addition to opportunistic sampling and sightings.

The optimum season for fauna detectability in the south west bioregions is spring. Trapping periods of at least 7 nights are recommended to reduce the potential for adverse weather conditions to impact upon survey results and therefore show species diversity, richness trends and provide reliable indications of species composition and abundance data.

Previous fauna surveys at Iluka-Burns Beach Foreshore Reserve include:

- *Iluka Foreshore Macroinvertebrate and Herpetofauna Inventory Surveys – all samples from April 2015 to May 2018*, prepared for Friends of North Ocean Reef – Iluka Foreshore.

- ATA Environmental (2001) *Iluka Flora & Vegetation Survey & Fauna Habitat Assessment*.
- City of Joondalup (CoJ) *Natural Area Initial Field Assessment – Burns Beach Park* (2009).
- AECOM (2018) *Tamala Park Reserve – Biological Report*, prepared for City of Wanneroo.
- GHD (2013) *Proposed Dual Use Coastal Path between Mindarie and Burns Beach: Environmental Study and Topographical Survey Report*, prepared for Department of Planning.
- Cardno BSD Pty Ltd (2006) *Foreshore Management Plan Burns Beach*, prepared for Burns Beach Property Trust.
- City of Joondalup (2014) *Burns Beach Structure Plan No. 10*.
- Government of WA (2000b) *Bush Forever Site Description: Burns Beach Bushland*.

The combination of results from the fauna survey in 2020 and the previous fauna assessments undertaken indicate the following species inhabit Iluka – Burns Beach Foreshore Reserves:

- Six native mammals
- 62 native birds (including two species of conservation significance)
- 30 native reptile species
- Over 500 native invertebrates.

In addition, the following non-native fauna have been identified at Iluka – Burns Beach Foreshore Reserves:

- Four mammals (including the domestic/feral cat)
- Two birds.

The full fauna species list incorporating all the above assessments is provided in Appendix 8.

The results from the fauna survey in 2020 recorded the following species:

- Seven mammals (three native and four introduced species)
- 28 birds (26 native and two introduced species)
- 15 reptiles (all native species)
- No amphibians
- 14 invertebrates (13 native and one introduced species).

Fauna Habitat

The bushland at Iluka – Burns Beach Foreshore Reserve provides an important area of remnant fauna habitat within the City of Joondalup. The vegetation community and habitat resources it contains support a relatively diverse and species-rich assemblage of native birds, mammals and reptiles and the bushland is considered to have high local conservation value.⁹ The Iluka – Burns Beach Foreshore Reserve provides a valuable ecological linkage to adjacent bushland to the north, south and east (e.g. Burns Beach Bushland and Neerabup National Park).³⁵

The vegetation condition at Iluka Foreshore ranges from excellent to good and at Burns Beach Foreshore ranges from excellent to completely degraded. There are areas of localised disturbance due to the dunal blow-outs, unauthorised access tracks (walk trails and vehicle tracks) and minor rubbish dumping. Vegetation, trees, leaf litter, soil, fungi, sticks, logs and dead trees at Iluka – Burns Beach Foreshore Reserve provide habitat for fauna to nest, shelter, forage and roost.

A total of five fauna habitats are present within the Iluka – Burns Beach Foreshore Reserve. The Iluka study area contains five broad vegetation community types and the Burns Beach study area contains four broad vegetation community types; described in Table 4. The most commonly occurring fauna habitat in the Burns Beach survey area was dunes and swales and in the Iluka survey area was *Melaleuca* shrubland over heath. In respect to coverage of the habitats, in the Burns Beach survey area the habitats covered a total of 26.5 ha (90.8%) and in the Iluka survey area the habitats covered a total of 29 ha (92.5%), with the remaining areas comprising of tracks and open beach/rock in both survey areas. The vegetation communities provide foraging and nesting habitat for a diversity of nectar and seed eating birds, as well as habitat for a range of mammals, reptiles and invertebrates.⁹

The fauna survey in 2020 highlighted the invertebrate species diversity within Iluka – Burns Beach Foreshore Reserve is expected to be higher than what was recorded, given the extent of good quality remnant native bushland habitat present and the diversity of flora species at the site.³⁵ This is supported by the results of the Friends of North Ocean Reef – Iluka Foreshore Macroinvertebrate and Herpetofauna Inventory Surveys from 2015 to 2018.¹

Table 4: Fauna habitats at Iluka-Burns Beach Foreshore Reserve

Fauna habitats	Burns Beach extents	Iluka extents
Dunes and swales	24.1ha (82.3%)	1.6ha (5.2%)
Tall Acacia shrubland	1.9ha (6.7%)	0.6ha (2%)
Low Banksia shrubland over low heath	0.4ha (1.4%)	4.6ha (14.7%)
Low limestone coastal heath	0.1ha (0.5%)	3.6ha (11.5%)
Melaleuca shrubland over heath	N/A	18.5ha (59.1%)
Open beach / rocks	1.6ha (5.4%)	1.2ha (3.8%)
Tracks	1.1ha (3.8%)	1.1ha (3.7%)
Total	29.3 ha	31.3 ha

Carnaby's Black-Cockatoo habitat

The *Banksia sessilis*, *Acacia rostellifera*, *Spyridium globulosum* mid open shrubland (BsArSg) vegetation community within the Iluka – Burns Beach Foreshore Reserve provides potential foraging habitat for the Carnaby's Black-Cockatoo. This includes Banksia and Hakea species, which are known foraging species for Carnaby's Black-Cockatoo.⁷³ Carnaby's Black-Cockatoos nest in hollows of smooth-barked eucalypts, including Tuarts (*Eucalyptus gomphocephala*) and Marris (*Corymbia calophylla*), which are not found on site.⁵⁰

Due to the endangered status of the Carnaby's Black-Cockatoo and the limited remaining vegetation within the Perth Metropolitan Area, it is important that good quality vegetation and a diversity of flora species known to be used by the endangered Carnaby's Black-Cockatoo is maintained for potential foraging habitat at Iluka – Burns Beach Foreshore Reserve.

Quenda habitat

Quenda are one of the few remaining native mammals that still persist within remnant habitat on the Swan Coastal Plain.⁵¹ They are considered ecosystem engineers capable of turning

⁵⁰ DEC (2011a)

⁵¹ Wilson et al. (2012)

over nearly four tonnes of soil per individual per year and their continued persistence in landscapes may be important for maintaining ecosystem processes.⁵²

Quenda are omnivores and forage for subterranean food such as fungi and invertebrates.⁵³ The Iluka-Burns Beach Foreshore Reserve with its dense understorey provides plenty of foraging habitat for Quenda which were recorded on site in the 2020 fauna survey.

Native Fauna

Fauna and flora are interconnected in complex relationships with each other and with factors such as soil, water, climate and landscape. The decline of native fauna can cause loss of plant species and changes to ecological communities. Alternatively, the decline of native flora can cause loss of fauna species.

Mammals

Three native mammals were recorded at Iluka – Burns Beach Foreshore Reserve, the Quenda (*Isoodon fusciventer*), White-striped Free-tailed Bat (*Austronomus australis*) and the Gould's Wattled Bat (*Chalinolobus gouldii*).³⁵ In previous surveys the Western Grey Kangaroo (*Macropus fuliginosus*), Western Brush Wallaby (*Notamacropus irma*) and the Short-beaked Echidna (*Tachyglossus aculeatus*) have also been recorded.^{54,55}

Quenda

The DBCA have listed the Quenda (*Isoodon fusciventer*) as a Priority 4 species (Rare, Near Threatened and other species in need of monitoring). Threats to Quenda include loss of habitat, predation by introduced predators (e.g. European Red Fox and cats) and fire in fragmented habitat.⁶⁴ In addition, they appear to be vulnerable to spatial isolation.⁵⁶ Although Quenda were once common throughout south-west Western Australia, due to a combination of habitat loss and predation by introduced predators, they are now absent from many areas, or persist in low numbers.⁶²

Home range estimates for species in the genus *Isoodon* vary from 0.5 – 6.0ha and although these animals are typically solitary, they often have overlapping home ranges.⁵³ While searching for underground food Quenda create small scale disturbances in the form of foraging pits in the soil and have been identified as one of Australia's persisting digging mammals; with its digging activities implicated in a range of potential ecosystem services.⁶³

Quenda have a backward opening pouch which assists with reducing soil falling onto their pouch young during digging activities. Eight teats are arranged in an incomplete circle and the pouch can accommodate one to six (usually two to four) young in a litter.^{64 70}

During the 2020 fauna survey, Quenda (*Isoodon fusciventer*) were recorded in both survey areas. Within the Burns Beach survey area, six individuals were trapped in cage traps over four trapping nights. An individual was also recorded on motion camera. Within the Iluka survey area one individual was recorded at each of the two trapping locations. Of the eight trapped individuals, all but one were males, with the female having one unfurred pouch young. The majority of the Quenda observed appeared to be in good condition. Two males were missing the majority of their tail, an injury most likely the result of mating.

⁵² Valentine et al. (2013); Valentine et al. (2017)

⁵³ VanDyck and Strahan (2008)

⁵⁴ AECOM (2018)

⁵⁵ Beaumaris Land Sales (2001)

⁵⁶ Ramalho et al. (2018)

Insectivorous Bats (microbats)

Gould's Wattled Bat (*Chalinolobus gouldii*) and White-striped Free-tailed Bat (*Austronomus australis*) are two of approximately 75 species of bat in Australia. These native mammals fall into two main groups: the megabats and the microbats. Two groups of bat occur in Western Australia, flying-foxes (megabats) and insectivorous bats (microbats). Both recorded species are insectivorous bats (microbats). Bats can be useful for pest control, feeding on moths, beetles, mosquitoes, invertebrate larvae, flying ants and other invertebrates.⁵⁷ A comprehensive bat survey would require a one week remote monitoring bat survey during summer. Bats can be encouraged to roost in the area by installing bat boxes.

Reptiles

Fifteen native reptile species have been recorded at Iluka – Burns Beach Foreshore Reserve, with 13 reptiles (four snakes, one gecko, seven skinks and one blind snake) in the Iluka survey area and seven reptiles (one dragon, three snakes, and three skinks) in the Burns Beach survey area. The most commonly occurring species trapped across the survey areas was West-coast Laterite Ctenotus (*Ctenotus fallens*). This species favours low coastal vegetation on sandy soils. Scincidae family (skinks) were the most commonly observed reptiles across both survey areas. All species recorded are considered common and widespread throughout the Perth region and wider South-west WA. None are considered conservation significant.
9, 58, 59

The 2020 fauna survey noted that the majority of reptile specimens trapped were considered to be in good physical condition.³⁵

In a previous study in 2018 the species *Lialis burtonis* (Burton's Legless Lizard) was recorded and is a specialist predator of skink lizards. Its occurrence indicates adequate abundance of skinks to support a population of this species.⁹

Amphibians

No amphibians have been recorded at Iluka – Burns Beach Foreshore Reserve.

Birds

A total of 26 native birds have been recorded at Iluka-Burns Beach Foreshore Reserves, with 25 native species recorded in the Iluka Foreshore Reserve and 22 native species in the Burns Beach Foreshore Reserve.

Carnaby's Black-Cockatoos

One conservation listed species was recorded in the Iluka survey area, the endangered Carnaby's Black-Cockatoo (*Calyptorhynchus latirostris*) (see Appendix 9). This species was observed flying over the survey area during the flora survey.

Carnaby's Black-Cockatoos (Carnaby's) are endemic to the South-west of Western Australia and are listed on state, national and international threatened species lists.

Common Native Birds

⁵⁷ DEC (2007)

⁵⁸ Australian Government, Atlas of Living Australia (no date a)

⁵⁹ Australian Government, Atlas of Living Australia (no date b)

The most common bird species recorded at Iluka – Burns Beach Foreshore Reserve were the honeyeaters. Across the Iluka and Burns Beach Foreshore Reserves there were a range of seasonal and resident nectar feeders such as honey eaters and wattle birds, opportunistic insectivores such as the *Malurus lamberti* (Variegated Fairywren) and *Malurus leucopterus* (White-winged Fairywren) and larger omnivorous species such as *Cracticus tibicen* (Australian Magpie), *Coracina novaehollandiae* (Black-faced Cuckoo-shrike) and *Cracticus nigrogularis* (Pied Butcherbird). All species observed at Iluka – Burns Beach Foreshore Reserve are known to be widespread throughout the south-west of WA and considered as common on the northern Swan Coastal Plain.⁹

Invertebrates

Invertebrates are animals without backbones such as insects, worms and molluscs. Invertebrates constitute more than 95% of all living animal species, with Australia having documented 100,000 species and an estimated 200,000 undescribed invertebrate species.⁶⁰ Some invertebrates are important indicators of ecosystem health, such as ants (seed dispersers), bees (pollinators) or spiders (top invertebrate predators).⁶¹

Invertebrates recycle organic matter, putting it back into circulation for use by other parts of the ecosystem and are instrumental in controlling the numbers of other species.⁶⁰

During the 2020 fauna survey, invertebrates were recorded opportunistically by observations, during hand searching for vertebrates, or as bycatch within vertebrate pitfall traps.

A total of 13 native invertebrates were recorded during the 2020 survey across the Iluka-Burns Beach Foreshore Reserve. The majority of invertebrate species recorded in the 2020 fauna survey were spiders. The Iluka-Burns Beach Foreshore Reserve supports a rich invertebrate diversity, which is reflected by the fairly diverse reptile assemblage present.⁶²

Over 500 invertebrate species were identified in the 2015-2018 an invertebrate study that was undertaken by Spineless Wonders in collaboration with the Friends of North Ocean Reef Iluka Foreshore.¹ A macroinvertebrate inventory survey conducted between 2015 and 2018 within the bounds of the Iluka Coastal Foreshore Reserve, between St. Lucia Road in the north and Resolute Way in the south, recorded over 500 macroinvertebrate species over this four-year period in one of the most comprehensive macrofaunal biodiversity inventories for any coastal habitat mosaic ever assembled in Western Australia.¹

The invertebrates recorded during the 2020 survey, in most cases, were only able to be identified to the taxonomic order level. It is likely that a targeted invertebrate survey would uncover a much higher number of invertebrate taxa within the Iluka-Burns Beach Foreshore Reserve, as demonstrated by the 2015 – 2018 survey.

Non-native Fauna

Non-native fauna impact native fauna and flora through predation, competition for food and shelter, spreading diseases and destroying habitat. These impacts can result in the diminishing or extinction of native species.⁶³

⁶⁰ DBCA (no date b)

⁶¹ V Framenau (2012), email, 9 July

⁶² ELA (2021)

⁶³ Australian Government, DAWE (no date)

Non-native animals such as cats, foxes, rabbits, rats, mice, birds, millipedes, ants and bees inhabit the City's bushland, wetland and coastal areas.

Mammals

Australia is home to some of the world's most unique animals. More than 80 per cent of our mammals occur nowhere else on earth,⁶⁴ however Australian mammals are becoming extinct at an alarming rate, primarily due to non-native (feral animal) predation.⁶⁵

Four non-native mammals were recorded in the 2020 fauna survey. This included the house mouse (*Mus musculus*), fox (*Vulpes vulpes*), cat (*Felis catus*) and rabbit (*Oryctolagus cuniculus*). The Red Fox and Cat are direct predators to native mammals and reptiles. The survey also recorded free roaming pet cats (*Felis catus*) on a motion camera, indicating the use of the reserve by domestic animals. The House Mouse and European Rabbit have the potential to introduce and spread disease to native mammal populations and likely compete for food resources with other native fauna species. European Rabbits also eat seedlings and prevent natural revegetation or planted revegetation.

The lack of small native mammals recorded (other than the Quenda and microbats) is expected due to the size, fragmented nature and location of Iluka-Burns Beach Foreshore Reserve, however the likely presence of feral predators could also be having an impact on the microbat and Quenda populations.

Foxes are common within the City's bushland areas and have caused the decline of many native birds, reptiles and small mammals.⁶⁶

Domestic animals such as dogs (*Canis lupus*) can also cause damage to the City's natural environment, particularly when exercised unleashed within natural areas. Iluka-Burns Beach Foreshore Reserve is a dog on lead area. Dogs can harass native fauna, including mammals such as Quenda, resulting in stress and harm to the animals. Dogs can also spread pathogens if they disturb the soil, particularly around trees which may contain soil-based diseases. Dog droppings, if not removed, contribute a significant amount of nutrients to the site, encouraging weed growth and potentially polluting groundwater. Some dog droppings contain harmful bacteria and nutrients.⁶⁷

The City Field Officers patrol Iluka-Burns Beach Foreshore Reserve on an adhoc basis (responding to requests) to ensure dogs are kept on leads and their droppings are collected.

Domestic and feral cats (*Felis catus*) have the potential to cause significant environmental harm when allowed to roam within urban natural areas.⁶⁸ Feral cats are attributed to be the major threat to mammalian fauna extinction in Australia.⁶⁵ The Federal Government Environment Minister endorsed the *National Declaration of Feral Cats as Pests* in 2015 to recognise feral cats as a nationally significant pest that threatens native fauna.

Under the *Cat Act 2011* the City of Joondalup may seize cats if they are reported to be in public areas or on private property without the consent of the owner/occupier. The *Cat Act 2011* encourages responsible pet ownership by ensuring cats are registered, sterilised and microchipped.

⁶⁴ Australian Government, DoE (2015a)

⁶⁵ Australian Wildlife Conservancy (no date)

⁶⁶ DPI (2012)

⁶⁷ KABWA (no date)

⁶⁸ Australian Government, Department of the Environment (2015b)

Birds

A total of two non-native species of birds have been recorded at Iluka – Burns Beach Foreshore Reserve including *Dacelo novaeguineae* (Laughing Kookaburra) and *Spilopelia senegalensis* (Laughing Dove).

The Laughing Kookaburra has been widely introduced into Western Australia where they breed in tree hollows that would usually be used by parrots and owls. Laughing Kookaburras also prey on small reptiles, mammals and nestlings, placing undue pressure on these native species.⁶⁹

The Laughing Dove are widespread throughout much of south-western Western Australia, the natural range of the Laughing Dove extends from Africa, through the Middle East to the Indian subcontinent. Laughing Doves breed in an array of locations, often suburban environments. Laughing Doves typically feed on the ground eating grain, seeds and weeds.

Although no Rainbow Lorikeets were sighted in the 2020 fauna survey, they were recorded in a previous survey in 2013 and have been observed over the past couple of years in increasing numbers at Iluka-Burns Beach Foreshore Reserve.

Invertebrates

One non-native invertebrate species was recorded in Iluka – Burns Beach Foreshore Reserve in the 2020 survey, the Portuguese millipede (*Ommatoiulus moreletii*). In the 2015-2018 survey within the Iluka Foreshore Reserve, two non-native invertebrate species were recorded in Iluka – Burns Beach Foreshore Reserve the European Honey Bee (*Apis mellifera*) and Portuguese millipede (*Ommatoiulus moreletii*).¹

Portuguese millipedes were first recorded in Western Australia in 1986 and are now widespread in the south-west of the State. They feed on organic matter such as leaf litter and are not known to impact native flora or fauna. Portuguese millipedes can reach high population levels and be a domestic nuisance when they invade homes and gardens. This species is known to be distasteful and therefore avoided by many predators. It plays a useful role in breaking down organic matter in the soil, however is considered a pest when it reaches high population levels.⁷⁰ This species has become widespread across the Perth metropolitan area in both bushland and suburban areas. The Portuguese Millipede (*Ommatoiulus moreletii*) is listed as Permitted – s11 under the Western Australian organism List.

European honey bees are frequently observed at the site. The European honey bee (*Apis mellifera*) is common within the City's natural areas and may impact upon native flora and fauna through competing with native fauna (including native bees) for floral resources, disrupting natural pollination processes and displacing endemic wildlife from tree hollows. European honey bees are feral animals, however, European honey bees are important to Australian horticulture and agricultural industries with approximately 65% of agricultural production in Australia being dependent on pollination by European honey bees.⁷¹

Ecological Linkages

Naturally connected landscapes and ecosystems are generally healthier, protect a diversity of species, provide pathways for species movement and can store carbon more effectively than

⁶⁹ Birdlife Australia (no date b)

⁷⁰ DPIRD (2020)

⁷¹ Rural Industries Research and Development Corporation (no date)

degraded landscapes.⁷² In urban areas where there is engineered infrastructure dividing the landscape, it may be beneficial to provide wildlife crossings such as underpasses, tunnels, viaducts or overpasses to enable wildlife movement.

Iluka-Burns Beach Foreshore Reserve forms an important coastal ecological linkage from Mindarie in the north to North Fremantle in the south. It also forms an ecological linkage to Neerabup National Park and Yellagonga Regional Park in the east, as shown in Figure 27. The ecological linkage from Burns Beach Foreshore Reserve to Neerabup National Park and Yellagonga Regional Park is divided by Marmion Avenue, Connolly Drive, Mitchell Freeway and Burns Beach Road.

Future development to the north of Iluka-Burns Beach Foreshore Reserve, may result in further isolation from other bushland remnants. The Iluka-Burns Beach Foreshore Reserve provides a valuable linkage to adjacent bushland to the north, south and east. It provides habitat connectivity for many species, particularly birds and this is important for the continued presence of a range of local bird species, including Carnaby's Black-Cockatoo. The occurrence of Carnaby's Black-Cockatoo highlights the foraging value of the study area.⁹

Current Management Approach

The City of Joondalup is implementing a number of management actions to monitor native fauna and address the environmental impacts of domestic and pest animals within the City's natural areas. Monitoring of native fauna occurs through fauna surveys. Control of non-native fauna such as foxes, cats and rabbits is undertaken annually within selected bushland, wetland and coastal areas, as required. Fox, cat and rabbit control methods employed include biological and chemical control, trapping, baiting and exclusion methods such as fencing. Fox, cat and rabbit control is conducted when foxes, cats or rabbits are observed or rabbit or fox warrens are identified on site. Three separate fox and cat trapping events were conducted in Iluka Foreshore Reserve during 2020, resulting in the trapping of seven cats and two foxes. Further fox and cat trapping events were conducted in Iluka – Burns Beach Foreshore Reserve in 2021 and summer of 2022 as well as the release of Rabbit Hemorrhagic Disease (RHD) virus for rabbit control.

The City liaises with City of Wanneroo around feral animal control programs within in its connected reserves, and where possible aligns its programs to address any feral animals that move between the Cities coastal foreshore reserves. In addition, Friends Groups often report any feral animal observations within reserves to the City.

The City's current management practices have greatly reduced the incidence of pest animal populations within the City. However, continued and coordinated action is required to ensure that populations remain at controllable numbers and that the impacts on natural areas remain acceptably low.

The City also promotes responsible pet ownership and encourages the community to ensure that domestic pets do not have a negative impact on the natural environment. Iluka-Burns Beach Foreshore Reserve is designated as a place where dogs must be on a lead at all times by Council resolution in accordance with the *Dog Act 1976*. Cats may be seized where they are found wandering in public areas, such as Iluka-Burns Beach Foreshore Reserve, in accordance with the *Cat Act 2011*.

Recommended Fauna Management Actions:

⁷² NWCPAG (2012)

To monitor and protect native fauna in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Fauna survey	Undertake a follow up fauna survey, in mid-late spring to supplement previous fauna survey, within 10 years.
Fauna / Ecological Linkages investigations	During on ground maintenance tasks, investigate the access points utilised by native fauna, in order to guide suitable management of native fauna within the reserve. Based on the findings, undertake an in house study aiming to improve ecological linkages between the Iluka-Burns Beach Foreshore Reserve to the Burns Beach Bushland and Neerabup National Park; and to Yellagonga Regional Park.
Quenda monitoring	Commence discussions with WA Universities on research and monitoring opportunities of the Quenda population.
Bat survey	Undertake a one week remote monitoring bat survey in summer to supplement previous one night bat survey undertaken in spring.
Installation of bat boxes	If bat survey indicates presence of bats, consider installing bat boxes to encourage bats to roost.
Feral animal control	Monitor feral animal populations and implement regular control to reduce pressures on native fauna and flora. This is inclusive of rabbit, cat and fox control. Remove feral beehives if they are identified on site and are accessible.
Patrols undertaken by City Field Officers	Continue targeted patrols by City Field Officers to ensure dogs are kept on leads and their droppings are collected.

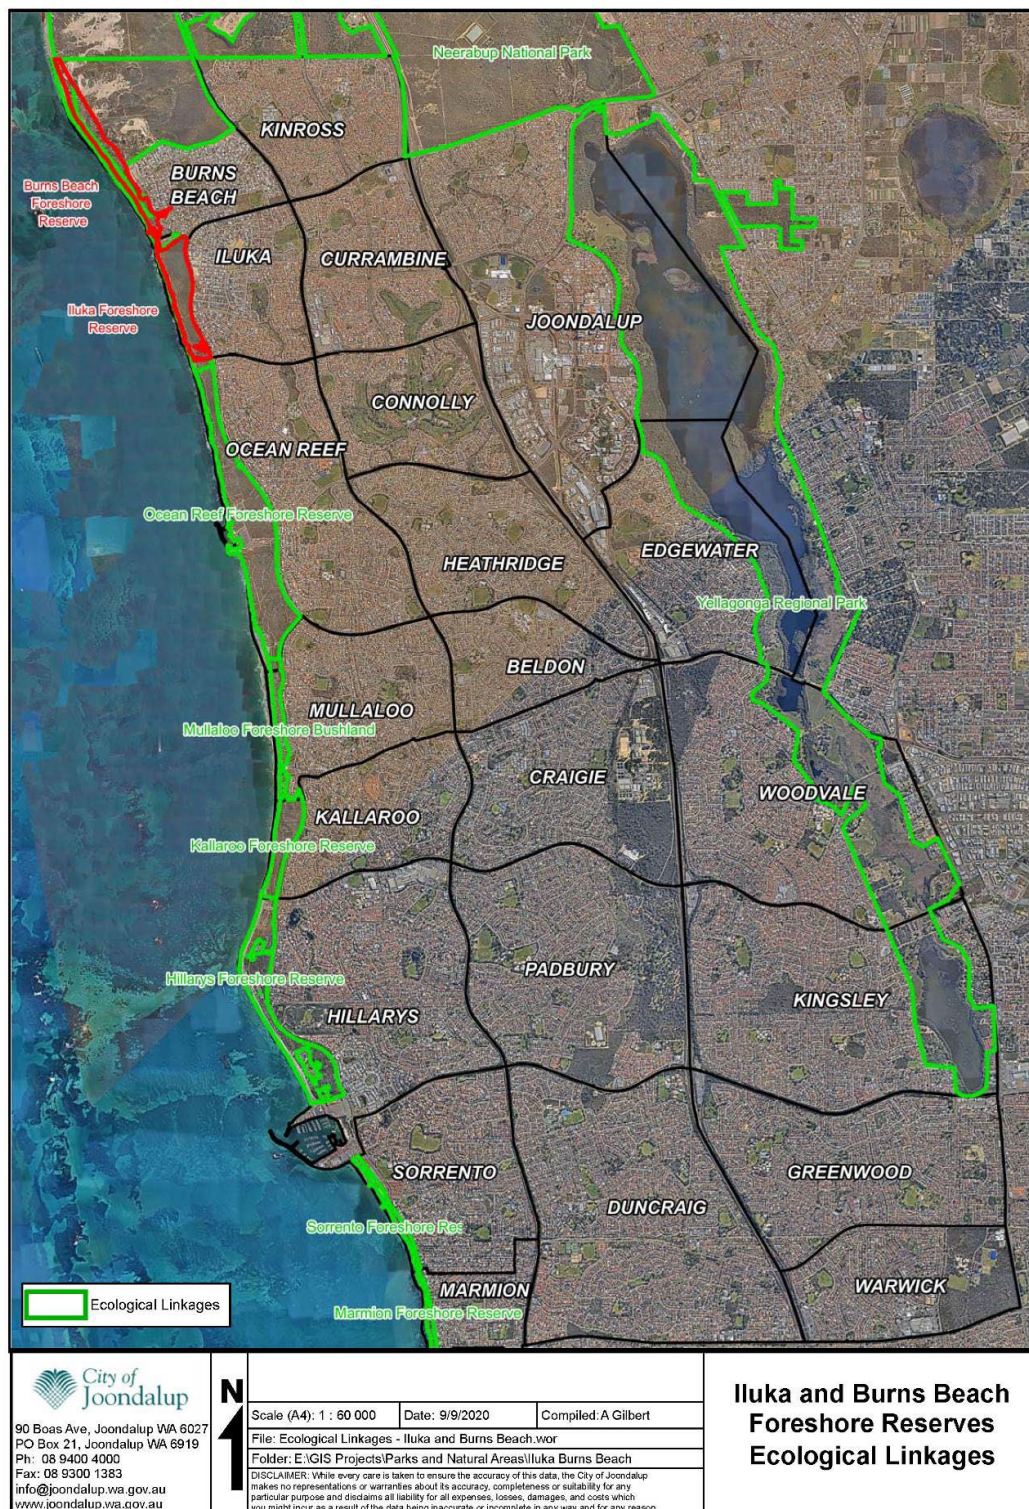

Figure 27: Ecological Linkages adjacent to Iluka-Burns Beach Foreshore Reserve

3.5 Social and Built Environment

History and Heritage

Iluka-Burns Beach Foreshore Reserve is not listed on the State Heritage Register, however Marmion Marine Park is located adjacent to the site and is listed on the State Heritage Register due to the social and ecological significance of the islands, lagoons and reefs forming the marine park.

The Burns Beach Waugal Aboriginal Heritage site (ID 22672) is located within Iluka Foreshore Reserve (see Section 1.3.2) and is listed on the State Aboriginal Heritage Inquiry System.

An unexploded ordnance (UXO) investigation was undertaken in Burns Beach Foreshore for the development of the Burns Beach to Mindarie dual use path in July 2019. No items of live UXO or explosive ordnance were located during the investigation, however a few fragments of explosive ordnance waste were uncovered. The investigation only surveyed the area designated for the Burns Beach to Mindarie dual use path and not the surrounding areas. The majority of Burns Beach Foreshore Reserve is located within an UXO area ID 1041 with a slight occurrence category and was a field firing demonstration range in 1943 where armour artillery and infantry conducted live firing.⁷³

Social Value

Australians have reported they would be willing to pay an average of \$35,000 more (approximately 7%, assuming a base value of \$500,000) to live in a home in a 'green' neighbourhood, with a third of Australians willing to pay an extra \$100,000 or more to live in a 'green' area. Approximately two thirds of Australians would prefer to buy a home in a nature-filled neighbourhood to reduce their stress levels. Living in a home with a 'green' neighbourhood is important to Australians, even more important than proximity to work, shops and public transport.⁷⁴

Urban natural areas can provide social, psychological, physical and spiritual benefits and play a role in community health, wellbeing and quality of life. Some of the benefits of urban natural areas for the community include:

- Reduction of mental fatigue and stress
- Provide opportunities for reflective thought, peace and quiet
- Create opportunities for informal social interactions
- Provide opportunities for activities that can increase physical health
- Assists to reduce the crime rate by relaxing people and encouraging people to be outdoors.⁷⁵

The main uses of Iluka-Burns Beach are for recreational purposes such as walking, cycling, dog exercising, beach activities and use of adjacent playgrounds and Burns Beach Cafe.

The Friends of North Ocean Reef – Iluka Foreshore have been operational since 2006 and contribute a significant amount towards maintaining the conservation values of Iluka Foreshore Reserve through actions such as manual weed control, revegetation and conducting ecological surveys. There is currently no Friends Group operating in Burns Beach Foreshore Reserve.

⁷³ Department of Defence (2020)

⁷⁴ Planet Ark (2014)

⁷⁵ Tarran (2006)

Access and Infrastructure

Iluka Foreshore Reserve contains infrastructure such as playgrounds, board walk and lookout, toilets and showers, BBQs, bike racks, gazebo, shelters, seating, drink fountain and bins, as shown in Figure 35.

Burns Beach Foreshore Reserve contains infrastructure such as playgrounds, board walks, BBQs, toilets and showers, bike racks, seating, shelters, bins and a drinking fountain, as shown in Figure 37. The Sistas Burns Beach Café and Restaurant and Burns Beach Sunsets Village caravan park are also located on site.

A development is proposed for Burns Beach in the predominantly cleared area near the northern car park including a new café / restaurant space, car park, playground, picnic facilities and landscaping. The development is subject to approvals, community consultation and Council endorsement prior to commencement.

Utilities

Several public utilities operate within or adjacent to Iluka-Burns Beach Foreshore Reserve, as shown in Figure 28 and Figure 29.

The public hydrants are owned, serviced and maintained by the DFES in conjunction with the Water Corporation. The Water Corporation also maintain the sewerage infrastructure on an as required basis.

Lighting

Whilst artificial lighting benefits humans by providing for safety, amenity and increased productivity, it also has the potential to affect wildlife.⁷⁶

Any new infrastructure projects should consider the conservation of natural darkness through good-quality lighting design and management. Appropriate risk assessment, management plans and monitoring procedures of artificial lighting will be able to reduce the overall effect on wildlife.⁷⁶

Light-emitting diodes (LEDs) provide the ability to control and manage the parameters of lighting, thereby incorporating best practice lighting design principles. The City is investigating options to transition the City's street lighting to LED smart-monitor lighting.

Security lighting has only been added in Iluka Foreshore Reserve and Burns Beach Foreshore Reserve where necessary, see Figure 28 and Figure 29. The City endeavours to install lighting using best practice design lighting principles.⁷⁶

⁷⁶ DCCEEW (2023)

Figure 28: Iluka Foreshore Reserve Power, Lighting, Water & Sewage Utilities

Figure 29: Burns Beach Foreshore Reserve Power, Lighting Water & Sewage Utilities

Conservation Fencing

Conservation fencing is used to restrict access and protect areas of the foreshore reserve. Timber post and plastic coated galvanised chain mesh fencing surrounds the outer perimeter of the bushland (adjacent to Burns Beach Road) at Iluka Foreshore Reserve and along the sides of the pathway, as shown in Figure 30. There are also several small sections of the previous ring lock conservation fencing that require upgrading to the plastic coated galvanised chain mesh fencing.

Conservation fencing is also installed along the sides of the pathway at Burns Beach Foreshore Reserve extending to the north until the development on Beachside Drive.

Fencing is inspected every two months and repairs are conducted as required.

Figure 30: Conservation Fencing on the perimeter of Iluka-Burns Beach Foreshore Reserve

Access Points

Access points allow people to enter the foreshore reserve areas that are fenced off and often give access to paths and provide pedestrian access to the beach. All formal access points have fencing or railing to prevent unauthorised vehicle and motorbike access. There are numerous access points in Iluka-Burns Beach Foreshore Reserve, as shown in Figure 34 and Figure 36. The access ways provide access from recreational areas, car parks and at several intervals along the dual use path.

Where informal access points are established within Iluka – Burns Beach Foreshore Reserve, the City addresses this through installing temporary fencing and repairing any damage to fencing.

Paths and Trails

Paths in Iluka-Burns Beach Foreshore Reserve are used for pedestrian and cyclist access, fire access ways and bushland management and maintenance purposes. The paths in Iluka-Burns Beach Foreshore Reserve are mostly used by pedestrians, dog walkers and cyclists. The primary path within Iluka-Burns Beach Foreshore Reserve is a coastal dual use path. This primary dual use path also forms part of the Sunset Coast Trail which runs along the entire stretch of coastline.

Construction of the northern section of the coastal path between Mindarie and Burns Beach was completed in October 2020. In early 2022, developer PEET has completed the final 650 metre section of the Burns Beach-Mindarie shared coastal path, which links the cities of Joondalup and Wanneroo from Burns Beach estate in the south to Catalina estate in the north. The coastal path route was designed to ensure the region's biodiversity and Aboriginal cultural heritage would be protected before construction began. The works have created a continuous route from North Fremantle to Mindarie. The City is planning on widening the coastal shared path from Hillarys to Burns Beach from 2.5m or 3m to 4m to provide increased safety to users of the path such as pedestrians and cyclists.

An existing fire access way was formalised to create a pathway in the north of Iluka Foreshore Reserve adjacent to Burns Beach Caravan Park in 2021.

A number of informal tracks also exist within the bushland. The use of informal tracks and the disturbance of soil through the establishment of informal 4WD, BMX and walking tracks, has the potential to spread and establish weeds and reduce healthy vegetation condition.

The current gates are easy for cyclists or people with prams or wheelchairs to use, however gates that allow easy access on site also allow motorbikes to enter.

Access and Inclusion

The Australian Bureau of Statistics 2021 Census indicates that 6,224 (3.9%) of City residents have a need for assistance with core activities due to a severe or profound disability.

The City of Joondalup has an *Access and Inclusion Plan 2021/22 -2023/24* stating that 'the City is committed to ensuring that its activities and services are inclusive of all members of the community, including people with disability and their families or carers, and people from culturally and linguistically diverse backgrounds.'

The formal paths in Iluka-Burns Beach Foreshore Reserve allow wheelchair access. The paths can be accessed from entries in the north and south of the reserve. The City's *Access and Inclusion Plan 2021/22 – 2023/24* also has an action to 'investigate improving the accessibility of beaches and foreshore environments' and implement accessibility upgrades in approved locations.

Signage

Signage is important to encourage appropriate use of the site and inform the community about the ecological and cultural values of Iluka-Burns Beach Foreshore Reserve. There are numerous signs at Iluka-Burns Beach Foreshore Reserve on the periphery of the site and near

the main entrances, detailing information such as the name of the site and that the site is managed by City of Joondalup.

Signage at the reserve also informs park users about the danger associated with the limestone cliff risk areas and encourages the protection of the natural areas and dunes. There is also a series of ecological interpretative signage installed along the coastal walk from Iluka Foreshore Reserve in the south to Burns Beach Foreshore Reserve in the north. The signage focuses on highlighting the unique flora and fauna of the area. There is also signage regarding the Marmion Marine Park site and its management.

There are also 'dogs must be on a lead' signs, at the main entrance points.

Directional signage uses maps to indicate trails, entrances and infrastructure. Interpretive signage increases awareness of the ecological values of the bushland. The City has developed a *Wayfinding Signage Strategy* to guide the provision of information and interpretive messages within the City's natural areas.

Signage is reviewed and inspected as required in alignment with the *Wayfinding Signage Strategy* and the City's legal requirements.

Figure 31: Examples of the interpretative ecological signage along the coastal walk through Iluka-Burns Beach Foreshore Reserve

Toilets

There are toilets and showers located adjacent to the car park at Iluka Foreshore Reserve, as shown in Figure 35. Toilets and showers are also located at Burns Beach Foreshore Reserve to the north of the car parks, as shown in Figure 37.

Parking

There is a car park located at Iluka Foreshore Reserve with the entrance being close to the corner of Burns Beach Road and Discovery Circuit, as shown in Figure 35. There are two car parks located at Burns Beach Foreshore Reserve at the end of Ocean Parade by the coast (north and south of the roundabout), as shown in Figure 37. Some street parking is also available along Ocean Parade.

Seating

Numerous park bench seats and picnic shelter seats are located at Iluka Foreshore Reserve in the park area and along the dual use path, as shown in Figure 34 and Figure 35. Numerous park bench seats and picnic shelter seats are also located at Burns Beach Foreshore Reserve, predominantly in the park areas, as shown in Figure 36 and Figure 37.

Figure 32: Seating at Iluka – Burns Beach Foreshore Reserve

Antisocial Behaviour

There is a history of dumping of garden refuse and rubbish, cubby houses, graffiti on signage, theft of plant tags and homeless person activities in Iluka Foreshore Reserve. There is a history of dumping of garden refuse within Burns Beach Foreshore Reserve, particularly in the fire access ways adjacent to houses. Inspections are conducted every 2 months and actions are undertaken to address any issues identified.

Rubbish

Rubbish bins are generally installed in locations where people gather to socialise or undertake recreational activities. Dog poo bins are generally installed in locations where people walk their dogs. There are dog poo bins located in the south-east corner and the south-west corner near paths and access points to the site (see Figure 35 and Figure 37). These dog poo bins can also be used to dispose of general rubbish.

Litter can have negative impacts on flora and fauna. Litter is collected by the City or Friends Group on an as needed basis, sometimes in conjunction with hand weeding activities.

The City monitors the amount of litter present in Iluka Foreshore Reserve on an annual basis, measured on three transects within the reserve. The amount of litter present in Iluka Foreshore Reserve has decreased from 18 items per hectare in 2019/20 to 0 items per hectare in 2020/21 and 2021/22 (see Figure 33).

The amount of litter per hectare has not been measured at Burns Beach Foreshore Reserve to date.

Figure 33: Amount of Litter Present in Iluka Foreshore Reserve

Water Sensitive Urban Design

The City manages a fenced off sump located adjacent to Iluka Foreshore Reserve on the corner of Burns Beach Road and St Lucia Road, as shown in Figure 13. The City also manages a fenced off sump located close to Burns Beach Foreshore Reserve at Burns Beach Park on Ocean Parade, as shown in Figure 14. Both sumps contain vegetation and there are currently no plans for changes to these sites.

Recommended Social and Built Environment Management Actions:

To enhance the social and built environment in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Maintain conservation fencing	Maintain conservation fencing on an as needed basis (informed by inspections every 2 months) to protect the native vegetation, flora and fauna from informal access.
Upgrade conservation fencing	Upgrade sections of old ring-lock conservation fencing to the newer plastic coated galvanised chain mesh fencing.
Investigate closure and rehabilitation of informal tracks	Investigate closure and rehabilitation of informal tracks that are used infrequently to protect vegetation.

Action	Details
Implement <i>Wayfinding Signage Strategy</i>	Implement recommendations from the City's <i>Wayfinding Signage Strategy</i> that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.
Investigate additional signage requirements	Investigate any additional signage requirements, such as Aboriginal cultural heritage interpretative signage (e.g. mythological Burns Beach Waugal Aboriginal heritage site), limestone cliff danger signage and Unexploded Ordnance signage as required.
Patrols undertaken by City Field Officers	The City will continue to visit Iluka-Burns Beach Foreshore Reserve as part of the City Field Officers patrol regime, as a form of active surveillance of the bushland and adjoining recreational parkland.
Investigate the provision of additional waste services	Monitor and investigate the provision of additional waste services to mitigate litter, as a result of increased public use and infrastructure upgrades in the active reserve.
Dismantle cubby houses, BMX tracks and informal tracks	Dismantle cubby houses, BMX tracks and informal tracks as required to discourage vegetation degradation and littering in the surrounding area.

Figure 34: Iluka Foreshore Reserve Infrastructure

Figure 35: Iluka Foreshore Reserve Detailed Infrastructure

Figure 36: Burns Beach Foreshore Reserve Infrastructure

Figure 37: Burns Beach Foreshore Reserve Detailed Infrastructure

3.6 Fire Management

Fire is an important natural feature of the Western Australian landscape. Fire helps to shape the diversity of plant communities with many native plants having developed fire-related adaptations over time, for example fire expedites many species to flower or germinate.

Before Aboriginal people populated the Australian continent approximately 40,000 to 60,000 years ago, the major cause of fires would have been lightning. Aboriginal people learnt to harness the naturally recurring fire caused by lightning and other sources to their advantage, which resulted in skilful burning of landscapes for many different purposes. Fire was used to gain access to difficult areas, promote the development of food plants, for cooking, warmth and signalling and attracting animals for hunting.⁷⁷

Although there are benefits to fire, an increase of fire occurrences particularly in the same area over a short period of time, referred to as fire intervals or measured as time since last fire, has the potential to adversely impact flora and fauna populations.

Human activity such as accidents and arson have resulted in increased incidences of fire within many urban bushland reserves, which can encourage growth of highly flammable and invasive weeds.

The climate in the south-west of Western Australia has become warmer and drier and is likely to continue to dry, with lower winter rainfall and increased average temperatures resulting in a longer 'fire season' and a greater proportion of the landscape that is sufficiently dry enough to burn.^{78,79}

Bushfires are unplanned fires that can be caused by events such as lightning, unplanned effects from controlled burning operations, escape from industrial activities, damaged power transmission lines, discarded cigarette butts or deliberate arson. Bushfires can cause significant damage to people, property and the environment.⁸⁰ In 2015 the State Government released *State Planning Policy 3.7, Planning in Bushfire Prone Areas* and corresponding guidelines in response to several extreme fire events in Australia.

Under the *Bush Fires Act 1954*, local government have the responsibility of prevention, preparedness and recovery to bushfires, hence fire management of Iluka-Burns Beach Foreshore Reserve is the responsibility of the City of Joondalup. The City of Joondalup has a "duty of care" to take all reasonable precautions to prevent any bushfire from spreading onto neighbouring properties. The City of Joondalup does not currently have a hazard reduction burn management regime for the area.

The Department of Fire and Emergency Services (DFES) has the primary responsibility of emergency response in the event of a bushfire. DFES work with the community and local government to provide education on hazard risk management and to prevent, prepare for, respond to and recover from a diverse range of emergencies.⁸¹

DFES have developed an Urban Bushland Response Plan (UBRP) for Iluka Foreshore Reserve (Ocean Reef Foreshore Resolute Way to Burns Beach) and also a UBRP for Burns Beach Foreshore Reserve (Burns Beach Foreshore and dunes to Marmion Avenue) including

⁷⁷ DPaW (2013a)

⁷⁸ DPaW (2013b)

⁷⁹ City of Joondalup (2014)

⁸⁰ EDOWA (2011)

⁸¹ DFES (no date a)

site specific information on ecologically sensitive areas, hazard advice, high risk areas and communications plan. The UBRP's are updated by DFES annually and identify key stakeholders including the City of Joondalup.

There are numerous public water hydrants located around Iluka-Burns Beach Foreshore Reserve which are installed and maintained by the Water Corporation and DFES, as shown in Figure 28 and Figure 29.

Undertaking fire management within Iluka-Burns Beach Foreshore Reserve will help to:

- Protect life, property and environment in Iluka-Burns Beach Foreshore Reserve and adjacent residential areas and privately owned buildings.
- Fulfil obligations under the *Bush Fires Act 1954*.
- Protect the ecological and amenity values of Iluka-Burns Beach Foreshore Reserve bushland.
- Protect landscape values (including flora and fauna) from uncontrolled fire and inappropriate suppression techniques.
- Reduce the frequency, impact and area of unplanned fires.
- Minimise the spread of disease and weeds during fire fighting operations and when establishing firebreaks.
- Minimise impacts on air quality.

Fire Risk

The most recent fuel load assessment was conducted at Iluka-Burns Beach Foreshore Reserve in 2016-17 by the City of Joondalup which indicated the site had a fuel load ranging from 5.4 to 17.5 tonnes / ha. The fuel load assessment was undertaken according to the methodology from the Fire and Emergency Services Australia (FESA) *Visual Fuel Load Guide for the Scrub Vegetation of the Swan Coastal Plain*.⁸² The results of fuel load assessments are used to inform fire management of the site.

Fire Occurrences

There have been a small amount of fires at Iluka-Burns Beach Foreshore Reserve, the majority of which are believed to have been deliberately lit. Most of the fires occurred within Iluka Foreshore Reserve. Records of fire occurrences at Iluka Foreshore Reserve and Burns Beach Foreshore Reserve are detailed in Table 5 and Table 6.

Dates	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013	2012	2011	2010
Fire Occurrences	0	1	0	0	1	0	1	1	1	2	0	0	1

Table 5: Fire Occurrences at Iluka Foreshore Reserve (DFES 2023)

Dates	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013	2012	2011	2010
Fire Occurrences	0	0	0	0	0	0	0	2	0	0	0	0	0

⁸² FESA (2007)

Table 6: Fire Occurrences at Burns Beach Foreshore Reserve (DFES 2023)

Monitoring of fire occurrences and detailing fire incidents and frequency through mapping and updating the City's Geographic Information System (GIS) layer could inform fire prevention actions.

Fire Response

The closest Fire and Rescue Service Station is Joondalup Fire Station located on Drovers Place in Wanneroo and they are responsible for suppressing fires within Iluka-Burns Beach Foreshore Reserve. The Western Australia Police are responsible for the evacuation of residents and visitors, if required.

Fire Recovery

Weed control is revised after fire incidents to aid regrowth by selecting appropriate chemicals, targeting weeds if safe to do so for new seedlings, and spraying weedy grasses using targeted approaches.

Current Management Approach

The City of Joondalup implements a number of on ground measures to reduce the risk of fire, including undertaking:

- Controlled access;
- Weed (invasive) species management;
- Ad-hoc fuel load assessment and management; and
- Maintenance and installation of fire access tracks (fire access ways and strategic firebreaks).

Fuel load assessments are conducted on an as required basis and the results used to inform bushfire mitigation works on the site.

Weed control and maintenance of fire access tracks are conducted in accordance with the City's Annual Bushland Schedule.

A *Bushfire Risk Management Plan 2018 – 2023* has been developed by the City of Joondalup to identify the level of risk for fire occurrences within the City of Joondalup and proposes management strategies to be employed to reduce and mitigate the risk. Iluka Foreshore Reserve has the risk rating of extreme and Burns Beach Foreshore Reserve has the risk rating of medium within the Plan. The majority of Iluka-Burns Beach Foreshore Reserve has been rated as a bushfire prone area by the Fire and Emergency Services Commissioner, meaning that it is subject, or likely to be subject, to bushfire attack. Additional planning and building requirements may apply to development within these areas.

The City has also developed Fire Weed Management Guidelines to mitigate the impact of weeds within the post fire environment of the City's natural areas. These Guidelines are implemented within the City's natural areas after a fire event.

Recommended Fire Management Actions:

To prevent fire occurrences and minimise the environmental impact of fire occurrences in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Maintain fire access tracks and footpaths	Maintain fire access tracks and footpaths, including weed control and pruning of vegetation, by implementing the Annual Bushland Schedule.
Implement Bushfire Risk Management Plan	Implement the City's <i>Bushfire Risk Management Plan</i> in relation to Iluka-Burns Beach Foreshore Reserve.
Monitor fire occurrences	Monitor fire occurrences through mapping and updating Geographic Information System (GIS) layers detailing fire incidents and frequency to inform fire prevention actions.
Revise weed control after fire incidents	Revise weed control after fire incidents to aid regrowth by selecting appropriate chemicals, targeting weeds if safe to do so for new seedlings, and spraying weedy grasses using backpacks.
Implement Fire Weed Management Guidelines	Implement the Fire Weed Management Guidelines, when required, to reduce the infestation of weeds in natural areas after a fire.

3.7 Education and Training

An important objective of this Plan is to ensure that the local community, visitors to the City's natural areas and those that manage the City's natural areas have the necessary awareness, knowledge, motivation and behaviour to assist in protecting the City's natural areas.

Environmental objectives cannot be achieved through the actions of the City alone; the community can also affect the local environment in both positive and negative ways. Environmental outcomes require the support of an engaged community that is aware and participating in environmental activities.

The local community can protect and enhance Iluka-Burns Beach Foreshore Reserve through the following actions:

- Contact the City if they are interested in initiating an environmental volunteer group such as the Friends of Burns Beach Foreshore Reserve to assist with bushland restoration and maintenance activities.
- Contact the City if they are interested in participating in an environmental volunteer group such as the Friends of North Ocean Reef – Iluka Foreshore to assist with bushland restoration and maintenance activities.
- Minimising access and disturbance to the site by staying on paths, not taking vehicles into natural areas, and not allowing dogs to run off-leads.
- Contain cats, particularly at night, and ensure they stay out of Iluka-Burns Beach Foreshore Reserve.
- Planting local, native species in gardens where possible.
- Avoid touching or feeding wildlife and picking wildflowers or native plants.
- Undertaking appropriate hygiene practices such as cleaning footwear when entering and leaving the site, removing any weed seeds attached to clothing and removing and disposing appropriately of dog excrement (may contain weed seed).
- Not dumping garden rubbish or littering on site. Litter could be collected from site when spotted, or people could organise or get involved with a Clean Up Australia Day event.

Schools are also an important avenue for raising awareness and interest in environmental issues and creating future community members that are aware of, appreciate and actively participate in local environmental management. There are a number of schools (e.g.

Beaumaris Primary School, Burns Beach Primary School, St Simon Peter Catholic Primary School and Prendiville Catholic College) within close proximity to Iluka-Burns Beach Foreshore Reserve which creates possible bushland learning opportunities for students.

Current Management Approach

The City implements an annual Environmental Education Program to address key environmental issues and encourage greater environmental stewardship by the community. The Environmental Education Program includes a Think Green Biodiversity campaign, focussed on raising awareness of key environmental issues within the City and encouraging community participation in protecting the natural environment.

As part of the Environmental Education Program, the City has developed an Adopt a Bushland Program for students from years 4 to 6 to provide an interactive educational bushland management program. The Adopt a Bushland program could be implemented with students from years 4 to 6 at the abovementioned primary schools.

In order to educate the community about how they can protect natural areas, the City has developed a number of key brochures titled '*Being WEEDwise: Garden Escapees in the City of Joondalup*', '*Being WEEDwise: Environmental Weeds in the City of Joondalup*' and '*Protecting our Natural Areas and Parks*'.

The City of Joondalup Natural Environment Team currently conduct regular plant identification training, including weed management. New members in the Natural Environment Team undertake training for the management of pathogens.

The City's Friends Groups are instrumental in assisting to protect, preserve and enhance significant bushland areas within the City and may also benefit from training.

Recommended Education and Training Management Actions:

To increase community awareness and training opportunities regarding natural areas management, the following actions are proposed:

Action	Details
Environmental Education Program	Implement initiatives of a 'Think Green Biodiversity' campaign (part of the Environmental Education Program) targeting environmental issues such as: <ul style="list-style-type: none"> • pathogens • weeds • litter • fire • flora, fungi and fauna awareness and valuing biodiversity • preventing hand feeding of wildlife • responsible pet ownership.
Support 'Friends of North Ocean Reef – Iluka Foreshore'	Support the 'Friends of North Ocean Reef – Iluka Foreshore' group and encourage community participation in the management of this natural area.
School Programs	Implement an Adopt a Bushland/Coastline program for students to provide an interactive bushland management program; and liaise with nearby schools such as Kinross Primary School, Francis Jordan Catholic School, Currambine Primary School, Burns Beach Primary School and Beaumaris Primary School to increase awareness of the bushland ecological values.
Natural Environment Team training	Conduct regular Natural Environment Team plant identification training, including weed management, to increase the effectiveness of weed control activities, as required.
Friends Groups training	Provide training including pathogen management and weed identification to community members involved in Friends of North Ocean Reef – Iluka Foreshore.

4.0 Implementation Plan

To ensure the Iluka-Burns Beach Foreshore Reserve Management Plan is being implemented in an effective and timely manner the following steps will be undertaken:

- Regular inspections
- Natural Area Key Performance Indicators reported on in Annual Report
- Scientific research
- Annual progress report against the actions in the Management Plan.

4.1 Inspections

Inspections of Iluka-Burns Beach Foreshore Reserve are conducted by the City of Joondalup once every 2 months and include weed monitoring, pest species monitoring and assessment of infrastructure maintenance requirements.

4.2 Monitoring and Reporting

A review of the Iluka-Burns Beach Foreshore Reserve Management Plan will be undertaken annually by reporting against progress made in implementing recommended management actions through the State of the Environment Report, as relevant.

Ongoing reporting against Council endorsed Natural Key Performance Indicators will also be undertaken to ascertain whether current management practices are leading to positive environmental outcomes. The key indicator will be measured and reported on a five yearly basis, as shown in Table 7.

Key Performance Indicator	Source	Reporting Period
Vegetation condition per area (using the Keighery Scale of vegetation condition) expressed as a percentage for each classification (pristine to completely degraded).	Data obtained through on site floristic survey undertaken to inform the review of the Management Plan with the service provided by specialised consultants.	Five Yearly 2026/27

Table 7: Natural Area Key Performance Indicator

4.3 Scientific Research and Monitoring

A flora survey and vegetation condition assessment will be conducted at Iluka-Burns Beach Foreshore Reserve in 2026/27, to inform the update of the Management Plan. Comparisons to previous surveys will be made to assess site changes over time.

4.4 Management Plan Review

The Implementation Plan for the Iluka-Burns Beach Foreshore Reserve Management Plan is to be reviewed 5 years after the initial ecological survey in 2026/27 with a major update of the Plan to be conducted 10 years after the initial ecological survey in 2031/32.

4.5 Summary of Recommended Management Actions

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
Flora	Flora survey	Undertake a follow up flora survey in spring to supplement previous flora surveys, within 5-10 years. Make comparisons between flora surveys to assess site changes every 5-10 years.	Within 5-10 years
	Weed survey	Undertake a follow up weed survey in winter to supplement previous weed surveys, within 5-10 years.	Within 5-10 years
	Endangered flora conservation	Investigate the planting of the identified endangered flora species to maintain or enhance the population/s to ensure the species long-term preservation within Iluka-Burns Beach Foreshore Reserve.	Within 4-5 years
	Investigate planting trees (and vegetation) for habitat	Investigate planting other species of locally native trees and shrubs (such as Banksia and Hakea species) to provide opportunities for nesting sites and shelter for fauna.	Within 4-5 years
	Revegetation	Support revegetation being conducted in degraded or completely degraded areas using local provenance species, as required.	Ongoing
	Restrict unauthorised access	Consider the installation of fencing or formal signage to prevent habitat degradation and weed spread from unauthorised walking/vehicle tracks.	As required
	Bi-monthly weed inspections	Conduct weed inspections every two months to establish the extent of weeds and to identify priority weed species.	Ongoing
	Weed control	Undertake a coordinated approach to regular weed control by implementing the Annual Bushland Schedule.	Ongoing
	Weed Control	Undertake a targeted approach to weed control of <i>Asparagus asparagoides</i> (Bridal Creeper) within Iluka – Burns Beach Foreshore Reserve.	Ongoing
	Weed Control	Undertake a targeted approach to weed control of <i>Moraea flaccida</i> (One-leaf Cape Tulip) within Iluka reserve, to prevent its spread within the reserve and into surrounding reserves.	Ongoing
	Weed Control	Undertake a targeted approach to weed control of <i>Ricinus communis</i> (Castor Oil Plant) within Iluka Foreshore Reserve.	Ongoing
	Weed control on verges	Conduct weed management of weeds on verges within and surrounding Iluka – Burns Beach Reserves including mowing of verges to reduce seed spread, spraying of weeds and spreading of certified mulch, where required.	Ongoing
	Weed Management Plan	Implement the City of Joondalup Weed Management Plan to provide an ongoing strategic approach to the management of natural areas in order to reduce the incidence of weeds.	Ongoing

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
Fungi	Fungi Survey	Undertake a comprehensive fungi survey in autumn or winter after substantial rain, to supplement previous incidental fungi surveys, within 5-10 years.	Within 5-10 years
Pathogens	Pathogen Management	Implement recommendations from the Pathogen Management Plan that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.	Ongoing
	Hygiene Guidelines	Implement Pathogen Hygiene Procedure for City staff and Contractors, Pathogen and Weed Hygiene Guidelines and Purchasing of Landscaping Materials Guidelines to prevent the introduction or spread of weed or pathogens into Iluka-Burns Beach Foreshore Reserve.	Ongoing
Fauna	Fauna survey	Undertake a follow up fauna survey, in mid-late spring to supplement previous fauna survey, within 10 years.	Within 9-10 years
	Fauna / Ecological Linkages investigations	During on ground maintenance tasks, investigate the access points utilised by native fauna, in order to guide suitable management of native fauna within the reserve. Based on the findings, undertake an in house study aiming to improve ecological linkages between the Iluka-Burns Beach Foreshore Reserve to the Burns Beach Bushland and Neerabup National Park; and to Yellagonga Regional Park.	Within 1-2 years
	Quenda monitoring	Commence discussions with WA Universities on research and monitoring opportunities of the Quenda population.	Within 4-5 years
	Bat survey	Undertake a one week remote monitoring bat survey in summer to supplement previous one night bat survey undertaken in spring.	Within 9-10 years
	Installation of bat boxes	If bat survey indicates presence of bats, consider installing bat boxes to encourage bats to roost.	Within 9-10 years
	Feral animal control	Monitor feral animal populations and implement regular control to reduce pressures on native fauna and flora. This is inclusive of rabbit, cat and fox control. Remove feral beehives if they are identified on site and are accessible.	Ongoing
	Patrols undertaken by City Field Officers	Continue targeted patrols by City Field Officers to ensure dogs are kept on leads and their droppings are collected.	Ongoing
Social and Built Environment	Maintain conservation fencing	Maintain conservation fencing on an as needed basis (informed by inspections every 2 months) to protect the native vegetation, flora and fauna from informal access.	Ongoing
	Upgrade conservation fencing	Upgrade sections of old ring-lock conservation fencing to the newer plastic coated galvanised chain mesh fencing.	Within 4-5 years
	Investigate closure and rehabilitation of informal tracks	Investigate closure and rehabilitation of informal tracks that are used infrequently to protect vegetation.	Ongoing

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
	Implement Wayfinding Signage Strategy	Implement recommendations from the City's Wayfinding Signage Strategy that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.	Ongoing
	Investigate additional signage requirements	Investigate any additional signage requirements, such as Aboriginal cultural heritage interpretative signage (e.g. mythological Burns Beach Waugal Aboriginal heritage site), limestone cliff danger signage and Unexploded Ordnance signage as required.	Within 4-5 years
	Patrols undertaken by City Field Officers	The City will continue to visit Iluka-Burns Beach Foreshore Reserve as part of the City Field Officers patrol regime, as a form of active surveillance of the bushland and adjoining recreational parkland.	Ongoing
	Investigate the provision of additional waste services	Monitor and investigate the provision of additional waste services to mitigate litter, as a result of increased public use and infrastructure upgrades in the active reserve.	Ongoing
	Dismantle cubby houses, BMX tracks and informal tracks	Dismantle cubby houses, BMX tracks and informal tracks as required to discourage vegetation degradation and littering in the surrounding area.	Ongoing
Fire Management	Maintain fire access tracks and footpaths	Maintain fire access tracks and footpaths, including weed control and pruning of vegetation, by implementing the Annual Bushland Schedule.	Ongoing
	Implement Bushfire Risk Management Plan	Implement the City's Bushfire Risk Management Plan in relation to Iluka-Burns Beach Foreshore Reserve.	Ongoing
	Monitor fire occurrences	Monitor fire occurrences through mapping and updating Geographic Information System (GIS) layers detailing fire incidents and frequency to inform fire prevention actions.	Ongoing
	Revise weed control after fire incidents	Revise weed control after fire incidents to aid regrowth by selecting appropriate chemicals, targeting weeds if safe to do so for new seedlings, and spraying weedy grasses using backpacks.	Ongoing
	Implement Fire Weed Management Guidelines	Implement the Fire Weed Management Guidelines, when required, to reduce the infestation of weeds in natural areas after a fire.	Ongoing

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
Education and Training	Environmental Education Program	Implement initiatives of a 'Think Green Biodiversity' campaign (part of the Environmental Education Program) targeting environmental issues such as: <ul style="list-style-type: none"> • pathogens • weeds • litter • fire • flora, fungi and fauna awareness and valuing biodiversity • preventing hand feeding of wildlife • responsible pet ownership. 	Ongoing
	Support 'Friends of North Ocean Reef – Iluka Foreshore'	Support the 'Friends of North Ocean Reef – Iluka Foreshore' group and encourage community participation in the management of this natural area.	Ongoing
	School Programs	Implement an Adopt a Bushland/Coastline program for students to provide an interactive bushland management program; and liaise with nearby schools such as Kinross Primary School, Francis Jordan Catholic School, Currambine Primary School, Burns Beach Primary School and Beaumaris Primary School to increase awareness of the bushland ecological values.	Ongoing
	Natural Environment Team training	Conduct regular Natural Environment Team plant identification training, including weed management, to increase the effectiveness of weed control activities, as required.	Ongoing
	Friends Groups training	Provide training including pathogen management and weed identification to community members involved in Friends of North Ocean Reef – Iluka Foreshore	Ongoing

Appendix 2: Iluka – Burns Beach Foreshore Reserve Flora Species List

Appendix 3: Iluka – Burns Beach Foreshore Reserve Key Flora Species

Appendix 4: Conservation Codes for Flora and Fauna

Appendix 5: Keighery Scale Definitions

Appendix 6: Examples of Priority Weed Species at Iluka – Burns Beach Foreshore Reserve

Appendix 7: Iluka – Burns Beach Foreshore Reserve High Priority Weed Species
Management

Appendix 8: Iluka – Burns Beach Foreshore Reserve Fauna Species List

Appendix 9: Iluka – Burns Beach Foreshore Reserve Key Fauna Species

Appendix 10: Iluka – Burns Beach Foreshore Reserve Introduced Fauna Species

Appendix 11: Iluka – Burns Beach Foreshore Reserve Fungi Species – Likely to Occur

Appendix 1: Relevant Local, State and Federal Legislation, Plans and Strategies

The purpose of the Iluka-Burns Beach Foreshore Reserve Management Plan aligns with the environmental aims and objectives of the following City of Joondalup, State and Federal Government strategic plans and legislation.

Local Government

Strategic Community Plan

The City of Joondalup *Strategic Community Plan 2022-2032* highlights the focus on preservation, conservation and accessibility of the City's natural assets and the importance of engaging with the community and regional stakeholders.

Environment Plan

The City of Joondalup *Environment Plan 2014-2019* provides strategic direction in the delivery of environmental initiatives within the City of Joondalup.

Biodiversity Action Plan

The *City of Joondalup Biodiversity Action Plan 2009 – 2019* provides direction for the City's biodiversity management activities and details the development of individual Natural Areas Management Plans as an action.

Local Planning Scheme No. 3

The City's Local Planning Scheme No. 3 (LPS3) classifies land into zones and outlines how land within those zones may be used and developed. Significant natural areas that are not otherwise protected can be zoned as environmental conservation reserves to identify areas with biodiversity and conservation value and to protect those areas from development and subdivision.

Neither Iluka Foreshore Reserve or Burns Beach Foreshore Reserve are zoned as Environmental Conservation under LPS3 as they are both under a higher protection order, the MRS – Parks and Recreation.

City of Joondalup Pest Plant Local Law 2012

Under the *Agriculture and Related Resources Protection Act 1976* and the *Local Government Act 1995*, the Council of the City of Joondalup made the *Pest Plant Local Law 2012* to require the owner or occupier of private land within the City of Joondalup district to destroy, eradicate or otherwise control pest plants within a specified time. Caltrop (*Tribulus terrestris*) and Golden Crownbeard (*Verbesina encelioides*) are designated as pest plants.

Caltrop and Golden Crownbeard have not been identified within Iluka – Burns Beach Foreshore Reserve by the City of Joondalup.

Local Biodiversity Program (formerly Perth Biodiversity Project)

The City of Joondalup is one of 32 local governments participating in the Western Australian Local Government Association's (WALGA's) Local Biodiversity Program. The aim of the Local Biodiversity Program is to support local governments to effectively integrate biodiversity conservation into land use planning to protect and manage local natural areas.

As part of the Local Biodiversity Program, the City of Joondalup assessed all natural areas from 2004 onwards using the ecological criteria of the Natural Area Assessment process, resulting in a priority ranking of natural areas. The City of Joondalup assesses major conservation (without management plans), high priority and medium priority natural areas approximately every 5-7 years using this assessment tool.

Natural Area Assessments include a desktop assessment and field survey and document information such as:

- vegetation complexes
- threatened or significant flora or ecological communities
- structural plant communities
- weed species
- vegetation condition assessment
- ecological criteria rankings
- a viability estimate
- fauna species observed.

A Natural Areas Initial Field Assessment was conducted at Burns Beach Park in 2009.

State Government

Relevant Legislation, Policies and Plans

Aboriginal Heritage Act 1972

The Act provides a framework for protection of Aboriginal cultural sites in Western Australia.

Iluka Foreshore Reserve contains the mythological Burns Beach Waugal Aboriginal heritage site (ID 22672) which is registered with the Department of Planning, Lands and Heritage as a State protected Aboriginal heritage site.

Biodiversity Conservation Act 2016

The Act provides for the conservation and protection of biodiversity, particularly threatened species and threatened ecological communities.

One flora species listed as Endangered under the EPBC Act and the BC Act was recorded within the Iluka survey area, namely *Marianthus paralius* (WA Herbarium ACC/8941/E). No Threatened flora species listed under the EPBC Act or BC Act were recorded within the Burns Beach survey area.

One conservation significant fauna species was observed during the Iluka field survey, the Carnaby's Cockatoo (*Calyptorhynchus latirostris*); listed as Endangered under the EPBC Act and BC Act.

Biosecurity and Agriculture Management Act 2007

The Act gives provision to control the entry, establishment, spread and impact of certain organisms that have or may have an adverse effect on other organisms, human beings, the environment, agricultural activities or related commercial activities. Pests, including plants, are declared under the Act as prohibited organisms.

One the Declared Pest species **Moraea flaccida* (One-leaf Cape Tulip), was recorded during the Iluka – Burns Beach Foreshore Reserve survey.

Bush Fires Act 1954

The Act makes provision for diminishing the dangers resulting from bush fires and for the prevention, control and extinguishment of bush fires.

Cat Act 2011

The Act makes provision for the control and management of cats and promotes and encourages the responsible ownership of cats.

Cats may be seized if they are found wandering in public areas, such as Iluka-Burns Beach Foreshore Reserve, in accordance with the *Cat Act 2011*.

Dog Act 1976

The Act makes provisions for the control of dogs in public and private spaces and promotes the responsible ownership of dogs.

Iluka-Burns Beach Foreshore Reserve is designated as a place where dogs must be on a leash at all times by Council resolution in accordance with the *Dog Act 1976*.

Environmental Protection Act 1986

The Act provides authority to the Environmental Protection Authority (EPA) for the prevention, control and abatement of pollution and environmental harm, for the conservation, preservation, protection, enhancement and management of the environment in Western Australia.

Heritage of Western Australia Act 1990

The Act provides for and encourages the conservation of places which have significance to the cultural heritage in the State.

Government of Western Australia "Bush Forever" Strategy 2000

The Strategy identifies regionally significant bushland in the Perth Metropolitan Region to be retained, managed and protected forever.

Iluka Foreshore Reserve is designated as Bush Forever site 325 and the majority of Burns Beach Foreshore Reserve is designated as Bush Forever site 322.

Two DBCA listed flora species were recorded in the Iluka survey area; *Hibbertia leptotheca* (P3) and *Jacksonia sericea* (P4).

A further eight Bush Forever significant species were recorded within the survey areas; *Agonis flexuosa*, *Callitris preissii*, *Grevillea preissii* subsp. *preissii* and *Melaleuca lanceolata* within Burns Beach and *Diplopeltis huegelii*, *Grevillea preissii* subsp. *preissii*, *Lechenaultia linarioides*, *Melaleuca cardiophylla*, and *Trymalium ledifolium* within Iluka Foreshore. These species are listed as Bush Forever significant species of the Perth Metropolitan Region due to their being endemic to the Swan Coastal Plain.

Draft Perth and Peel Green Growth Plan for 3.5 million (Green Growth Plan)

The *Green Growth Plan* delivers a comprehensive environmental program for the protection of both Commonwealth matters of national environmental significance and State environmental values. The draft *Green Growth Plan* provides a comprehensive approach to the avoidance and mitigation of environmental impacts and a committed Conservation Program that will deliver significant improvements to the protection and management of the environment as the Perth and Peel regions grow to a population of 3.5 million people.

State Planning Policy 2.8 – Bushland Policy for the Perth Metropolitan Region

The *State Planning Policy 2.8 – Bushland Policy for the Perth Metropolitan Region* aims to provide direction and an implementation framework that will ensure bushland protection and management issues in the Perth Metropolitan Region are appropriately addressed and integrated with broader land use planning and decision-making.

State Planning Policy 3.7 - Planning in Bushfire Prone Areas

The *State Planning Policy 3.7 – Planning in Bushfire Prone Areas* (SPP 3.7) seeks to guide the implementation of effective risk-based land use planning and development to preserve life and reduce the impact of bushfire on new property and infrastructure. SPP 3.7 applies to all higher order strategic planning documents, strategic planning proposals, subdivision and development applications located in designated bushfire prone areas.

Federal Government

Relevant Legislation and Strategies

Environment Protection and Biodiversity Conservation Act 1999

The Act provides for the protection of the environment and the conservation of biodiversity, and for related purposes.

One *Environment Protection and Biodiversity Conservation (EPBC) Act 1999* listed fauna species have been recorded in Iluka Foreshore Reserve, the endangered Carnaby's Black-Cockatoo (*Calyptorhynchus latirostris*). In addition, one flora species listed as Endangered under the EPBC Act was recorded within the Iluka survey area, namely *Marianthus paralius*.

Australia's Biodiversity Conservation Strategy 2010-2030

The Strategy aims to protect biological diversity and maintain ecological processes and systems.

Australia's Strategy for Nature 2019-2030

The Strategy is the overarching framework for all national, state and territory and local strategies, legislation, policies and actions that target nature. The strategy moves away from a purely protection-based approach and strives to incorporate adaptation, resilience and natural resource management in cities, rural and natural environments, on land and at sea.

Australian Pest Animal Strategy 2017-2027

The strategy provides national guidance on best practice vertebrate pest animal management, in striving towards the national vision of protecting Australia's economy, environment and social wellbeing from the impact of pest animals. It reaffirms agreed national pest animal management principles, and sets national goals and priorities that will help improve Australia's overall ability to prevent and respond to new pest animal incursions and manage the negative impacts of established pest animals.

Australian Weeds Strategy 2017-2027

The strategy provides national guidance on best practice weed management. It aims to guide coordination of effort across all jurisdictions and affected stakeholders and to inform plans and actions by state and territory governments, local governments, regional natural resource management (NRM) agencies, as well as by industry, landholders and the wider community.

Threatened Species Strategy 2021-2031

The Australian Government's Threatened Species Strategy delivers a framework for action to protect and recover our nation's threatened plants and animals across Australia, spanning terrestrial, marine and freshwater environments. It sets a clear vision to drive practical on-ground action; identifies key action areas that are fundamental to the recovery of threatened species and ecological communities; and establishes principles for identifying priority threatened species and places to focus Australian Government effort. The Strategy provides guidance into how the Australian community can work together to protect threatened animals and plants, both now and into the future and is underpinned by consecutive 5 year Action Plans.

The Australian Government endorsed a list of 20 Weeds of National Significance (WoNS) in 1999 and a further 12 species were added in 2012. The 32 WoNS are identified as nationally agreed priority plant species for control and management based on the criteria of invasiveness and impact characteristics, potential and current area of spread and economic, environmental and social impacts.

Iluka – Burns Beach Foreshore Reserve contains one known WoNS, namely *Asparagus asparagoides* (Bridal Creeper).

International Conventions or Listings

International Union for Conservation of Nature (IUCN) Red List of Threatened Species

The IUCN Red List of Threatened Species™ provides taxonomic, conservation status and distribution information on plants and animals that have been globally evaluated using the IUCN Red List Categories and Criteria.

One endangered IUCN Red List species has been recorded in Iluka-Burns Beach Foreshore Reserve, Carnaby's Black-Cockatoo (*Calyptrorhynchus latirostris*).

United Nations Convention on Biological Diversity (CBD)

The *Convention on Biological Diversity* (CBD) is one of three international environment agreements that emerged from the Rio Earth Summit held in 1992. The CBD is the overarching global framework on biodiversity conservation for the United Nations system and links all related biodiversity-related conventions and cascading treaties.

United Nations Convention on Migratory Species

The Convention on Migratory Species (CMS) aims to build and strengthen global conservation efforts for migratory species in the air, on land, and in the seas.

Apiaceae	<i>Xanthosia huegelii</i>							X							

+ = recorded during survey.

• = listed within database search for respective survey but not recorded during that survey.

* = introduced species.

^ = species recorded as an opportunistic collection

CR = listed as Critically Endangered under the EPBC Act, WC Act and the IUCN red list.

EN = listed as Endangered under the EPBC Act, WC Act and the IUCN red list.

VU = listed as Vulnerable under the EPBC Act, WC Act and the IUCN red list.

P1, P2, P3 = Taxa that may be threatened or near threatened, but are data deficient or have not yet been adequately surveyed to be listed under the Wildlife Conservation (Rare Flora) Notice

P4 = Taxa that are not currently threatened but could if present circumstances change. These taxa are usually represented on conservation lands.

Note: For further explanations on Conservation Codes, refer to Appendix 4.

Appendix 4: Conservation Codes for WA Flora and Fauna

Conservation Codes for WA Flora and Fauna under the *Biodiversity Conservation Act 2016*

Category	Definition
Threatened (T)	Listed in the category of critically endangered, endangered or vulnerable, as outlined below.
Critically Endangered (CR)	Threatened species considered to be facing an extremely high risk of extinction in the wild in the immediate future.
Endangered (EN)	Threatened species considered to be facing a very high risk of extinction in the wild in the near future.
Vulnerable (VU)	Threatened species considered to be facing a high risk of extinction in the wild in the medium-term future.
Migratory (MI)	Species are defined as migratory if they are listed in an international agreement approved by the Commonwealth Environment Minister, including: <ul style="list-style-type: none"> the Bonn Convention (<i>Convention on the Conservation of Migratory Species of Wild Animals</i>) for which Australia is a range state. the agreement between the Government of Australia and the Government of the People's Republic of China for the Protection of Migratory Birds and their environment (CAMBA). the agreement between the Government of Japan and the Government of Australia for the Protection of Migratory Birds and Birds in Danger of Extinction and their Environment (JAMBA). the agreement between Australia and the Republic of Korea to develop a bilateral migratory bird agreement similar to the JAMBA and CAMBA in respect to migratory birds (ROKAMBA). Published as migratory birds protected under an international agreement under schedule 5 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i>.
Conservation Dependent (CD)	Fauna of special conservation need being species dependent on ongoing conservation intervention.
Other specially protected species (OS)	Fauna otherwise in need of special protection to ensure their conservation.

The City of Joondalup has added a category listed as Locally Significant to reflect locally significant native species within the City of Joondalup. Locally Significant species are defined below.

Category	Definition
Locally Significant (LS) - City of Joondalup	Taxa within the City of Joondalup who are at risk of predation or extinction from within the City due to a variety of environmental and external factors. These populations are in need of conservation and monitoring, thus are classed as Locally Significant species within the City of Joondalup.

Priority flora and fauna categories used by the Department of Biodiversity, Conservation and Attractions (2019)

Category	Code	Definition
Priority 1	P1	<p><i>Poorly-known species</i></p> <p>Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.</p>
Priority 2	P2	<p><i>Poorly-known species</i></p> <p>Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.</p>
Priority 3	P3	<p><i>Poorly-known species</i></p> <p>Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.</p>
Priority 4	P4	<p><i>Rare, Near Threatened and other species in need of monitoring</i></p> <p>(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands.</p> <p>(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for Vulnerable, but are not listed as Conservation Dependent.</p> <p>(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.</p>

Appendix 5: Keighery Vegetation Condition Scale Definitions

Vegetation Condition	Description
Pristine	Pristine or nearly so, with no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered with obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Appendix 7 - Iluka – Burns Beach Foreshore Reserve High Priority Weed Species Management

Name	Common Name	Type of Weed	Status/Notes	Treatment Type	Optimal Treatment Timing (WA Herbarium)
<i>Arctotis</i> sp.	Arctotis	Herbs	Priority (CoJ)	Hand weeding, Glyphosate	September to January
<i>Asparagus asparagoides</i>	Bridal Creeper	Herbs and Creepers	WONS, P1 (whole state), highest priority (DPaW Swan Region), Priority (CoJ)	Metsulfuron, hand weeding	August to September
<i>Avena fatua</i>	Wild Oats	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Quizalofop	July to October
<i>Carpobrotus edulis</i>	Pigface	Herbs	High priority (DPaW Swan Region)	Hand weeding, Glyphosate	All year
<i>Chamaelucium uncinatum</i>	Geraldton Wax	Trees and Shrubs	Priority (CoJ)	Cut and paint with Glyphosate, hand weed	June to November / All year
<i>Conyza</i> sp.	Fleabane		Priority (CoJ)	Hand weeding, Glyphosate *Resistant to herbicide treatment.	All year
<i>Cynodon dactylon</i>	Couch grass	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Quizalofop	November to February
<i>Dimorphotheca ecklonis</i> (more recently known as <i>Osteospermum ecklonis</i> (DC.) Norl.)	Veldt Daisy	Herbs	Priority (CoJ)	Hand weeding, Glyphosate	September to January
<i>Ehrharta calycina</i>	Perennial Veldt Grass	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Quizalofop	June to August
<i>Ehrharta longiflora</i>	Annual Veldt Grass	Grasses	Priority (CoJ)	Quizalofop	July to November
<i>Euphorbia paralias</i>	Sea Spurge	Herbs	Priority (CoJ)	Glyphosate, Metsulfuron	October to June

Name	Common Name	Type of Weed	Status/Notes	Treatment Type	Optimal Treatment Timing (WA Herbarium)
<i>Euphorbia terracina</i>	Geraldton Carnation Weed	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Triasulfuron, Hand weeding	June to August spray, June to November hand weeding
<i>Fumaria</i> sp.	Fumitory	Herbs	Priority (CoJ)	Metsulfuron	August to November
<i>Gazania linearis</i>	Gazania	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Hand weeding	June to December spray, All year hand weeding
<i>Ipomoea indica</i>	Morning Glory	Herbs and Climbers	Priority (CoJ)	Metsulfuron	November to May
<i>Lactuca serriola</i>	Prickle Lettuce	Herbs	Priority (CoJ)	Hand weeding	October to February
<i>Moraea flaccida</i>	One-leaf Cape Tulip	Herbs	Declared pest (BAM Act), High priority (DPaW Swan Region), Priority (CoJ)	Metsulfuron	July to August
<i>Oxalis pes-caprae</i>	Soursob	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Metsulfuron	June to July
<i>Pennisetum clandestinium</i>	Kikuyu grass	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Quizalofop, Glyphosate	June to August
<i>Pelargonium capitatum</i>	Rose Pelargonium	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Metsulfuron, Hand weeding	June to October
<i>Raphanus</i> sp.	Wild Radish	Herbs	Priority (CoJ)	Hand weeding	April to May or July to November
<i>Ricinus communis</i>	Castor Oil Plant	Trees and Shrubs	Priority (CoJ)	Hand weeding	June to September
<i>Schinus terebinthifolia</i>	Japanese Pepper, Brazilian Pepper	Trees and Shrubs	High priority (DPaW Swan Region), Priority (CoJ)	Cut & paint with Glyphosate, hand weeding	All year
<i>Tetragonia decumbens</i>	Sea Spinach	Herbs	Priority (CoJ)	Hand weeding, Glyphosate	March to November
<i>Thinopyrum distichum</i>	Sea Wheatgrass	Herbs	Priority (CoJ)	Metsulfuron (wiping)	October to November
<i>Trachyantha divaricata</i>	Onion Weed	Herbs	Priority (CoJ)	Hand weeding, Metsulfuron, Glyphosate	June to October

Name	Common Name	Type of Weed	Status/Notes	Treatment Type	Optimal Treatment Timing (WA Herbarium)
<i>Tropaeolum</i> sp.	Nasturtium	Herbs	Priority (CoJ)	Glyphosate, hand weeding	July to November
<i>Urospermum picroides</i>	False Hawkbit	Herbs	Priority (CoJ)	Hand weeding	August to December
<i>Yucca</i> sp.	Yucca	Herbs	Priority (CoJ)	Hand weeding	July

Note: The Iluka – Burns Beach High Priority Weed Species Management table was created using the following criteria:

- Weed species listed as a Weed of National Significance (WoNS) in 1999 and 2012 by the Australian Government;
- The weed species is listed as a Declared Plant according to the *Biosecurity and Agriculture Management Act 2007*;
- The weed species is listed as High Priority in regards to its ecological impact according to the DPaW Draft Weed Prioritisation Process for the Swan Region (2013);
- The weed species is listed as a Pest Plant under the City's *Pest Plant Local Law 2012*;
- The City of Joondalup has determined that the weed species poses: a major threat to vegetation and the structure of vegetation communities or is likely to contribute to a high fuel load (e.g. grasses). These species are classed as High Priority weeds in the City of Joondalup.

Notes: Invertebrates have not been included within this Appendices due to the high diversity of invertebrate species (exceeding 500 species) found in the invertebrate inventory surveys undertaken by Spineless Wonders between 2015 and 2018.¹

Key:

X = recorded during survey.

• = listed within database search for respective survey but not recorded during that survey.

* = introduced species.

EN = listed as Endangered under the EPBC Act, WC Act and/or the IUCN red list.

VU = listed as Vulnerable under the EPBC Act, WC Act and/or the IUCN red list.

LC = Least Concern under the IUCN red list.

M = listed as Migratory species under the EPBC Act.

IA = listed as Migratory under the WC Act.

P1 = Priority 1: poorly known species occurring on threatened land (land not managed for conservation)

P2 = Priority 2: poorly known species occurring on some conservation lands

P3 = Priority 3: known from few specimens or records and need urgent survey and evaluation of conservation status.

P4 = Priority 4: not currently threatened but could if present circumstances change. Usually found on conservation lands.

Appendix 9: Iluka – Burns Beach Foreshore Reserve Key Fauna Species

Name	Common Name	Conservation Code	Image
<i>Calyptorhynchus latirostris</i>	Carnaby's Black-Cockatoo	Schedule 2 (<i>Wildlife Conservation Act</i>), Endangered (IUCN, DPaW and EPBC)	 <p>Photo: Gary Tate, Yellagonga Regional Park, 2012</p>
<i>Isoodon fusciventer</i>	Quenda	Priority 4 (Department of Biodiversity, Conservation and Attractions)	 <p>Photo: Gary Tate, 2017</p>

Acknowledgement of Country

The City of Joondalup acknowledges the traditional custodians of this land, the Whadjuk people of the Noongar nation. We recognise the culture of the Noongar people and the unique contribution they make to the Joondalup region and Australia. We pay our respects to their Elders past, present and emerging, as well as all Aboriginal and Torres Strait Islander peoples.

Joondalup-ak ngala kaditj Noongar moort nidja Wadjak boodjar-ak kalyakool moondang-ak kaaradj-midi. Ngala Noongar Moort wer baalabang moorditj kaadidjiny koota-djinanginy. Ngala Noongar wer Torres Strait Moort-al dandjoo koorliny kwaba-djinanginy. Koora, yeyi wer kalyakool, ngalak Noongar wer Torres Strait Birdiya wer moort koota-djinanginy.

This plan may include words from the Noongar language and the City recognises that Aboriginal languages are oral in nature and the same word can be spelt in multiple ways.

Aboriginal and Torres Strait Islander people are advised that this plan may contain images or names of people who are deceased.

Executive Summary

The *Iluka-Burns Beach Foreshore Reserve Management Plan* outlines a framework for the environmental management of Iluka Foreshore Reserve and Burns Beach Foreshore Reserve (referred to as Iluka-Burns Beach) for the next ten years. Iluka-Burns Beach are classified as Major Conservation Areas due to the high biodiversity values of the area.

As part of the development of the *Iluka-Burns Beach Foreshore Reserve Management Plan*, a flora, fauna and fungi survey was conducted in spring 2020. The results of this survey were combined with previous surveys to develop a comprehensive species list and ecological assessment of the site.

Iluka Foreshore Reserve is located approximately 27km north-west from the Perth Central Business District, with Burns Beach Foreshore Reserve being located adjacent to the north.

Iluka Foreshore Reserve in Iluka contains approximately 31 hectares (ha) of bushland and is bounded by Ocean Parade to the north, Burns Beach Road to the east, ocean to the west and extends just past Shenton Ave to the south.

Iluka Foreshore Reserve contains a significant State listed priority ecological community 'Coastal shrublands on shallow sands' (Priority 3) and is recognised for its regional environmental significance by being designated as a Bush Forever site (325) by the Western Australian Planning Commission in 2000. Iluka Foreshore Reserve contains the Burns Beach Waugal Aboriginal heritage site (ID 22672) and is also located adjacent to the State Heritage Register listed Marmion Marine Park.

The majority of the native vegetation at Iluka Foreshore Reserve is in excellent condition (70%) and the survey conducted in spring 2020 identified 74 native flora species (including one endangered species, two priority species and five significant species of the Perth Metropolitan Region), three native mammals (including one priority species), 25 native birds (including one endangered species), 13 native reptiles and 12 native invertebrates.

A comprehensive macroinvertebrate and herpetofauna survey was conducted at Iluka Foreshore between April 2015 to May 2018 by Spineless Wonders (engaged by Friends of North Ocean Reef – Iluka Foreshore) with over 500 invertebrate species being identified.¹

A total of 47 weed species, four non-native mammals, two non-native birds and one non-native invertebrate were identified at Iluka Foreshore Reserve in the survey conducted in spring 2020.

Burns Beach Foreshore Reserve in Burns Beach contains approximately 29 ha of bushland and is bounded by Tamala Park Conservation Reserve to the north, Beachside Drive to the east, ocean to the west and Ocean Parade to the south.

Burns Beach Foreshore Reserve contains a significant State listed priority ecological community 'Coastal shrublands on shallow sands' (Priority 3) and the majority of the site is recognised for its regional environmental significance by being designated as a Bush Forever site (322) by the Western Australian Planning Commission in 2000. Burns Beach Foreshore Reserve is also located adjacent to the State Heritage Register listed Marmion Marine Park.

¹ Knowles, D.G. (2018)

The majority of the native vegetation at Burns Beach Foreshore Reserve is in excellent condition (65%) and the survey conducted in spring 2020 identified 63 native flora species (including four significant species of the Perth Metropolitan Region), three native mammals (including one priority species), 22 native birds, seven native reptiles and 12 native invertebrates.

A total of 43 weed species, three non-native mammals, two non-native birds were identified at Burns Beach Foreshore Reserve in the survey conducted in spring 2020.

Environmental threats have the potential to degrade natural areas and reduce biodiversity values. Environmental threats addressed in this Plan include weeds, pathogens and disease, human impacts, access and infrastructure, non-native fauna species and fire.

In order to address the key environmental threats at Iluka-Burns Beach a number of management actions are outlined within the Plan. Recommended management actions for the next five years include weed management, pathogen management, feral animal control, bushfire mitigation, monitoring flora and fauna species through field surveys, endangered flora species management, maintaining infrastructure, environmental education and supporting the Friends Group.

It is also proposed that the City reviews the risk and management of unexploded ordnances (UXO) within Burns Beach Foreshore Reserve and coastal hazard risks such as the limestone cliffs across the Iluka – Burns Beach Foreshore Reserve. Management actions will be implemented in partnership with Friends of North Ocean Reef - Iluka Foreshore and other key stakeholders and community groups, where relevant.

1.0 Introduction

1.1 Background

The City of Joondalup ('the City') is situated along the Swan Coastal Plain, with the Joondalup City Centre being located 30km from the Perth Central Business District. The City covers an area of 96.5km² which encompasses a diverse range of natural areas including 17km of coastal foreshore, a chain of wetlands and a variety of bushland ecosystems (as shown in Figure 1).

The City's southern boundary is located approximately 16km from the Perth Central Business District, and is bounded by the City of Wanneroo to the east and north, the City of Stirling to the south, and the Indian Ocean to the west.

There are a number of regionally, nationally and internationally significant natural areas located within the City, including the Yellagonga Regional Park and a number of Bush Forever sites which contain species of high conservation value. Significant natural areas adjacent to the City include the Marmion Marine Park and the Neerabup National Park.

The City of Joondalup is committed to conserving and enhancing the City's natural assets to ensure the long term protection of the environment for future generations.

1.2 Natural Area Management Plans

The City is developing Natural Area Management Plans to provide strategic ongoing management of the City's natural areas and protect native vegetation and ecosystems.

Environmental threats have the potential to degrade natural areas and reduce biodiversity values. Environmental threats addressed in this Plan include weeds, plant diseases, fire, non-native fauna species and human impacts.

Natural Areas Management Plans describe the potential environmental impacts, risks and threats in natural areas and the associated management strategies that will be implemented to minimise potential impacts.

1.3 Study Area

The study area for the Iluka-Burns Beach Foreshore Reserve Management Plan is Iluka Foreshore Reserve in Iluka and Burns Beach Foreshore Reserve in Burns Beach. These sites have been recognised for their regional environmental significance by being designated as Bush Forever sites 322 and 325^{2,3}. Marmion Marine Park is located adjacent to the sites and is listed on the State Heritage Register by the Government of Western Australia.

1.3.1 Location

Iluka Foreshore Reserve in Iluka contains approximately 31 ha of bushland and is bounded by Burns Beach Caravan Park and Ocean Parade to the north, Burns Beach Road and residential properties to the east, ocean to the west and extends just past Shenton Ave to the south, adjoining Ocean Reef Foreshore Reserve (as shown in Figure 2).

² Government of Western Australia (2000a)

³ Government of Western Australia (2000b)

Burns Beach Foreshore Reserve in Burns Beach contains approximately 29 ha of bushland and is bounded by Tamala Park Conservation Reserve to the north, Beachside Drive, residential properties and bushland to the east, ocean to the west and Ocean Parade and Burns Beach Caravan Park to the south (as shown in Figure 3).

1.3.2 Aboriginal Heritage

The Iluka-Burns Beach Foreshore Reserve is located within the Traditional Country of the Noongar people. Noongar people have lived in the south-west of Western Australia for more than 45,000 years. Noongar are made up of fourteen different language groups and Whadjuk is the name of the dialectal group from the Perth area.⁴

Noongar people have their own laws and customs and speak their own language. The laws and customs are characterised by a strong spiritual connection to country, caring for the natural environment and for places of significance.⁴ The Noongar connection with nature and country includes a close relationship with spiritual beings associated with the land.⁵

Iluka Foreshore Reserve contains the mythological Burns Beach Waugal Aboriginal heritage site (ID 22672). Waugal means soul, spirit or breath and is the snake or rainbow serpent major spirit for Noongar people and central to their beliefs and customs. Noongar people recognise the Waugal as the giver of life, maintaining all fresh water sources and making Noongar people custodians of the land. Noongar people believe that the Waugal dominates the earth and sky and its track shaped the sand dunes as it slithered over the land.⁵

1.3.3 European Heritage

Up until the early 1970's, Iluka-Burns Beach Foreshore Reserve was predominantly native vegetation. In the early 1970s there was a residential development at the south of Burns Beach Foreshore Reserve adjacent to Iluka Foreshore Reserve. Further residential developments adjacent to Iluka-Burns Beach Foreshore Reserve commenced in the 1970s.

The suburb name Iluka was proposed by the City of Wanneroo and approved in 1980. Iluka is an Aboriginal word from an eastern states dialect meaning 'near the sea'.⁶

Burns Beach is located on land originally owned by Midland Railway Company. A request was made by 50 district residents to the Wanneroo Road Board in 1908 and granted for a 50-acre reserve for camping and a health resort at the beach. By the late 1920s the area was referred to by locals as 'Burns Beach' after a farmer who ran sheep in the area.⁶

1.3.4 Land Use Planning

City of Joondalup Local Planning Scheme No. 3

Planning for land use occurs under the City of Joondalup Local Planning Scheme No. 3 (LPS3). LPS3 includes the protection of sites zoned as Environmental Conservation, meaning areas with biodiversity and conservation value.

⁴ SWALSC (no date(a))

⁵ SWALSC (no date(b))

⁶ Landgate (2020)

Neither Iluka Foreshore Reserve or Burns Beach Foreshore Reserve are zoned as Environmental Conservation under LPS3 as they are both under a higher protection order, the MRS – Parks and Recreation.

Metropolitan Region Scheme

The Metropolitan Region Scheme (MRS) was established in 1962 by the then Metropolitan Regional Planning Authority. The MRS sets out the broad pattern of land use for the whole Perth Metropolitan Region.

The coastal foreshore area of Iluka Foreshore Reserve and Burns Beach Foreshore Reserve was zoned as Parks and Recreation when the MRS was established, meaning lands of regional significance for ecological, recreation or landscape purposes.

1.3.5 Land Tenure

Iluka Foreshore Reserve is Crown Land managed by the City of Joondalup and is reserved for the purposes of Parks and Recreation under the Metropolitan Region Scheme (MRS).

Burns Beach Foreshore is partly Crown Land managed by the City of Joondalup and reserved for the purposes of Parks and Recreation under the MRS. The other part of Burns Beach Foreshore Reserve is also reserved for the purposes of Parks and Recreation under the MRS, however it is owned by Burns Beach Management Pty Ltd (as shown in Figure 4). The City has an informal arrangement with Burns Beach Management Pty Ltd to manage the bushland area from Ocean Parade in the south to Burleigh Drive in the north. The remaining bushland on the coast to the north of Burleigh Drive is currently not managed ~~due to restricted access~~ by the City.

1.3.6 Current Land Use

The main uses of Iluka-Burns Beach are for recreational and conservation purposes such as walking, cycling, dog exercising, beach activities and use of adjacent playgrounds and Burns Beach Cafe.

Properties adjacent to Iluka Foreshore Reserve are primarily zoned as Low Density Residential with a small area of Commercial Zone (such as Iluka Plaza) and public open space (Pattaya Park and Burns Park). The Iluka Structure Plan applies to the properties to the north of Silver Sands Drive in Iluka.

Properties adjacent to Burns Beach Foreshore Reserve are primarily zoned as Low and Medium Density Residential with a small area of Commercial Zone and public open space (Burns Beach Park and Beachside Park). The Burns Beach Structure Plan applies to the majority of the properties adjacent to the site.

1.3.6 Future Land Use

Tamala Conservation Park

The establishment of a conservation park between Burns Beach and Mindarie as a Class A Reserve is outlined in the DPLH and WAPC *Tamala Conservation Park Establishment Plan*. Figure 5 identifies the proposed boundaries, with the proposed park comprising of around 380 ha of ~~native high quality~~ coastal vegetation ~~of conservation significance~~ bordered in the west by the Indian Ocean and to the east by Marmion Avenue within the Cities of Wanneroo and Joondalup. The subject area is entirely reserved for Parks and Recreation under the MRS. The entire area lies within Bush Forever site 322 and consists of around 234 ha, owned by the Western Australian Planning Commission (WAPC) and 147 hectares of Crown Reserves.

The Cities of Wanneroo and Joondalup are prepared to continue managing these reserves wholly or in part, conditional upon State Government funding and maintaining a dual use path along the coast to connect Burns Beach and Mindarie.

The *Tamala Conservation Park Establishment Plan* notes the Noongar name of Booyeembara be considered by DBCA when developing the Management Plan for the Park. The plan references that the coastal area was referred to as Booyeembara, deriving from the Noongar word for rock (boya or booyee), referring to the prevalence of limestone in the area.

Marmion Marine Park

Marmion Marine Park is currently situated between Trigg Island and Burns Rocks, encompassing approximately 9,500 hectares (Figure 6). It was gazetted in 1987 as Western Australia's first marine park, with management guided by the *Marmion Marine Park Management Plan (1992-2002)*.

A review of the management plan was recommended by the then Marine Parks and Reserves Authority in 2012, and the Office of the Auditor General in its 2016 report *Management of Marine Parks and Reserves*. In 2019, development approval for Ocean Reef Marina required the excision of 143 hectares from Marmion Marine Park enacted through the *Reserves (Marmion Marine Park) Act 2019*. This triggered a review of the management plan to reflect the excision as well as the proposed extension of the marine park, as a commitment under the State Government's *Plan for Our Parks* initiative.

The DBCA commenced the review and proposed extension of Marmion Marine Park in 2021. There has been an extensive community engagement process throughout the review, ~~with including the final~~ ~~Community Reference Committee meeting scheduled in the later half of 2023~~. The Indicative Joint Management Plan is progressing through relevant statutory approvals and once approval from the relevant Ministers has been granted, will be advertised for the public comment period.

An extension to the Marmion Marine Park is being proposed to enhance protection of intertidal and subtidal macroalgae reef communities, sea grass beds, important habitat for the endemic Australia sea lion (*Neophoca cinerea*) and an array of seabirds. An extension to the park will also allow management frameworks to be put in place to manage the expected increase in use of this area into the future. The proposed extension will see Marmion Marine Park covering the entire length of Iluka – Burns Beach Foreshore Reserve coastline and the City's entire 17km length of coastline (Figure 6).

Marmion Marine Park will continue to be managed for multiple-use, with zoning to be determined through the planning process based on community input. The review will include the development of a new management plan to establish a contemporary management framework to conserve the ecological, social, and cultural values of the area, while allowing for sustainable use and planning for the predicted increased use of the area.

1.4 Aim and Objectives

The aim of the *Iluka-Burns Beach Foreshore Reserve Management Plan* is to provide a framework to protect and enhance biodiversity and conservation values whilst maintaining appropriate community access and awareness of the natural area.

The objectives of the *Iluka-Burns Beach Foreshore Reserve Management Plan* are to:

- Establish a baseline description of the Iluka-Burns Beach environment to guide future environmental planning and recommended management actions.
- Outline key environmental threats and the impact they have on conservation and recreation values.
- Outline management actions to address key environmental threats including monitoring and reporting.

1.5 Purpose

The purpose of the *Iluka-Burns Beach Foreshore Reserve Management Plan* is to:

- Provide information to assist the City in prioritising maintenance schedules.
- Guide the future development of the City's Conservation Capital Works Program.
- Increase opportunities for grant funding by having a detailed schedule of projects.
- Provide guidance to City employees, contractors and Friends Groups operating within Iluka-Burns Beach Foreshore Reserve.
- Provide mechanisms to raise community awareness of Iluka-Burns Beach Foreshore Reserve whilst protecting and enhancing biodiversity and conservation values.

1.6 Strategic Context

The *Iluka-Burns Beach Foreshore Reserve Management Plan* is a Natural Area Management Plan and aligns with the City of Joondalup Strategic Environmental Framework outlined in Figure 7. Details of the relevant local, State and Federal legislation, policies, plans and strategies are outlined in Appendix 1.

Figure 7: City of Joondalup Strategic Environmental Framework

1.7 Stakeholder Consultation

| Key external stakeholders ~~to be~~ consulted for the development of the *Iluka-Burns Beach Foreshore Reserve Management Plan* include:

- Friends of North Ocean Reef - Iluka Foreshore
- Department of Biodiversity, Conservation and Attractions (DBCA)
- Department of Fire and Emergency Services (DFES)
- Department of Planning, Lands and Heritage (DPLH)
- Western Australian Local Government Association (WALGA)
- Burns Beach Residents Association (Inc)
- Iluka Homeowners Association
- Local residents.

2.0 Description of the Physical Environment

2.1 Geology, Soils and Landforms

Soils of the Swan Coastal Plain

Iluka-Burns Beach is situated in the City of Joondalup which is located within the Swan Coastal Plain. The majority of the soils of the Swan Coastal Plain are formed by material deposited by rivers and wind. A series of dune systems has been formed with the youngest dunes being the Quindalup Dunes nearest the coast, followed by the Spearwood Dunes and the oldest Bassendean Dunes are farthest from the coast, as shown in Figure 8.⁷

Iluka-Burns Beach is located within the Quindalup and Spearwood Dune System. The Spearwood Dune System comprises of sand derived from Tamala Limestone.⁸ The Spearwood Dunes have a core of sandy aeolianite with a capping of secondary limestone (Tamala Limestone, predominantly calcarenite) overlain by yellow brown siliceous sands with weak podzol development.^{9,10} The Spearwood Dunes are believed to have formed around 40,000 years ago and comprise of red/brown, yellow and pale yellow/grey sands. The Spearwood Sand Phase is characterised by undulating dunes with rocky crests of Aeolian sand over limestone, as in Figure 9.

The Quindalup System is described as coastal dunes of the Swan Coastal Plain, with calcareous deep sands and yellow sands, dominated by coastal scrub. The Quindalup System formed around 10,000 years ago and exhibits undulating and dramatic landscape features. The Quindalup dunes are underlain by the Safety Bay Sands formation, which comprises calcareous soils also derived from Tamala limestone.¹¹

The environmental geological characteristics of Iluka-Burns Beach are limestone and sand, impacting on the types of vegetation communities existing at the site.

The land contours of Iluka Foreshore Reserve range from 0m to 24m and the Burns Beach Foreshore Reserve land contours range from 0m to 27m Australian Height Datum (AHD), as shown in Figure 13 and Figure 14.

Acid Sulfate Soils

Potential Acid Sulfate Soils are naturally occurring soils and sediments that contain iron sulphides. Potential Acid Sulfate Soils are predominantly found in low-lying coastal wetlands and tidal flats and are harmless when left undisturbed. Exposure to air can cause the iron sulfides in Potential Acid Sulfate Soils to react with oxygen and water producing Acid Sulfate Soils with high concentrations of iron and sulfuric acid, which can lead to other contaminants, such as heavy metals and arsenic being released into the surrounding environment.¹²

⁷ Bolland (1998)

⁸ Gozzard cited in ELA (2016a)

⁹ McArthur and Bettenay cited in Syrinx (2012)

¹⁰ DoW (2004)

¹¹ ELA (2017)

¹² DEC no date (a)

Acid Sulfate Soils are categorised as Potential Acid Sulfate Soils or Actual Acid Sulfate Soils. Potential Acid Sulfate Soils have not been oxidised by exposure to air whilst Actual Acid Sulfate Soils have been disturbed or exposed to oxygen and become acidic.¹²

There is no known risk of Acid Sulfate Soils in Iluka Foreshore Reserve or Burns Beach Foreshore Reserve.¹⁰ The risk of Acid Sulfate Soils is based on the likelihood of Potential Acid Sulfate Soils occurring within soil profiles and has been mapped by the Department of Biodiversity, Conservation and Attractions (DBCA) using available desk-top information and limited ground-truthing, within areas where intensive on-ground soil mapping and soil analysis work has been undertaken. The mapping undertaken has found that Acid Sulfate Soils are not known or expected to occur in the environment of Iluka Foreshore Reserve or Burns Beach Foreshore Reserve on the basis of the geological units present, depth to groundwater and partial “ground truthing” or onsite investigation. Within the City of Joondalup, areas of high to moderate acid sulfate soil risk are predominantly in wetlands or areas adjacent to wetlands, as shown in Figure 10.^{12,13}

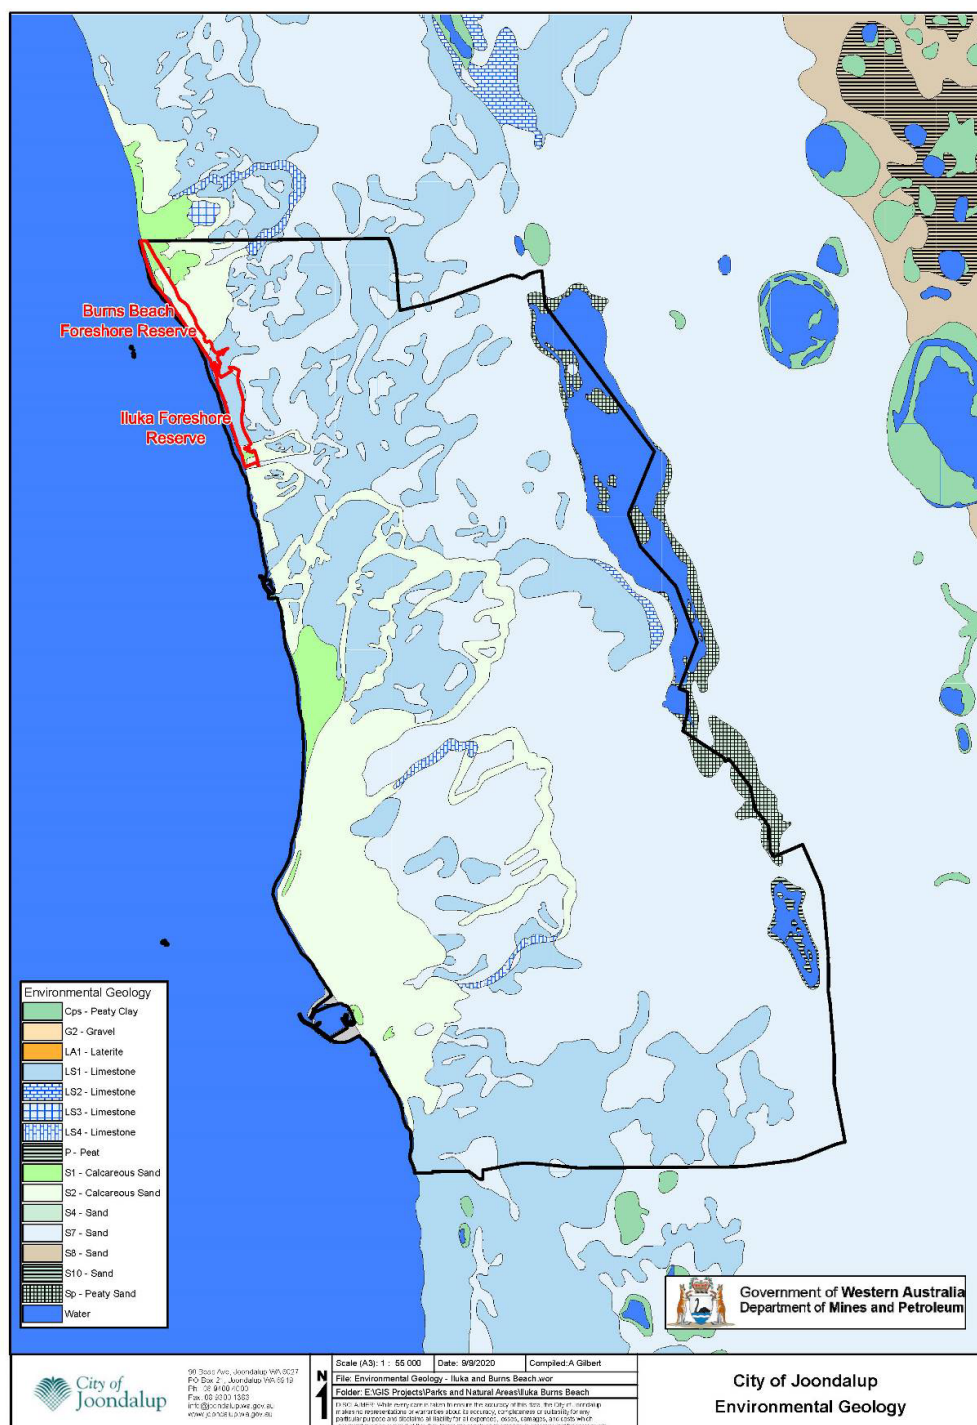

Figure 9: City of Joondalup Environmental Geology (sourced from Department of Mines and Petroleum 2013)

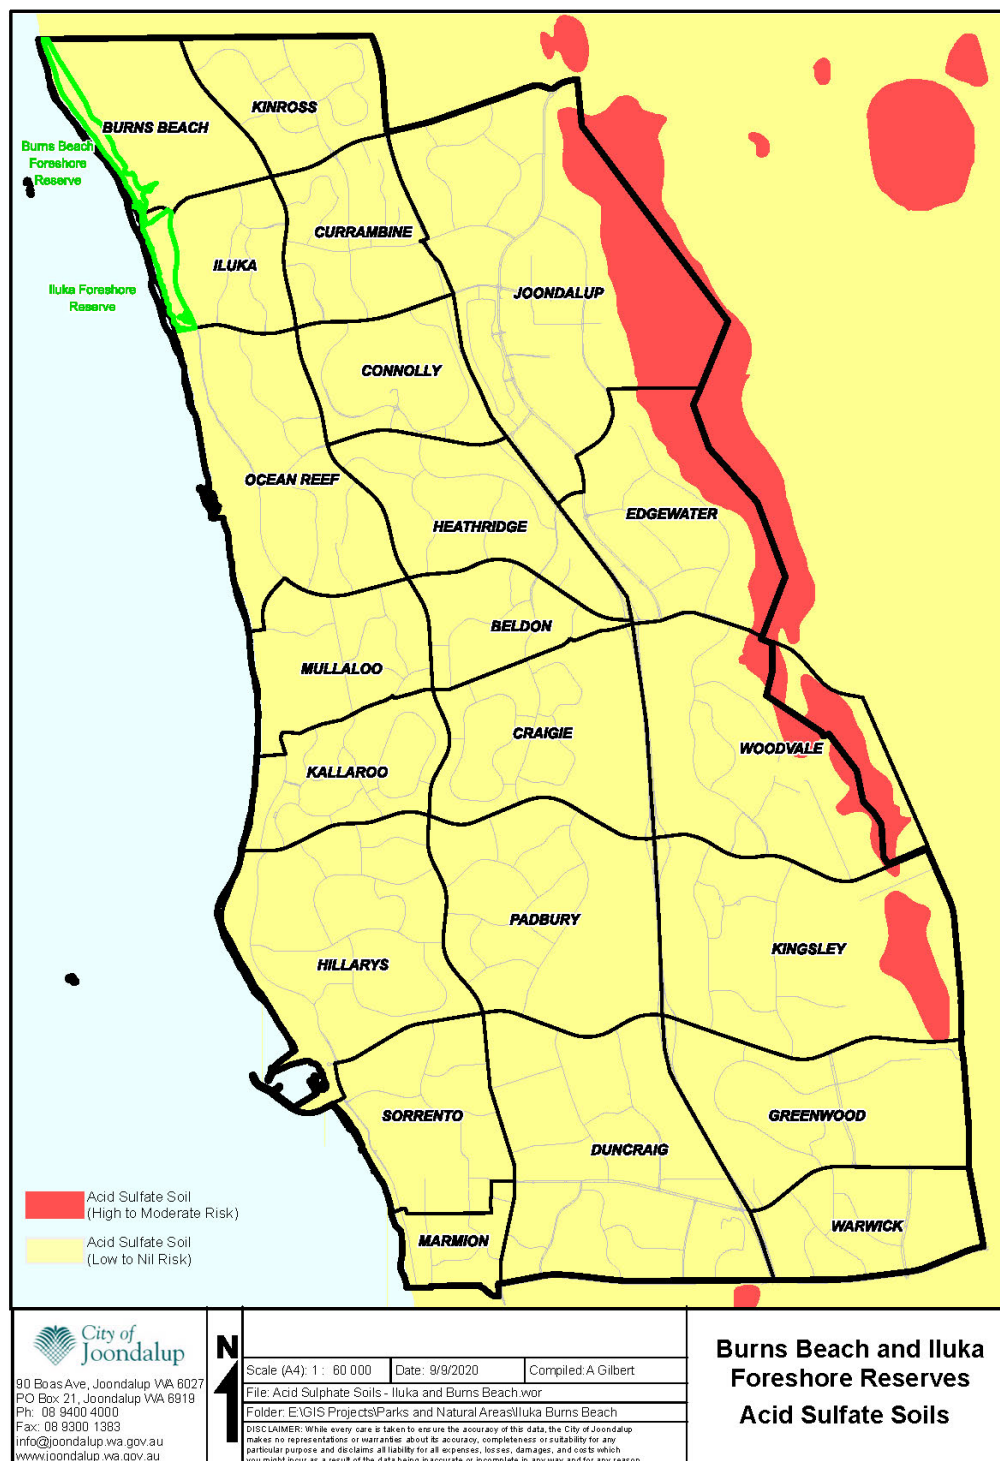

Figure 10: Iluka-Burns Beach Reserve Acid Sulfate Soil Risk

2.2 Hydrology

Groundwater

The City of Joondalup is located on Perth's largest source of groundwater, the Gnangara Groundwater System, comprising four main aquifers: superficial (shallow, unconfined), Mirrabooka (deeper, semi-confined), Leederville (deep, mostly confined) and the Yarragadee (deep, mostly confined). The Gnangara Mound extends across most of the superficial aquifer and refers to the water table creating a mound shape, as shown in Figure 11. Groundwater levels in the superficial aquifer have been declining over recent years due to pressure from extraction and the impacts of climate change, as shown in Figure 12.¹⁴

Figure 11: Gnangara Groundwater System (sourced from DWER 2020a)

There is a natural seasonal variance in Perth's groundwater system due to annual rainfall recharge, as shown in Figure 12.

¹⁴ City of Joondalup (2012a)

Figure 12: Average Groundwater Levels of the Gngangara Mound Superficial Aquifer (sourced from DWER 2020a)

It is likely that plant species at Iluka-Burns Beach utilise groundwater as the depth to water varies from 0m on the water line up to 21.5m, with a +/- range of 3m seasonal variance.¹³ In general, some plant species (usually larger tree species) in the Perth metropolitan area within approximately 10m of groundwater are likely to access the water table. Depth to water is the depth from the natural surface contours to the water table. Groundwater salinity at Iluka-Burns Beach is marginal (500 – 1000 TDS in mg/L).

There is one groundwater monitoring bore located within the north of Iluka Foreshore Reserve with groundwater level measurements having been taken from 1974 until 2020. The water levels taken at this bore indicate that the water table has risen by 0.044 meters AHD from 0.515 meters AHD in 1974 to 0.559 meters AHD in 2020.¹⁵ The water level readings taken at this bore are largely steady and a 0.05m variation is to be expected. The groundwater level near the coast is controlled by sea level and should not change much over time. Most of the groundwater decline in the Perth metropolitan area is recorded further inland such as at the top of the groundwater mound, whilst groundwater levels near the coast have remained stable.

The effect of long-term persistent hydrological change can cause changes in vegetation community composition and structure, with a potential loss of some species and a gradual replacement by more drought-tolerant species. The rate (m/yr) and magnitude (metres) of groundwater level change are also relevant to potential vegetation impact.¹⁶

¹⁵ DWER (2020b)

¹⁶ Loomes and Froend (no date)

The use of groundwater for domestic irrigation through bores is deemed suitable in the area and is supported in preference to scheme water. The area is low in iron concentration, resulting in a low iron staining risk.¹³

Stormwater Drainage

Stormwater consists of runoff from rainfall and material mobilised and dissolved in its path of flow. Stormwater is channelled and collected in sumps and swales to recharge the superficial aquifer and prevent the spread of weeds, pollutants, pathogens and sediment to vegetation.¹⁷

Sumps allow some stormwater to infiltrate retention basins, detain the water, collect sediment and over time the water is absorbed back into groundwater. Most sumps are steeply graded rectangular excavations with an inflow at the bottom. Sumps are fenced off in the interest of community safety due to the potential for rapid stormwater inflow.¹⁸

Iluka Foreshore Reserve does not contain a sump, however there is one located adjacent to the site in Pattaya Park, Iluka (Burns Beach Road Sump), as shown in Figure 13.

Burns Beach Foreshore Reserve does not contain a sump, however there is one located approximately 60 metres away (First Ave Sump) in Burns Beach Park, which adjoins to the site, as shown in Figure 14.

¹⁷ DoE (2004)

¹⁸ Grose and Hedgcock (no date)

Figure 13: Iluka Foreshore Reserve Drainage

Figure 14: Burns Beach Foreshore Reserve Drainage

2.3 Climate

The City of Joondalup experiences a Mediterranean climate of hot dry summers with an average temperature of 32°C during the day and mild wet winters with an average day time temperature of 18°C.¹⁹

The average annual rainfall in the City of Joondalup (as recorded at Perth Airport) from 2012 to 2022 was 664.4mm. Approximately 76% of the annual rain falls between the months of May and September, as shown in Figure 15.²⁰

Figure 15: Mean Monthly Rainfall Recorded at Perth Airport Weather Station 2012-2022 (sourced from BoM 2023a)

Current Climate Change

The City of Joondalup is located in the southwest of Western Australia, an area that is already being impacted by the effects of climate change particularly through rising temperatures and decreasing rainfall.

The long-term trend in temperature for south-west Western Australia has been increasing over the past century, with the rate of warming higher since 1960.²¹ In 2019 the mean annual temperature for Perth was 1.8°C above the long term average (1961-1990) and was the warmest year on record (since 1944). In 2022 the annual mean maximum temperature was 25.5°C.

There have also been greater temperature extremes. The mean number of days over 35°C between 1944 and 2014, was 27.5 days; between 1981 and 2010 it was 28.5 days; between 1991 and 2021 it was 37 days; and in 2022 there were 40 days.^{Error! Bookmark not defined.} In

¹⁹ City of Joondalup (no date)

²⁰ BoM (2023b)

²¹ Hope et al. (2015)

January 2022, Perth Airport recorded six consecutive days over 40°C days and in February 2022, recorded seven consecutive days between 36-40°C.²²

There is a strong drying trend between May to July over south-west Western Australia, with rainfall since 1970 around 20% less than the average between 1900 and 1969. Since 1999, rainfall is around 26% less than the average between 1900 and 1969.²³ In 2019, Perth Airport recorded 524.6 mm which was its fourth-driest year since records commenced in 1944 and the driest year since 2010.²² In 2021, Perth Airport recorded 798.8mm and was one of the wettest year on record since 2011.²² In 2022, Perth Airport recorded 668.6mm of rainfall.

Future Climate Change

Climate change is expected to continue although the extent of change will be dependent on both the amount of greenhouse gases that continue to be emitted and how the environment responds. Future projections have been developed which indicate that for the south-west of Western Australia temperatures will continue to increase while rainfall decreases.²¹ Further details on these projections are provided in Table 1.

	2030	2090
Temperature	By 2030 temperatures are expected to rise between 0.6 to 1°C.	By 2090 temperatures under an intermediate emissions scenario could rise between 1.1 to 2.1°C and under a high emissions scenario between 2.6 to 4.2°C.
Rainfall	By 2030 winter rainfall is projected to decrease by up to 15%.	By 2090 under an intermediate emissions scenario winter rainfall could decrease by up to 28%, under a high emissions scenario this reduction could as high as 44%.
Extreme Temperatures	Extreme temperatures are projected to increase at a similar rate to mean temperature, with a substantial increase in the temperature reached on hot days, the frequency of hot days, and the duration of warm spells	
Extreme Rainfall and drought	Increased intensity of extreme rainfall events is projected, with <i>medium confidence</i> . Time spent in drought is projected (with <i>high confidence</i>) to increase over the course of the century.	
Fire Weather	There is <i>high confidence</i> that climate change will result in a harsher fire-weather climate in the future.	

Table 1: Future Climate Change Projections for South-West Western Australia (adapted from DWER 2021)

The future changes to the climate are expected to have the following impacts on local bushland areas:

- Overall reduction in biodiversity.
- Increase threats to the natural environment such as incidence of weeds, fire and disease.

²² BOM (2023b)

²³ BOM & CSIRO (2018)

- Changes to habitats and distribution patterns of species. A drier climate will result in reduced water availability for ecosystems and fauna and flora species.
- Potential extinctions of endemic species.
- Greater occurrence of extreme weather events such as heat-waves and intense storms.

Whilst climate change is difficult to address directly, many of the management actions in this Plan focus on maintaining vegetation resilience and will assist to minimise the effects of climate change.

2.4 Vegetation

Vegetation Complexes

Vegetation complexes are classified by the soil and landforms contained in medium to large areas along the Swan Coastal Plain. Regional scale mapping shows the study area is classified as having Quindalup Complex and Cottesloe Complex - Central and South (see Figure 16).

The Quindalup Complex is described as a coastal dune complex consisting mainly of two alliances – the strand and foredune alliance and the mobile and stable dune alliance. Local variations include the low closed forest of *Melaleuca lanceolata* – *Callitris preissii* and the closed scrub of *Acacia rostellifera*. The pre-European extent remaining within the Swan Coastal Plain IBRA region for the Quindalup Complex is 49%. The pre-European extent remaining within the City of Joondalup is 12.55%.^{24,25}

The Cottesloe Complex - Central and South is described as a “mosaic of woodland of *Eucalyptus gomphocephala* and open forest of *Eucalyptus gomphocephala* – *Eucalyptus marginata* – ~~*Eucalyptus*~~ *Corymbia calophylla* with a closed heath on the limestone outcrops.”²⁶ Approximately 31% (10,606 ha) of the original vegetation complex extent of Cottesloe Complex – Central and South remains within the Perth Metropolitan Region, with 3% (345 ha) of this remaining vegetation existing within the City of Joondalup.

The State Government’s Bush Forever Strategy aims to protect 51,000 ha of regionally significant vegetation, or 18% of the original vegetation, within the Swan Coastal Plain portion of the Perth Metropolitan Region. The State Government has established targets under Bush Forever which aim to protect at least 10% of each of the 26 vegetation complexes, to achieve a comprehensive representation of all the ecological communities originally occurring in the region.²⁴ The Strategy identifies 287 bushland sites. Iluka Foreshore Reserve is included within the Bush Forever Strategy as site 325 and Burns Beach Foreshore Reserve is included within the Bush Forever Strategy as site 322.

Due to the limited extent of the Quindalup Complex and Cottesloe Complex – Central and South vegetation complex remaining within the City of Joondalup, it is important to retain bushland within Iluka-Burns Beach Foreshore Reserve for its conservation value.

²⁴ ELA (2016b)

²⁵ NACMS (2016)

²⁶ Hedde et. al. cited in Syrnix (2014)

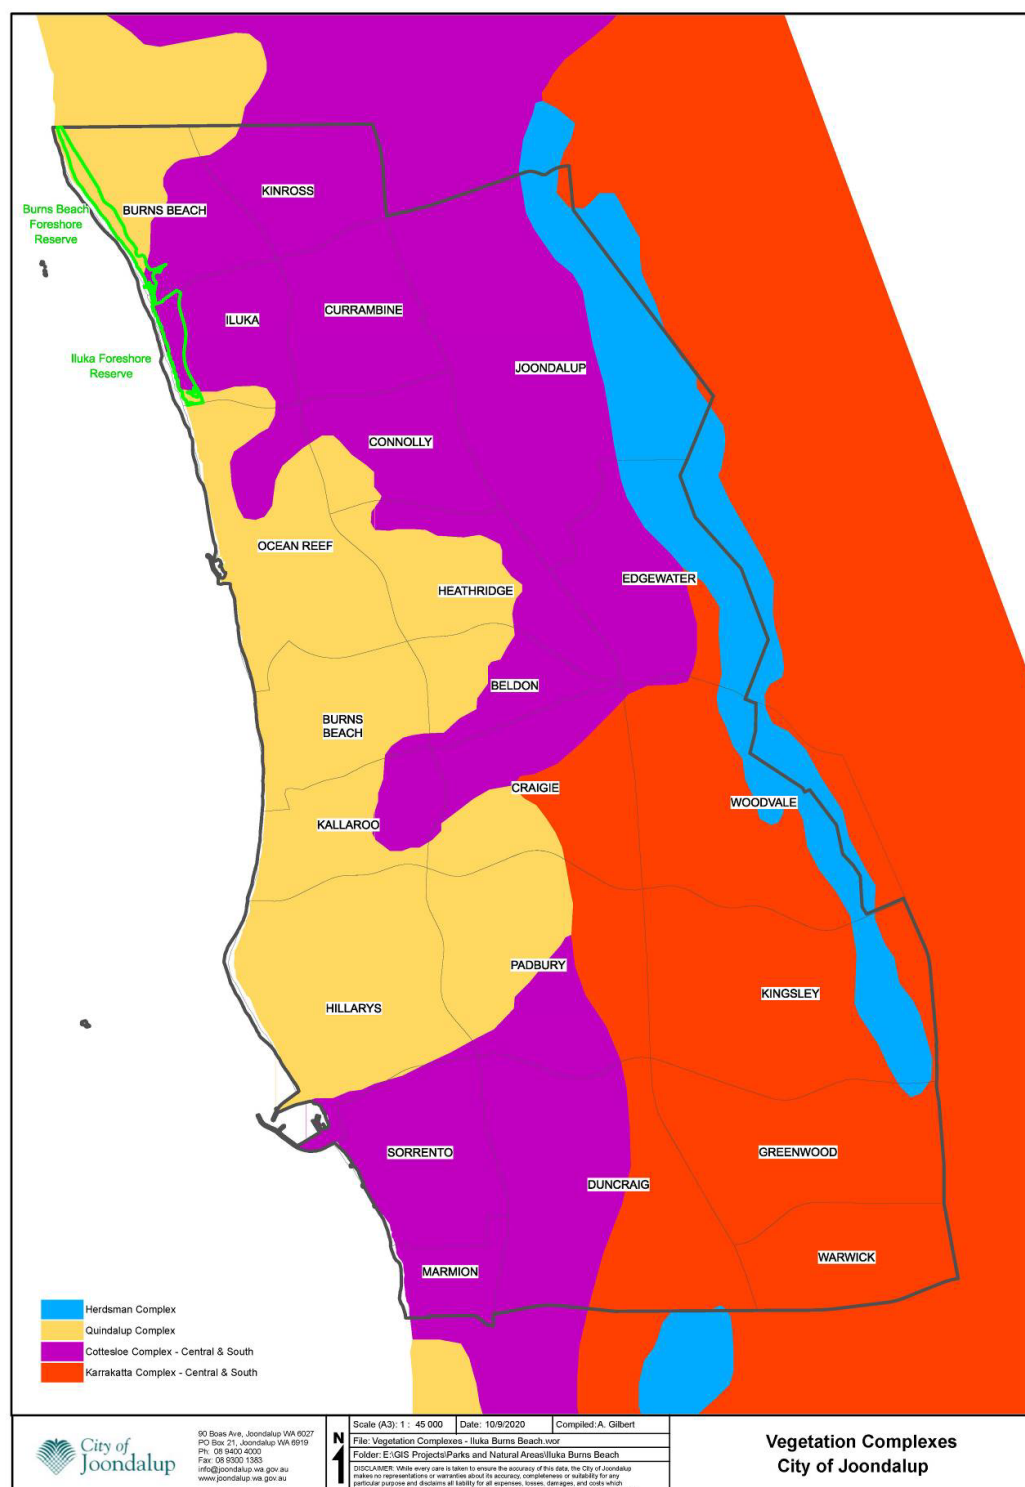

Figure 16: City of Joondalup Vegetation Complexes

Floristic Community Types

The vegetation of the Swan Coastal Plain has been systematically surveyed and defined into Floristic Community Types (FCTs). This floristic analysis defined 30 FCTs with some groups further subdivided, with a total of 43 types and sub-types recognised.²⁷

The Spearwood and Quindalup Dune units support FCT 24, FCT 27, FCT 28 and FCT 29. The following FCTs were inferred to occur in the study area through the State Government's Bush Forever assessment in 2000:

- FCT 24: Northern Spearwood shrublands and woodlands
- FCT 27: Species-poor mallees and shrublands on limestone
- FCT 28: Spearwood *Banksia attenuata* or *B. attenuata* — *Eucalyptus* Woodlands
- FCT 29a: Coastal shrublands on shallow sands
- FCT 29b: Acacia shrublands on taller dunes.

Only FCT 24 and FCT 29a were identified in Iluka-Burns Beach Foreshore Reserve during the September 2020 field survey conducted by Eco Logical Australia.²⁸

FCT 24 – Northern Spearwood shrublands and woodlands

FCT 24 is described as heaths or heaths with scattered *Eucalyptus gomphocephala* (Tuart), with heathlands in this group typically including *Banksia sessilis*, *Calothamnus quadrifidus*, and *Schoenus grandifloras*. The BsArSg vegetation community, comprising a total of 4.6ha (14.7%) of the Iluka survey area and 0.4ha (1.4%) of the Burns Beach survey area, has components analogous to the 'Northern Spearwood shrublands and woodlands' Priority Ecological Community, including the presence of *Banksia sessilis* and *Calothamnus quadrifidus* heathland, and is considered as likely representing this Priority Ecological Community. The inferred presence of FCT 24 is also noted in Bush Forever for Burns Beach Foreshore Reserve.

FCT 24 is currently listed as a Priority 3 (i), Priority Ecological Community (PEC)²⁹ which means that it is poorly known from several to many occurrences but does not appear to be under threat of habitat destruction or degradation.³⁰

FCT 24 can be a component of the Endangered Banksia Woodlands of the Swan Coastal Plain EPBC Act listed TEC.

FCT 29a – Coastal shrublands on shallow sands

FCT 29a is described as mostly heaths on shallow sands over limestone close to the coast. Important species include *Spyridium globulosum*, *Rhagodia baccata*, and *Olearia axillaris*. Quadrats within the remaining vegetation communities showed close affiliation with FCT 29a. Vegetation communities ArAcSg, FpApSc, McAr, SgEsOa, SgMhAr, SgSa, comprising a total of 24.4 ha (77.91%) of the Iluka survey area and 26.2 ha (89.4%) of the Burns Beach survey area, have components analogous to the 'Coastal shrublands on shallow sands' PEC, including the presence of heaths on shallow sands over limestone close to the coast,

²⁷ Gibson et al cited in ELA (2016)

²⁸ ELA (2021)

²⁹ DPaW (2015b)

³⁰ DEC (2010a)

Spyridium globulosum, *Rhagodia baccata*, and *Olearia axillaris* and is considered as likely representing this community. The inferred presence of FCT 29a is also noted in Bush Forever for Burns Beach Foreshore Reserve and Coastal Strip from Burns Beach to Hillarys.

FCT 29a: 'Coastal shrublands on shallow sands' is listed by DBCA as a Priority 3 ecological community which means that it is poorly known from several to many occurrences but does not appear to be under threat of habitat destruction or degradation.³¹

FCT 29a is listed within the Approved Conservation Advice (incorporating listing advice) for the Tuart (*Eucalyptus gomphocephala*) woodlands and forests of the Swan Coastal Plain TEC as a FCT that includes Tuart, indicating the potential presence of these TECs within the survey areas.

Whilst FCTs can be a useful way of describing groups of flora species, or defining Threatened or Priority Ecological Communities on the Swan Coastal Plain, vegetation communities are more commonly used to define plant communities.

Vegetation Communities

Field sampling confirmed seven vegetation communities occurring within Iluka-Burns Beach Foreshore Reserve. Although only two main vegetation communities exists within the Iluka – Burns Beach Foreshore Reserve area, SgMhAr (25.0%) and SgEsOa (24.1%), and described in full in Table 2 and shown in Figure 17 and Figure 18.

Table 2: Vegetation Communities at Iluka-Burns Beach Foreshore Reserve

*indicates weed species.

Note: The remaining vegetation on site has been cleared and/or identified as open beach / rocks, dunal blow out and tracks (5.2 ha or 8.6%).

No Threatened Ecological Communities were identified within Iluka – Burns Beach Foreshore Reserve.³⁵

Vegetation Condition

The Keighery Scale is a tool used to rate the condition of vegetation from pristine to completely degraded, as detailed in Appendix 5. Infrastructure, formalised limestone or asphalt paths and areas of bare ground not containing vegetation (e.g. sandy or rocky beaches) were not assigned a vegetation condition category.

Vegetation condition assessments include observations regarding the numbers of native species, weed cover, vegetation structure, species diversity, amount of understorey, health condition of most species' populations and physical disturbance.

Changes in the vegetation condition can also be attributed to differing interpretations of Keighery Scale definitions by assessors as well as external factors such as different seasonal timings of vegetation assessments, frequency and intensity of recent fire occurrences and other disturbances such as the incidence of weeds can also result in variance in vegetation assessments.

A vegetation condition assessment was conducted in 2012 for the entire coastal foreshore area but has not been broken down into vegetation condition categories for the specific sites of Iluka Foreshore Reserve and Burns Beach Foreshore Reserve. Eco Logical undertook a vegetation condition assessment in September 2020 for the Iluka-Burns Beach Foreshore Reserve.

The vegetation condition at Iluka-Burns Beach Foreshore Reserve ranges from excellent to completely degraded. The majority of Iluka and Burns Beach survey areas were classed as being in excellent condition. Iluka-Burns Beach Foreshore Reserve contains various formal paths and informal tracks and these have been categorised as completely degraded. The majority of the remnant vegetation within Burns Beach Foreshore Reserve is in excellent condition, with the condition reducing to completely degraded in areas directly surrounding pathways, known as 'edge effects'.

The good condition areas surrounding pathways reflects the reduction in vegetation condition caused by disturbances, through the construction of formal and informal paths. Reduction in vegetation condition also commonly exists on the boundary edges of bushland areas, due to various factors including the introduction of invasive species from surrounding areas, informal access and rubbish dumping.

Completely degraded areas in the northern sections of Burns Beach Foreshore Reserve generally surround the illegal vehicle tracks, fragmenting the vegetation throughout the area and preventing these areas from naturally revegetating. There is also a dunal blowout in the north of Burns Beach Foreshore Reserve. Vegetation condition is shown in Table 3, Figure 19 and Figure 20.

Table 3: Iluka-Burns Beach Foreshore Reserve Vegetation Condition Assessment using Keighery Scale

Site / Year	Burns Beach Foreshore Sept 2020	Iluka Foreshore Sept 2020
Pristine	N/A	N/A
Excellent	19.1 ha (65.2%)	21.9 ha (70%)
Very Good	2 ha (6.8%)	3.4 ha (10.9%)
Good	4.2 ha (14.3%)	3.7 ha (11.8%)
Degraded	N/A	N/A
Completely Degraded	1.9 ha (6.5%)	N/A
Open beach / rocks	1 ha (3.4%)	1.2 ha (3.8%)
Tracks	1.1 ha (3.8%)	1.1 ha (3.5%)
Total	29.3 ha	31.3 ha

Additionally the State Government's Bush Forever Strategy rated the vegetation condition of Burns Bush bushland as more than 70% excellent to pristine, less than 30% very good to good, with localised disturbance areas to the north of Burns Beach. The coastal strip from Burns Beach to Hillarys was rated as excellent to degraded, with areas of severe localised disturbance.³²

High resolution multi-spectral imagery has been obtained for the City of Joondalup in November 2015 and November 2019 and analysed to measure canopy cover and change in vigour of vegetation in key City conservation areas. The vegetation vigour change in Iluka-Burns Beach Foreshore Reserve over a two year period is shown in Figure 21 and Figure 22. The majority of the site has increased in vegetation vigour with some minor areas showing decline.

Vegetation Cover

The height of the majority of vegetation cover at Iluka-Burns Beach Foreshore Reserve is 0-3m, with a minor amount of vegetation with a height of 3-10m and a very minor amount of vegetation with a height of 10m or more, as shown in Figure 23 and Figure 24.

Figure 24: Burns Beach Foreshore Reserve Vegetation Heights (2017)

3.0 Biodiversity Management

Iluka-Burns Beach Foreshore Reserve supports an abundance of plant and animal species, including species listed as priority based on their endangered, threatened and migratory status. The long term protection of biodiversity values within Iluka-Burns Beach Foreshore Reserve is critical to ensure the conservation of this important bushland habitat. The protection and enhancement of biodiversity within Iluka-Burns Beach Foreshore Reserve also benefits the community through the provision of ecosystem services such as:

- the production of oxygen and capture of carbon dioxide
- noise and air quality regulation
- cooling of urban environments
- regulation of freshwater supplies
- generation and maintenance of topsoil
- generation and recycling of nutrients³³
- control of pests and diseases
- supporting seed dispersal and pollination
- providing a genetic store³⁴
- a number of cultural services such as recreational, aesthetic values and heritage values.³⁵

There are a number of environmental threats that pose a risk to the biodiversity of Iluka-Burns Beach Foreshore Reserve. The key environmental threats at Iluka-Burns Beach Foreshore Reserve addressed in this Section include:

- Weeds
- Pathogens and disease
- Non-native fauna species
- Human impacts
- Access and infrastructure
- Fire.

Management actions to address the key environmental threats are outlined in the following sections. There are other additional environmental threats that are out of the scope of this Plan and therefore not addressed such as climate change and habitat fragmentation.

3.1 Flora

Iluka-Burns Beach Foreshore Reserve is located within the Southwest Australia biodiversity hotspot. Southwest Australia, from Shark Bay in the north to Israelite Bay in the south, is one of 36 biodiversity hotspots in the world with over 3,600 endemic plant species occurring in this region. Approximately 30% of the original vegetation extent of this area remains in more or less pristine condition, with habitat loss being primarily due to agricultural and urban expansion and biological factors such as feral animals, weeds and the plant pathogen *Phytophthora cinnamomi*.^{36,37}

³³ Burbidge (2004)

³⁴ Millennium Ecosystem Assessment (2005)

³⁵ City of Joondalup (2012b)

³⁶ Conservation International (2020)

³⁷ WWF (no date)

Flora surveys enable collection of scientific data related to the occurrence and distribution of flora species and vegetation communities. Information obtained from flora surveys is used as a baseline to monitor the ecological health of flora populations and vegetation communities.³⁶

The City engaged consultants, Eco Logical Australia (ELA), to undertake a field flora survey of Iluka-Burns Beach Foreshore Reserve in September 2020.

The design of the flora survey was aligned with methodology outlined in the EPA *Technical Guidance: Flora and Vegetation Surveys for Environmental Impact Assessment* (2016). The survey was undertaken in accordance with the requirements of the State *Biodiversity Conservation Act 2016* (BC Act), *Environmental Protection Act 1986* (EP Act) and the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act).

The survey methodology included the use of 10m x 10m quadrats with at least 3 per vegetation community. It also included opportunistic sampling of species not recorded within the quadrats, to inform a species inventory of the study area. A total of 28 quadrats (14 in each Iluka and Burns Beach survey area) were installed within the study area, following analysis of aerial imagery, review of previous City of Joondalup field survey reports and ground-truthing.

ELA recorded a total of 149 flora species at the Iluka-Burns Beach Foreshore Reserve during their survey. This total included 92 native (62%) and 57 (38%) introduced taxa. The taxa comprised 52 families and 120 genera. The most commonly occurring family was Poaceae (19 taxa) and Fabaceae (17 taxa). Acacia (with 5 taxa), Conostylis (with 4 taxa), Hibbertia (with 4 taxa) and Melaleuca (with 3 taxa) were the most common genus.

ELA recorded a total of 121 flora species within the Iluka survey area (74 native and 47 introduced). Families with the highest number of species included Poaceae (15 species), Fabaceae (14 species) and Asteraceae (10 species). Acacia (with 4 taxa), Conostylis (with 4 taxa), Hibbertia (with 4 taxa) and Melaleuca (with 3 taxa) were the best represented genera throughout the Iluka survey area.

ELA recorded a total of 106 flora species within the Burns Beach survey area (63 native and 43 introduced). Families with the highest number of species included Poaceae (16 species), Fabaceae (14 species) and Asteraceae (6 species). Acacia (with 4 taxa), Conostylis (with 4 taxa), and Melaleuca (with 3 taxa) were the best represented genera throughout the Iluka survey area.

Previous flora surveys conducted in Iluka-Burns Beach Foreshore Reserve include:

- ATA Environmental (2001) *Iluka Flora & Vegetation Survey & Fauna Habitat Assessment*
- Dr. W. Foulds (1982) *Conservation Area Ocean Reef / Burn's Beach South*
- Cardno BSD Pty Ltd (2006) *Foreshore Management Plan Burns Beach*, prepared for Burns Beach Property Trust
- Keighery G.J. and B.J. (1992) *Flora of Burns Beach Coastal Reserve*
- City of Joondalup (2014) *Burns Beach Structure Plan No. 10*
- City of Joondalup (2009) *Burns Beach Park Natural Area Initial Field Assessment*
- AECOM (2018) *Tamala Park Reserve – Biological Report*, prepared for City of Wanneroo
- NACMS (2017) *Targeted Flora and Vegetation Survey – Part Lot 11485, 44 Ocean Parade, Burns Beach*, prepared for City of Joondalup

- GHD (2013) *Proposed Dual Use Coastal Path between Mindarie and Burns Beach: Environmental Study and Topographical Survey Report*, prepared for Department of Planning
- Government of WA (2000b) *Bush Forever Site Description: Burns Beach Bushland*.

The combination of results from all the surveys undertaken within Iluka – Burns Beach Foreshore Reserve indicates that there are 402 species, including 298 native species (76%) and 104 introduced species (26%).

The optimal time for surveying is spring for native flora and winter for weeds. Rainfall (4 mm) was recorded during the five day survey conducted by ELA, and a total of 322.1 mm of rainfall was received in the three months prior to the survey.³⁸ This is below the long-term average for the period June – August (446 mm), however it is still considered suitable for flora survey timing.⁹

Native Flora

Native flora is an important part of the Iluka-Burns Beach Foreshore Reserve ecosystem. The loss of native plant species can lead to a loss of fauna that depend on flora for food and shelter.

A total of 92 native flora species have been recorded at Iluka-Burns Beach Foreshore Reserve (see Appendix 2). There were 75 native flora species identified in the Iluka survey area and 63 native flora species identified in the Burns Beach survey area.

The number of native flora species recorded at Iluka-Burns Beach Foreshore Reserve is comparable to the number of species recorded in similar bushland areas nearby.³⁸ The diversity is also considered to be very good for remnant vegetation in a built-up urbanised area.⁹

One flora species listed as Endangered under the EPBC Act and BC Act was recorded within the Iluka survey area, namely *Marianthus paralius* (WA Herbarium ACC/8941/E). No Threatened flora species listed under the EPBC Act or BC Act were recorded within the Burns Beach survey area.

Two naturally occurring priority species rated by the Department of Biodiversity, Conservation and Attractions (DBCA) listed under the *Biodiversity Conservation Act 2016* has been recorded at Iluka Foreshore Reserve, *Hibbertia leptotheca* (Priority Three - Poorly-known species) and *Jacksonia sericea* (Priority Four - Rare, Near Threatened and other species in need of monitoring). Both species are also listed as Significant Flora of the Perth Metropolitan Region, under the State Governments' Bush Forever Strategy (2000). A further eight Bush Forever significant flora species were recorded within Iluka-Burns Beach Foreshore Reserve, including *Agonis flexuosa*, *Callitris preissii*, *Grevillea preissii* subsp. *preissii*, *Lechenaultia linarioides*, *Trymalium ledifolium*, *Diplopeltis huegelii*, *Melaleuca cardiophylla* and *Melaleuca lanceolata*, see Appendix 3.

Weeds

Weeds are exotic or native species that grow in ecosystems where they did not originally belong. Weeds are commonly introduced and distributed within bushland areas through the

³⁸ ELA 2021

dispersal of seed by water, wind and animals such as birds, fire, through dumping of garden refuse, and by human or vehicle movement in natural areas.³⁹

Weeds have major economic, environmental and social impacts in Australia and can:

- displace native plant species
- alter ecosystems, nutrient recycling and soil quality
- harbour pests and diseases
- increase fuel loads for fires
- impact negatively on fauna and flora and their habitats
- compete with native species for space, water and nutrients.⁴⁰

Approximately 3,200 species of introduced plants have naturalised within Australia, with 500 of these being declared noxious or under legislative control. Garden plants are the main source of Australia's weeds, accounting for between 50% and 70% of recognised weed species. An estimated average of 20 plant species become naturalised in Australia each year.⁴⁰

A combined total of 57 weed species have been recorded at Iluka-Burns Beach Foreshore Reserve (see Appendix 2), from the flora surveys undertaken by Eco Logical (2020). From these 57 weed species, 24 have been identified as priority weed species for management (see Appendix 7). A total of 47 introduced (weed) species were recorded within the Iluka survey area, representing 38.8% of the total flora species recorded. A total of 43 introduced (weed) species were recorded within the Burns Beach survey area, representing 40.6% of the total flora species recorded.

Environmental weeds are classified as priority if they meet any of the following criteria:

- Weed species listed as a Weed of National Significance (WoNS) by the Australian Government.
- The weed species is listed as a Declared Pest Plant according to the *Biosecurity and Agriculture Management Act 2007*.
- The weed species is listed as a Pest Plant under the City's *Pest Plant Local Law 2012*.
- The City of Joondalup has determined that the weed species; poses a major threat to vegetation or the structure of vegetation communities; is likely to lead to a significant outbreak of individual weed species; and/or contribute to a high fuel load (e.g. grasses). These species are classed as priority weeds in the City of Joondalup.

The majority of the weed species recorded are daisies from the Asteraceae family and grasses from the Poaceae family. Many of the weed species adjoin disturbed areas, particularly pathways and informal tracks. Areas surrounding the boundary of Iluka-Burns Beach Foreshore Reserve, where the bushland meets the road, particularly in the northern section of the Burns Beach reserve, contain a high weed presence. The most common species observed in the 2020 survey at Iluka-Burns Beach Foreshore Reserve were *Ehrharta calycina* (Perennial Veldt Grass), *Ehrharta longiflora* (Annual Veldt Grass), *Tetragonia decumbens* (Sea Spinach), and *Pelargonium capitatum* (Rose Pelargonium).³⁸⁹

A total of 24 weed species have been recorded in Iluka-Burns Beach Foreshore Reserve and are rated as priority weed species in the City of Joondalup, none of which is ranked as a Pest Plant under the City of Joondalup [Pest Plant](#) Local Law.

³⁹ Australian Government, no date

⁴⁰ Invasive Plants and Animals Committee (2016)

The City of Joondalup has a Pest Plant Local Law (2012) for the management of Caltrop (*Tribulus terrestris*) and Golden Crownbeard (*Verbesina encelioides*). Caltrop and Golden Crownbeard This species was not recorded in the 2020 survey undertaken by ELA, however there is anecdotal evidence that Golden Crownbeard occurs in areas adjacent to the Iluka-Burns Beach Foreshore Reserve.

Two species recorded are listed as Declared Pests under the *Biosecurity and Agriculture Management (BAM) Act 2007* (both of which are also listed on the City's priority weed list). Within the Iluka survey, *Asparagus asparagoides* (Bridal Creeper) and *Moraea flaccida* (One-leaf Cape Tulip) were recorded and are listed as Declared Pests s22(2) under the BAM Act. *Asparagus asparagoides* (Bridal Creeper) was recorded and is also listed as a WoNS. Within the Burns Beach survey area, *Asparagus asparagoides* (Bridal Creeper) is listed as a Declared Pest under the BAM Act and as a WoNS.

Examples of Identified priority weeds are illustrated in Appendix 6 and their recommended weed treatment methodology is detailed in Appendix 7, which is used for City of Joondalup on ground management of priority weeds.

Current Management Approach

The City's current approach to monitoring, conserving and protecting native flora in Iluka-Burns Beach Foreshore Reserve is outlined below.

Site Assessments

Flora surveys are conducted approximately every 5-10 years in Iluka-Burns Beach Foreshore Reserve to record the occurrence and distribution of flora species and vegetation communities. Information obtained from flora surveys is used to monitor the ecological health of flora populations and vegetation communities on site.

Natural Area Initial Assessments are conducted approximately every 5-10 years in sites without Council endorsed management plans to assess site-specific ecological values, biodiversity significance and threatening processes, at a level that is consistent with regional scientific standards.⁴¹

Weed Management

The City undertakes an integrated approach to weed management, including:

- Preventing weed introduction through weed hygiene and other measures.
- Regular monitoring and reporting of weed populations.
- On ground weed control, including prioritisation of natural areas and priority weeds to target.
- Community education initiatives.
- Partnerships and research with external stakeholders.

Weed Monitoring

The following table outlines the various weed monitoring methods undertaken by the City in Iluka-Burns Beach Foreshore Reserve.

⁴¹ WALGA (2004)

Weed Monitoring Method	Detail
Bi-monthly weed inspections	Weed inspections are conducted at Iluka-Burns Beach Foreshore Reserve every two months to establish the extent and distribution of weed species and to identify priority weeds. Weed inspections are used to inform on ground weed management programs.
Annual weed percentage cover monitoring	The City monitors the percentage cover of environmental weeds in Iluka-Burns Beach Foreshore Reserve on an annual basis, measured by three transects within the reserve.
Flora surveys	Flora surveys are conducted every 5-10 years in Iluka-Burns Beach Foreshore Reserve. Flora surveys include mapping of priority weeds and a vegetation condition assessment. The vegetation condition assessment also informs weed management as the vegetation in the best condition can be prioritised for weed control. Comparisons will be made between flora surveys to assess site changes every 5-10 years.

Annual weed percentage cover monitoring is conducted in Iluka Foreshore Reserve, measured by three transects within the reserve. A significant increase in the percentage cover of weeds was recorded in 2019/20, as compared to 2018/19 due to an earlier winter rainfall in 2019/20 and a focus on hand weeding rather than herbicide use, as requested by the Friends of North Ocean Reef – Iluka Foreshore. In 2021/22 there was a significant reduction in weeds at Iluka Foreshore from 2019/20 and 2020/21 levels, as shown in Figure 25. This ~~decrease was partly was most likely due to~~ the increased Friends Group receiving funding to undertake contractor hand weeding and grass-selective sprays which may have reduced the percentage of weed cover.

Figure 25: Percentage Cover of Weeds in Iluka Foreshore Reserve 2014–2022

Weed Control

In accordance with the City's Annual Bushland Schedule, on ground weed management in Iluka-Burns Beach Foreshore Reserve occurs through weed spraying and hand weeding methods. In addition to this, contractors are engaged to spray weeds and hand weed. City of Joondalup staff use a weed spraying procedure and conduct weed control trials periodically to evaluate the most effective weed management methods.

The Friends of North Ocean Reef - Iluka Foreshore also conduct substantial amounts of hand weeding within Iluka Foreshore Reserve.

Resources such as the DPaW's Florabase website, the *Western Weeds, A guide to the Weeds of Western Australia* book or *Southern Weeds and their Control* (DAFWA Bulletin 4744) are consulted in regards to weed control. Weeds on verges surrounding Iluka-Burns Beach Foreshore Reserve are managed by mowing and brush cutting to reduce seed spread, chemical weed control and spreading certified pathogen free mulch, where required.

The City's *Weed Management Plan 2023 - 2033* provides an integrated approach to the management of weeds in the City. The *Weed Management Plan 2023 - 2033* details actions to prevent, monitor, prioritise and control the introduction and spread of weeds in the City.

Pest Plant Local Law 2012

The purpose of the *Pest Plant Local Law 2012* is to prescribe pest plants within the City of Joondalup that are likely to adversely affect the value of property in the district or the health, comfort or convenience of the inhabitants of the district.

Pest plants are generally highly adaptable, out compete native species and spread easily, leading to quick establishment, particularly after a disturbance event such as fire, or through unrestricted access. If pest plants are allowed to establish they have the potential to decrease the City's unique floristic diversity.

The *Pest Plant Local Law 2012* requires the owner or occupier of private land within the City of Joondalup district to destroy, eradicate or otherwise control scheduled pest plants on notice by the City. Currently ~~one-two~~ weed species ~~are scheduled-listed as pest plants~~ under the Local Law ~~being-~~ Caltrop (*Tribulus terrestris*) and Golden Crownbeard (*Verbesina encelioides*). Caltrop has previously been identified on private property adjacent to Burns Beach Foreshore Reserve in 2015 and the owner notified. There is anecdotal evidence that Golden Crownbeard occurs in areas adjacent to the Iluka-Burns Beach Foreshore Reserves.

~~An amendment to the *Pest Plant Local Law 2012* was proposed in 2023 to include Golden Crownbeard (*Verbesina encelioides*) as a pest plant.~~

Community Education

A number of education initiatives are undertaken to raise the awareness of weeds in the community, these include:

- Delivery of Gardening Workshops, promoting the use of native species in residential gardens
- Development and distribution of brochures including *Environmental Weeds*, *Garden Escapees*, *Protecting our Natural Areas and Parks* and a series of *Growing Locals* brochures (available in hard copy and on the City's website)
- Weed Education Workshops for Local Friends Groups.

Revegetation

The City of Joondalup encourages natural bushland regeneration through weed management and conservation fencing, to allow natural regeneration to occur and vegetation to re-establish itself. This is important in maintaining species diversity and populations.

The City supports revegetation in degraded or completely degraded areas using direct seeding techniques with local provenance seeds and seedlings, as required. The Friends of North Ocean Reef – Iluka Foreshore have initiated numerous revegetation projects within Iluka Foreshore Reserve, supported by the City, resulting in increased native vegetation condition and biodiversity.

Recommended Flora Management Actions

To monitor, conserve and protect native flora in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Flora survey	Undertake a follow up flora survey in spring to supplement previous flora surveys, within 5-10 years. Make comparisons between flora surveys to assess site changes every 5-10 years.
Weed survey	Undertake a follow up weed survey in winter to supplement previous weed surveys, within 5-10 years.
Endangered flora conservation	Investigate the planting of the identified endangered flora species to maintain or enhance the population/s to ensure the species long-term preservation within Iluka-Burns Beach Foreshore Reserve.
Investigate planting trees (and vegetation) for habitat	Investigate planting other species of locally native trees and shrubs (such as Banksia and Hakea species) to provide opportunities for nesting sites and shelter for fauna.
Revegetation	Support revegetation being conducted in degraded or completely degraded areas using local provenance species, as required.
Restrict unauthorised access	Consider the installation of fencing or formal signage to prevent habitat degradation and weed spread from unauthorised walking/vehicle tracks.
Bi-monthly weed inspections	Conduct weed inspections every two months to establish the extent of weeds and to identify priority weed species.
Weed control	Undertake a coordinated approach to regular weed control by implementing the Annual Bushland Schedule.
Weed Control	Undertake a targeted approach to weed control of <i>*Asparagus asparagoides</i> (Bridal Creeper) within Iluka – Burns Beach Foreshore Reserve.
Weed Control	Undertake a targeted approach to weed control of <i>*Moraea flaccida</i> (One-leaf Cape Tulip) within Iluka reserve, to prevent its spread <u>within the reserve and</u> into surrounding reserves.
Weed Control	Undertake a targeted approach to weed control of <i>*Ricinus communis</i> (Castor Oil Plant) within Iluka Foreshore Reserve.
Weed control on verges	Conduct weed management of weeds on verges within and surrounding Iluka – Burns Beach Reserves including mowing of verges to reduce seed spread, spraying of weeds and spreading of certified mulch, where required.
Weed Management Plan	Implement the <i>City of Joondalup Weed Management Plan</i> to provide an ongoing strategic approach to the management of natural areas in order to reduce the incidence of weeds.

3.2 Fungi

It is estimated that there are 10 times more species of fungi than plants in the world, equating to approximately 140,000 fungi and 14,000 plant species in Western Australia.⁴² Many fungi are yet to be discovered and most are microscopic. Fungi is an important part of an ecosystem as they recycle and break down organic matter and debris to provide nutrients for plants. Many plants can thrive in poor soils because they have beneficial connections with fungi. The amount of species of fungi present in bushland can be an indicator of ecosystem health.⁴³ Fungi also provide food and habitat for mammals such as bandicoots and other fauna including invertebrates.⁴⁴

Research into the importance of fungi is leading to the discovery of how fungi can help reduce the likelihood of extinction of plants, animals and the loss of ecological communities.⁴⁴

Fungi surveys are important in providing baseline information and to highlight changes in fungi occurrence over time. Undertaking fungi surveys also enables the comparison of ecological data with other natural areas within the City of Joondalup.

Fungi Survey (2020)

Whilst undertaking the flora and fauna survey in September 2020, consultants Eco Logical Australia were also engaged to undertake an opportunistic fungi survey of the Iluka – Burns Beach Foreshore Reserve and record all incidental sightings of fungi.³⁵ The optimum time for fungi surveys is in autumn or winter after substantial rainfall.⁴² Due to time limitations, the incidental fungi survey was conducted in spring (dry conditions) and no fungi were recorded by the consultant.

In spring 2018 and 2019, the City engaged Natural Area Consulting to undertake a fungi survey at Ocean Reef Foreshore, located 1.8 kms from Iluka Foreshore Reserve. No species of fungi were recorded during this survey.

In spring 2013, the City engaged consultants, Natural Area Consulting, to undertake a fungi survey at Marmion Coastal Foreshore Reserve, located approximately 12 kms from Iluka Foreshore Reserve. Four species of fungi were recorded during this survey.

Fungi species recorded in the nearby natural areas of Marmion Foreshore Reserve are potentially likely to be present in Iluka – Burns Beach Foreshore Reserve. A list of fungi likely to occur in Iluka – Burns Beach Foreshore Reserves and photographic examples is provided in Appendix 11.

Current Management Approach

The City of Joondalup currently monitor fungi in Iluka – Burns Beach Foreshore Reserve through recording incidental sightings of fungi species during the City's 5-10 yearly flora and fauna surveys.

Recommended Fungi Management Action:

⁴² Bougher (2009)

⁴³ Robinson (no date)

⁴⁴ DPaW (no date a)

To monitor fungi health in Iluka – Burns Beach Foreshore Reserve, the following management action is proposed:

Action	Details
Fungi survey	Undertake a comprehensive fungi survey in autumn or winter after substantial rain, to supplement previous incidental fungi surveys, within 5-10 years.

3.3 Plant Diseases

Organisms such as fungi, bacteria and viruses that cause plant diseases are known as pathogens. Whilst some pathogens are naturally occurring within the soil, others have been introduced to the environment through the movement of plant materials and soils.⁴⁵

The symptoms produced by plants that are affected by pathogens vary depending upon the species of pathogen, host species, environment and climatic conditions. Some pathogens can live in the soil for a long period without impacting the health of plants, whilst others can cause rapid death or result in a slow, perennial decline in health.⁴⁵

Phytophthora dieback refers to the disease caused by the introduced plant pathogen *Phytophthora cinnamomi*. While there are numerous species of *Phytophthora*, the most widespread and destructive species affecting native plants throughout South-western Western Australia is *P. cinnamomi*.⁴⁶ Previously *Phytophthora* dieback was commonly referred to as 'Jarrah dieback' due to Jarrah (*Eucalyptus marginata*) trees being one of the first plant species observed to be impacted by *P. cinnamomi*.⁴⁷ However as the pathogen has become more widespread, up to 22% of native plant species in the south-west of Western Australia are likely to be susceptible to the pathogen.⁴⁸

Whilst *P. cinnamomi* is the most common species of *Phytophthora* dieback within Western Australia, other species of *Phytophthora* are common in urban areas of Perth.

Pathogen sampling of the City's parks, natural areas and coastal sites in accordance with the *City of Joondalup Pathogen Management Plan 2013-2016* has recovered a number of *Phytophthora* species, which include *P. alticola*, *P. arenaria*, *P. asparagi*, *P. boodjera*, *P. multivora*, *P. nicotianae* and *P. palmivora*. Of these *Phytophthora* species identified within the City, *P. multivora* and *P. nicotianae* are the most prevalent.

Phytophthora multivora is a common pathogen in urban areas of Perth, particularly along the inland dune systems. It is widespread throughout the south-west of Western Australia with a similar distribution to *P. cinnamomi*. *P. multivora* is named due to its wide host range, including *Banksia* and *Eucalyptus* species. *P. multivora* can cause rapid death of plants, or a slow, perennial decline in the health of the tree crown and is commonly associated with individual spot deaths and areas of tree decline.⁴⁹

Phytophthora nicotianae has been identified in herbaceous and woody plants used in agriculture and horticulture, although it is now considered established within natural ecosystems in Western Australia. The pathogen is widely found within nursery stock and therefore has a higher probability of infecting parks and reserves, rather than natural areas

⁴⁵ City of Joondalup (2013)

⁴⁶ DBCA (no date a)

⁴⁷ DWG (2020)

⁴⁸ CPSM (2012)

⁴⁹ Barber (2012)

due to the introduction of nursery stock and soil through planting programs and the regular use of machinery and vehicles. *P. nicotianae* is associated with large lesions at the base of *Eucalyptus* trees and causes collar rot of *Grevillea* species. *P. nicotianae* has also been identified as causing fine root death of numerous other native plant species.⁴⁹

Armillaria luteobubalina has also been identified within a number of parks within the City of Joondalup. *Armillaria* is a fungus that causes root rot and wood decay of a wide variety of plants including many species of native flora. The fungus is native to Australia and can also cause major damage to natural ecosystems. *Armillaria luteobubalina* is commonly known as the "Honey Fungus" due to the colour of the fruiting body seen above the ground during certain times of the year, as shown in Figure 26. Fruiting bodies (mushrooms) are not evident at all infected sites.⁴⁹

Figure 26: Fruiting Bodies of *Armillaria luteobubalina* (sourced from City of Joondalup, 2013)

At present there is no reliable mechanism for the complete eradication of *Phytophthora* species and the control of *Armillaria luteobubalina* is both expensive and labour intensive.⁴⁹

Current Management Approach

The City has developed a *Pathogen Management Plan 2018-2028* to provide guidance on the management of pathogens within the City to protect biodiversity values and minimise the risk of pathogen introduction and spread within landscaped and natural areas. Strategies to engage the community and key stakeholders in order to raise the awareness of pathogens within the City are also identified within the Plan.

The City has further developed *Pathogen Hygiene Procedure for City staff and Contractors*, *Pathogen and Weed Hygiene Guidelines* and *Purchasing of Landscaping Materials Guidelines* to minimise the spread of pathogens.

Pathogen sampling was undertaken in Iluka Foreshore Reserve in March to April 2016 and December 2016 to January 2017 and in Burns Beach Park in May 2014. The only pathogen

to have been identified in the pathogen mapping and sampling program is *Armillaria* which is suspected in Iluka Foreshore Reserve.

Although no pathogens have been confirmed through the pathogen mapping and sampling program at Iluka-Burns Beach Foreshore Reserve, a limited amount of pathogen sampling has been undertaken several years ago. The City applies the precautionary approach and implements and encourages pathogen hygiene to prevent the introduction or spread of pathogens.

Recommended Pathogen Management Actions:

To prevent pathogen and weed spread and protect biodiversity values at Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Pathogen Management	Implement recommendations from the Pathogen Management Plan that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.
Hygiene Guidelines	Implement <i>Pathogen Hygiene Procedure for City staff and Contractors, Pathogen and Weed Hygiene Guidelines</i> and <i>Purchasing of Landscaping Materials Guidelines</i> to prevent the introduction or spread of weed or pathogens into Iluka-Burns Beach Foreshore Reserve.

3.4 Fauna

Fauna surveys document the occurrence, distribution and population of fauna species. Information from fauna surveys is used as a baseline to monitor the health of fauna species.

The City engaged consultants, Eco Logical Australia (ELA), to undertake a fauna survey of Iluka-Burns Beach Foreshore Reserve in November 2020. As part of the fauna survey, ELA reviewed data from previous surveys provided by City of Joondalup to compile a comprehensive data set to be used in the development of this Plan.

The fauna survey design was aligned with *EPA Technical Guidance: Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment* (2020), except there were three trapping nights rather than seven trapping nights.

Two conservation listed fauna species were recorded during the survey, including Carnaby's Black-Cockatoo (*Calyptrorhynchus latirostris*) and Quenda (*Isodon fusciventer*).

The fauna survey method included a variety of sampling techniques, both systematic and opportunistic. Systematic trapping was conducted over four nights; two in the Iluka area and two in the Burns Beach area; in October 2020 using a combination of pitfall traps, Elliot box traps, cage traps and funnel traps in six trapping transects. Other fauna survey methods included a bird survey during peak activity periods (e.g. after dawn), an acoustic survey using SM2 ultrasonic recorder for bat echolocation calls, hand searches, installation of motion sensor cameras (over four nights) and a nocturnal search (over one night), in addition to opportunistic sampling and sightings.

The optimum season for fauna detectability in the south west bioregions is spring. Trapping periods of at least 7 nights are recommended to reduce the potential for adverse weather conditions to impact upon survey results and therefore show species diversity, richness trends and provide reliable indications of species composition and abundance data.

Previous fauna surveys at Iluka-Burns Beach Foreshore Reserve include:

- *Iluka Foreshore Macroinvertebrate and Herpetofauna Inventory Surveys – all samples from April 2015 to May 2018*, prepared for Friends of North Ocean Reef – Iluka Foreshore.
- ATA Environmental (2001) *Iluka Flora & Vegetation Survey & Fauna Habitat Assessment*.
- City of Joondalup (CoJ) *Natural Area Initial Field Assessment – Burns Beach Park* (2009).
- AECOM (2018) *Tamala Park Reserve – Biological Report*, prepared for City of Wanneroo.
- GHD (2013) *Proposed Dual Use Coastal Path between Mindarie and Burns Beach: Environmental Study and Topographical Survey Report*, prepared for Department of Planning.
- Cardno BSD Pty Ltd (2006) *Foreshore Management Plan Burns Beach*, prepared for Burns Beach Property Trust.
- City of Joondalup (2014) *Burns Beach Structure Plan No. 10*.
- Government of WA (2000b) *Bush Forever Site Description: Burns Beach Bushland*.

The combination of results from the fauna survey in 2020 and the previous fauna assessments undertaken indicate the following species inhabit Iluka – Burns Beach Foreshore Reserves:

- Six native mammals
- 62 native birds (including two species of conservation significance)
- 30 native reptile species
- Over 500 native invertebrates.

In addition, the following non-native fauna have been identified at Iluka – Burns Beach Foreshore Reserves:

- Four mammals (including the domestic/feral cat)
- Two birds.

The full fauna species list incorporating all the above assessments is provided in Appendix 8.

The results from the fauna survey in 2020 recorded the following species:

- Seven mammals (three native and four introduced species)
- 28 birds (26 native and two introduced species)
- 15 reptiles (all native species)
- No amphibians
- 14 invertebrates (13 native and one introduced species).

Fauna Habitat

The bushland at Iluka – Burns Beach Foreshore Reserve provides an important area of remnant fauna habitat within the City of Joondalup. The vegetation community and habitat resources it contains support a relatively diverse and species-rich assemblage of native birds, mammals and reptiles and the bushland is considered to have high local conservation value⁹ The Iluka – Burns Beach Foreshore Reserve provides a valuable ecological linkage to adjacent bushland to the north, south and east (e.g. Burns Beach Bushland and Neerabup National Park).³⁵

The vegetation condition at Iluka Foreshore ranges from excellent to good and at Burns Beach Foreshore ranges from excellent to completely degraded. There are areas of localised disturbance due to the dunal blow-outs, unauthorised access tracks (walk trails and vehicle tracks) and minor rubbish dumping. Vegetation, trees, leaf litter, soil, fungi, sticks, logs and dead trees at Iluka – Burns Beach Foreshore Reserve provide habitat for fauna to nest, shelter, forage and roost.

A total of five fauna habitats are present within the Iluka – Burns Beach Foreshore Reserve. The Iluka study area contains five broad vegetation community types and the Burns Beach study area contains four broad vegetation community types; described in Table 4. The most commonly occurring fauna habitat in the Burns Beach survey area was dunes and swales and in the Iluka survey area was *Melaleuca* shrubland over heath. In respect to coverage of the habitats, in the Burns Beach survey area the habitats covered a total of 26.5 ha (90.8%) and in the Iluka survey area the habitats covered a total of 29 ha (92.5%), with the remaining areas comprising of tracks and open beach/rock in both survey areas. The vegetation communities provide foraging and nesting habitat for a diversity of nectar and seed eating birds, as well as habitat for a range of mammals, reptiles and invertebrates.⁹

The fauna survey in 2020 highlighted the invertebrate species diversity within Iluka – Burns Beach Foreshore Reserve is expected to be higher than what was recorded, given the extent of good quality remnant native bushland habitat present and the diversity of flora species at the site.³⁵ This is supported by the results of the Friends of North Ocean Reef – Iluka Foreshore Macroinvertebrate and Herpetofauna Inventory Surveys from 2015 to 2018.¹

Table 4: Fauna habitats at Iluka-Burns Beach Foreshore Reserve

Fauna habitats	Burns Beach extents	Iluka extents
Dunes and swales	24.1ha (82.3%)	1.6ha (5.2%)
Tall Acacia shrubland	1.9ha (6.7%)	0.6ha (2%)
Low Banksia shrubland over low heath	0.4ha (1.4%)	4.6ha (14.7%)
Low limestone coastal heath	0.1ha (0.5%)	3.6ha (11.5%)
Melaleuca shrubland over heath	N/A	18.5ha (59.1%)
Open beach / rocks	1.6ha (5.4%)	1.2ha (3.8%)
Tracks	1.1ha (3.8%)	1.1ha (3.7%)
Total	29.3 ha	31.3 ha

Carnaby's Black-Cockatoo habitat

The *Banksia sessilis*, *Acacia rostellifera*, *Spyridium globulosum* mid open shrubland (BsArSg) vegetation community within the Iluka – Burns Beach Foreshore Reserve provides potential foraging habitat for the Carnaby's Black-Cockatoo. This includes Banksia and Hakea species, which are known foraging species for Carnaby's Black-Cockatoo.⁷³ Carnaby's Black-Cockatoos nest in hollows of smooth-barked eucalypts, including Tuarts (*Eucalyptus gomphocephala*) and Marris (*Corymbia calophylla*), which are not found on site.⁵⁰

⁵⁰ DEC (2011a)

Due to the endangered status of the Carnaby's Black-Cockatoo and the limited ~~remaining~~ remaining vegetation within the Perth Metropolitan Area, it is important that good quality vegetation and a diversity of flora species known to be used by the endangered Carnaby's Black-Cockatoo is maintained for potential foraging habitat at Iluka – Burns Beach Foreshore Reserve.

Quenda habitat

Quenda are one of the few remaining native mammals that still persist within remnant habitat on the Swan Coastal Plain.⁵¹ They are considered ecosystem engineers capable of turning over nearly four tonnes of soil per individual per year and their continued persistence in landscapes may be important for maintaining ecosystem processes.⁵²

Quenda are omnivores and forage for subterranean food such as fungi and invertebrates.⁵³ The Iluka-Burns Beach Foreshore Reserve with its dense understorey provides plenty of foraging habitat for Quenda which were recorded on site in the 2020 fauna survey.

Native Fauna

Fauna and flora are interconnected in complex relationships with each other and with factors such as soil, water, climate and landscape. The decline of native fauna can cause loss of plant species and changes to ecological communities. Alternatively, the decline of native flora can cause loss of fauna species.

Mammals

Three native mammals were recorded at Iluka – Burns Beach Foreshore Reserve, the Quenda (*Isoodon fusciventer*), White-striped Free-tailed Bat (*Austronomus australis*) and the Gould's Wattled Bat (*Chalinolobus gouldii*).⁵⁴ In previous surveys the Western Grey Kangaroo (*Macropus fuliginosus*), Western Brush Wallaby (*Notamacropus irma*) and the Short-beaked Echidna (*Tachyglossus aculeatus*) have also been recorded.^{54, 55}

Quenda

The DBCA have listed the Quenda (*Isoodon fusciventer*) as a Priority 4 species (Rare, Near Threatened and other species in need of monitoring). Threats to Quenda include loss of habitat, predation by introduced predators (e.g. European Red Fox and cats) and fire in fragmented habitat.⁶⁴ In addition, they appear to be vulnerable to spatial isolation.⁵⁶ Although Quenda were once common throughout south-west Western Australia, due to a combination of habitat loss and predation by introduced predators, they are now absent from many areas, or persist in low numbers.⁶²

Home range estimates for species in the genus *Isoodon* vary from 0.5 – 6.0ha and although these animals are typically solitary, they often have overlapping home ranges.⁵³ While searching for underground food Quenda create small scale disturbances in the form of foraging pits in the soil and have been identified as one of Australia's persisting digging mammals; with its digging activities implicated in a range of potential ecosystem services.⁶³

⁵¹ Wilson et al. (2012)

⁵² Valentine et al. (2013); Valentine et al. (2017)

⁵³ VanDyck and Strahan (2008)

⁵⁴ AECOM (2018)

⁵⁵ Beaumaris Land Sales (2001)

⁵⁶ Ramalho et al. (2018)

Quenda have a backward opening pouch which assists with reducing soil falling onto their pouch young during digging activities. Eight teats are arranged in an incomplete circle and the pouch can accommodate one to six (usually two to four) young in a litter.^{64 70}

During the 2020 fauna survey, Quenda (*Isododon fusciventer*) were recorded in both survey areas. Within the Burns Beach survey area, six individuals were trapped in cage traps over four trapping nights. An individual was also recorded on motion camera. Within the Iluka survey area one individual was recorded at each of the two trapping locations. Of the eight trapped individuals, all but one were males, with the female having one unfurred pouch young. The majority of the Quenda observed appeared to be in good condition. Two males were missing the majority of their tail, an injury most likely the result of mating.

Insectivorous Bats (microbats)

Gould's Wattled Bat (*Chalinolobus gouldii*) and White-striped Free-tailed Bat (*Austronomus australis*) are two of approximately 75 species of bat in Australia. These native mammals fall into two main groups: the megabats and the microbats. Two groups of bat occur in Western Australia, flying-foxes (megabats) and insectivorous bats (microbats). Both recorded species are insectivorous bats (microbats). Bats can be useful for pest control, feeding on moths, beetles, mosquitoes, invertebrate larvae, flying ants and other invertebrates.⁵⁷ A comprehensive bat survey would require a one week remote monitoring bat survey during summer. Bats can be encouraged to roost in the area by installing bat boxes.

Reptiles

Fifteen native reptile species have been recorded at Iluka – Burns Beach Foreshore Reserve, with 13 reptiles (four snakes, one gecko, seven skinks and one blind snake) in the Iluka survey area and seven reptiles (one dragon, three snakes, and three skinks) in the Burns Beach survey area. The most commonly occurring species trapped across the survey areas was West-coast Laterite Ctenotus (*Ctenotus fallens*). This species favours low coastal vegetation on sandy soils. Scincidae family (skinks) were the most commonly observed reptiles across both survey areas. All species recorded are considered common and widespread throughout the Perth region and wider South-west WA. None are considered conservation significant.^{9, 58, 59}

The 2020 fauna survey noted that the majority of reptile specimens trapped were considered to be in good physical condition.³⁵

In a previous study in 2018 the species *Lialis burtonis* (Burton's Legless Lizard) was recorded and is a specialist predator of skink lizards. Its occurrence indicates adequate abundance of skinks to support a population of this species.⁹

Amphibians

No amphibians have been recorded at Iluka – Burns Beach Foreshore Reserve.

Birds

⁵⁷ DEC (2007)

⁵⁸ Australian Government, Atlas of Living Australia (no date a)

⁵⁹ Australian Government, Atlas of Living Australia (no date b)

A total of 26 native birds have been recorded at Iluka-Burns Beach Foreshore Reserves, with 25 native species recorded in the Iluka Foreshore Reserve and 22 native species in the Burns Beach Foreshore Reserve.

Carnaby's Black-Cockatoos

One conservation listed species was recorded in the Iluka survey area, the endangered Carnaby's Black-Cockatoo (*Calyptorhynchus latirostris*) (see Appendix 9). This species was observed flying over the survey area during the flora survey.

Carnaby's Black-Cockatoos (Carnaby's) are endemic to the South-west of Western Australia and are listed on state, national and international threatened species lists.

Common Native Birds

The most common bird species recorded at Iluka – Burns Beach Foreshore Reserve were the honeyeaters. Across the Iluka and Burns Beach Foreshore Reserves there were a range of seasonal and resident nectar feeders such as honey eaters and wattle birds, opportunistic insectivores such as the *Malurus lamberti* (Variegated Fairywren) and *Malurus leucopterus* (White-winged Fairywren) and larger omnivorous species such as *Cracticus tibicen* (Australian Magpie), *Coracina novaehollandiae* (Black-faced Cuckoo-shrike) and *Cracticus nigrogularis* (Pied Butcherbird). All species observed at Iluka – Burns Beach Foreshore Reserve are known to be widespread throughout the south-west of WA and considered as common on the northern Swan Coastal Plain.⁹

Invertebrates

Invertebrates are animals without backbones such as insects, worms and molluscs. Invertebrates constitute more than 95% of all living animal species, with Australia having documented 100,000 species and an estimated 200,000 undescribed invertebrate species.⁶⁰ Some invertebrates are important indicators of ecosystem health, such as ants (seed dispersers), bees (pollinators) or spiders (top invertebrate predators).⁶¹

Invertebrates recycle organic matter, putting it back into circulation for use by other parts of the ecosystem and are instrumental in controlling the numbers of other species.⁶⁰

During the 2020 fauna survey, invertebrates were recorded opportunistically by observations, during hand searching for vertebrates, or as bycatch within vertebrate pitfall traps.

A total of 13 native invertebrates were recorded during the 2020 survey across the Iluka-Burns Beach Foreshore Reserve. The majority of invertebrate species recorded in the 2020 fauna survey were spiders. The Iluka-Burns Beach Foreshore Reserve supports a rich invertebrate diversity, which is reflected by the fairly diverse reptile assemblage present.⁶²

Over 500 invertebrate species were identified in the 2015-2018 an invertebrate study that was undertaken by Spineless Wonders in collaboration with the Friends of North Ocean Reef Iluka Foreshore.¹ A macroinvertebrate inventory survey conducted between 2015 and 2018 within the bounds of the Iluka Coastal Foreshore Reserve, between St. Lucia Road in

⁶⁰ DBCA (no date b)

⁶¹ V Framenau (2012), email, 9 July

⁶² ELA (2021)

the north and Resolute Way in the south, recorded over 500 macroinvertebrate species over this four-year period in one of the most comprehensive macrofaunal biodiversity inventories for any coastal habitat mosaic ever assembled in Western Australia.⁶³

The invertebrates recorded during the 2020 survey, in most cases, were only able to be identified to the taxonomic order level. It is likely that a targeted invertebrate survey would uncover a much higher number of invertebrate taxa within the Iluka-Burns Beach Foreshore Reserve, as demonstrated by the 2015 – 2018 survey.

Non-native Fauna

Non-native fauna impact native fauna and flora through predation, competition for food and shelter, spreading diseases and destroying habitat. These impacts can result in the diminishing or extinction of native species.⁶³

Non-native animals such as cats, foxes, rabbits, rats, mice, birds, millipedes, ants and bees inhabit the City's bushland, wetland and coastal areas.

Mammals

Australia is home to some of the world's most unique animals. More than 80 per cent of our mammals occur nowhere else on earth,⁶⁴ however Australian mammals are becoming extinct at an alarming rate, primarily due to non-native (feral animal) predation.⁶⁵

Four non-native mammals were recorded in the 2020 fauna survey. This included the house mouse (*Mus musculus*), fox (*Vulpes vulpes*), cat (*Felis catus*) and rabbit (*Oryctolagus cuniculus*). The Red Fox and Cat are direct predators to native mammals and reptiles. The survey also recorded free roaming pet cats (*Felis catus*) on a motion camera, indicating the use of the reserve by domestic animals. The House Mouse and European Rabbit have the potential to introduce and spread disease to native mammal populations and likely compete for food resources with other native fauna species. European Rabbits also eat seedlings and prevent natural revegetation or planted revegetation.

The lack of small native mammals recorded (other than the Quenda and microbats) is expected due to the size, fragmented nature and location of Iluka-Burns Beach Foreshore Reserve, however the likely presence of feral predators could also be having an impact on the microbat and Quenda populations.

Foxes are common within the City's bushland areas and have caused the decline of many native birds, reptiles and small mammals.⁶⁶

Domestic animals such as dogs (*Canis lupus*) can also cause damage to the City's natural environment, particularly when exercised unleashed within natural areas. Iluka-Burns Beach Foreshore Reserve is a dog on lead area. Dogs can harass native fauna, including mammals such as Quenda, resulting in stress and harm to the animals. Dogs can also spread pathogens if they disturb the soil, particularly around trees which may contain soil-based diseases. Dog droppings, if not removed, contribute a significant amount of nutrients

⁶³ Australian Government, DAWE (no date)

⁶⁴ Australian Government, DoE (2015a)

⁶⁵ Australian Wildlife Conservancy (no date)

⁶⁶ DPI (2012)

to the site, encouraging weed growth and potentially polluting groundwater. Some dog droppings contain harmful bacteria and nutrients.⁶⁷

The City Field Officers patrol Iluka-Burns Beach Foreshore Reserve on an adhoc basis (responding to requests) to ensure dogs are kept on leads and their droppings are collected.

Domestic and feral cats (*Felis catus*) have the potential to cause significant environmental harm when allowed to roam within urban natural areas.⁶⁸ Feral cats are attributed to be the major threat to mammalian fauna extinction in Australia.⁶⁵ The Federal Government Environment Minister endorsed the *National Declaration of Feral Cats as Pests* in 2015 to recognise feral cats as a nationally significant pest that threatens native fauna.

Under the *Cat Act 2011* the City of Joondalup may seize cats if they are reported to be in public areas or on private property without the consent of the owner/occupier. The *Cat Act 2011* encourages responsible pet ownership by ensuring cats are registered, sterilised and microchipped.

Birds

A total of two non-native species of birds have been recorded at Iluka – Burns Beach Foreshore Reserve including *Dacelo novaeguineae* (Laughing Kookaburra) and *Spilopelia senegalensis* (Laughing Dove).

The Laughing Kookaburra has been widely introduced into Western Australia where they breed in tree hollows that would usually be used by parrots and owls. Laughing Kookaburras also prey on small reptiles, mammals and nestlings, placing undue pressure on these native species.⁶⁹

The Laughing Dove are widespread throughout much of south-western Western Australia, the natural range of the Laughing Dove extends from Africa, through the Middle East to the Indian subcontinent. Laughing Doves breed in an array of locations, often suburban environments. Laughing Doves typically feed on the ground eating grain, seeds and weeds.

Although no Rainbow Lorikeets were sighted in the 2020 fauna survey, they were recorded in a previous survey in 2013 and have been observed over the past couple of years in increasing numbers at Iluka-Burns Beach Foreshore Reserve.

Invertebrates

One non-native invertebrate species was recorded in Iluka – Burns Beach Foreshore Reserve in the 2020 survey, the Portuguese millipede (*Ommatoiulus moreletii*). In the 2015-2018 survey within the Iluka Foreshore Reserve, two non-native invertebrate species were recorded in Iluka – Burns Beach Foreshore Reserve the European Honey Bee (*Apis mellifera*) and Portuguese millipede (*Ommatoiulus moreletii*).¹

Portuguese millipedes were first recorded in Western Australia in 1986 and are now widespread in the south-west of the State. They feed on organic matter such as leaf litter and are not known to impact native flora or fauna. Portuguese millipedes can reach high population levels and be a domestic nuisance when they invade homes and gardens. This species is known to be distasteful and therefore avoided by many predators. It plays a useful

⁶⁷ KABWA (no date)

⁶⁸ Australian Government, Department of the Environment (2015b)

⁶⁹ Birdlife Australia (no date b)

role in breaking down organic matter in the soil, however is considered a pest when it reaches high population levels.⁷⁰ This species has become widespread across the Perth metropolitan area in both bushland and suburban areas. The Portuguese Millipede (*Ommatoiulus moreletii*) is listed as Permitted – s11 under the Western Australian organism List.

European honey bees are frequently observed at the site. The European honey bee (*Apis mellifera*) is common within the City's natural areas and may impact upon native flora and fauna through competing with native fauna (including native bees) for floral resources, disrupting natural pollination processes and displacing endemic wildlife from tree hollows. European honey bees are feral animals, however, European honey bees are important to Australian horticulture and agricultural industries with approximately 65% of agricultural production in Australia being dependent on pollination by European honey bees.⁷¹

Ecological Linkages

Naturally connected landscapes and ecosystems are generally healthier, protect a diversity of species, provide pathways for species movement and can store carbon more effectively than degraded landscapes.⁷² In urban areas where there is engineered infrastructure dividing the landscape, it may be beneficial to provide wildlife crossings such as underpasses, tunnels, viaducts or overpasses to enable wildlife movement.

Iluka-Burns Beach Foreshore Reserve forms an important coastal ecological linkage from Mindarie in the north to North Fremantle in the south. It also forms an ecological linkage to Neerabup National Park and Yellagonga Regional Park in the east, as shown in Figure 27. The ecological linkage from Burns Beach Foreshore Reserve to Neerabup National Park and Yellagonga Regional Park is divided by Marmion Avenue, Connolly Drive, Mitchell Freeway and Burns Beach Road.

Future development to the north of Iluka-Burns Beach Foreshore Reserve, may result in further isolation from other bushland remnants. The Iluka-Burns Beach Foreshore Reserve provides a valuable linkage to adjacent bushland to the north, south and east. It provides habitat connectivity for many species, particularly birds and this is important for the continued presence of a range of local bird species, including Carnaby's Black-Cockatoo. The occurrence of Carnaby's Black-Cockatoo highlights the foraging value of the study area.⁹

Current Management Approach

The City of Joondalup is implementing a number of management actions to monitor native fauna and address the environmental impacts of domestic and pest animals within the City's natural areas. Monitoring of native fauna occurs through fauna surveys. Control of non-native fauna such as foxes, cats and rabbits is undertaken annually within selected bushland, wetland and coastal areas, as required. Fox, cat and rabbit control methods employed include biological and chemical control, trapping, baiting and exclusion methods such as fencing. Fox, cat and rabbit control is conducted when foxes, cats or rabbits are observed or rabbit or fox warrens are identified on site. Three separate fox and cat trapping events were conducted in Iluka Foreshore Reserve during 2020, resulting in the trapping of seven cats and two foxes. Further fox and cat trapping events were conducted in Iluka –

⁷⁰ DPIRD (2020)

⁷¹ Rural Industries Research and Development Corporation (no date)

⁷² NWCPAG (2012)

Burns Beach Foreshore Reserve in 2021 and summer of 2022 as well as the release of Rabbit Hemorrhagic Disease (RHD) virus for rabbit control.

The City liaises with City of Wanneroo around feral animal control programs within in its connected reserves, and where possible aligns its programs to address any feral animals that move between the Cities coastal foreshore reserves. In addition, Friends Groups often report any feral animal observations within reserves to the City.

The City's current management practices have greatly reduced the incidence of pest animal populations within the City. However, continued and coordinated action is required to ensure that populations remain at controllable numbers and that the impacts on natural areas remain acceptably low.

The City also promotes responsible pet ownership and encourages the community to ensure that domestic pets do not have a negative impact on the natural environment. Iluka-Burns Beach Foreshore Reserve is designated as a place where dogs must be on a lead at all times by Council resolution in accordance with the *Dog Act 1976*. Cats may be seized where they are found wandering in public areas, such as Iluka-Burns Beach Foreshore Reserve, in accordance with the *Cat Act 2011*.

Recommended Fauna Management Actions:

To monitor and protect native fauna in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Fauna survey	Undertake a follow up fauna survey, in mid-late spring to supplement previous fauna survey, within 10 years.
Fauna / Ecological Linkages investigations	During on ground maintenance tasks, investigate the access points utilised by native fauna, in order to guide suitable management of native fauna within the reserve. Based on the findings, undertake an in house study aiming to improve ecological linkages between the Iluka-Burns Beach Foreshore Reserve to the Burns Beach Bushland and Neerabup National Park; and to Yellagonga Regional Park.
Quenda monitoring	Commence discussions with WA Universities on research and monitoring opportunities of the Quenda population.
Bat survey	Undertake a one week remote monitoring bat survey in summer to supplement previous one night bat survey undertaken in spring.
Installation of bat boxes	If bat survey indicates presence of bats, consider installing bat boxes to encourage bats to roost.
Feral animal control	Monitor feral animal populations and implement regular control to reduce pressures on native fauna and flora. This is inclusive of rabbit, cat and fox control. Remove feral beehives if they are identified on site and are accessible.
Patrols undertaken by City Field Officers	Continue targeted patrols by City Field Officers to ensure dogs are kept on leads and their droppings are collected.

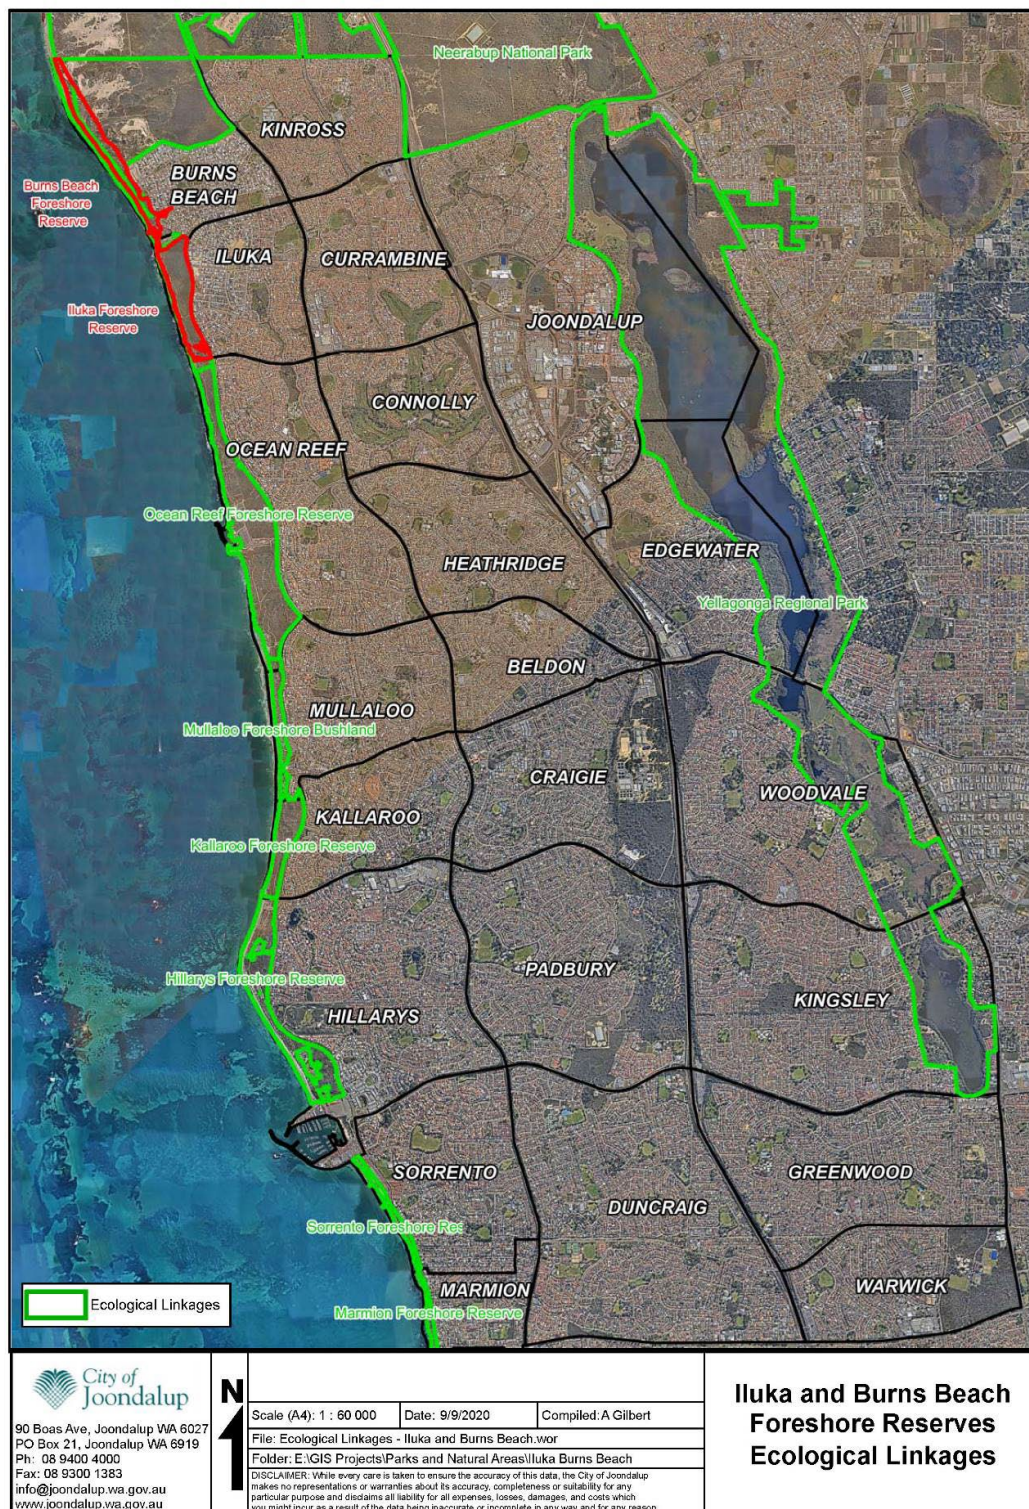

Figure 27: Ecological Linkages adjacent to Iluka-Burns Beach Foreshore Reserve

3.5 Social and Built Environment

History and Heritage

Iluka-Burns Beach Foreshore Reserve is not listed on the State Heritage Register, however Marmion Marine Park is located adjacent to the site and is listed on the State Heritage Register due to the social and ecological significance of the islands, lagoons and reefs forming the marine park.

The Burns Beach Waugal Aboriginal Heritage site (ID 22672) is located within Iluka Foreshore Reserve (see Section 1.3.2) and is listed on the State Aboriginal Heritage Inquiry System.

An unexploded ordnance (UXO) investigation was undertaken in Burns Beach Foreshore for the development of the Burns Beach to Mindarie dual use path in July 2019. No items of live UXO or explosive ordnance were located during the investigation, however a few fragments of explosive ordnance waste were uncovered. The investigation only surveyed the area designated for the Burns Beach to Mindarie dual use path and not the surrounding areas. The majority of Burns Beach Foreshore Reserve is located within an UXO area ID 1041 with a slight occurrence category and was a field firing demonstration range in 1943 where armour artillery and infantry conducted live firing.⁷³

Social Value

Australians have reported they would be willing to pay an average of \$35,000 more (approximately 7%, assuming a base value of \$500,000) to live in a home in a 'green' neighbourhood, with a third of Australians willing to pay an extra \$100,000 or more to live in a 'green' area. Approximately two thirds of Australians would prefer to buy a home in a nature-filled neighbourhood to reduce their stress levels. Living in a home with a 'green' neighbourhood is important to Australians, even more important than proximity to work, shops and public transport.⁷⁴

Urban natural areas can provide social, psychological, physical and spiritual benefits and play a role in community health, wellbeing and quality of life. Some of the benefits of urban natural areas for the community include:

- Reduction of mental fatigue and stress
- Provide opportunities for reflective thought, peace and quiet
- Create opportunities for informal social interactions
- Provide opportunities for activities that can increase physical health
- Assists to reduce the crime rate by relaxing people and encouraging people to be outdoors.⁷⁵

The main uses of Iluka-Burns Beach are for recreational purposes such as walking, cycling, dog exercising, beach activities and use of adjacent playgrounds and Burns Beach Cafe.

The Friends of North Ocean Reef – Iluka Foreshore have been operational since 2006 and ~~assist-contribute a significant amount towards~~ maintaining the conservation values of Iluka Foreshore Reserve through actions such as manual weed control, revegetation and

⁷³ Department of Defence (2020)

⁷⁴ Planet Ark (2014)

⁷⁵ Tarran (2006)

conducting ecological surveys. There is currently no Friends Group operating in Burns Beach Foreshore Reserve.

Access and Infrastructure

Iluka Foreshore Reserve contains infrastructure such as playgrounds, board walk and lookout, toilets and showers, BBQs, bike racks, gazebo, shelters, seating, drink fountain and bins, as shown in Figure 35.

Burns Beach Foreshore Reserve contains infrastructure such as playgrounds, board walks, BBQs, toilets and showers, bike racks, seating, shelters, bins and a drinking fountain, as shown in Figure 37. The Sistas Burns Beach Café and Restaurant and Burns Beach Sunsets Village caravan park are also located on site.

A development is proposed for Burns Beach in the predominantly cleared area near the northern car park including a new café / restaurant space, car park, playground, picnic facilities and landscaping. The development is subject to approvals, community consultation and Council endorsement prior to commencement.

Utilities

Several public utilities operate within or adjacent to Iluka-Burns Beach Foreshore Reserve, as shown in Figure 28 and Figure 29.

The public hydrants are owned, serviced and maintained by the DFES in conjunction with the Water Corporation. The Water Corporation also maintain the sewerage infrastructure on an as required basis.

Lighting

Whilst artificial lighting benefits humans by providing for safety, amenity and increased productivity, it also has the potential to affect wildlife.⁷⁶

Any new infrastructure projects should consider the conservation of natural darkness through good-quality lighting design and management. Appropriate risk assessment, management plans and monitoring procedures of artificial lighting will be able to reduce the overall effect on wildlife.⁷⁶

Light-emitting diodes (LEDs) provide the ability to control and manage the parameters of lighting, thereby incorporating best practice lighting design principles. The City is investigating options to transition the City's street lighting to LED smart-monitor lighting.

Security lighting has only been added in Iluka Foreshore Reserve and Burns Beach Foreshore Reserve where necessary, see Figure 28 and Figure 29. The City endeavours to install lighting using best practice design lighting principles.⁷⁶

⁷⁶ DCCEEW (2023)

Figure 28: Iluka Foreshore Reserve Power, Lighting, Water & Sewage Utilities

Figure 29: Burns Beach Foreshore Reserve Power, Lighting Water & Sewage Utilities

Conservation Fencing

Conservation fencing is used to restrict access and protect areas of the foreshore reserve. Timber post and plastic coated galvanised chain mesh fencing surrounds the outer perimeter of the bushland (adjacent to Burns Beach Road) at Iluka Foreshore Reserve and along the sides of the pathway, as shown in Figure 30. There are also several small sections of the previous ring lock conservation fencing that require upgrading to the plastic coated galvanised chain mesh fencing.

Conservation fencing is also installed along the sides of the pathway at Burns Beach Foreshore Reserve extending to the north until the development on Beachside Drive.

Fencing is inspected every two months and repairs are conducted as required.

Figure 30: Conservation Fencing on the perimeter of Iluka-Burns Beach Foreshore Reserve

Access Points

Access points allow people to enter the foreshore reserve areas that are fenced off and often give access to paths and provide pedestrian access to the beach. All formal access points have fencing or railing to prevent unauthorised vehicle and motorbike access. There are numerous access points in Iluka-Burns Beach Foreshore Reserve, as shown in Figure 34 and Figure 36. The access ways provide access from recreational areas, car parks and at several intervals along the dual use path.

Where informal access points are established within Iluka – Burns Beach Foreshore Reserve, the City addresses this through installing temporary fencing and repairing any damage to fencing.

Paths and Trails

Paths in Iluka-Burns Beach Foreshore Reserve are used for pedestrian and cyclist access, fire access ways and bushland management and maintenance purposes. The paths in Iluka-Burns Beach Foreshore Reserve are mostly used by pedestrians, dog walkers and cyclists. The primary path within Iluka-Burns Beach Foreshore Reserve is a coastal dual use path. This primary dual use path also forms part of the Sunset Coast Trail which runs along the entire stretch of coastline.

Construction of the northern section of the coastal path between Mindarie and Burns Beach was completed in October 2020. In early 2022, developer PEET has completed the final 650 metre section of the Burns Beach-Mindarie shared coastal path, which links the cities of Joondalup and Wanneroo from Burns Beach estate in the south to Catalina estate in the north. The coastal path route was designed to ensure the region's biodiversity and Aboriginal cultural heritage would be protected before construction began. The works have created a continuous route from North Fremantle to Mindarie. The City is planning on widening the coastal shared path from Hillarys to Burns Beach from 2.5m or 3m to 4m to provide increased safety to users of the path such as pedestrians and cyclists.

An existing fire access way was formalised to create a pathway in the north of Iluka Foreshore Reserve adjacent to Burns Beach Caravan Park in 2021.

A number of informal tracks also exist within the bushland. The use of informal tracks and the disturbance of soil through the establishment of informal 4WD, BMX and walking tracks, has the potential to spread and establish weeds and reduce healthy vegetation condition.

The current gates are easy for cyclists or people with prams or wheelchairs to use, however gates that allow easy access on site also allow motorbikes to enter.

Access and Inclusion

The Australian Bureau of Statistics 2021 Census indicates that 6,224 (3.9%) of City residents have a need for assistance with core activities due to a severe or profound disability.

The City of Joondalup has an *Access and Inclusion Plan 2021/22 -2023/24* stating that 'the City is committed to ensuring that its activities and services are inclusive of all members of the community, including people with disability and their families or carers, and people from culturally and linguistically diverse backgrounds.'

The formal paths in Iluka-Burns Beach Foreshore Reserve allow wheelchair access. The paths can be accessed from entries in the north and south of the reserve. The City's *Access and Inclusion Plan 2021/22 – 2023/24* also has an action to 'investigate improving the accessibility of beaches and foreshore environments' and implement accessibility upgrades in approved locations.

Signage

Signage is important to encourage appropriate use of the site and inform the community about the ecological and cultural values of Iluka-Burns Beach Foreshore Reserve. There are numerous signs at Iluka-Burns Beach Foreshore Reserve on the periphery of the site

and near the main entrances, detailing information such as the name of the site and that the site is managed by City of Joondalup.

Signage at the reserve also informs park users about the danger associated with the limestone cliff risk areas and encourages the protection of the natural areas and dunes. There is also a series of ecological interpretative signage installed along the coastal walk from Iluka Foreshore Reserve in the south to Burns Beach Foreshore Reserve in the north. The signage focuses on highlighting the unique flora and fauna of the area. As well as There is also signage regarding the Marmion Marine Park site and its management.

There are also 'dogs must be on a lead' signs, at the main entrance points.

Directional signage uses maps to indicate trails, entrances and infrastructure. Interpretive signage increases awareness of the ecological values of the bushland. The City has developed a *Wayfinding Signage Strategy* to guide the provision of information and interpretive messages within the City's natural areas.

Signage is reviewed and inspected as required in alignment with the *Wayfinding Signage Strategy* and the City's legal requirements.

Figure 31: Examples of the interpretative ecological signage along the coastal walk through Iluka-Burns Beach Foreshore Reserve

Toilets

There are toilets and showers located adjacent to the car park at Iluka Foreshore Reserve, as shown in Figure 35. Toilets and showers are also located at Burns Beach Foreshore Reserve to the north of the car parks, as shown in Figure 37.

Parking

There is a car park located at Iluka Foreshore Reserve with the entrance being close to the corner of Burns Beach Road and Discovery Circuit, as shown in Figure 35. There are two car parks located at Burns Beach Foreshore Reserve at the end of Ocean Parade by the coast (north and south of the roundabout), as shown in Figure 37. Some street parking is also available along Ocean Parade.

Seating

Numerous park bench seats and picnic shelter seats are located at Iluka Foreshore Reserve in the park area and along the dual use path, as shown in Figure 34 and Figure 35. Numerous park bench seats and picnic shelter seats are also located at Burns Beach Foreshore Reserve, predominantly in the park areas, as shown in Figure 36 and Figure 37.

Figure 32: Seating at Iluka – Burns Beach Foreshore Reserve

Antisocial Behaviour

There is a history of dumping of garden refuse and rubbish, cubby houses, graffiti on signage, theft of plant tags and homeless person activities in Iluka Foreshore Reserve. There is a history of dumping of garden refuse within Burns Beach Foreshore Reserve, particularly in the fire access ways adjacent to houses. Inspections are conducted every 2 months and actions are undertaken to address any issues identified.

Rubbish

Rubbish bins are generally installed in locations where people gather to socialise or undertake recreational activities. Dog poo bins are generally installed in locations where people walk their dogs. There are dog poo bins located in the south-east corner and the south-west corner near paths and access points to the site (see Figure 35 and Figure 37). These dog poo bins can also be used to dispose of general rubbish.

Litter can have negative impacts on flora and fauna. Litter is collected by the City or Friends Group on an as needed basis, sometimes in conjunction with hand weeding activities.

The City monitors the amount of litter present in Iluka Foreshore Reserve on an annual basis, measured on three transects within the reserve. The amount of litter present in Iluka

Foreshore Reserve has decreased from 18 items per hectare in 2019/20 to 0 items per hectare in 2020/21 and 2021/22 (see Figure 33).

The amount of litter per hectare has not been measured at Burns Beach Foreshore Reserve to date.

Figure 33: Amount of Litter Present in Iluka Foreshore Reserve

Water Sensitive Urban Design

The City manages Aa fenced off sump ~~is~~ located adjacent to Iluka Foreshore Reserve on the corner of Burns Beach Road and St Lucia Road, as shown in Figure 13. The City also manages Aa fenced off sump ~~is also~~ located close to Burns Beach Foreshore Reserve at Burns Beach Park on Ocean Parade, as shown in Figure 14. Both sumps contain vegetation and there are currently no plans for changes to these sites.

Recommended Social and Built Environment Management Actions:

To enhance the social and built environment in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Maintain conservation fencing	Maintain conservation fencing on an as needed basis (informed by inspections every 2 months) to protect the native vegetation, flora and fauna from informal access.
Upgrade conservation fencing	Upgrade sections of old ring-lock conservation fencing to the newer plastic coated galvanised chain mesh fencing.
Investigate closure and rehabilitation of informal tracks	Investigate closure and rehabilitation of informal tracks that are used infrequently to protect vegetation.

Action	Details
Implement <i>Wayfinding Signage Strategy</i>	Implement recommendations from the City's <i>Wayfinding Signage Strategy</i> that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.
Investigate additional signage requirements	Investigate any additional signage requirements, such as Aboriginal cultural heritage interpretative signage (e.g. mythological Burns Beach Waugal Aboriginal heritage site), limestone cliff danger signage and Unexploded Ordnance signage as required.
Patrols undertaken by City Field Officers	The City will continue to visit Iluka-Burns Beach Foreshore Reserve as part of the City Field Officers patrol regime, as a form of active surveillance of the bushland and adjoining recreational parkland.
Investigate the provision of additional waste services	Monitor and investigate the provision of additional waste services to mitigate litter, as a result of increased public use and infrastructure upgrades in the active reserve.
Dismantle cubby houses, BMX tracks and informal tracks	Dismantle cubby houses, BMX tracks and informal tracks as required to discourage vegetation degradation and littering in the surrounding area.

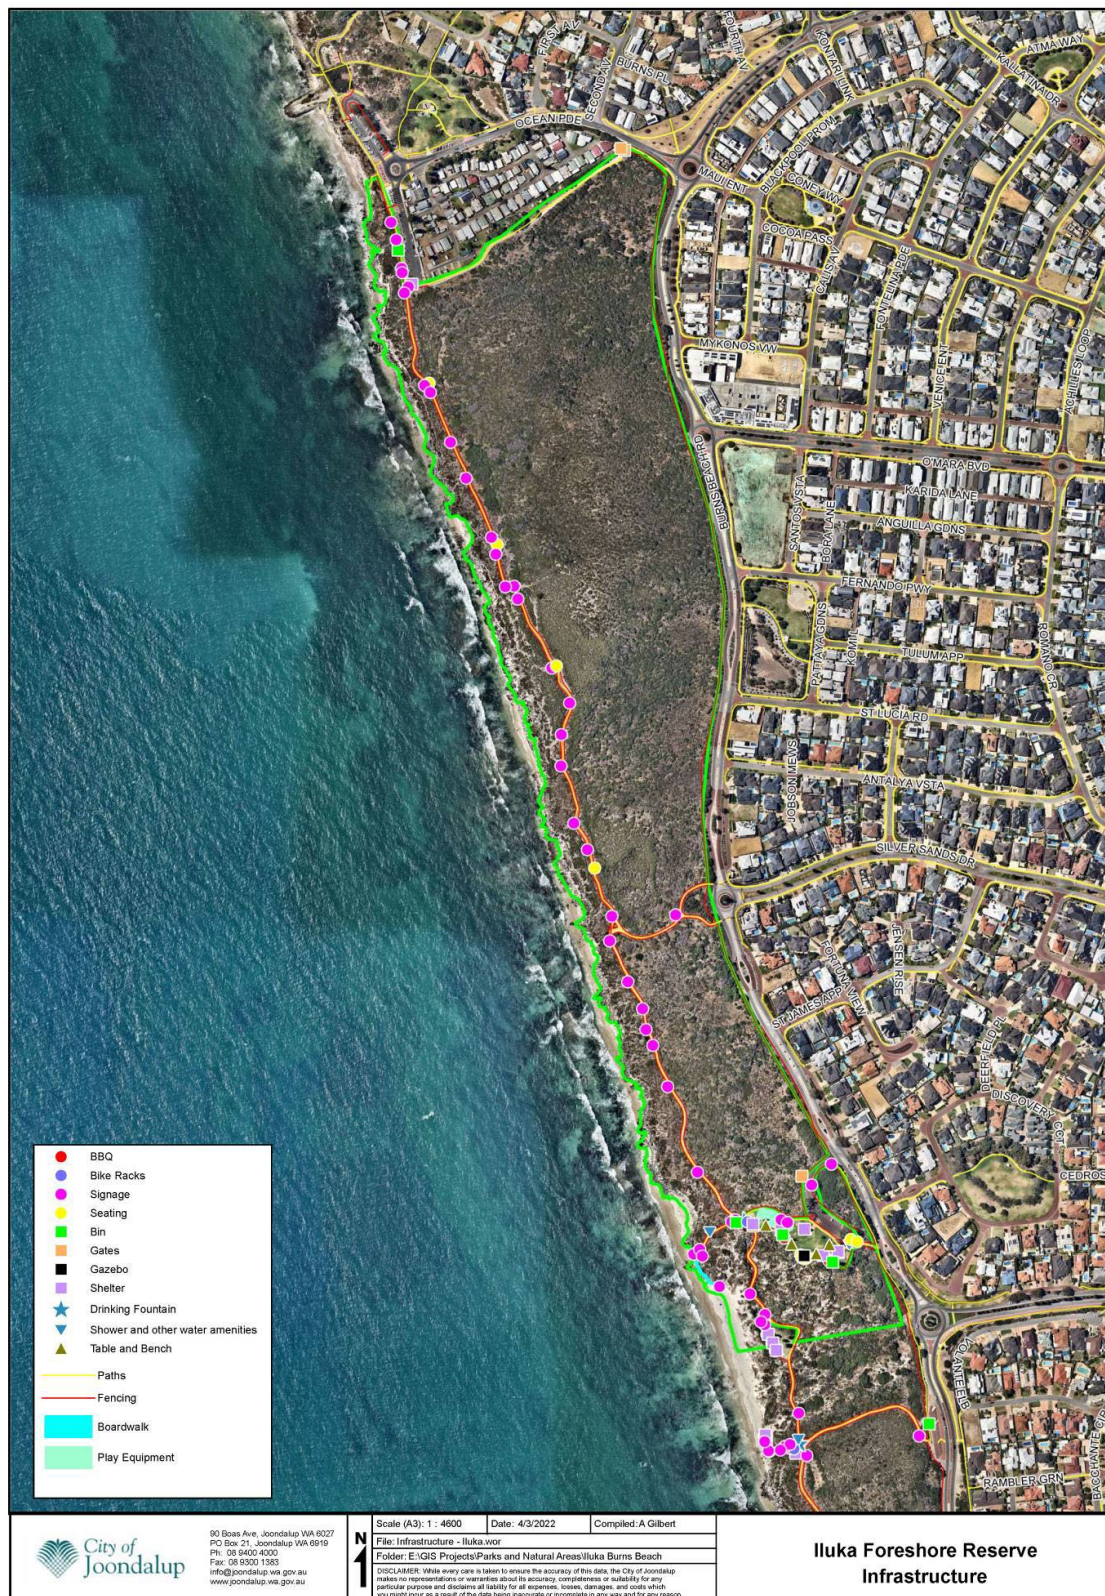

Figure 34: Iluka Foreshore Reserve Infrastructure

Figure 36: Burns Beach Foreshore Reserve Infrastructure

Figure 37: Burns Beach Foreshore Reserve Detailed Infrastructure

3.6 Fire Management

Fire is an important natural feature of the Western Australian landscape. Fire helps to shape the diversity of plant communities with many native plants having developed fire-related adaptations over time, for example fire expedites many species to flower or germinate.

Before Aboriginal people populated the Australian continent approximately 40,000 to 60,000 years ago, the major cause of fires would have been lightning. Aboriginal people learnt to harness the naturally recurring fire caused by lightning and other sources to their advantage, which resulted in skilful burning of landscapes for many different purposes. Fire was used to gain access to difficult areas, promote the development of food plants, for cooking, warmth and signalling and attracting animals for hunting.⁷⁷

Although there are benefits to fire, an increase of fire occurrences particularly in the same area over a short period of time, referred to as fire intervals or measured as time since last fire, has the potential to adversely impact flora and fauna populations.

Human activity such as accidents and arson have resulted in increased incidences of fire within many urban bushland reserves, which can encourage growth of highly flammable and invasive weeds.

The climate in the south-west of Western Australia has become warmer and drier and is likely to continue to dry, with lower winter rainfall and increased average temperatures resulting in a longer 'fire season' and a greater proportion of the landscape that is sufficiently dry enough to burn.^{78,79}

Bushfires are unplanned fires that can be caused by events such as lightning, unplanned effects from controlled burning operations, escape from industrial activities, damaged power transmission lines, discarded cigarette butts or deliberate arson. Bushfires can cause significant damage to people, property and the environment.⁸⁰ In 2015 the State Government released *State Planning Policy 3.7, Planning in Bushfire Prone Areas* and corresponding guidelines in response to several extreme fire events in Australia.

Under the *Bush Fires Act 1954*, local government have the responsibility of prevention, preparedness and recovery to bushfires, hence fire management of Iluka-Burns Beach Foreshore Reserve is the responsibility of the City of Joondalup. The City of Joondalup has a "duty of care" to take all reasonable precautions to prevent any bushfire from spreading onto neighbouring properties. The City of Joondalup does not currently have a hazard reduction burn management regime for the area.

The Department of Fire and Emergency Services (DFES) has the primary responsibility of emergency response in the event of a bushfire. DFES work with the community and local government to provide education on hazard risk management and to prevent, prepare for, respond to and recover from a diverse range of emergencies.⁸¹

DFES have developed an Urban Bushland Response Plan (UBRP) for Iluka Foreshore Reserve (Ocean Reef Foreshore Resolute Way to Burns Beach) and also a UBRP for Burns

⁷⁷ DPaW (2013a)

⁷⁸ DPaW (2013b)

⁷⁹ City of Joondalup (2014)

⁸⁰ EDOWA (2011)

⁸¹ DFES (no date a)

Beach Foreshore Reserve (Burns Beach Foreshore and dunes to Marmion Avenue) including site specific information on ecologically sensitive areas, hazard advice, high risk areas and communications plan. The UBRP's are updated by DFES annually and identify key stakeholders including the City of Joondalup.

There are numerous public water hydrants located around Iluka-Burns Beach Foreshore Reserve which are installed and maintained by the Water Corporation and DFES, as shown in Figure 28 and Figure 29.

Undertaking fire management within Iluka-Burns Beach Foreshore Reserve will help to:

- Protect life, property and environment in Iluka-Burns Beach Foreshore Reserve and adjacent residential areas and privately owned buildings.
- Fulfil obligations under the *Bush Fires Act 1954*.
- Protect the ecological and amenity values of Iluka-Burns Beach Foreshore Reserve bushland.
- Protect landscape values (including flora and fauna) from uncontrolled fire and inappropriate suppression techniques.
- Reduce the frequency, impact and area of unplanned fires.
- Minimise the spread of disease and weeds during fire fighting operations and when establishing firebreaks.
- Minimise impacts on air quality.

Fire Risk

The most recent fuel load assessment was conducted at Iluka-Burns Beach Foreshore Reserve in 2016-17 by the City of Joondalup which indicated the site had a fuel load ranging from 5.4 to 17.5 tonnes / ha. The fuel load assessment was undertaken according to the methodology from the Fire and Emergency Services Australia (FESA) *Visual Fuel Load Guide for the Scrub Vegetation of the Swan Coastal Plain*.⁸² The results of fuel load assessments are used to inform fire management of the site.

Fire Occurrences

There have been a small amount of fires at Iluka-Burns Beach Foreshore Reserve, the majority of which are believed to have been deliberately lit. Most of the fires occurred within Iluka Foreshore Reserve. Records of fire occurrences at Iluka Foreshore Reserve and Burns Beach Foreshore Reserve are detailed in Table 5 and Table 6.

Dates	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013	2012	2011	2010
Fire Occurrences	0	1	0	0	1	0	1	1	1	2	0	0	1

Table 5: Fire Occurrences at Iluka Foreshore Reserve (DFES 2023)

⁸² FESA (2007)

Dates	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013	2012	2011	2010
Fire Occurrences	0	0	0	0	0	0	0	2	0	0	0	0	0

Table 6: Fire Occurrences at Burns Beach Foreshore Reserve (DFES 2023)

Monitoring of fire occurrences and detailing fire incidents and frequency through mapping and updating the City's Geographic Information System (GIS) layer could inform fire prevention actions.

Fire Response

The closest Fire and Rescue Service Station is Joondalup Fire Station located on Drovers Place in Wanneroo and they are responsible for suppressing fires within Iluka-Burns Beach Foreshore Reserve. The Western Australia Police are responsible for the evacuation of residents and visitors, if required.

Fire Recovery

Weed control is revised after fire incidents to aid regrowth by selecting appropriate chemicals, targeting weeds if safe to do so for new seedlings, and spraying weedy grasses using targeted approaches.

Current Management Approach

The City of Joondalup implements a number of on ground measures to reduce the risk of fire, including undertaking:

- Controlled access;
- Weed (invasive) species management;
- Ad-hoc fuel load assessment and management; and
- Maintenance and installation of fire access tracks (fire access ways and strategic firebreaks).

Fuel load assessments are conducted on an as required basis and the results used to inform bushfire mitigation works on the site.

Weed control and maintenance of fire access tracks are conducted in accordance with the City's Annual Bushland Schedule.

A *Bushfire Risk Management Plan 2018 – 2023* has been developed by the City of Joondalup to identify the level of risk for fire occurrences within the City of Joondalup and proposes management strategies to be employed to reduce and mitigate the risk. Iluka Foreshore Reserve has the risk rating of extreme and Burns Beach Foreshore Reserve has the risk rating of medium within the Plan. The majority of Iluka-Burns Beach Foreshore Reserve has been rated as a bushfire prone area by the Fire and Emergency Services Commissioner, meaning that it is subject, or likely to be subject, to bushfire attack. Additional planning and building requirements may apply to development within these areas.

The City has also developed Fire Weed Management Guidelines to mitigate the impact of weeds within the post fire environment of the City's natural areas. These Guidelines are implemented within the City's natural areas after a fire event.

Recommended Fire Management Actions:

To prevent fire occurrences and minimise the environmental impact of fire occurrences in Iluka-Burns Beach Foreshore Reserve, the following management actions are proposed:

Action	Details
Maintain fire access tracks and footpaths	Maintain fire access tracks and footpaths, including weed control and pruning of vegetation, by implementing the Annual Bushland Schedule.
Implement Bushfire Risk Management Plan	Implement the City's <i>Bushfire Risk Management Plan</i> in relation to Iluka-Burns Beach Foreshore Reserve.
Monitor fire occurrences	Monitor fire occurrences through mapping and updating Geographic Information System (GIS) layers detailing fire incidents and frequency to inform fire prevention actions.
Revise weed control after fire incidents	Revise weed control after fire incidents to aid regrowth by selecting appropriate chemicals, targeting weeds if safe to do so for new seedlings, and spraying weedy grasses using backpacks.
Implement Fire Weed Management Guidelines	Implement the Fire Weed Management Guidelines, when required, to reduce the infestation of weeds in natural areas after a fire.

3.7 Education and Training

An important objective of this Plan is to ensure that the local community, visitors to the City's natural areas and those that manage the City's natural areas have the necessary awareness, knowledge, motivation and behaviour to assist in protecting the City's natural areas.

Environmental objectives cannot be achieved through the actions of the City alone; the community can also affect the local environment in both positive and negative ways. Environmental outcomes require the support of an engaged community that is aware and participating in environmental activities.

The local community can protect and enhance Iluka-Burns Beach Foreshore Reserve through the following actions:

- Contact the City if they are interested in initiating an environmental volunteer group such as the Friends of Burns Beach Foreshore Reserve to assist with bushland restoration and maintenance activities.
- Contact the City if they are interested in participating in an environmental volunteer group such as the Friends of North Ocean Reef – Iluka Foreshore to assist with bushland restoration and maintenance activities.
- Minimising access and disturbance to the site by staying on paths, not taking vehicles into natural areas, and not allowing dogs to run off-leads.
- Contain cats, particularly at night, and ensure they stay out of Iluka-Burns Beach Foreshore Reserve.
- Planting local, native species in gardens where possible.
- Avoid touching or feeding wildlife and picking wildflowers or native plants.

- Undertaking appropriate hygiene practices such as cleaning footwear when entering and leaving the site, removing any weed seeds attached to clothing and removing and disposing appropriately of dog excrement (may contain weed seed).
- Not dumping garden rubbish or littering on site. Litter could be collected from site when spotted, or people could organise or get involved with a Clean Up Australia Day event.

Schools are also an important avenue for raising awareness and interest in environmental issues and creating future community members that are aware of, appreciate and actively participate in local environmental management. There are a number of schools (e.g. Beaumaris Primary School, Burns Beach Primary School, St Simon Peter Catholic Primary School and Prendiville Catholic College) within close proximity to Iluka-Burns Beach Foreshore Reserve which creates possible bushland learning opportunities for students.

Current Management Approach

The City implements an annual Environmental Education Program to address key environmental issues and encourage greater environmental stewardship by the community. The Environmental Education Program includes a Think Green Biodiversity campaign, focussed on raising awareness of key environmental issues within the City and encouraging community participation in protecting the natural environment.

As part of the Environmental Education Program, the City has developed an Adopt a Bushland Program for students from years 4 to 6 to provide an interactive educational bushland management program. The Adopt a Bushland program could be implemented with students from years 4 to 6 at the abovementioned primary schools.

In order to educate the community about how they can protect natural areas, the City has developed a number of key brochures titled '*Being WEEDwise: Garden Escapees in the City of Joondalup*', '*Being WEEDwise: Environmental Weeds in the City of Joondalup*' and '*Protecting our Natural Areas and Parks*'.

The City of Joondalup Natural Environment Team currently conduct regular plant identification training, including weed management. New members in the Natural Environment Team undertake training for the management of pathogens.

The City's Friends Groups are instrumental in assisting to protect, preserve and enhance significant bushland areas within the City and may also benefit from training.

Recommended Education and Training Management Actions:

To increase community awareness and training opportunities regarding natural areas management, the following actions are proposed:

Action	Details
Environmental Education Program	Implement initiatives of a 'Think Green Biodiversity' campaign (part of the Environmental Education Program) targeting environmental issues such as: <ul style="list-style-type: none"> • pathogens • weeds • litter • fire • flora, fungi and fauna awareness and valuing biodiversity • preventing hand feeding of wildlife • responsible pet ownership.
Support 'Friends of North Ocean Reef – Iluka Foreshore'	Support the 'Friends of North Ocean Reef – Iluka Foreshore' group and encourage community participation in the management of this natural area.
School Programs	Implement an Adopt a Bushland/Coastline program for students to provide an interactive bushland management program; and liaise with nearby schools such as Kinross Primary School, Francis Jordan Catholic School, Currambine Primary School, Burns Beach Primary School and Beaumaris Primary School to increase awareness of the bushland ecological values.
Natural Environment Team training	Conduct regular Natural Environment Team plant identification training, including weed management, to increase the effectiveness of weed control activities, as required.
Friends Groups training	Provide training including pathogen management and weed identification to community members involved in Friends of North Ocean Reef – Iluka Foreshore.

4.0 Implementation Plan

To ensure the Iluka-Burns Beach Foreshore Reserve Management Plan is being implemented in an effective and timely manner the following steps will be undertaken:

- Regular inspections
- Natural Area Key Performance Indicators reported on in Annual Report
- Scientific research
- Annual progress report against the actions in the Management Plan.

4.1 Inspections

Inspections of Iluka-Burns Beach Foreshore Reserve are conducted by the City of Joondalup once every 2 months and include weed monitoring, pest species monitoring and assessment of infrastructure maintenance requirements.

4.2 Monitoring and Reporting

A review of the Iluka-Burns Beach Foreshore Reserve Management Plan will be undertaken annually by reporting against progress made in implementing recommended management actions through the State of the Environment Report, as relevant.

Ongoing reporting against Council endorsed Natural Key Performance Indicators will also be undertaken to ascertain whether current management practices are leading to positive environmental outcomes. The key indicator will be measured and reported on a five yearly basis, as shown in Table 7.

Key Performance Indicator	Source	Reporting Period
Vegetation condition per area (using the Keighery Scale of vegetation condition) expressed as a percentage for each classification (pristine to completely degraded).	Data obtained through on site floristic survey undertaken to inform the review of the Management Plan with the service provided by specialised consultants.	Five Yearly 2026/27

Table 7: Natural Area Key Performance Indicator

4.3 Scientific Research and Monitoring

A flora survey and vegetation condition assessment will be conducted at Iluka-Burns Beach Foreshore Reserve in 2026/27, to inform the update of the Management Plan. Comparisons to previous surveys will be made to assess site changes over time.

4.4 Management Plan Review

The Implementation Plan for the Iluka-Burns Beach Foreshore Reserve Management Plan is to be reviewed 5 years after the initial ecological survey in 2026/27 with a major update of the Plan to be conducted 10 years after the initial ecological survey in 2031/32.

4.5 Summary of Recommended Management Actions

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
Flora	Flora survey	Undertake a follow up flora survey in spring to supplement previous flora surveys, within 5-10 years. Make comparisons between flora surveys to assess site changes every 5-10 years.	Within 5-10 years
	Weed survey	Undertake a follow up weed survey in winter to supplement previous weed surveys, within 5-10 years.	Within 5-10 years
	Endangered flora conservation	Investigate the planting of the identified endangered flora species to maintain or enhance the population/s to ensure the species long-term preservation within Iluka-Burns Beach Foreshore Reserve.	Within 4-5 years
	Investigate planting trees (and vegetation) for habitat	Investigate planting other species of locally native trees and shrubs (such as Banksia and Hakea species) to provide opportunities for nesting sites and shelter for fauna.	Within 4-5 years
	Revegetation	Support revegetation being conducted in degraded or completely degraded areas using local provenance species, as required.	Ongoing
	Restrict unauthorised access	Consider the installation of fencing or formal signage to prevent habitat degradation and weed spread from unauthorised walking/vehicle tracks.	As required
	Bi-monthly weed inspections	Conduct weed inspections every two months to establish the extent of weeds and to identify priority weed species.	Ongoing
	Weed control	Undertake a coordinated approach to regular weed control by implementing the Annual Bushland Schedule.	Ongoing
	Weed Control	Undertake a targeted approach to weed control of <i>*Asparagus asparagoides</i> (Bridal Creeper) within Iluka – Burns Beach Foreshore Reserve.	Ongoing
	Weed Control	Undertake a targeted approach to weed control of <i>*Moraea flaccida</i> (One-leaf Cape Tulip) within Iluka reserve, to prevent its spread <u>within the reserve and</u> into surrounding reserves.	Ongoing
	Weed Control	Undertake a targeted approach to weed control of <i>*Ricinus communis</i> (Castor Oil Plant) within Iluka Foreshore Reserve.	Ongoing
	Weed control on verges	Conduct weed management of weeds on verges within and surrounding Iluka – Burns Beach Reserves including mowing of verges to reduce seed spread, spraying of weeds and spreading of certified mulch, where required.	Ongoing
	Weed Management Plan	Implement the City of Joondalup Weed Management Plan to provide an ongoing strategic approach to the management of natural areas in order to reduce the incidence of weeds.	Ongoing

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
Fungi	Fungi Survey	Undertake a comprehensive fungi survey in autumn or winter after substantial rain, to supplement previous incidental fungi surveys, within 5-10 years.	Within 5-10 years
Pathogens	Pathogen Management	Implement recommendations from the Pathogen Management Plan that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.	Ongoing
	Hygiene Guidelines	Implement Pathogen Hygiene Procedure for City staff and Contractors, Pathogen and Weed Hygiene Guidelines and Purchasing of Landscaping Materials Guidelines to prevent the introduction or spread of weed or pathogens into Iluka-Burns Beach Foreshore Reserve.	Ongoing
Fauna	Fauna survey	Undertake a follow up fauna survey, in mid-late spring to supplement previous fauna survey, within 10 years.	Within 9-10 years
	Fauna / Ecological Linkages investigations	During on ground maintenance tasks, investigate the access points utilised by native fauna, in order to guide suitable management of native fauna within the reserve. Based on the findings, undertake an in house study aiming to improve ecological linkages between the Iluka-Burns Beach Foreshore Reserve to the Burns Beach Bushland and Neerabup National Park; and to Yellagonga Regional Park.	Within 1-2 years
	Quenda monitoring	Commence discussions with WA Universities on research and monitoring opportunities of the Quenda population.	Within 4-5 years
	Bat survey	Undertake a one week remote monitoring bat survey in summer to supplement previous one night bat survey undertaken in spring.	Within 9-10 years
	Installation of bat boxes	If bat survey indicates presence of bats, consider installing bat boxes to encourage bats to roost.	Within 9-10 years
	Feral animal control	Monitor feral animal populations and implement regular control to reduce pressures on native fauna and flora. This is inclusive of rabbit, cat and fox control. Remove feral beehives if they are identified on site and are accessible.	Ongoing
	Patrols undertaken by City Field Officers	Continue targeted patrols by City Field Officers to ensure dogs are kept on leads and their droppings are collected.	Ongoing
Social and Built Environment	Maintain conservation fencing	Maintain conservation fencing on an as needed basis (informed by inspections every 2 months) to protect the native vegetation, flora and fauna from informal access.	Ongoing
	Upgrade conservation fencing	Upgrade sections of old ring-lock conservation fencing to the newer plastic coated galvanised chain mesh fencing.	Within 4-5 years
	Investigate closure and rehabilitation of informal tracks	Investigate closure and rehabilitation of informal tracks that are used infrequently to protect vegetation.	Ongoing

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
	Implement Wayfinding Signage Strategy	Implement recommendations from the City's Wayfinding Signage Strategy that are applicable to the management of Iluka-Burns Beach Foreshore Reserve.	Ongoing
	Investigate additional signage requirements	Investigate any additional signage requirements, such as Aboriginal cultural heritage interpretative signage (e.g. mythological Burns Beach Waugal Aboriginal heritage site), limestone cliff danger signage and Unexploded Ordnance signage as required.	Within 4-5 years
	Patrols undertaken by City Field Officers	The City will continue to visit Iluka-Burns Beach Foreshore Reserve as part of the City Field Officers patrol regime, as a form of active surveillance of the bushland and adjoining recreational parkland.	Ongoing
	Investigate the provision of additional waste services	Monitor and investigate the provision of additional waste services to mitigate litter, as a result of increased public use and infrastructure upgrades in the active reserve.	Ongoing
	Dismantle cubby houses, BMX tracks and informal tracks	Dismantle cubby houses, BMX tracks and informal tracks as required to discourage vegetation degradation and littering in the surrounding area.	Ongoing
Fire Management	Maintain fire access tracks and footpaths	Maintain fire access tracks and footpaths, including weed control and pruning of vegetation, by implementing the Annual Bushland Schedule.	Ongoing
	Implement Bushfire Risk Management Plan	Implement the City's Bushfire Risk Management Plan in relation to Iluka-Burns Beach Foreshore Reserve.	Ongoing
	Monitor fire occurrences	Monitor fire occurrences through mapping and updating Geographic Information System (GIS) layers detailing fire incidents and frequency to inform fire prevention actions.	Ongoing
	Revise weed control after fire incidents	Revise weed control after fire incidents to aid regrowth by selecting appropriate chemicals, targeting weeds if safe to do so for new seedlings, and spraying weedy grasses using backpacks.	Ongoing
	Implement Fire Weed Management Guidelines	Implement the Fire Weed Management Guidelines, when required, to reduce the infestation of weeds in natural areas after a fire.	Ongoing

Biodiversity Conservation Area	Recommended Management Action	Detail	Timeframe
Education and Training	Environmental Education Program	Implement initiatives of a 'Think Green Biodiversity' campaign (part of the Environmental Education Program) targeting environmental issues such as: <ul style="list-style-type: none"> • pathogens • weeds • litter • fire • flora, fungi and fauna awareness <u>and valuing biodiversity</u> • preventing hand feeding of wildlife • responsible pet ownership. 	Ongoing
	Support 'Friends of North Ocean Reef – Iluka Foreshore'	Support the 'Friends of North Ocean Reef – Iluka Foreshore' group and encourage community participation in the management of this natural area.	Ongoing
	School Programs	Implement an Adopt a Bushland/Coastline program for students to provide an interactive bushland management program; and liaise with nearby schools such as Kinross Primary School, Francis Jordan Catholic School, Currambine Primary School, Burns Beach Primary School and Beaumaris Primary School to increase awareness of the bushland ecological values.	Ongoing
	Natural Environment Team training	Conduct regular Natural Environment Team plant identification training, including weed management, to increase the effectiveness of weed control activities, as required.	Ongoing
	Friends Groups training	Provide training including pathogen management and weed identification to community members involved in Friends of North Ocean Reef – Iluka Foreshore	Ongoing

Appendix 8: Iluka – Burns Beach Foreshore Reserve Fauna Species List

Appendix 9: Iluka – Burns Beach Foreshore Reserve Key Fauna Species

Appendix 10: Iluka – Burns Beach Foreshore Reserve Introduced Fauna Species

Appendix 11: Iluka – Burns Beach Foreshore Reserve Fungi Species – Likely to Occur

Appendix 1: Relevant Local, State and Federal Legislation, Plans and Strategies

The purpose of the Iluka-Burns Beach Foreshore Reserve Management Plan aligns with the environmental aims and objectives of the following City of Joondalup, State and Federal Government strategic plans and legislation.

Local Government

Strategic Community Plan

The City of Joondalup *Strategic Community Plan 2022-2032* highlights the focus on preservation, conservation and accessibility of the City's natural assets and the importance of engaging with the community and regional stakeholders.

Environment Plan

The City of Joondalup *Environment Plan 2014-2019* provides strategic direction in the delivery of environmental initiatives within the City of Joondalup.

Biodiversity Action Plan

The *City of Joondalup Biodiversity Action Plan 2009 – 2019* provides direction for the City's biodiversity management activities and details the development of individual Natural Areas Management Plans as an action.

Local Planning Scheme No. 3

The City's Local Planning Scheme No. 3 (LPS3) classifies land into zones and outlines how land within those zones may be used and developed. Significant natural areas that are not otherwise protected can be zoned as environmental conservation reserves to identify areas with biodiversity and conservation value and to protect those areas from development and subdivision.

Neither Iluka Foreshore Reserve or Burns Beach Foreshore Reserve are zoned as Environmental Conservation under LPS3 as they are both under a higher protection order, the MRS – Parks and Recreation.

City of Joondalup Pest Plant Local Law 2012

Under the *Agriculture and Related Resources Protection Act 1976* and the *Local Government Act 1995*, the Council of the City of Joondalup made the *Pest Plant Local Law 2012* to require the owner or occupier of private land within the City of Joondalup district to destroy, eradicate or otherwise control pest plants within a specified time. Caltrop (*Tribulus terrestris*) and Golden Crownbeard (*Verbesina encelioides*) are designated as a-pest plants.

Caltrop and Golden Crownbeard haves not been identified within Iluka – Burns Beach Foreshore Reserve by the City of Joondalup.

Local Biodiversity Program (formerly Perth Biodiversity Project)

The City of Joondalup is one of 32 local governments participating in the Western Australian Local Government Association's (WALGA's) Local Biodiversity Program. The aim of the Local Biodiversity Program is to support local governments to effectively integrate biodiversity conservation into land use planning to protect and manage local natural areas.

As part of the Local Biodiversity Program, the City of Joondalup assessed all natural areas from 2004 onwards using the ecological criteria of the Natural Area Assessment process, resulting in a priority ranking of natural areas. The City of Joondalup assesses major conservation (without management plans), high priority and medium priority natural areas approximately every 5-7 years using this assessment tool.

Natural Area Assessments include a desktop assessment and field survey and document information such as:

- vegetation complexes
- threatened or significant flora or ecological communities
- structural plant communities
- weed species
- vegetation condition assessment
- ecological criteria rankings
- a viability estimate
- fauna species observed.

A Natural Areas Initial Field Assessment was conducted at Burns Beach Park in 2009.

State Government

Relevant Legislation, Policies and Plans

Aboriginal Heritage Act 1972

The Act provides a framework for protection of Aboriginal cultural sites in Western Australia.

Iluka Foreshore Reserve contains the mythological Burns Beach Waugal Aboriginal heritage site (ID 22672) which is registered with the Department of Planning, Lands and Heritage as a State protected Aboriginal heritage site.

Biodiversity Conservation Act 2016

The Act provides for the conservation and protection of biodiversity, particularly threatened species and threatened ecological communities.

One flora species listed as Endangered under the EPBC Act and the BC Act was recorded within the Iluka survey area, namely *Marianthus paralius* (WA Herbarium ACC/8941/E). No Threatened flora species listed under the EPBC Act or BC Act were recorded within the Burns Beach survey area.

One conservation significant fauna species was observed during the Iluka field survey, the Carnaby's Cockatoo (*Calyptorhynchus latirostris*); listed as Endangered under the EPBC Act and BC Act.

Biosecurity and Agriculture Management Act 2007

The Act gives provision to control the entry, establishment, spread and impact of certain organisms that have or may have an adverse effect on other organisms, human beings, the environment, agricultural activities or related commercial activities. Pests, including plants, are declared under the Act as prohibited organisms.

One the Declared Pest species **Moraea flaccida* (One-leaf Cape Tulip), was recorded during the Iluka – Burns Beach Foreshore Reserve survey.

Bush Fires Act 1954

The Act makes provision for diminishing the dangers resulting from bush fires and for the prevention, control and extinguishment of bush fires.

Cat Act 2011

The Act makes provision for the control and management of cats and promotes and encourages the responsible ownership of cats.

Cats may be seized if they are found wandering in public areas, such as Iluka-Burns Beach Foreshore Reserve, in accordance with the *Cat Act 2011*.

Dog Act 1976

The Act makes provisions for the control of dogs in public and private spaces and promotes the responsible ownership of dogs.

Iluka-Burns Beach Foreshore Reserve is designated as a place where dogs must be on a leash at all times by Council resolution in accordance with the *Dog Act 1976*.

Environmental Protection Act 1986

The Act provides authority to the Environmental Protection Authority (EPA) for the prevention, control and abatement of pollution and environmental harm, for the conservation, preservation, protection, enhancement and management of the environment in Western Australia.

Heritage of Western Australia Act 1990

The Act provides for and encourages the conservation of places which have significance to the cultural heritage in the State.

Government of Western Australia "Bush Forever" Strategy 2000

The Strategy identifies regionally significant bushland in the Perth Metropolitan Region to be retained, managed and protected forever.

Iluka Foreshore Reserve is designated as Bush Forever site 325 and the majority of Burns Beach Foreshore Reserve is designated as Bush Forever site 322.

Two DBCA listed flora species were recorded in the Iluka survey area; *Hibbertia leptotheca* (P3) and *Jacksonia sericea* (P4).

A further eight Bush Forever significant species were recorded within the survey areas; *Agonis flexuosa*, *Callitris preissii*, *Grevillea preissii* subsp. *preissii* and *Melaleuca lanceolata* within Burns Beach and *Diplopeltis huegelii*, *Grevillea preissii* subsp. *preissii*, *Lechenaultia linarioides*, *Melaleuca cardiophylla*, and *Trymalium ledifolium* within Iluka Foreshore. These species are listed as Bush Forever significant species of the Perth Metropolitan Region due to their being endemic to the Swan Coastal Plain.

Draft Perth and Peel Green Growth Plan for 3.5 million (Green Growth Plan)

The *Green Growth Plan* delivers a comprehensive environmental program for the protection of both Commonwealth matters of national environmental significance and State environmental values. The draft *Green Growth Plan* provides a comprehensive approach to the avoidance and mitigation of environmental impacts and a committed Conservation Program that will deliver significant improvements to the protection and management of the environment as the Perth and Peel regions grow to a population of 3.5 million people.

State Planning Policy 2.8 – Bushland Policy for the Perth Metropolitan Region

The *State Planning Policy 2.8 – Bushland Policy for the Perth Metropolitan Region* aims to provide direction and an implementation framework that will ensure bushland protection and management issues in the Perth Metropolitan Region are appropriately addressed and integrated with broader land use planning and decision-making.

State Planning Policy 3.7 - Planning in Bushfire Prone Areas

The *State Planning Policy 3.7 – Planning in Bushfire Prone Areas* (SPP 3.7) seeks to guide the implementation of effective risk-based land use planning and development to preserve life and reduce the impact of bushfire on new property and infrastructure. SPP 3.7 applies to all higher order strategic planning documents, strategic planning proposals, subdivision and development applications located in designated bushfire prone areas.

Federal Government

Relevant Legislation and Strategies

Environment Protection and Biodiversity Conservation Act 1999

The Act provides for the protection of the environment and the conservation of biodiversity, and for related purposes.

One *Environment Protection and Biodiversity Conservation (EPBC) Act 1999* listed fauna species have been recorded in Iluka Foreshore Reserve, the endangered Carnaby's Black-Cockatoo (*Calyptorhynchus latirostris*). In addition, one flora species listed as Endangered under the EPBC Act was recorded within the Iluka survey area, namely *Marianthus paralius*.

Australia's Biodiversity Conservation Strategy 2010-2030

The Strategy aims to protect biological diversity and maintain ecological processes and systems.

Australia's Strategy for Nature 2019-2030

The Strategy is the overarching framework for all national, state and territory and local strategies, legislation, policies and actions that target nature. The strategy moves away from a purely protection-based approach and strives to incorporate adaptation, resilience and natural resource management in cities, rural and natural environments, on land and at sea.

Australian Pest Animal Strategy 2017-2027

The strategy provides national guidance on best practice vertebrate pest animal management, in striving towards the national vision of protecting Australia's economy, environment and social wellbeing from the impact of pest animals. It reaffirms agreed national pest animal management principles, and sets national goals and priorities that will help improve Australia's overall ability to prevent and respond to new pest animal incursions and manage the negative impacts of established pest animals.

Australian Weeds Strategy 2017-2027

The strategy provides national guidance on best practice weed management. It aims to guide coordination of effort across all jurisdictions and affected stakeholders and to inform plans and actions by state and territory governments, local governments, regional natural resource management (NRM) agencies, as well as by industry, landholders and the wider community.

Threatened Species Strategy 2021-2031

The Australian Government's Threatened Species Strategy delivers a framework for action to protect and recover our nation's threatened plants and animals across Australia, spanning terrestrial, marine and freshwater environments. It sets a clear vision to drive practical on-ground action; identifies key action areas that are fundamental to the recovery of threatened species and ecological communities; and establishes principles for identifying priority threatened species and places to focus Australian Government effort. The Strategy provides guidance into how the Australian community can work together to protect threatened animals and plants, both now and into the future and is underpinned by consecutive 5 year Action Plans.

The Australian Government endorsed a list of 20 Weeds of National Significance (WoNS) in 1999 and a further 12 species were added in 2012. The 32 WoNS are identified as nationally agreed priority plant species for control and management based on the criteria of invasiveness and impact characteristics, potential and current area of spread and economic, environmental and social impacts.

Iluka – Burns Beach Foreshore Reserve contains one known WoNS, namely *Asparagus asparagoides* (Bridal Creeper).

International Conventions or Listings

International Union for Conservation of Nature (IUCN) Red List of Threatened Species

The IUCN Red List of Threatened Species™ provides taxonomic, conservation status and distribution information on plants and animals that have been globally evaluated using the IUCN Red List Categories and Criteria.

One endangered IUCN Red List species has been recorded in Iluka-Burns Beach Foreshore Reserve, Carnaby's Black-Cockatoo (*Calyptrorhynchus latirostris*).

United Nations Convention on Biological Diversity (CBD)

The *Convention on Biological Diversity* (CBD) is one of three international environment agreements that emerged from the Rio Earth Summit held in 1992. The CBD is the overarching global framework on biodiversity conservation for the United Nations system and links all related biodiversity-related conventions and cascading treaties.

United Nations Convention on Migratory Species

The Convention on Migratory Species (CMS) aims to build and strengthen global conservation efforts for migratory species in the air, on land, and in the seas.

+ = recorded during survey.

• = listed within database search for respective survey but not recorded during that survey.

* = introduced species.

^ = species recorded as an opportunistic collection

CR = listed as Critically Endangered under the EPBC Act, WC Act and the IUCN red list.

EN = listed as Endangered under the EPBC Act, WC Act and the IUCN red list.

VU = listed as Vulnerable under the EPBC Act, WC Act and the IUCN red list.

P1, P2, P3 = Taxa that may be threatened or near threatened, but are data deficient or have not yet been adequately surveyed to be listed under the Wildlife Conservation (Rare Flora) Notice
P4 = Taxa that are not currently threatened but could if present circumstances change. These taxa are usually represented on conservation lands.

Note: For further explanations on Conservation Codes, refer to Appendix 4.

Appendix 4: Conservation Codes for WA Flora and Fauna

Conservation Codes for WA Flora and Fauna under the *Biodiversity Conservation Act 2016*

Category	Definition
Threatened (T)	Listed in the category of critically endangered, endangered or vulnerable, as outlined below.
Critically Endangered (CR)	Threatened species considered to be facing an extremely high risk of extinction in the wild in the immediate future.
Endangered (EN)	Threatened species considered to be facing a very high risk of extinction in the wild in the near future.
Vulnerable (VU)	Threatened species considered to be facing a high risk of extinction in the wild in the medium-term future.
Migratory (MI)	Species are defined as migratory if they are listed in an international agreement approved by the Commonwealth Environment Minister, including: <ul style="list-style-type: none"> the Bonn Convention (<i>Convention on the Conservation of Migratory Species of Wild Animals</i>) for which Australia is a range state. the agreement between the Government of Australia and the Government of the People's Republic of China for the Protection of Migratory Birds and their environment (CAMBA). the agreement between the Government of Japan and the Government of Australia for the Protection of Migratory Birds and Birds in Danger of Extinction and their Environment (JAMBA). the agreement between Australia and the Republic of Korea to develop a bilateral migratory bird agreement similar to the JAMBA and CAMBA in respect to migratory birds (ROKAMBA). Published as migratory birds protected under an international agreement under schedule 5 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i>.
Conservation Dependent (CD)	Fauna of special conservation need being species dependent on ongoing conservation intervention.
Other specially protected species (OS)	Fauna otherwise in need of special protection to ensure their conservation.

The City of Joondalup has added a category listed as Locally Significant to reflect locally significant native species within the City of Joondalup. Locally Significant species are defined below.

Category	Definition
Locally Significant (LS) - City of Joondalup	Taxa within the City of Joondalup who are at risk of predation or extinction from within the City due to a variety of environmental and external factors. These populations are in need of conservation and monitoring, thus are classed as Locally Significant species within the City of Joondalup.

Priority flora and fauna categories used by the Department of Biodiversity, Conservation and Attractions (2019)

Category	Code	Definition
Priority 1	P1	<p><i>Poorly-known species</i></p> <p>Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.</p>
Priority 2	P2	<p><i>Poorly-known species</i></p> <p>Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.</p>
Priority 3	P3	<p><i>Poorly-known species</i></p> <p>Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.</p>
Priority 4	P4	<p><i>Rare, Near Threatened and other species in need of monitoring</i></p> <p>(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands.</p> <p>(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for Vulnerable, but are not listed as Conservation Dependent.</p> <p>(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.</p>

Appendix 5: Keighery Vegetation Condition Scale Definitions

Vegetation Condition	Description
Pristine	Pristine or nearly so, with no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered with obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Appendix 7 - Iluka – Burns Beach Foreshore Reserve High Priority Weed Species Management

Name	Common Name	Type of Weed	Status/Notes	Treatment Type	Optimal Treatment Timing (WA Herbarium)
<i>Arctotis</i> sp.	Arctotis	Herbs	Priority (CoJ)	Hand weeding, Glyphosate	September to January
<i>Asparagus asparagoides</i>	Bridal Creeper	Herbs and Creepers	WONS, P1 (whole state), highest priority (DPaW Swan Region), Priority (CoJ)	Metsulfuron, hand weeding	August to September
<i>Avena fatua</i>	Wild Oats	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Quizalofop	July to October
<i>Carpobrotus edulis</i>	Pigface	Herbs	High priority (DPaW Swan Region)	Hand weeding, Glyphosate	All year
<i>Chamelaucium uncinatum</i>	Geraldton Wax	Trees and Shrubs	Priority (CoJ)	Cut and paint with Glyphosate, hand weed	June to November / All year
<i>Conyza</i> sp.	Fleabane		Priority (CoJ)	Hand weeding, Glyphosate *Resistant to herbicide treatment.	All year
<i>Cynodon dactylon</i>	Couch grass	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Quizalofop	November to February
<i>Dimorphotheca ecklonis</i> (more recently known as <i>Osteospermum ecklonis</i> (DC.) Norl.)	Veldt Daisy	Herbs	Priority (CoJ)	Hand weeding, Glyphosate	September to January
<i>Ehrharta calycina</i>	Perennial Veldt Grass	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Quizalofop	June to August
<i>Ehrharta longiflora</i>	Annual Veldt Grass	Grasses	Priority (CoJ)	Quizalofop	July to November
<i>Euphorbia paralias</i>	Sea Spurge	Herbs	Priority (CoJ)	Glyphosate, Metsulfuron	October to June
<i>Euphorbia terracina</i>	Geraldton Carnation	Herbs	High priority (DPaW)	Triasulfuron, Hand	June to August spray,

Name	Common Name	Type of Weed	Status/Notes	Treatment Type	Optimal Treatment Timing (WA Herbarium)
	Weed		Swan Region), Priority (CoJ)	weeding	June to November hand weeding
<i>Fumaria</i> sp.	Fumitory	Herbs	Priority (CoJ)	Metsulfuron	August to November
<i>Gazania linearis</i>	Gazania	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Hand weeding	June to December spray, All year hand weeding
<i>Ipomoea indica</i>	Morning Glory	Herbs and Climbers	Priority (CoJ)	Metsulfuron	November to May
<i>Lactuca serriola</i>	Prickle Lettuce	Herbs	Priority (CoJ)	Hand weeding	October to February
<i>Moraea flaccida</i>	One-leaf Cape Tulip	Herbs	Declared pest (BAM Act), High priority (DPaW Swan Region), Priority (CoJ)	Metsulfuron	July to August
<i>Oxalis pes-caprae</i>	Soursob	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Metsulfuron	June to July
<i>Pennisetum clandestinum</i>	Kikuyu grass	Grasses	High priority (DPaW Swan Region), Priority (CoJ)	Quizalofop, Glyphosate	June to August
<i>Pelargonium capitatum</i>	Rose Pelargonium	Herbs	High priority (DPaW Swan Region), Priority (CoJ)	Glyphosate, Metsulfuron, Hand weeding	June to October
<i>Raphanus</i> sp.	Wild Radish	Herbs	Priority (CoJ)	Hand weeding	April to May or July to November
<i>Ricinus communis</i>	Castor Oil Plant	Trees and Shrubs	Priority (CoJ)	Hand weeding	June to September
<i>Schinus terebinthifolia</i>	Japanese Pepper, Brazilian Pepper	Trees and Shrubs	High priority (DPaW Swan Region), Priority (CoJ)	Cut & paint with Glyphosate, hand weeding	All year
<i>Tetragonia decumbens</i>	Sea Spinach	Herbs	Priority (CoJ)	Hand weeding, Glyphosate	March to November
<i>Thinopyrum distichum</i>	Sea Wheatgrass	Herbs	Priority (CoJ)	Metsulfuron (wiping)	October to November
<i>Trachyandra divaricata</i>	Onion Weed	Herbs	Priority (CoJ)	Hand weeding, Metsulfuron, Glyphosate	June to October
<i>Tropaeolum</i> sp.	Nasturtium	Herbs	Priority (CoJ)	Glyphosate, hand weeding	July to November

Name	Common Name	Type of Weed	Status/Notes	Treatment Type	Optimal Treatment Timing (WA Herbarium)
<i>Urospermum picroides</i>	False Hawkbit	Herbs	Priority (CoJ)	Hand weeding	August to December
<i>Yucca</i> sp.	Yucca	Herbs	Priority (CoJ)	Hand weeding	July

Note: The Iluka – Burns Beach High Priority Weed Species Management table was created using the following criteria:

- Weed species listed as a Weed of National Significance (WoNS) in 1999 and 2012 by the Australian Government;
- The weed species is listed as a Declared Plant according to the *Biosecurity and Agriculture Management Act 2007*;
- The weed species is listed as High Priority in regards to its ecological impact according to the DPaW Draft Weed Prioritisation Process for the Swan Region (2013);
- The weed species is listed as a Pest Plant under the City's *Pest Plant Local Law 2012*;
- The City of Joondalup has determined that the weed species poses: a major threat to vegetation and the structure of vegetation communities or is likely to contribute to a high fuel load (e.g. grasses). These species are classed as High Priority weeds in the City of Joondalup.

Notes: Invertebrates have not been included within this Appendices due to the high diversity of invertebrate species (exceeding 500 species) found in the invertebrate inventory surveys undertaken by Spineless Wonders between 2015 and 2018.¹

Key:

X = recorded during survey.

• = listed within database search for respective survey but not recorded during that survey.

* = introduced species.

EN = listed as Endangered under the EPBC Act, WC Act and/or the IUCN red list.

VU = listed as Vulnerable under the EPBC Act, WC Act and/or the IUCN red list.

LC = Least Concern under the IUCN red list.

M = listed as Migratory species under the EPBC Act.

IA = listed as Migratory under the WC Act.

P1 = Priority 1: poorly known species occurring on threatened land (land not managed for conservation)

P2 = Priority 2: poorly known species occurring on some conservation lands

P3 = Priority 3: known from few specimens or records and need urgent survey and evaluation of conservation status.

P4 = Priority 4: not currently threatened but could if present circumstances change. Usually found on conservation lands.

NOTES TO AND FORMING PART OF THE FINANCIAL ACTIVITY STATEMENT FOR THE PERIOD ENDED 31 MARCH 2024

1. Rates

\$122,228

This favourable variance mainly arose from higher Interim Rates than estimated

2. Grants and Subsidies

(\$123,002)

This net unfavourable timing variance is mainly driven by State Government grants for Beach Cleaning and Sand Drift (\$78,125), Transport (\$47,656) and Fire Mitigation \$40,508.

3. Contribution, Reimbursements and Donations

(\$160,495)

This is an unfavourable timing variance occurring due to reimbursements for Marmion Avenue Median (\$102,500).

4. Profit on Asset Disposals

(\$41,801)

This unfavourable timing variance arose from disposal of fleet and plant (\$41,801).

5. Fees and Charges

(\$123,080)

	YTD Budget	YTD Actual	Variance
a) Refuse Charges	\$22,310,533	\$22,382,051	\$71,518
b) Sports and Recreation Fees	\$9,478,077	\$9,391,966	(\$86,111)
c) Other Fees and Charges	\$1,773,795	\$1,713,130	(\$60,665)
d) Fines and Penalties	\$320,960	\$268,639	(\$52,321)
Other Fees and Charges	\$6,200,712	\$6,205,211	\$4,499
	<u>\$40,084,077</u>	<u>\$39,960,997</u>	<u>(\$123,080)</u>

a) Favourable variance arose mainly from Waste Refuse Service Charge \$54,500.

b) An unfavourable timing variance due to Admission Fees for Joondalup Festival (\$101,829), Valentines Day Concert (\$80,809), Swim School (\$76,834) and Parks Bookings (\$67,462). This was offset by Fitness Centre \$93,593, Craige Leisure Centre Pool Admission Fees \$71,598 and Group Fitness \$55,149.

c) An unfavourable variance occurred due to Other Unclassified Fees and Charges (\$25,612) and a lower than estimated result in Immunisation (\$24,087).

d) Unfavourable variance mainly as a result of lower Parking Infringements (\$38,305).

6. Interest Earnings

\$880,179

This favourable variance arose mainly due to higher than estimated Interest from Other Financial Institutions \$876,602 due to the cumulative impact of higher deposit interest rates on the City's investment portfolio.

7. Other Revenue/Income

\$2,316,628

This favourable variance arose primarily from Net Revenue from CRC Catalina Estate Sales \$2,315,208.

8. Employee Costs

\$770,811

	YTD Budget	YTD Actual	Variance
a) Salaries and Wages	\$50,518,329	\$50,045,911	\$472,418
b) Other Employment Costs	\$3,284,435	\$2,986,042	\$298,393
	<u>\$53,802,764</u>	<u>\$53,031,953</u>	<u>\$770,811</u>

a) Favourable timing variance for Salaries and Wages mainly arose from vacancies across various teams partly offset by higher Salaries and Wages – Casuals due to higher activity at the Craigie Leisure Centre than estimated, which is reflected in additional revenue.

b) This favourable timing variance arose mainly due to lower than estimated staff training \$194,483 and Agency Employees \$110,775 and Other Employee Costs \$63,781 partially offset by Standard Labour Recovery Capital Works (\$91,873).

9. Materials and Contracts

\$4,207,160

	YTD Budget	YTD Actual	Variance
a) External Service Expenses	\$16,206,268	\$15,077,752	\$1,128,516
b) Professional Fees and Costs	\$2,356,106	\$1,507,802	\$848,304
c) Waste Management Services	\$13,655,000	\$13,085,747	\$569,253
d) Furniture, Equipment and Artworks	\$2,527,454	\$2,131,648	\$395,806
e) Other Materials	\$2,104,747	\$1,808,464	\$296,283
f) Public Relations, Advertising and Promotions	\$1,000,312	\$732,161	\$268,151
g) Travel, Vehicles and Plant	\$1,513,463	\$1,284,702	\$228,761
h) Administration	\$1,030,974	\$823,382	\$207,592
i) Contributions & Donations	\$1,589,165	\$1,401,738	\$187,427
j) Members Costs	\$603,805	\$527,644	\$76,161
k) Charges and Recoveries	(\$46,709)	(\$97,011)	\$50,302
l) Computing	\$2,724,287	\$2,897,200	(\$172,913)
Other Materials & Contracts	\$2,132,658	\$2,009,141	\$123,517

\$47,397,530	\$43,190,370	\$4,207,160
--------------	--------------	-------------

- a) This favourable timing variance mainly arose in External Contractors and Services \$519,123 as a result of Roads \$234,509, Website Improvements \$174,825, Data Collection \$118,192 and Natural Areas \$87,035, partially offset by higher than estimated Parks (\$146,344), Buildings (\$85,873) and Fleet and Plant (\$74,712). Favourable variance also occurred on Programme Activities \$519,782 caused by timing of costs for Joondalup Festival \$230,495 and Digital Development \$79,893.
- b) Favourable timing variances arose in Consultancy \$681,992 and Research \$117,455.
- c) Favourable variances were due to lower than estimated costs for Processing Domestic Green Waste \$123,522, Tipping Fees for General Waste \$97,224, Processing Recycling & Government Levy \$97,196, Bulk Green Waste Collection \$77,367, Collection Recycling & Transport Fees \$52,808 and Processing Bulk Hard Waste \$51,080.
- d) Favourable timing variances arose due to lower than estimated Minor Computer and Communications Equipment Purchases \$194,482, Minor Plant & Equipment Purchase \$92,305 and Hire of Equipment \$90,230.
- e) Favourable variance arose mainly as a result of lower than estimated External Material Purchases – Contract \$276,790 pertaining to various operational activities progressing differently to budget estimates.
- f) Favourable timing variances occurred due to lower than estimated Promotions \$135,930, Advertising General \$79,969 and Signage/Decals expenditure \$57,439.
- g) Favourable timing variances arose mainly due to lower than estimated Vehicle Servicing Costs \$65,634 and Vehicle GPS Costs \$62,500.
- h) A favourable variance mainly arose due to lower than estimated Other Sundry Admin Expenses \$43,414 and Printing \$42,147.
- i) Favourable timing variances arose for Community Funding Program \$81,252 and Grants & Contributions Made \$52,220.
- j) Favourable variance mainly arose due to lower than estimated Elected Members Conference and Training expenses \$48,421.
- k) An unfavourable timing variance occurred mainly due to lower than estimated Fleet and Plant Utilisation Charge \$155,039, Vehicle Running Expenses \$125,374, Fleet and Plant Operational Recovery (\$197,178) and Fleet and Plant Capital Recovery (\$75,298).
- l) Unfavourable variance caused by Computer Software Subscriptions (\$259,889) and Data Communication Links (\$101,968) which is offset by lower than estimated Internet Provider Costs \$150,798.

10. Utilities

\$142,036

Favourable variance arose mainly due to lower than estimated electricity costs for a number of Roads \$144,532 and Buildings \$87,406 partially offset by higher than estimated electricity for Parks (\$69,277).

11. Depreciation

\$632,932

Favourable variance arose due to lower than estimated Impairment/Write off of assets \$858,574, due to timing of progress on various capital works projects, Depreciation - Footpaths Infrastructure \$244,928, and Depreciation - Other Infrastructure Assets \$142,652, partially offset by higher than estimated Depreciation - Open Reserves (\$303,634), and Depreciation - Mobile and Other Plant (\$238,110).

12. Loss on Asset Disposals

\$40,303

Favourable variance arose due to timing of fleet and plant asset disposals.

13. Movement in Non-current items

\$112,599

This timing variance arose in respect to increase in Non-current Long Service Leave Liability compared to budget estimates.

14. Capital Grants and Subsidies

\$3,884,326

	YTD Budget	YTD Actual	Variance
a) State Government Grants - Capital - Other	\$3,887,624	\$7,520,806	\$3,633,182
b) Other Grants and Subsidies – Capital - Other	\$200,787	\$403,937	\$203,150
Other Grants and Subsidies	\$4,976,375	\$5,024,369	\$47,994
	<u>\$9,064,786</u>	<u>\$12,949,112</u>	<u>\$3,884,326</u>

a) Favourable variance relates to FPN2299 Coastal Shared Path Design \$1,890,000 due to grant timing versus estimates, RDC2031 Hepburn Ave – Lilburne to Walter Padbury \$800,000 following an approved increase in the election commitment value, PDP2371 Chichester Park Skate Park \$425,000 due to more funding received at this stage than anticipated and \$218,182 received from Water Corp for PDP2348 Barrisdale Park Irrigation Renewal. In addition, there is also grant income for State Urban Bike Trail of \$300,000 unspent from the previous year has now been recognised.

b) This is a favourable timing variance mainly arising from early progress milestones achieved for PDP2350 Sorrento Bowling Synthetic Turf \$166,629.

15. Capital Contributions

\$137,736

This favourable timing variance was mainly due to capital contributions received for Sorrento Bowling Synthetic Turf \$83,788.

16. Other Non-Operating Revenue

\$262,490

This favourable timing variance predominately arose from GST reimbursements in respect of CRC land sales undertaken.

17. Capital Projects

\$566,593

This favourable timing variance arose from Network infrastructure Upgrade Program \$238,460, CCTV Hardware Replacement Program \$125,000, Upgrading of Audio and Visual Technology in Conference Room 1 \$100,000 and IT Disaster Recovery Facilities \$60,359. The balances of variances are spread across a number of projects.

18. Vehicle and Plant Replacements

(\$110,495)

An unfavourable variance mainly due to earlier than estimated delivery of various fleet and plant items, including a Loader (\$282,870) and a Tractor (\$111,936), which are offset by delays in respect of a Tipper Truck \$250,000, a Beach Cleaner \$132,950 and a Verimower \$80,996 that are still on order.

19. Proceeds from Disposal

\$102,545

A favourable variance arose due to timing of disposal of fleet and plant assets compared to estimates.

20. Closing Funds

\$13,000,051

Community Funding Program Policy

City Policy

Responsible Directorate: Corporate Services

Objective: To support the delivery of community-initiated activities for the benefit of the City of Joondalup community.

1. Statement:

The City has a role to partner and support local community-based organisations to deliver programs, services and events which build community capacity, enrich quality of life for residents, deliver social, cultural, and environmental outcomes and strengthen the City of Joondalup community. The City therefore provides grants to eligible applicants to support these initiatives.

2. Details:

2.1. Community Funding Program:

Grants will be made available for programs, services and events which are in line with the following funding priorities:

- Strengthen community participation
- Encourage connected communities
- Promote healthy and active lifestyles
- Build resilient and sustainable communities.

The Community Funding Program is only available to incorporated community organisations that deliver activities for the benefit of the City of Joondalup community.

Successful grant recipients will be required to complete a grant acquittal (Project Completion Report) and acknowledge the City's financial support accordingly.

2.2. Funding Guidelines:

All community grant funding programs will be managed through specific guidelines that will include details on the following:

- Eligibility
- Funding criteria
- Terms of grants
- Application, assessment, and approval process
- Recognition requirements
- Acquittal process
- Audit and accountability procedures.

These funding guidelines will be determined from time to time in accordance with this policy at the discretion of the Chief Executive Officer.

2.3. Funding Approvals:

The Chief Executive Officer may approve applications for funding up to and including \$10,000 (excluding GST), while applications for funding greater than \$10,000 (excluding GST) will require the approval of Council.

TENDER 001/24 PERCY DOYLE FOOTBALL / TEEBALL CLUBROOM – REFURBISHMENT AND EXTENSION

SUMMARY OF SUBMISSIONS

Tenderer & Description of Response	Is it Compliant? Yes or No	Comment Against Criteria				Evaluation Score	Lump Sum Price	Rank
		Demonstrated Experience Completing Community Sporting Facility Construction Projects	Demonstrated Understanding of the Required Tasks	Capacity	Social and economic effects on the local community			
Hickey Constructions Pty Ltd All requirements have been met.	Yes	It has extensive experience completing community sporting facility construction projects for WA local governments including the Cities of Melville (Mount Pleasant Bowling Club refurbishment, duration five months, completed October 2023) and Joondalup (Warwick Bowling Club extension and refurbishment of existing facility, completed 2021 and Sorrento Football Club upgrade to changerooms, completed February 2023). Numerous other examples of works were provided and these included the City of Wanneroo's Yanchep Café kiosk upgrade and new building construction (commenced November 2023 and works in progress).	It demonstrated a thorough understanding and appreciation of the City's requirements. It submitted a detailed response and a statement of the method of construction proposed to be used in executing the works was provided. It outlined the key risks associated with the project and proposed mitigation and management. It focussed on the key processes it considered as being critical to the success of this project and the tasks required to be carried out to complete the works, from site establishment and demolition works to site works and working in occupied areas. Its submission included a list of sub-contractors (13 in total) proposed to be used. A Gantt chart was provided, with relevant dates and duration of works (161 days) within the specified timeframe. A schedule of estimated monthly progress claims was supplied.	It has been operating since 2014. It currently has 10 full-time employees. Its structure of business and details of key personnel including their qualifications, length of service and industry experience were provided. After hours contacts for emergency requirements were supplied. It indicated the company has the ability to provide additional personnel as it works closely with two separate carpentry / labour companies, both with an average of 10 employees each and have resources available at all times, are always on call during the week and afterhours.	It is located in Yanchep. It indicated as the company currently hold the maintenance and minor works contract for the City, it regularly source materials and equipment from local suppliers located within the Joondalup area. A list of suppliers it utilises (13 in total) was supplied. Several of its employees reside within the City.	81.4%	\$1,281,727	1

Tenderer & Description of Response	Is it Compliant? Yes or No	Comment Against Criteria				Evaluation Score	Lump Sum Price	Rank
		Demonstrated Experience Completing Community Sporting Facility Construction Projects	Demonstrated Understanding of the Required Tasks	Capacity	Social and economic effects on the local community			
Kilmore Group Pty Ltd All requirements have been met.	Yes	It demonstrated experience completing community sporting facility construction projects for various local governments in WA including the Shire of Dardanup (Eaton Pavilion design and construct, completed November 2023 and Wells Reserve design and construct, completed 2022) and the Cities of Rockingham (Mike Barnett Sports Complex refurbishment, duration January to April 2024) and Gosnells (remediation of the R.S Sampson Grandstand at Gosnells Senior Football Club, completed October 2023).	It demonstrated a good understanding of the required tasks. Its submission included the company's proposed construction methodology and approach in undertaking the various tasks required to carry out the works, from site setup and site dilapidation survey to demolition, groundwork, foundations and blockwork. It provided names of 18 sub-contractors proposed to be used in executing the works though limited or no details on their previous experience, project and personnel commitments or financial capabilities. A Gantt chart with duration of work (160 days) and a progress claim schedule was supplied.	It did not address the period of time in business or when it was established. Also, the number of full-time employees was not stated though it listed eight key personnel under its team structure and indicated the proposed delivery team collectively holds over 45 years of experience. Details of key personnel including their qualifications, skills and industry experience were provided, however, their length of service with the company is less than five years. It is noted afterhours contacts for emergency requirements or the ability to provide additional personnel were not addressed.	It is located in Osborne Park. It stated the company will encourage its employees to engage with local cafes and restaurants in Joondalup via vouchers. Approximately 9% of its employees are located within the City.	58.1%	\$1,757,053	2

Schlager Group Pty Ltd All requirements have been met.	Yes	It demonstrated experience completing community sporting facility construction projects for WA local governments. Examples of works included the construction of Litis Stadium changeroom facility for the City of Vincent (duration November 2023 to November 2024), renovation of Claremont Recreation Club for the Town of Claremont (completed March 2024) and Charlottes Vineyard Pavilion refurbishment for the City of Swan (October 2023 to April 2024).	It did not fully demonstrate an understanding of the required tasks. Its submission did not include a statement of the method of construction proposed to be used in executing the works. It listed eight sub-contractors proposed to be used and a Gantt chart with duration of work (262 days) was provided. A progress claim schedule was not supplied.	It has been in business for nearly 30 years. Though the total number of full-time employees was not stated, an organisational chart and details of 10 key personnel including their qualifications, employment history and previous projects were provided. It did not address afterhours contacts for emergency requirements or the ability to provide additional personnel.	It is located in West Perth. It did not submit a response.	52%	\$1,379,663	3

Construct360 Pty Ltd All requirements have been met.	Yes	It demonstrated experience completing community facility construction projects for state and local governments in WA. Examples of works included the City of Gosnells' Cassidy Pavilion refurbishment and extension (completed December 2023), the Public Transport Authority via Programmed Facility Management's upgrade to the administration building of Joondalup Bus Depot (completed 2022) and refurbishing an existing building at the North Metropolitan TAFE Leederville into a Dental Training Centre (completed March 2023).	It demonstrated some understanding of the required tasks. It submitted a general response and it is noted the methodology proposed to be used to undertake the works was generic and did not take site specific issue into account. A total of 13 sub-contractors was proposed to carry out the works. Its submission included a Gantt chart with duration of work (316 days). Monthly progress claims were not addressed.	It commenced operation in 2016. It indicated it has a small team of consultants established in 2019 though the number of full-time employees was not stated. An organisational chart and details of eight key personnel including their qualifications and industry experience were provided. All key personnel, with the exception of the managing director, have less than five years length of service with the company. It indicated the company utilises several external resource providers (labour hire) for additional personnel. Afterhours contacts for emergency requirements were not supplied.	It is located in Osborne Park. It stated the company currently has 30% of its employees residing within the City. Two of its proposed sub-contractors (Ambitech Mechanical Services and West Coast Brick and Stone) are located within the City.	50.4%	\$1,416,695	4

All requirements have not been met.		Did not submit a response adequately addressing the qualitative criteria and the information provided in its submission was insufficient to enable assessment of its offer.						

OBJECTS OF AND REASONS FOR PROPOSED DIFFERENTIAL RATES FOR THE 2024-25 FINANCIAL YEAR

GROSS RENTAL VALUES:

OBJECT

The cents in the dollar (\$) for the various differential rates are calculated to provide the shortfall in income required to enable the City to provide necessary works and services in the 2024-25 Financial Year after taking into account all non-rate sources of funding.

REASONS

Residential Improved – the cents in the \$ of 5.4781 has been set to ensure that the proportion of total rate revenue derived from residential property remains consistent with previous years.

Residential Vacant – the cents in the \$ of 10.6461 has been set to ensure that the proportion of total rate revenue derived from residential property remains consistent with previous years and is higher than residential improved property in an effort to promote development of this category of property thereby stimulating growth and development in the community.

Commercial Improved – the cents in the \$ of 7.2023 has been set to ensure that the proportion of total rate revenue derived from commercial property remains consistent with previous years and recognises the higher demand on City infrastructure and services from the activity on commercial property.

Commercial Vacant – the cents in the \$ of 10.6461 has been set to ensure that the proportion of total rate revenue derived from commercial property remains consistent with previous years and is higher than commercial improved property in an effort to promote development of this category of property thereby stimulating growth and development in the community.

Industrial Improved - the cents in the \$ of 6.5261 has been set to ensure that the proportion of total rate revenue derived from industrial property remains consistent with previous years and recognises the higher demand on City infrastructure and services from the activity on industrial property.

Industrial Vacant – the cents in the \$ of 10.6461 has been set to ensure that the proportion of total rate revenue derived from industrial property remains consistent with previous years and is higher than industrial improved property in an effort to promote development of this category of property thereby stimulating growth and development in the community.

UNIMPROVED VALUES:

OBJECT

The cents in the dollar (\$) are calculated to provide the shortfall in income required to enable the City to provide necessary works and services in the 2024-25 Financial Year after taking into account all non-rate sources of funding.

REASON

Residential – the cents in the \$ of 1.0966 has been set to ensure that the proportion of total rate revenue derived from residential property remains consistent with previous years.

Rural – the cents in the \$ of 1.0948 has been set to ensure that the proportion of total rate revenue derived from rural property remains consistent with previous years.

MINIMUM PAYMENT:

A minimum payment of \$899 is applied to Gross Rental Valued residential improved categories in recognition that every property receives some minimum level of benefit from works and services provided.

A minimum payment of \$982 is applied to Gross Rental Valued commercial and industrial improved rate categories and Gross Rental Valued residential, commercial and industrial vacant rate categories in recognition that every property receives some minimum level of benefit from works and services provided.

A minimum payment of \$961 is applied to Unimproved Valued residential and rural rate categories in recognition that every property receives some minimum level of benefit from works and services provided.

AGRICULTURE AND RELATED RESOURCES PROTECTION ACT 1976

LOCAL GOVERNMENT ACT 1995

City of Joondalup

PEST PLANT LOCAL LAW 2012

Under the powers conferred by the *Agriculture and Related Resources Protection Act 1976* and the *Local Government Act 1995* and under all other powers enabling it, the Council of the City of Joondalup resolved on 20 November 2012 to make the following local law.

ARRANGEMENT

PART 1 - PRELIMINARY

- 1.1 Title
- 1.2 Commencement
- 1.3 Purpose
- 1.4 Effect
- 1.5 Application
- 1.6 Definitions

PART 2 - PRESCRIPTION OF PEST PLANTS

- 2.1 Prescription of Pest Plants

PART 3 - SERVING OF NOTICES

- 3.1 Serving of Notices

PART 4 - COMPLIANCE WITH NOTICE

- 4.1 Failure to comply with notice

SCHEDULE 1

Pest Plants

SCHEDULE 2

Notice

PART 1 - PRELIMINARY

1.1 Title

This local law may be referred to as the *City of Joondalup Pest Plant Local Law 2012*.

1.2 Commencement

This local law comes into operation 14 days after the date of its publication in the *Government Gazette*.

1.3 Purpose

The purpose of this local law is to prescribe pest plants within the City of Joondalup district that, in the local government's opinion, are likely to adversely affect the value of property in the district or the health, comfort or convenience of the inhabitants of the district.

1.4 Effect

The effect of this local law is to require the owner or occupier of private land within the City of Joondalup district to destroy, eradicate or otherwise control pest plants on and in relation to that land in a manner and within a time specified in a notice given by the local government and served on the owner or occupier of the land.

1.5 Application

This local law applies throughout the district.

1.6 Definitions

In this local law unless the context requires otherwise:

“authorised person” means a person authorised in accordance with section 9.10 of the *Local Government Act 1995*;

“district” means the district of the local government;

“local government” means the City of Joondalup;

“occupier” is as defined by the *Local Government Act 1995*;

“owner” is as defined by the *Local Government Act 1995*;

“pest plant” means a plant prescribed as a pest plant under clause 2.1 of this local law.

PART 2 – PRESCRIPTION OF PEST PLANTS

2.1 Prescription of Pest Plants

Every plant described in Schedule 1 to this local law is prescribed as a pest plant.

PART 3 – SERVING OF NOTICES

3.1 Serving of Notices

- (a) The local government may serve on the owner or occupier of private land within the district a duly completed notice in the form of Schedule 2 to this local law requiring the destruction, eradication or otherwise control of any pest plant on that land.
- (b) A person served with a notice under sub clause (a) shall comply with that notice within the time and in the manner specified therein.

PART 4 – COMPLIANCE WITH NOTICE

4.1 Failure to comply with notice

- (a) Where a person fails to comply with a notice served under clause 3.1 of this local law, the local government may –
 - (i) without payment of any compensation in respect thereof, destroy, eradicate or control, as the case may be, any pest plant the destruction, eradication or control of which was required by the notice; and
 - (ii) recover in a court of competent jurisdiction from the person to whom the notice is directed, the amount of the expense of such destruction, eradication or control.

Pest Plant Amendment Local Law 2023

Under the powers conferred by the *Biosecurity and Agriculture Management Act 2007* and the *Local Government Act 1995*, and under all other powers enabling it, the Council of the City of Joondalup resolved on 26 March 2024 to make the following local law.

Part 1 – Preliminary

1.1 Citation

This local law may be cited as the *City of Joondalup Pest Plant Amendment Local Law 2023*.

1.2 Commencement

This local law commences 14 days after the day on which it is published in the *Government Gazette*.

1.3 Purpose and effect

- (1) The purpose of this local law is to amend the *City of Joondalup Pest Plant Local Law 2012*.
- (2) The effect of this local law is to better clarify the provisions and requirements within the *City of Joondalup Pest Plant Local Law 2012*.

Part 2 – Amendments

2.1 City of Joondalup Pest Plant Local Law 2012 amended

This Part of the *City of Joondalup Pest Plant Amendment Local Law 2023* amends the *City of Joondalup Pest Plant Local Law 2012* as published in the Government Gazette on 18 December 2012.

2.2 Schedule 1 amended

In Schedule 1 delete the existing table and replace with the following:

Common Name	Scientific Name
Caltrop	Tribulus terrestris
Golden Crownbeard	Verbesina encelioides

Dated April of 2024.

1. Introduction

1.1.1 Background

The first Local Heritage Survey that covered the City of Joondalup boundary was prepared in 1994 as the 'City of Wanneroo Inventory of Heritage Places' by W.G. Martinick and Associates Pty Ltd (the 1994 Inventory).

When the City of Joondalup (the City) was created in 1998, only part of the 1994 Inventory applied; specifically nine places.

In January 2023 the City of Joondalup engaged consultants Element Advisory (**element**) to undertake a review of the City's Local Heritage Survey (LHS) and Heritage List.

The project was partly funded by a Local Government Heritage Consultancy Grant program 2022-23 by the Department of Planning, Lands and Heritage to the amount of \$10,000.

1.1.2 What is a Local Heritage Survey and Heritage List?

The *Heritage Act 2018* (the Act) requires each local government to identify places of cultural heritage significance by developing its own LHS. The Act identifies that the purposes of the LHS include:

- a. identifying and recording places that are, or may become, of cultural heritage significance in its district.
- b. assisting the local government in making and implementing decisions that are in harmony with cultural heritage values.
- c. providing a cultural and historical record of its district.
- d. providing an accessible public record of places of cultural heritage significance to its district.
- e. assisting the local government in preparing a heritage list or list of heritage areas under a local planning scheme.

The LHS itself has no direct statutory role. This function is served by the establishment of a Heritage List under the *Planning and Development (Local Planning Schemes) Regulations 2015*. Having places identified in a Heritage List allows for a local government to have statutory authority to manage the development of a heritage place.

6 | City of Joondalup Local Heritage Survey 2024

2. Methodology

2.1.1 Study Team

The City engaged Element Advisory Pty Ltd (**element**) as the heritage consultants to undertake this project.

2.1.2 Acknowledgements

The City acknowledges the Department of Planning, Lands and Heritage. The City received a \$10,000 grant as part of the 2022-23 Local Government Heritage Consultancy Grants.

The consultants acknowledge the following for assistance with this project:

- The Planning Services and Local History & Reference teams
- All community members who submitted information, nominated places for assessment and for genuinely showing an interest in their local heritage.

2.1.3 Study Area

Figure 1. The City of Joondalup in the context of the Perth CBD. (element 2023)

Figure 2. City of Joondalup boundary showing suburbs. (element 2023)

2.1.4 Legislation, regulations and guidelines

Legislation relevant to this project is:

- *Heritage Act 2018*
- *Planning and Development Act 2005*.

The following HCWA regulations and guidelines have informed this review.

- Planning and Development (Local Planning Schemes) Regulations 2015
- Guidelines for Establishing a Heritage List, March 2021
- Guidelines for Local Heritage Surveys, August 2022
- Guidelines for the Assessment of Local Heritage Places, November 2022.

Architectural styles described within Place Records are from:

- Apperly, Richard, Robert Irving, Peter Reynolds, 'A pictorial guide to identifying Australian architecture', Sydney, Angus & Robertson, 1989.

Heritage Themes described within Place Records are from:

- Menck, Clare. *A Thematic History of Western Australia*. Heritage Council of Western Australia, 2022.

Note that a full bibliography is included at Appendix 2; and that each Place Record also includes references supporting the historical notes.

2.1.5 Thematic History

The scope included preparation of a Thematic History, which provided the City with the opportunity to use the recently published book: Clare Menck, *A Thematic History of Western Australia*, Heritage Council of Western Australia, 2022.

Refer to Section 3 for the Thematic History.

2.1.6 Community consultation

The City undertook the call for nominations and community consultation in March and April 2023 via the website and a mail out. The outcome was 17 new nominations. Information was collated and provided to the consultants in a 'Community Consultation Outcomes Report' April 2023.

The consultants assessed the submissions and developed a final list according to the scope of an initial 20 places to be included in the City's first Local Heritage Survey.

2.1.7 Assessment of heritage value

Each place is assessed for cultural heritage significance using a set of criteria as outlined in the following table in accordance with the 'Australia ICOMOS Burra Charter' (2013) and the 'Guidelines for the Assessment of Local Heritage Places', November 2022. Note that a place does not need to demonstrate all values and qualities – it may be of cultural heritage significance if it meets any one of these. The criteria are outlined in the following table.

Criteria indicators of cultural heritage significance

Value	Explanation
AESTHETIC	It is significant in exhibiting particular aesthetic characteristics valued by the community.
HISTORIC	It is significant in the evolution or pattern of the history of Western Australia.
SCIENTIFIC	Potential to yield information that will contribute to an understanding of the history of the locality or region.
SOCIAL	It is significant through association with a community or cultural group in the locality or region for social, cultural, educational, or spiritual reasons.
SPIRITUAL	It is significant because it embodies or evokes intangible values and meanings which give it importance in the spiritual identity, or the traditional knowledge, art, and practices of a cultural group.
RARITY	Importance in demonstrating uncommon, rare, or endangered aspects of local heritage
REPRESENTATIVENESS	Importance in demonstrating the characteristics of a class of cultural places or environments in the local district.

8 | City of Joondalup Local Heritage Survey 2024

2.1.8 Classification and Management Category

Each place is assigned a Level of Significance according to the values assessed. Classifications and their correlating Management Statement and Description are summarised in the table below:

Classifications of Significance

Level of Significance and description	Classification	Management Statement
Exceptional - Essential to the heritage of the City of Joondalup. Rare or outstanding example.	Category 1	Conservation of the place is essential. The place should be retained and conserved. Any alterations or extensions should reinforce the significance of the place and be in accordance with a Conservation Plan (if one exists).
Considerable - Very important to the heritage of the City of Joondalup.	Category 2	Conservation of the place is highly desirable. The place should be retained and managed sensitively. For buildings this means original fabric should be retained; and any alterations or extensions should reinforce the significance of the place.
Some - Contributes to the heritage of the City of Joondalup.	Category 3	Conservation of the place is desirable. The place should be retained and managed sensitively. For buildings this means original fabric should be retained wherever feasible; most importantly that which is visible from the street. Any alterations or extensions should reinforce the significance of the place.
Little - Has elements or values worth noting for community interest but otherwise makes little contribution.	Category 4	Conservation of the place is not necessary. Should the place be proposed for demolition, or substantially altered so that its heritage values are lost, the City may request that the owner provide an Archival Record as a condition of approval of the development application.
Historic Site - Has significance for its former use, an event, or its role in the development of the City of Joondalup.	Category 5	This site is generally a place that has few visible material remains that relate to its former use and significance. This place should be included in heritage initiatives such as interpretive signage, heritage/walk trails, research, and education projects.

Refer to Section 4 for the 20 places in tables according to locality, and order of classification. Refer to Section 5 for the detailed Place Records.

2.1.9 The Heritage List

The 'Guidelines for Establishing a Heritage List', March 2021 suggest that the Heritage List include all places in Category 1 and 2; and that places in Category 3 'may be included in the heritage list.'

The City proposes that the places identified in the LHS with the **Classification of Significance 1 and 2** will form the Heritage List. This amounts to eight (8) places from the total 20 in the LHS.

Refer to Section 4.1.3 for the recommended Heritage List.

2.1.10 A note on Aboriginal cultural heritage

Places that are protected under the *Aboriginal Heritage Act 1972* are identified in Appendix 1; and that legislation takes precedence over the *Heritage Act 2018* where their cultural heritage significance is solely connected with Aboriginal tradition or culture.

The 'Guidelines for Local Heritage Surveys', August 2022 state that places of significance to Aboriginal communities may be included in the LHS where their cultural heritage significance is not solely connected with Aboriginal tradition or culture.

There are two places already in the 1994 LHS that are of heritage significance for values relating to non-Aboriginal cultural heritage as well as Aboriginal cultural heritage, and these have been included in the 2023 LHS.

However it should be noted that the 2023 review did not include in its scope specific consultation with Aboriginal communities in the City, Traditional Owners or Knowledge Holders. Therefore places identified in Appendix 1, and others not yet recorded or known, have potential to be added to this LHS in future provided that consultation following the correct protocols is undertaken. That is a separate exercise to this project with a different methodology and guidelines.

3. Thematic History

3.1 Introduction

3.1.1 Background

This Thematic History (2023) provides a broad historical context for understanding the evolution of the City of Joondalup's history and cultural landscape, and the patterns and forces that have shaped it over time. It uses historic themes to structure the history. Using themes can unite a variety of actions, events, functions, people and dates. It helps to prevent focusing on one place, period or event of history over any other.

The area that forms the City of Joondalup was originally part of the Wanneroo district. In 1998, the City of Joondalup was created. As such, the Thematic History refers to the 'Wanneroo district' to denote the historical areas that are now the City of Joondalup but were previously under the boundaries of Wanneroo.

City of Joondalup local government area

City of Wanneroo local government area

The Thematic History has been compiled by Carmel Given, Associate Heritage - **element** with Lucy Hair, Historian and Heritage Consultant. It is not intended to be a detailed account of all aspects of the history of Joondalup, nor to replace histories designed to serve other purposes. It is intended as a guiding document for the Local Heritage Survey of historically significant places within the City. Where possible, primary sources such as newspaper articles have been examined to verify secondary source information.

A complete bibliography of all primary and secondary sources consulted is provided at Appendix 2. While all care has been taken, the authors do not accept responsibility for any inaccurate information published in secondary sources.

3.1.2 Historic Themes

The following themes have been drawn from Clare Menck's, *A Thematic History of Western Australia, Heritage Council of Western Australia, 2022*. The new themes revise the Historic Themes that have been used since the Heritage Act 1990, and better reflect the historical development of the state.

Note: Not all themes in this table apply or are relevant to the City of Joondalup.

Environment

Peopling WA

- Colonisation
- Demographic Development

Economy

- Rural Occupations
- Natural Resources
- Mining and Mineral Resources
- Manufacturing and Secondary Industry
- Commerce
- Workers and Working

Infrastructure

- Development of Settlement and Services
- Transport and Communications

Social Services

- General Social Services
- Education
- Health

Governing

- Government and Politics
- Law, Order and Defence

Cultural Life

- Religion
- Recreation – Arts, Culture and Entertainment
- Recreation – Sport
- Domestic Life

International Links

And across all of the above are included the **Integrated Stories**

- Aboriginal People
- Women
- Non-British Migrants
- Isolation

Appendix 3 charts the places considered for the Local Heritage Survey against these historic themes and key time periods.

3.2 Environment

For thousands of years the land has been maintained by Noongar people. The City of Joondalup sits on Mooro Country on Whadjuk Noongar Boodjar (People's Country). Noongar Dreamtime stories are important to demonstrate traditional beliefs about the land and spirits. Noongar people have many creation stories about Mooro Country that relate to our past, present and future.

In Mooro Country, mamang (whales) carry spirits from the ocean that need to be returned to the land. Noongar people believe the whales beach themselves when they need to return spirits. Traditional practices involved cutting the whales with a daap (knife) so the blood would allow the spirit to return to the land.¹

The rocks at Two Rocks are Yonga (kangaroo) and Bibyur (scrub turkey) who watched Shark and Crocodile fight in the Wardandi (ocean). Shark tore Crocodile's tail off and these became Wadjemup (Rottnest Island) and Garden Island. Unable to swim without his tail, Crocodile attempted to go up the Derbal Yarragan (Swan River) but the Waugal (Rainbow Serpent) refused to let him enter. Crocodile made his way back to Two Rocks and his resting place are where the lakes, swamps and limestone outcrops formed.²

The wetlands and the ocean have provided important food sources for Noongars for thousands of years. In particular, the lakes in the area have provided plentiful supplies of animals and plants as well as reliable drinking water sources.³

The Aboriginal Heritage Inquiry System (AHIS) contains twelve registered Aboriginal Sites within the Joondalup area and the majority of these relate to Noongar dreamtime stories.⁴

Since colonisation, 'European and later arrivals initially responded to the land as an opponent and attempted to reshape it, but gradually learned to respect and care for the earth – attitudes long integrated by Aboriginal culture.'⁵ Nineteenth century agricultural practices included allocating pastoral leases along the North West Stock Route with the lakes and wetlands providing important stopping points.⁶

Timber milling was mostly confined to localised use such as housing and was, when compared to other areas in the state, considered fairly small scale.⁷

The ocean has been important to local communities for social and recreational purposes. In the first half of the twentieth century, many people constructed shacks along the coastline north of Perth. The State Government spent decades trying to deter the construction of these shacks.⁸ The creation of boating harbours in the area, particularly Hillarys and Ocean Reef, has resulted in substantial changes to the coastline.

With close development of the area from the 1970s and the creation of new suburbs, much of the natural bushland was subsumed for residential purposes. While 'part of the original complex natural pattern of the surface has been destroyed or disrupted by the northward growth of the Perth Metropolitan Area, the area still presents a variety of plant and animal communities.'⁹

In 2023, the City of Joondalup maintains 300 reserves and parks. While the majority of these are green pockets within residential areas there are also large tracts of natural bushland such as Yellagonga Regional Park, Shepherds Bush Reserve, Craigie Bushland and Warwick Open Space.

3.3 Peopling WA

With the arrival of British colonists in Western Australia from 1826 onwards, development centred initially around the Albany area. From 1829, settlement focused on Perth, Fremantle and Guildford. Areas north of Perth were considered for agricultural expansion at a later date. The Joondalup area was part of the northern stock route and its many lakes were important water sources along the route. Although surveying of the Wanneroo (now Joondalup) area occurred in the 1830s and some early settlers purchased land from the 1850s, generally there was little development until the 1890s when Government policies changed to encourage agricultural expansion in other areas.¹⁰

3.3.1 Colonisation

In 1834, John Butler led the first recorded excursion into the area we know as Wanneroo.¹¹ Butler noted a 'large lake' and recommended the area be surveyed. Grey surveyed the area in 1838 and he camped at 'Lake Moolooore' with several Noongar people who advised him the land was called 'Doon-da-lup'.¹² The lakes in the area were officially surveyed by Thomas Watson in 1838.¹³

The area was surveyed several times in subsequent years with land allocations made, often to absentee landlords who leased their land.¹⁴ The Cockman family was one of the first British settlers in the area.¹⁵ Other families to settle the area in the nineteenth century included the Duffy, Leach, Gibbs, Tapping and Caporn families.¹⁶

14 | City of Joondalup Local Heritage Survey 2024

An early attempt to establish a Wesleyan Mission experimental farm by Reverend John Smithies in 1844 was largely unsuccessful. The Mission Farm sought to convert Aboriginal people to Christianity and integrate them into white society. Aboriginal adults and children were taught farming and housework skills with the intention of Aboriginal people entering into servitude for colonials. A flood destroyed the school only a year into operation and the Mission was relocated to York.¹⁷

The large area and distance from Perth proved difficult for settlers to traverse the area easily. Settlers such as Hamersley, Shenton, Roe, Duffy, Okely, Truslowe, Darch and Buckingham petitioned the newly formed Perth Districts Road Board in 1871 for a permanent road from Perth to Wanneroo. In their petition they cited the macadamised roads from Perth to Fremantle and appealed to the Roads Board to service the area to the north of Perth. With the many pressures on the infant Roads Board, it would take many years for a road to be constructed. Arguably rallying for a road united the local community and fostered community spirit.¹⁸ Locals needed the road to transport their goods to markets in Perth. The district became a thoroughfare for travellers heading north to Champion Bay (Geraldton).¹⁹

In 1886, two Aboriginal men, Tommy Dower and Johnny Carroll, petitioned the government for land at Wanneroo.²⁰ The petition received some support and consideration was given to making 'a home somewhere near Wanneroo where all natives could obtain food and clothing and where they could do light work for wages'. Effectively the reserve created for this purpose was cancelled in 1901.²¹

The 1903 Post Office Directory described Wanneroo as a 'farming district' and the entries confirm the rural nature of the area with only a carpenter and a teacher listed with non-rural connections.²² There were around thirty market gardens in the area by 1903.²³

3.3.2 Demographic Development

During the nineteenth century, 'the Old North Road' was developed as a route for stock movement. As well as stock based in the Wanneroo area, the route was used for those bringing stock from the Champion Bay (Geraldton) and Victoria Plains districts to the markets in Perth. In addition to the natural water sources such as the lakes, many wells and bores were sunk along the route when natural springs were not available. Many pastoral leases were taken up in the 1880s at a greater rate than previous settlement. Generally, the leases were at least 3,000 acres each.²⁴

From the early 1900s, many people choosing to settle in the area included Italians and Yugoslavs.²⁵ After World War I, many more Italian families settled in the district, often establishing market gardens.²⁶ After World War II, many refugees from Communist Yugoslavia immigrated to Australia with a significant number taking up market gardening or viticulture. Several also specialised in building trades.²⁷ Greeks, Macedonians and Slovenians also comprised many of the post-war migrants who made their way to the Wanneroo area.²⁸

The 1955 Stephenson-Hepburn planning report considered that the area around Lake Joondalup was best suited for rural and market gardening purposes. In referring to the area around Lake Joondalup they noted, 'these areas should be protected and extended for market gardening, and other types of development should not generally be allowed to intrude.'²⁹ Hepburn and Stephenson's recommendation to extend the railway line from Daglish to Whitfords was not implemented by the Hawke Labor Government.³⁰

After World War II, the burgeoning population required housing and demand for residential land increased dramatically across the country. One solution to the problem was to explore the idea of new cities. In Western Australia, the State Government commissioned several reports from the late 1960s examining the feasibility of a new city north of Perth. Originally it was proposed to create a 'system city' in Perth's north-west corridor, 'Salvado' with a steel works located between Yanchep and Moore River. The steelworks did not eventuate (for companies like BHP and BP remained at Kwinana) but a commitment to exploring a new centre at Joondalup persisted.³¹

³¹ Stannage, *Lakeside City*, p. 9. Chambers, p. 129.

In 1947, only around 500 people lived in the Wanneroo district and it was estimated there were only 200 houses. By 1954 the number of inhabitants had more than doubled, with around 1,300 living in the area.³² Settlement intensified and new suburbs were created. The development was guided by several planning reports for the areas along and in the vicinity of the old North Stock Route. Some of the many reports included the Stephenson-Hepburn Report (1955); the Perth Metropolitan Scheme (MRS, 1963); Corridor Plan (1970), Metroplan (1990); North-West Corridor Plan (1992); Network City (2004).³³ Many of the recommendations from these early reports formed the basis for the concepts outlined in the Joondalup Centre Act, 1976.³⁴

Between 1961 and 1973, Perth's metropolitan population increased from 495,000 to 739,000.³⁵ Within the boundaries of Wanneroo, the population went from 2,437 in 1966 to 55,328 in 1976.³⁶ From the late 1960s, many new suburbs such as Craigie, Duncraig, Edgewater, Iluka, Kallaroo and Ocean Reef were established.³⁷ Generally, large landholdings were subdivided into smaller suburban lots. Many earlier residences and agricultural buildings were demolished to make way for new housing although some examples, such as Duffy House, Luisini Winery and Pearsall's House, are still extant in 2023.

In the early 1970s, it was estimated that 50 families were moving to the Wanneroo area every week.³⁸ The pattern of exponential growth in the northern suburbs has continued into the twenty-first century. Many new residents were migrants from other countries. The pattern of migrants choosing to settle in the Joondalup area is a current trend with many residents originating from the United Kingdom and South Africa in particular. In 2022, around 37% of residents were born overseas.³⁹

16 | City of Joondalup Local Heritage Survey 2024

3.3.3 Suburb Summaries

The origin of the word 'Joondalup' varies slightly. One definition is it means, 'place of the long white hair that shimmers in the moonlight'. The original inhabitants of the area were the Oor-dal-kalla people with Yellagonga a prominent Elder at the time of European settlement. Joondalup (or Doondalup) is a word that means 'the lake that glistens'.⁴⁰

Landgate's Geographic Names website contains summaries of the suburb names.⁴¹ As the City of Joondalup includes the suburbs of Beldon, Burns Beach, Connolly, Craigie, Currambine, Duncraig, Edgewater, Greenwood, Heathridge, Hillarys, Iluka, Joondalup, Kallaroo, Kingsley, Kinross, Marmion, Mullaloo, Ocean Reef, Padbury, Sorrento, Warwick and Woodvale (part) their summaries included below. Unless noted otherwise, information has been taken from the WA Geographic Names webpage of Landgate.

BELDON: The suburb is thought to be named after a teacher at Wanneroo School from 1945 to 1959 named A. W. Beldon, but this has not been confirmed.⁴² The suburb was originally proposed to be named Albert Grove in 1974 after Sir Albert V Jennings a founder of the company Jennings Industries, which was the co-partner in the development. Beldon was approved as the name in 1975.

BURNS BEACH: This suburb is located on land originally owned by the Midland Railway Company. In 1908 the Wanneroo Road Board, following a request by 50 district residents, applied for a 50-acre reserve for camping and a health resort at the beach. The request was granted, and by the late 1920s the area was well-used by locals and referred to by them as 'Burns Beach' after a farmer who ran sheep in the area.

CONNOLLY: 'Connolly' was the name adopted for this suburb adjoining Joondalup in 1980. Named in honour of John Connolly who held land in the area in 1838. Connolly was a private in the 63rd Regiment who arrived in the colony in 1829 and who farmed at Upper Swan and Bindoon after being discharged in 1834.

CRAIGIE: Craigie is one of the four suburbs created from the area previously known as Whitfords Estate. It is possible that developers Taylor Woodrow named it after Craigie Lake as Lake Joondalup was known by European settlers, or Craigie Farm established by the Spiers family on the south-eastern shore of Lake Joondalup in the early 1900s. (Information provided by City of Joondalup.)

CURRAMBINE: Currambine was approved as a suburb name in 1980. The name was chosen by the City of Wanneroo in 1979 from a book on Aboriginal Place Names by AW Reed. It is an Aboriginal word from New South Wales meaning "heaps of rocks".

DUNCRAIG: This suburb name was approved in 1969. The name was first used in the area as a promotional name, and it is of Scottish origin.

EDGEWATER: Edgewater was approved as a suburb name in 1974. It derives its name from its location on the western shores of Lake Joondalup.

GREENWOOD: Name derived from the promotional estate name Greenwood Forest used by the Gold Land Development Corporation who began development of this area in 1969.

HEATHRIDGE: Heathridge is a descriptive suburb name, chosen because of the heath-type vegetation growing on the sand ridges in the area.

HILLARYS: This suburb is named after Bertram John Hillary, a Gallipoli war veteran who died in 1957 at the age of 62, who set up the first beach shack on a lonely stretch of beach in 1930. That stretch of beach eventually came to be named after its best known inhabitant, courtesy of the army which had use of the land during World War II. The name was suggested as a suburb name by the City of Wanneroo, and was approved in 1971.

ILUKA: Name proposed by the City of Wanneroo in 1979 and approved in 1980. Iluka is an Aboriginal word from an eastern states dialect and is said to mean 'near the sea'.

JOONDALUP: This suburb is named after Lake Joondalup, situated on the eastern side of the suburb. Joondalup is an Aboriginal word first recorded in 1837, and possibly means "place of whiteness or glistening". Another account states that a 'joondal' is a creature that can only move backwards.

KALLAROO: Kallaroo is one of the four 'Whitfords' suburbs that resulted from the State Government rezoning a large area of coastal land for development in 1969. Kallaroo was chosen as a suburb name in 1970 and is an Aboriginal word meaning 'road to the water'.

⁴⁰Edith Cowan University (ECU), Reconciliation Action Plan, May 2018 to April 2021, https://www.ecu.edu.au/_data/assets/pdf_file/0012/782886/ECU-Reconciliation-Action-Plan-2018-2021.pdf, accessed 6 April 2023. City of Joondalup website: <https://www.joondalup.wa.gov.au/kb/resident/city-of-joondalup-history>, accessed 4 April 2023

⁴¹Landgate Suburb index, <https://www0.landgate.wa.gov.au/maps-and-imagery/wa-geographic-names/name-history/historical-suburb-names#B>, accessed 3 April 2023.

⁴²Chambers, p. 21.

KINGSLEY: The suburb of Kingsley is thought to named after the village of Kingsley, near Winchester in County Hampshire, England. George Shenton, who leased land in the area, was from this village but the connection has yet to be confirmed. The suburb name was approved in 1974.

KINROSS: Kinross is named after a village near Perth in Scotland. The name was chosen because the adjoining suburb of Burns Beach is also a name of Scottish origin. The name was approved for the suburb in 1989.

MARMION: Marmion is named after Patrick Marmion who ran a whaling station from 1849 in the area. He was given ten acres of land and permission to run sheep on the adjacent crown land while his whaling station was operational. (Information provided by City of Joondalup.)

MULLALOO: Mullaloo is an Aboriginal word, and was first recorded for a point on the coast near here in 1919. It was first shown as Moolaloo Point, but the spelling was later changed to Mullaloo, and the feature is now known as Pinnaroo Point. The beach here was locally known as Mullaloo Beach around the turn of the century, but urban subdivision only commenced in the late 1950s. One record of the Aboriginal name records it as meaning "place of the rat kangaroo".

OCEAN REEF: Ocean Reef is a descriptive name used by developers. It is derived from a line of reefs offshore from Mullaloo, and was approved in 1974.

PADBURY: This suburb is named after Walter Padbury (1820-1907), pastoralist, merchant and philanthropist. Padbury, a prominent Perth citizen and an early landholder in the area. The suburb was named in 1971.

SORRENTO: A private subdivision of freehold land known as 'Sorrento' was surveyed here in 1929. It is assumed that the name was taken from the Italian seaside town of Sorrento which is located south of Naples opposite the Isle of Capri.

WARWICK: Warwick derives its name from the main road in the area. It is thought to be named after an early settler named Jack Warrick. The spelling was changed to 'Warwick' in keeping with English and Scottish names that are a feature of the suburb. (Information provided by City of Joondalup.)

WOODVALE (part): The suburb of Woodvale derives its name from the area being rolling undulating country with many stands of good timber. The area was cleared between 1963 and 1968, apparently for grazing purposes, and then developed for housing in the early 1970s. The suburb name was approved on 3 December 1974.

3.4 Economy

Early grazing and agricultural activity in the nineteenth century was localised with varying degrees of success. Much of the development in the area has occurred primarily as a result of planning developments since the 1970s. Joondalup city was created as a 'satellite' city of Perth and as such contains many commercial businesses and community services.

3.4.1 Rural Occupations

Prior to 1829, the area was inhabited by the Mooro people who lived off and maintained the land. The Mooro people, as part of the Noongar group, lived in the area north of Derbal Yarragan (Swan River), the foothills to the east, the ocean to the west and as far north as Moore River. They captured fish and abalone from the coast and lived off plants such as quandongs and caught tortoises from the lakes.⁴⁴

The largely rural nature of the district that continued until well into the twentieth century meant that many people have relied on agricultural pursuits such as market gardening, dairying, bee-keeping, poultry farming and timber cutting to make a living.⁴⁵ Chinese market gardeners were in the area from around 1890 (although mostly on the Wanneroo side of Lake Joondalup).⁴⁶ A Farmers and Graziers Association was established in 1900, reflecting the predominantly rural employment of people in the district.⁴⁷ Several vineyards were established in the area, mostly by Italian migrants after World War I - such as the Luisini Winery.⁴⁸ With urban development growing rapidly throughout the area from the 1960s, many wineries were subsumed into new residential areas.⁴⁹

The rural nature of the area and associated rural occupations have largely disappeared since the area has been increasingly developed for housing since the 1970s.

The Luisini Wine Cellar in 1986. (Picture Joondalup Collection P02360)

3.4.2 Natural Resources

Early attempts to make a living included itinerant workers using 'palm-wool' picked from Zamia Palms (*Macrozamia reidlii*) to make pillows and mattresses. With natural bushland full of jarrah (also known as Swan River mahogany) the area was ripe for a timber industry. Rather than a formal mill arrangement, most of the timber was used locally for the construction of houses. Local timber was also used to construct wooden boxes for transporting produce from the local market gardens to the markets in Perth.⁵⁰

⁴⁹Ujma, p. 72.

⁵⁰Ujma, p. 69.

3.4.3 Mining and Mineral Resources

Lime kilns were established in the district from around 1910 and by the 1920s the area was highly regarded for the quality of lime. Between the wars as many as 200 people were employed in the lime burning industry. The success of the lime industry continued after World War II and much of the state's lime requirements were being produced from within the district.⁵¹

When planning for the new city centre in the mid-1970s, it was noted that 'Quarries will present problems in the development of the Centre. Ways and means should be sought to slow down operations and steps taken to make sure that restoration will be adequate for urban purposes.'⁵² Suburbs were designed around the quarries. The Connolly and Joondalup Golf Courses were developed from old quarry sites.⁵³

3.4.4 Manufacturing and Secondary Industry

The Joondalup district is not noted for its manufacturing industry; however, some industrial areas exist around Wangara (in the City of Wanneroo) and sections of Canham Way in Greenwood.

3.4.5 Commerce

Prior to the 1960s and 1970s, most of the economic activity was based around farming and semi-rural practices such as vegetable growing, wineries and small industry. The first bank in the district is believed to have opened in 1963.⁵⁴

The formation of the Joondalup City Centre through the 1980s and 1990s resulted in a substantial increase in the types of services available to local residents. The city was organised into precincts based around the Central Business District (CBD) with areas for the sporting complex, a Business Park for services and a Business Park for technology as well as the various education providers and health and justice services. Residential precincts bordered the CBD.⁵⁵

20 | City of Joondalup Local Heritage Survey 2024

As noted by former City of Wanneroo Planner Philip Thompson, 'what happened in the late '80s was that the market had finally got to a point where it was going to be viable for a big, new shopping centre to be built within the City Centre.'⁵⁶ The Lakeside Shopping Centre changed shopping patterns from small, localised retailers to a central venue which could be easily accessed by vehicle. Similarly, the Whitford City and Warwick Grove shopping centres have followed the pattern of large-scale centres as opposed to shopping strips along streets.

In more recent decades, the Hillarys Boat Harbour and ferry links to Rottnest Island/Wadjemup has created a tourist industry in the area. Joondalup has become a popular spot for visitors, particularly day trippers. Local attractions such as AQWA (previously Underwater World until 2001), beaches and parklands are all reasons people visit the area.⁵⁷

3.4.6 Workers and Working

Since the establishment of a satellite city to Perth, Joondalup has attracted many businesses and workers. The placement of several government services, particularly law and justice services, has resulted in increased numbers of workers in the area.

In 2012, a report on why businesses remain in Joondalup identified factors of convenience (living in close proximity to their workplace) and that it was considered a 'growth area' as the main reasons people worked in Joondalup. In 2012, there were 13,400 registered businesses within the City of Joondalup.⁵⁸ In 2022, there were 12,181 local businesses within the City of Joondalup.⁵⁹

3.5 Infrastructure

In the early 1950s, the State Government commissioned Professor Gordon Stephenson and Town Planning Commissioner J.A. Hepburn to prepare a planning scheme for the metropolitan region. The Stephenson-Hepburn report was published in 1955 and was regarded as a blueprint for development over the forthcoming decades.⁶⁰

The Perth Metropolitan Region Scheme was established in 1963. The Metropolitan Region Planning Authority (MRPA) released the 'Corridor Plan' in 1970. The City of Joondalup was identified as a new sub-regional centre to support the planned expansion of the North-West Corridor.⁶¹

In 1975-1976, a Development Committee was established by Premier, Sir Charles Court, to plan for a proposed new city north of Perth. Professor Gordon Stephenson was appointed as a consultant for the project.⁶² Stephenson's 'Joondalup Centre – An Interim Report' was accepted by the Steering Committee in January 1976.⁶³ A later iteration of the report, 'Joondalup Regional Centre: A Plan for Metropolitan Regional Centre' was produced in October 1977.⁶⁴ The report was prepared for the Government of Western Australia, Wanneroo Shire Council and the Metropolitan Regional Planning Authority.⁶⁵

Stephenson, 'a child of the British Garden City movement and a parent of the international New Towns movement', based his ideas around planning principles of access and flexibility to accommodate change.⁶⁶ If it had proceeded as per Stephenson's plan in 1977, Joondalup would be one of the last non-single industry new town projects anywhere.⁶⁷

The first meeting of the Joondalup Development Corporation (JDC) was held in March 1977. The JDC was chaired by Robert Holmes à Court.⁶⁸ For the JDC's work to be successful '...finance would have to be raised through Treasury, mining leases attended to, land exchanges made, Wanneroo Council mollified, the Steering Committee and its troublesome Plan held at bay, and roads and sewers approved.'⁶⁹ There were several tensions between the JDC and the City of Wanneroo as roles and responsibilities regarding the new city were clarified in the late 1970s.⁷⁰ Joondalup was designed along the principles of economic, social and environmental sustainability.⁷¹

Metroplan (1990) and the North-West Corridor Plan (1991) extended the ideas in the Corridor plan. The Network City Plan (2004) replaced the Metroplan.⁷² These plans all extended the principles from earlier reports and resulted in further development within Joondalup.

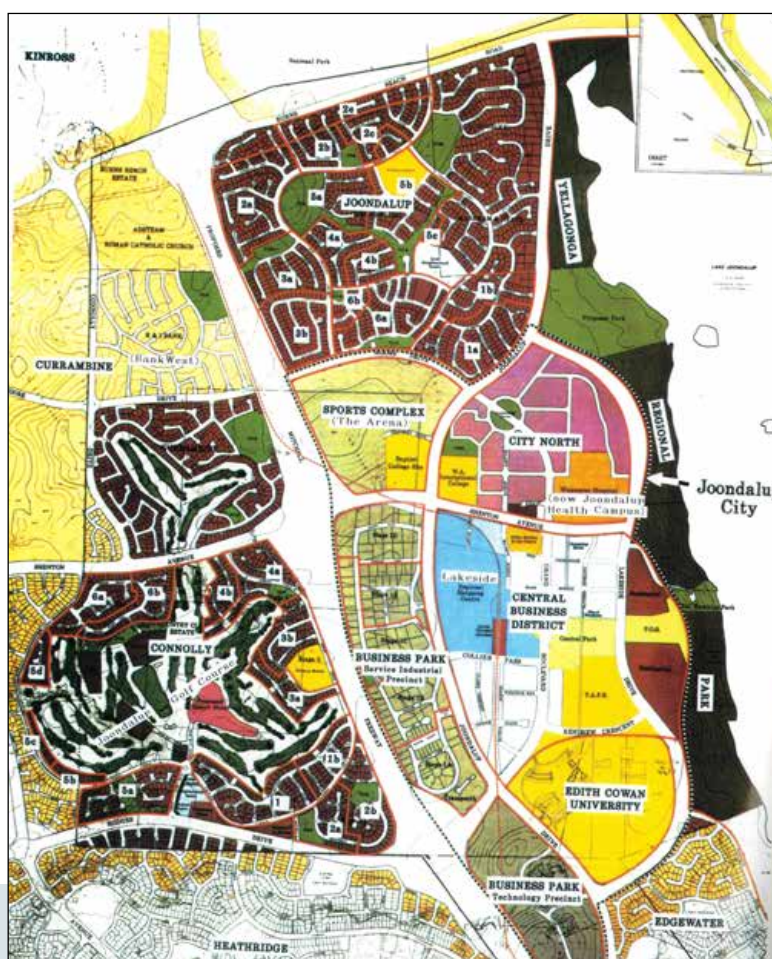

3.5.1 Development of Settlement and Services

The small population and disparate settlement characterised the Joondalup, then Wanneroo, area until well after World War II. Basic telegraph, postal and community services were provided, albeit on a small scale.

Many comments about the 'Wanneru, Yanchep, Middle Swan, Upper Swan and Bullsbrook' districts were made in the 1955 Stephenson-Hepburn report. The 'sparse' nature of settlement and the large pine plantations being established west of the Swan Valley were noted. The market gardens north of Herdsman Lake 'stretch along a band of rich swampy country to Wanneru and Lake Joondalup. Generally the land is unsuitable for building and it should be retained for market gardens to provide some of the fresh food for the growing metropolitan population.'⁷³

By examining the number of houses in the district, Lindsay Hunter noted that 'until the 1960s, Wanneroo was generally regarded as being beyond the urban margin, a largely underdeveloped district with pockets of intensive agriculture around some of the wetlands and a few small coastal settlements.'⁷⁴

Major capital works that occurred during the 1980s included a golf course at Connolly, a boat harbour at Ocean Reef and the substantial \$13 million marina development at Hillarys.⁷⁵ The freeway and railway line (discussed in the 'Transport and Communications' section below) provided the conduit through which people could travel, aiding and assisting further development north of Perth.

22 | City of Joondalup Local Heritage Survey 2024

3.5.2 Transport and Communications

In 1883, Dog Swamp farmer Tom Darch was awarded the mail delivery contract for the Joondalup/Wanneroo area.⁷⁶ A weekly postal service commenced from 1883 and a post office was established several years later. Telegraph communications were established in 1895.⁷⁷

The Old North Stock Route passed through an area to the west of Lake Joondalup.⁷⁸ 'While the stock route to the far north was being pioneered, residents in Wanneroo were more interested in having a good road to the market in Perth. And there was considerable pressure for a rail link.'⁷⁹ In September 1901, local residents petitioned for a rail link, led by Mathieson Jacoby, MLA for Swan. They maintained that much of the 'extremely suitable for vegetable growing and mixed farming' land was not being taken largely because of the difficulties in transporting produce to the city.⁸⁰

With no indication of a railway line, the first cars in the area around the time of World War I caused significant community interest. George Leach, one of the first car owners in the district, reportedly assisted local residents in times of emergency with his Model-T Ford.⁸¹ By 1924 there were 15 vehicles registered in the district.⁸² The reliance on horse and cart lessened rapidly and by 1935 there were just over 200 motor vehicles and the Wanneroo Road Board employed a Traffic Inspector that year.⁸³

In January 1959, 'faint hopes of a rail link to Wanneroo received a fatal blow when the Town Planning Commissioner advised Wanneroo's administrators the State Government had decided against a suggestion to have a suburban railway to Whitfords Beach'.⁸⁴

Planning for the Mitchell Freeway, which roughly followed the North West Stock Route, commenced from the 1950s through the Stephenson-Hepburn report. The freeway reached Warwick Road in 1985 and Ocean Reef Road in 1992. Extensions were completed to Hodges Drive in 1992, Burns Beach Road in 2008 and Clarkson in 2015.⁸⁵

Joondalup Railway Station was officially opened on 20 December 1992. More than 700 people travelled on the inaugural train ride from Perth to Joondalup. At the time it was referred to as the Northern Suburbs Railway Link and only the Leederville, Edgewater and Joondalup Stations were operational. Construction continued on Glendalough, Stirling, Warwick, Whitfords and Currabine stations, which all opened in 1993.⁸⁶ The railway line was built into the median of the freeway and therefore roughly followed the North West Stock Route.⁸⁷

Clarkson Railway Station opened 4 October 2004.⁸⁸ Greenwood Railway Station opened in January 2005.⁸⁹ Butler Railway Station opened in September 2014.⁹⁰ In 2023, there are plans in place through Metronet to extend the railway line a further 14km north and create new stations at Alkimos, Eglinton and Yanchep.⁹¹

3.6 Social Services

3.6.1 General Social Services

With a sparse and scattered population until the late twentieth century, social services would have generally been voluntary within the area or residents would have travelled to other centres. Within what was considered the Wanneroo district at the time, local groups such as Red Cross, Playgroups, Council Libraries and the like provided services for residents.

From the 1980s onwards, the establishment of the Joondalup area brought a new level of localised services. For example, Granny Spiers Community House was established in the early 1980s. As the residential population flourished, additional social services were established.

3.6.2 Education

The first school in the Wanneroo district opened in September 1874.⁹² Attendances were irregular when the children needed to help their families in the market gardens. Attendance numbers were low and the school closed between 1890 and 1899.⁹³ A new school was constructed in 1959.⁹⁴

When the Sisters of Mercy established St Anthony's Church (1932) and School (1935) in the district the Sisters had to travel from their convent in West Perth each day. Reflecting the multicultural community, the opening address for the school was given in English, Italian and Slavic.⁹⁵ Other schools in the district include the Kingsley Montessori School that opened in 1962.⁹⁶

The Regional Centre Plan prepared in 1977 noted that eight primary schools, one high school and a 'post-secondary' campus would be required but that, 'the future development of post-secondary education is difficult to predict'.⁹⁷

By the mid-1990s there were several high schools including Mater Dei College (1993) and Lake Joondalup Baptist College (1994). The Joondalup campus of the Western Australian College of Advanced Education (WACAE) opened in 1987 and was renamed the Edith Cowan University in 1991. By the end of the twentieth century there were 19 primary schools and four state secondary schools in the Joondalup District. 'Each primary school site is located as centrally as possible within its future catchment area – one primary school for 1,500-1,800 residential lots and one school for 7,000-plus lots.' In an area with such high growth 'new schools have been established every year and existing schools have endured temporary over-enrolments till accommodation became available on neighbouring campuses'.⁹⁸

In 2023, the City of Joondalup has 47 primary schools and 16 high schools – both government and private – within its boundaries. Tertiary facilities include Edith Cowan University (Joondalup Campus), North-West Metropolitan TAFE and the Western Australian Police Academy (2002).⁹⁹

3.6.3 Health

Up until the late twentieth century, residents within the Joondalup area would have had to access medical services outside the district.

Wanneroo Hospital, a 75-bed hospital, was planned for construction on the Joondalup town centre site in 1976.¹⁰⁰ It opened in August 1980 with 85 beds. It became the basis for the Joondalup Health Campus (JHC) from June 1996. In 2023, the JHC is a partnership between the State Government and Ramsay Health Care. It is a major sub-tertiary health care facility with more than 700 beds.¹⁰¹

The newly completed Emergency Department at Joondalup Health Campus in February 2011. (Picture Joondalup Collection P02744)

3.7 Governing

3.7.1 Government and Politics

The Wanneroo Road Board was gazetted in October 1902. From 1904, the Board met in the Wanneroo Agricultural Hall.¹⁰² In 1905, the Board created four wards which were soon reduced to three wards: North, Central and South.¹⁰³

A new office building for the Roads Board was constructed in 1960.¹⁰⁴ Wanneroo acquired 'Shire' status in 1961.¹⁰⁵ The Shire grew significantly in the 1960s and into the 1970s. The Shire quickly outgrew their 1960 building and a new administration building was opened by Premier John Tonkin in November 1971.¹⁰⁶

From 1996, work on excising the Joondalup area from the Shire of Wanneroo commenced in earnest and several public meetings were held. There were compromises over which historical sites would remain in Wanneroo and this resulted in the dividing line through Lake Joondalup, effectively dividing the suburb of Woodvale over the two local government authorities. The Wanneroo Council was suspended from October 1997 to aid the creation of the new cities of Wanneroo and Joondalup from 1998.¹⁰⁷

¹⁰⁶ *Picture our Past*, pp. 307-308.

¹⁰⁷ *Picture our Past*, p. 327.

3.7.2 Law, Order and Defence

Prior to the construction of several police and justice buildings in Joondalup in the 1990s, there were very few services in the Joondalup district. Before the 1990s, residents would have travelled to other districts to obtain court and police services.

The Building Management Authority (successor to the Public Works Department) designed, documented and built the \$8.24 million police complex in Joondalup. The complex was a commitment made under the Dowding Government. It was proposed as the centre for a Police division for the northern suburbs. The court facilities contained four Magistrate's Courts.¹⁰⁸ The two-storey combined police and court facility was completed in 1992.¹⁰⁹

The WA Police Academy was relocated to Joondalup from Maylands and was opened by Premier Geoff Gallop in February 2002. A purpose-built academy was constructed on the 8.7 hectare site adjacent to the Edith Cowan University campus at a cost of \$47 million.¹¹⁰

Joondalup Court House, 1993. (Picture Joondalup Collection P00278.22)

3.8 Cultural Life

3.8.1 Religion

One of the first churches in the Wanneroo district was St Anthony's Catholic Church which opened in 1932.¹¹¹ Generally, churches within the existing boundary of the City of Joondalup were not established until the 1970s onwards when rapid development of the suburbs occurred. For instance, the Duncraig (now Uniting) Church was established in 1974. Throughout the 1980s, Uniting Churches were consecrated in Beldon and Greenwood. Most of the Anglican Churches in the area date from the 1980s and 1990s such as St Nicholas, St John the Evangelist, St Mary Magdelene and Resurrection Churches.¹¹²

In 2023, there at least 14 churches in the City of Joondalup representing a range of denominations and faiths.¹¹³

¹⁰⁸ Information obtained from the 'Picture Joondalup' library catalogue, P00089.27.

26 | City of Joondalup Local Heritage Survey 2024

3.8.2 Recreation – Arts, Culture and Entertainment

Public art installations were regarded as an important feature for the new Joondalup city. The Joondalup Development Commission engaged several artists from the late 1980s for various artworks around the City. Artists included Sally Morgan, Robert Juniper and Leon Pericles.¹¹⁴

A cinema complex was first proposed in the early 1990s. The location was initially near the Civic Centre but later became a ten-cinema complex at Lakeside Joondalup.¹¹⁵ The Galaxy Drive-in Cinema opened in 1973 in Kingsley. While there were at least ten drive-ins in the metropolitan area from 1955, the Galaxy is the last drive-in still in operation.¹¹⁶

3.8.3 Recreation – Sport

Perry's Paddock (now in Wanneroo) was used for horse racing and social events for most of the 1920s. John (Jack) Perry had purchased land in the area in 1909 and used it to breed horses. The annual Race Days were popular not only for the racing but as a social, community gathering. It quickly became a popular and highly anticipated event but was stopped in 1931 when the WA Turf Club refused to grant approval. Despite community efforts to reinstate the event, the WA Turf Club was adamant. A short revival of the event occurred between 1992 and 2001.¹¹⁷

Lake Joondalup was a popular venue for Scout Camps between the 1940s and 1970s. Many of the camps were held near Neil Hawkins Park.¹¹⁸ Ern Halliday Recreation Reserve was established in 1976 in Hillarys, near Whitford Nodes Park and Hillarys Marina, and provides recreation activities for all ages and abilities.¹¹⁹

Aerial view of Lake Joondalup 1987. (Picture Joondalup Collection P00206.09)

Yellagonga Regional Park was established in 1989 as a way of preserving the fauna and flora in the region.¹²⁰ Lake Joondalup, with its wetland system, has been used for recreational purposes over many years. Picnics, gatherings and walking have been the main reasons people have, and continue to, visit the Lake. Activities such as fishing, rowing and speed boating have all been considered but generally have proved to be short-term or unsuccessful activities.¹²¹

Being a coastal city, ocean sports and recreation has been a significant pastime for local residents and visitors. The Marmion Angling and Aquatic Club was formed in 1953. The Whitford Sea Sports Club was formed in 1973. It is now known as the Ocean Reef Sea Sports Club and incorporates a volunteer rescue group.¹²²

Similarly, several surf lifesaving groups continue to operate with the Joondalup district. One of the first groups was likely in the Sorrento/Whitfords area where a large number of beach shacks existed. St John Ambulance volunteers operated a post at Mullaloo. The increasing number of incidents and popularity of the beaches resulted in Surf Clubs forming. It is believed that Sorrento (1958) and Mullaloo (late 1950s) Surf Life Saving Clubs were the first clubs in the district. A purpose-built Club opened in Mullaloo in January 1966. Sorrento Surf Life Saving Club originally operated from 'The Dome' from 1961 and new clubrooms were constructed in 1969 and then again in 1978.¹²³

The Duncraig Recreation Centre was commenced in 1974 and developed over the next several years.¹²⁴

Construction of Arena Joondalup, a large sporting arena, commenced in 1993. It was officially opened on Anzac Day 1994. A large aquatic centre opened at Arena Joondalup in 2000.¹²⁵

3.8.4 Domestic Life

The beach shacks along the coast were a recreational feature of the area for many decades. The first shacks were built in Marmion around the 1920s when the area became a popular fishing spot. Construction of shacks continued in the area and along the coast further north of Joondalup. Enterprising visitors to the area constructed makeshift dwellings but later shacks were constructed with more permanent materials. Whole rows of shacks appeared in the Whitfords and Hillarys areas. Beach shacks were strongly discouraged by the State Government and many shacks were demolished, particularly in the 1970s.¹²⁶

Beach Shacks at Marmion, c. 1950.
(Picture Joondalup Collection, P00597)

In 1978, the Pinnaroo Valley Memorial Park opened, and the first burial occurred that year. Unlike a typical cemetery, the area has been maintained as natural bushland. Burials are noted by flat bronze plaques and all plantings are native species. As noted by the Metropolitan Cemeteries Board, 'the natural environment of Pinnaroo provides a haven for many native birds and animals, including kangaroos.'¹²⁷

3.9 International Links

To honour those killed in conflicts, the Anzac Memorial was built in 1996 in Central Park.¹²⁸

The First Anzac Memorial service at the Joondalup War Memorial, 1996. (Picture Joondalup Collection P00223.05)

3.9.1 World War I

During World War I, locals banded together to assist with the war effort, including 'Sand Bag Day' to raise funds for the war.¹²⁹

23 men from the district enlisted in World War I.¹³⁰ Tragically, nine local men were killed in action.¹³¹

When the Armistice was announced, welcome committees were set up and a dance was organised to celebrate.¹³² Several measures were taken to assist returned soldiers find employment. In addition to the impact of war itself, the Spanish Influenza pandemic immediately after World War I had a significant impact globally. A clinic was established in the district to provide inoculations for the local community.¹³³

¹²⁸ Picture Joondalup, <https://joondalup.spydus.com/cgi-bin/spydus.exe/FULL/WPAC/BIBENQ/48532862/32153030,5, P00223.05>.

¹³¹ *Picture our Past*, pp. 137-141 contains details of soldiers who served in WWI.

¹³² Chambers, p. 37.

¹³³ *Picture our Past*, p. 142.

3.9.2 World War II

As in World War I, many local men enlisted at the outbreak of World War II.¹³⁴ The 10th Australian Light Horse Regiment was tasked with patrolling the coast from Scarborough to Moore River. Their camps were based around the coastal area. The 600 Light Horsemen effectively doubled the population of the district.¹³⁵ They served in the area from 1941 to 1944 after which time aerial patrols carried out coastal surveillance.¹³⁶

The Wanneroo district was a vital food production district at the outbreak of World War II.¹³⁷ Several market gardens in the area and a local sawmill were requisitioned by the Government to provide food and transport casing.¹³⁸ With a large Italian population, many men considered 'aliens' by the Federal Government were sent to internment camps.¹³⁹

Keen to assist with the war effort, local people found diverse ways to contribute. Many local men joined the Volunteer Defence Corps.¹⁴⁰ Many women joined the local Red Cross branch and worked to fundraise. Students at local schools were taught emergency drills in preparation for possible Japanese raids.¹⁴¹

3.9.3 COVID Pandemic

The worldwide COVID-19 pandemic led to lockdowns in Western Australia from 24 March 2020 when a range of national and international border restrictions were introduced. Various lockdowns occurred throughout 2021: 31 January – 5 February 2021¹⁴² and 24 – 27 April 2021¹⁴³ and 29 June – 3 July 2021.¹⁴⁴ The health measures severely restricted travel movements and had a significant impact on tourism as well as most other businesses, particularly retail and hospitality. A testing clinic opened at Joondalup Regional Health Campus on 23 March 2020 in response to the pandemic.¹⁴⁵ In May 2021, a vaccination clinic opened at the Lakeside Joondalup Shopping City.¹⁴⁶

Duncraig Leisure Centre

LHS No. 01.

Place No. (inHerit):

Place Details			
Former and other names	Sorrento Duncraig Recreation Centre		
Street Address	40 Warwick Road		
Locality	Duncraig		
Location Description	Cnr Marmion Avenue		
GIS coordinates	-31.83614885, 115.76496545		
Reserve No.	32380	Diagram/Plan No.	P220959
Lot No.	14077	Vol/Fol	LR3122/642
Place Type	Individual Building		
Original Use	Social/Recreational	Sports Building	
Current Use	Social/Recreational	Community Hall/Centre	
Statutory Listings	N/A		
Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	The Duncraig Leisure Centre has social significance for residents of the area as a recreational facility and social gathering place. It is representative of the development of services in the 1970s for a growing community.
Values	Social
Level of Significance	Little – Has elements or values worth noting for community interest but otherwise makes little contribution.
Classification and Management	Category 4 – Conservation of the place is not necessary. Should the place be proposed for demolition, or substantially altered so that its heritage values are lost, the City may request that the owner provide an Archival Record as a condition of approval of the development application.

Physical Description			
Construction Materials	Walls: Brick – Common		
	Roof: Metal – Colorbond		
	Other:		
Architectural Period	Late Twentieth Century (1960-)	Architectural Style	N/A
Demolished	No	Year of Demolition	N/A
Description	<p>The Duncraig Leisure Centre is a single storey brick structure, with a central second storey. Located in a similar group of purpose-built Council facilities, the multi-aspect building features a red brick façade characteristic of 1970s-built structures, with a mansard roofline. The front entrance features a concrete area extending from the front doors to a red brick wall, with an alcove for a flagpole and statue. The area between the brick wall and the road reserve is grassed, with large endemic trees planted. The building features large rectangular shaped windows on three of the four walls, and multiple double door entrances.</p> <p>The outer area includes a children’s play area, a stand-alone wooden pergola structure, and shade sail additions. The Leisure Centre is open to the front from Marmion Ave and enclosed on three sides by a low chain wire fence. It is bordered by the Duncraig Library on its northern side, and car parks and a loading dock to the east of the building. The entire group of facilities is bordered by the Percy Doyle Reserve.</p>		
Condition	Fair – <i>assessed from street view only</i>		
Historical Description			
Heritage Themes	Peopling WA – Demographic Development Social Services – General Social Services Cultural Life – Recreation – Sport		
Construction Date/s	1974		
Associations	Architect:		
	Builder:		
	Previous owners or occupants:		
	Other:	Percy Doyle	
Historical Notes	<p>The Sorrento Duncraig Community Recreation Association (Inc) was formed in 1973 and the land was vested in the then Shire of Wanneroo on 14 December 1973 as a ‘Library and Community Centre’. The site was originally a tennis club. The Sorrento Duncraig Recreation Centre was built in 1974 as part of the Percy Doyle Reserve, which also contains the Duncraig Library, the Sorrento Bowling Club, football fields and tennis courts. An honour board in the building lists its members from 1974 to 1993.</p> <p>Percival Kenneth Doyle was a Wanneroo Road Board member, elected in 1960 in Wanneroo’s final year as a Road Board prior to becoming a local government. He was a business proprietor who was one of two elected as first representatives for a new Southwest Ward.</p> <p>Since construction, the operations of the centre has shifted away from that of a leisure centre to a community-based facility. On 18 September 2006, as part of a rebranding program, the Recreation Centre was subsequently renamed the Duncraig Leisure Centre with the orange logo that is now used.</p> <p>In 2020 the place was leased for five years to the Churches of Christ Sport and Recreation Association and in 2023 is used for its basketball program.</p>

Cultural Heritage Significance	
Statement of Significance	The Ken Colbung statue has historic significance for its association with Mark Le Buse, the artist who created King Neptune and other sculptures for Atlantis Marine Park.
Values	Historic
Level of Significance	Little - Has elements or values worth noting for community interest but otherwise makes little contribution.
Classification and Management	Category 4 - Conservation of the place is not necessary. Should the place be proposed for demolition, or substantially altered so that its heritage values are lost, the City may request that the owner provide an Archival Record as a condition of approval of the development application.

38 | City of Joondalup Local Heritage Survey 2024

Physical Description			
Construction Materials	Walls: N/A		
	Roof: N/A		
	Other: Stone - Limestone		
Architectural Period	Late Twentieth Century (1960-)	Architectural Style	N/A
Demolished	No	Year of Demolition	N/A
Description	The statue is situated on a concrete plinth facing the Duncraig Leisure Centre. Sculpted from limestone, several of the facial features are deteriorated and black stains from surface dirt and moisture retention are evident. The statue is exposed to the elements as it is located outside of the Duncraig Leisure Centre awning.		
Condition	Poor – assessed from street view only		

Historical Description		
Heritage Themes	Cultural Life - Recreation – Arts, Culture and Entertainment	
Construction Date/s	1982	
Associations	Artist:	Mark Le Buse
	Builder:	
	Previous owners or occupants:	
	Other:	Atlantis Marine Park
Historical Notes	<p>Artist and sculptor Mark Le Buse (1918-1999) was born in America. He settled in Yanchep Two Rocks in 1975. In the 1980s he was commissioned to create statues in and around Two Rocks by the developers of Atlantis Marine Park, including a 10m high statue of King Neptune to overlook the marine park, a large clock with limestone and concrete busts of well-known celebrities, and other sculptures in the park including a pod of dolphins at the entrance.</p> <p>Le Buse was previously commissioned to construct a series of sculptures known as the Waugal Monoliths, which was Le Buse's interpretation of a Noongar creation story, adjacent to the Two Rocks Shopping Centre. It should be noted that he did so without consultation with representatives from the Noongar community.</p> <p>During the Wanneroo Shire Arts Exhibition at the Sorrento/Duncraig Recreation Centre in April 1982, Le Buse was commissioned to carve the bust of well-known Noongar leader Ken Colbung. He took photographs of Mr Colbung to enable an accurate depiction of him, and carved the 1.8m high carving in situ so the public could watch his creation, using a large piece of limestone taken from Quinns Rocks for the purpose. Originally the statue was to be relocated to the grounds of the Wanneroo Shire Offices, but at the next Council meeting the Council agreed to leave it at the Recreation Centre. It was felt that the statue would be lost among the others recently created by Le Buse if it was relocated to Yanchep.</p> <p>Le Buse crafted an estimated 48 limestone sculptures while living in Western Australia from 1975 to 1984. His work can still be seen at Two Rocks, most notably in the landmark King Neptune Statue that rises above the Sun City Precinct, a place in the State Register of Heritage Places. Many of the other Atlantis sculptures were relocated following the closure of the marine park in 1990. Several have undergone conservation and are now located in Charnwood Park, Two Rocks.</p>	

Historical Photos

● Yanchep sculptor Marc Le Buse chips away on the huge effigy of aboriginal leader Ken Colbung outside the Sorrento/Duncraig Recreation Centre. Mr Colbung's beard has yet to be carved from limestone.

Burial Site, Edgewater

LHS No. 03.

Place No. (inHerit): P08898

Place Details			
Former and other names			
Street Address	57 Joondalup Drive		
Locality	Edgewater		
Location Description	Off George Grey Place, within carpark of Lot 1		
GIS coordinates	-31.771659, 115.7812583 (Memorial)		
Reserve No.		Diagram/Plan No.	D075361
Lot No.	1	Vol/Fol	2838/93
Place Type	Aboriginal Site		
Original Use	Other - see Historical Notes		
Current Use	Other - see Historical Notes		
Statutory Listings	Aboriginal Cultural Heritage Register: <ul style="list-style-type: none"> 'Edgewater Burial Site', Site ID 17590 (Burial; Creation / Dreaming Narrative; Other) 'Joondalup Drive Trees', Site ID 3505 (Burial; Modified Tree) 		
Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	The memorial built at the Edgewater Burial site has historic significance for its association with recognised Noongar Elder Ken Colbung AM MBE (1931-2010). Colbung constructed the memorial to Bennyowlee in recognition of the social significance he holds to the Noongar community.
Values	Historic, Social
Level of Significance	Historical Site - Has significance for its former use, an event, or its role in the development of the City of Joondalup.
Classification and Management	Category 5 - This site is generally a place that has few visible material remains that relate to its former use and significance. This place should be included in heritage initiatives such as interpretive signage, heritage/walk trails, research, and education projects.

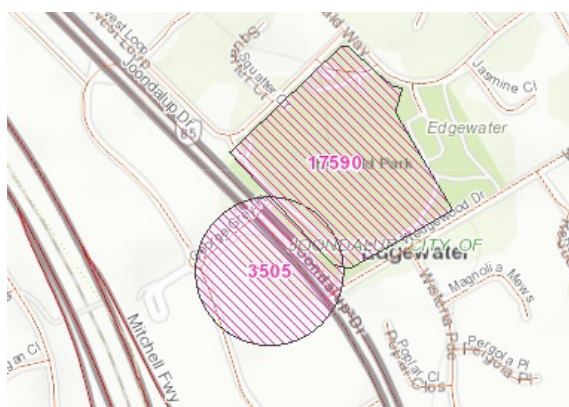

Physical Description			
Construction Materials	Walls:		
	Roof:		
	Other: Stone - Limestone		
Architectural Period	N/A	Architectural Style	N/A
Demolished	No	Year of Demolition	N/A
Description	The memorial is comprised of limestone blocks built to resemble a cairn, with a plaque detailing the significance of the site. The memorial is located amongst a bushland setting, between the main Joondalup Drive and the carpark for a commercial complex on George Grey Place. Surrounding the block are cut timber logs to further define the area. The memorial signifies that the actual burial site is in the vicinity of the memorial only. It is recorded as being in Emerald Park on the opposite side of Joondalup Drive.		
Condition	Poor – assessed from street view only		

Historical Description		
Heritage Themes	Integrated Stories - Aboriginal People Peopling WA - Colonisation	
Construction Date/s	1840s (burial); 1970s (memorial)	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	
	Other:	Bennyowlee, Ken Colbung AM MBE
Historical Notes	Bennyowlee (Ben-nee-yowl-ee) was a senior Yued tribesman of the Noongar people, and a member of the Tdondarup family. He was brother to Marungo and Werang. He was also a friend and guide to the explorer George Grey. Bennyowlee was an uncle of a man named Kaiber who in 1841 was a member of the party with Sir George Grey who arrived hungry and exhausted at Lake Joondalup after staggering southward down the coastal plain from a shipwreck near the mouth of the Murchison. Grey records in his diaries that without the assistance of Aboriginal people his party surely would have perished.	
	Bennyowlee was considered a sort of prophet who dreamt that the Aboriginal culture would go into a decline with the arrival of the Europeans, but that it would continue and eventually flourish again. It is not known when Bennyowlee died.	
	Alternative spellings for Bennyowlee's name are Bennyowlee; Beniyowlee; Benyowlee.	
	Noongar Elder Ken Colbung AM MBE (1931-2010) set up a small stone memorial and plaque in the general area of Bennyowlee's grave in George Grey Place, Edgewater prior to development of the area in the 1970/80s.	
	The place where the memorial is located is a Registered Aboriginal Cultural Heritage Site: 'Joondalup Drive Trees', Site ID 3505 (Burial; Modified Tree). The actual burial site is 'Edgewater Burial Site', Site ID 17590 (Burial; Creation / Dreaming Narrative; Other), the location of Emerald Park.

Demolished	No	Year of Demolition	N/A
Description	Parin Park is comprised of a well maintained public open space, inclusive of large specimens of tuart and Jarrah trees endemic to the area. The park includes children's play equipment, a pergola area with interpretive signage, and landscaping with local species. The park is used as a dog exercise area.		
Condition	Good – assessed from street view only		

Historical Description		
Heritage Themes	Economy - Rural Occupations	
	Integrated Stories - Non-British Migrants	
Construction Date/s	1975	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	Pater and Roko Parin
	Other:	Parin Family
Historical Notes	<p>Petar (Peter) and his brother Roko (Rocco) Parin are recorded as the first immigrants from Croatia to settle in the district. Peter first travelled to Australia in 1908 alone as a young man, working in the Southwest. He returned to Croatia in 1912, marrying Marija Antic in 1913. Their first daughter, Rose, was born in December of the same year, and three weeks later Peter returned to Australia. This time he brought his brother Rocco; the brothers arriving in Fremantle in 1914.</p>	
	<p>The Parin brothers worked in the Southwest and following investigation of several areas in the Perth area decided on the district of Wanneroo as their final destination. The climate and soil composition best replicated their former home in the central coastal Dalmatian region of Croatia, an area renowned for its production of fine wines. While working in Manjimup, Peter Parin befriended Ezio Luisini, whose family later established a vineyard in Kingsley 1929. (Refer to Place Record for Luisini Winery Group.)</p>	
	<p>The Parin brothers travelled from Manjimup to Wanneroo in 1921 and purchase land to realise their vision of a small property close to the sea which would be suitable to grow vines. They laboriously cleared with a broad axe and cross-cut saw an area of 20 hectares for their vineyard. Located at the 10-mile peg on Wanneroo Road, the Parin brothers cemented themselves as among the first to establish vineyards in the area. Following a disagreement in 1929, the brothers dissolved their partnership and went on to develop separate vineyards.</p>	
	<p>The Parin house, which they referred to as Homestead Park, was vacated in 1975, and then demolished to provide public open space for the new suburb of Greenwood. It was gazetted for Public Recreation on 17 September 1976. On 8 December 1999 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p>	
	<p>In 2015, Mrs Dorothy Parin requested that a memorial be erected in commemoration of her late husband John Erik Parin, and to showcase the history of the site as the location of their historical family landholding. The City had lengthy discussions with the Lands Department about changing the name of Parin Park to Homestead Park or 10-Mile-Peg Park. Ultimately the name has stayed officially as Parin Park. In 2019 the park received an upgrade including interpretive signage to tell the story of the Parin family.</p> <p>In 2023 Parin Park, or ‘10-Mile Peg Park’, is a public open space and dog walking park.</p>	

<p>Historical Photos</p>	 <p><i>Parin family, L-R: Peter, Maria, John, Milka (Millie) and Roko. On plough L-R: Tony, Frank and Lucy. Holding the horse is B. Parin, brother of Roko and Peter. Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	Pinnaroo Point has historic significance for its association with recreation and fishing, and holiday making at the beach shacks formerly present in the area. It has aesthetic and social significance to the community who appreciate its setting and location as a recreational space, and for the beach access it provides to recreational sea sports and small boat users.
Values	Aesthetic, Historic, Social
Level of Significance	Little - Has elements or values worth noting for community interest but otherwise makes little contribution.
Classification and Management	Category 4 - Conservation of the place is not necessary. Should the place be proposed for demolition, or substantially altered so that its heritage values are lost, the City may request that the owner provide an Archival Record as a condition of approval of the development application.

Description	<p>Pinnaroo Point is comprised of a well-maintained park area in a coastal setting which is set within the Bush Forever Area 325. The park features an ablution block and wide grassed areas with shelters and picnic tables. A multi-use pedestrian pathway provides a buffer between the park and the beach. The park is bordered on the eastern side by a car park.</p> <p>John Wilkie Tarn provides vehicle access from Whitfords Avenue to the Pinnaroo Point car park and terminates in a launching site for small sea craft. A vehicle turning and rigging area is also provided off John Wilkie Tarn, with signposting provided to restrict parking around this area.</p> <p>At the time of assessment in July 2023, a two-storey tavern was under construction and the boat launching site was closed to public access.</p>		
Condition	N/A

	Previous owners or occupants:	Mullaloo Shacks
	Other:	Whitfords Sea Sports Club Windsurfing WA Kitesurfing WA
Historical Notes	<p>The coastal beaches of Mullaloo, Hillarys and Whitfords have been popular with holiday makers since the 1920s. Pre-World War II, fisherman lived permanently on the nearby sand dunes in shacks made from tin and hessian. A line of shacks ran right along the shoreline, north and south of Pinnaroo Point. It was a colourful sight, even though it ultimately contributed to damage of the frontal dune system.</p>	
	<p>An extension to the West Coast Highway linking Sorrento to Mullaloo was opened in 1971, providing public access to new beaches. Prior to the extension, the only access to the beaches in this stretch of coast was by boat or four-wheel drive. The beach shacks were demolished in 1972 when the surrounding area was developed for housing.</p>	
	<p>In 1973 the Whitfords Sea Sports Club was formed and held its first fishing competition at Pinnaroo Point (Mullaloo Point) as well as the first club surf cat sailing event with 60-70 boats taking part. In 1974 regular club events off the beach at Pinnaroo Point included monthly power boating and fishing events and weekly sailing holding events. The Whitfords Volunteer Sea Rescue Group was formed by the club in 1975. In 1979 the new Ocean Reef Boat Harbour was opened and the following year the Whitfords Sea Sports Club was established there with a new clubrooms.</p>	
	<p>Pinnaroo Point continued to be used by beach-craft, but it was not until the early 1990s that the City of Wanneroo developed carparking and vehicle turnaround facilities. In 1988 a windsurfing school was established north of Mullaloo Point. In 2001 the first kitesurfing commenced at Pinnaroo Point.</p>	
	<p>The reserve was gazetted on 5 September 1986 for 'Parks and Recreation.' On 29 February 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p>	
	<p>In 2023, Pinnaroo Point is a public open space popular with families and the boat launch facilities provide access for small sea craft and recreational sports such as kiteboarding and windsurfing.</p>	
	<p>On 13 December 2023 a new two-storey Hillarys Beach Club opened at 20 John Wilkie Tarn on Pinnaroo Point</p>

Historical Notes	The original inhabitants of this area were Whadjuk and Yued Noongar people. Yellagonga, a prominent and highly regarded Aboriginal Elder, was the leader of his family group, the Oor-dal-kalla people. It is from the Oor-dal-kalla people that Joondalup derives its name. The Noongar word 'Doondalup' means 'the lake that glistens'.	
	The region was still predominately bush in 1914 and the local Noongar people were still living a traditional lifestyle, especially around Lake Joondalup.	
	In 1975 under the Metropolitan Regional Scheme most of the land which now comprises of Yellagonga Regional Park were reserved as 'Parks and Recreation'. Since then most of the private lands within the park have been acquired by State planning authorities. The Park was named 'Yellagonga Regional Park' in 1990 to honour Yellagonga. The current reserve of 27.1146ha was gazetted on 30 May 1995.	
	'Bush Forever' was a strategic plan released in 2000 for the conservation of bushland within the Swan Coastal Plain portion of the Perth Metropolitan Region. A key objective of Bush Forever was to retain the Swan Coastal Plain's rich biodiversity by protecting, where possible, representative areas of each of the 26 naturally occurring unique vegetation types (called 'vegetation complexes') that occur within the Swan Coastal Plain portion of the Perth Metropolitan Region. Yellagonga Regional Park was designated as Bush Forever Area 299 in 2000.	
	In 2023 Lake Joondalup Reserve is part of Yellagonga Regional Park, one of eleven regional parks within the Perth metropolitan area.

Description	Neil Hawkins Park is a landscaped area of 5.5ha on the western shore of Lake Joondalup, set among a natural bushland reserve. Playground facilities, parking and barbeque facilities are provided in this recreational space. The park features a dual limestone staircase leading towards the lake, that provides an alcove for the bronze statue 'Bibulmun woman'. The park also features a wooden jetty that extends out over the edges of the lake for bird watching.		
Condition	N/A

Construction Date/s	1880s; 1979	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	
	Other:	Neil Hawkins
Historical Notes	<p>The original inhabitants of this area were Whadjuk and Yued Noongar people. Yellagonga, a prominent and highly regarded Aboriginal Elder, was the leader of his family group, the Oor-dal-kalla people. It is from the Oor-dal-kalla people that Joondalup derives its name. The Noongar word 'Doondalup' means 'the lake that glistens'.</p> <p>A cadastral map dated 1890 indicates that most of the land along the coast and around the circular lakes was leased for pastoral purposes by 1880. The Crown land was at first used by farmers without authority. Dairy farmers settled along the linear lakes while the rest of the district developed mainly for pastoral use. Pastoral leases were of a minimum of 3,000 acres and an area called Reserve 313A was allocated as a 'watering place for stock'. A stock route between Sorrento and Dongara had been developed to the west of present Wanneroo Road and then west of Lake Joondalup, with usage peaking around 1884. In 1889 it was widened to about 800m and was gazetted in 1889 as freehold land.</p> <p>The original 5.5ha reserve was gazetted on 2 June 1967 for recreation. A portion of it was for the purpose 'Camping (Boy Scouts)' and was a popular camping place. Neil Hawkins Park was established in UNESCO's 'Year of the Child' in 1979 as a joint venture between the Metropolitan Region Planning Authority (MRPA), Shire of Wanneroo and the Joondalup Development Corporation. Neil Hawkins was a former Chairman of the MRPA. He visited the park in 1982 for a special tree planting ceremony and planted the first of 2,000 trees on the foreshores of Lake Joondalup. Trees were supplied by the Joondalup Development Corporation. On 17 January 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p> <p>Neil Hawkins Park now forms the starting point for the Yaberoo Budjara Heritage Trail that runs through Yellagonga Regional Park, Neerabup National Park and into Yanchep National Park. The name Yaberoo Budjara is translated as the land (Budjara) of the people of north of Perth (Yaberoo). The 28km walking trail opened in 1988 and highlights features of natural, Aboriginal and historic significance. It is based on the tracks made by Yellagonga and his group that linked together the linear lakes of the coastal plain.</p> <p>Neil Hawkins Park features the bronze sculpture of a Bibbulmun woman and a dingo, created by Rod Corbett and installed in 1988. The statue denotes the importance of the area to Noongar people. 'Bibul' means 'breast', hence the Bibbulmun group name which indicates a matrilineal society, with succession from the mother's line.</p>

Description	The limestone foundations of the former house are in situ, as are the avenue of trees that originally lined the driveway. Due to their orientation, the foundations of the former house provide a sense of the view from the house across Lake Joondalup and the natural bush landscape. The site is now incorporated into the greater Lake Joondalup Reserve.		
Condition	N/A		

Historical Description		
Heritage Themes	Peopling WA – Demographic Development	
	Economy – Rural Occupations	
	Economy - Mining and Mineral Resources	
Construction Date/s	1946	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	Ted Gibbs
	Other:	
Historical Notes	After colonisation, among the earliest families to purchase leases in the district was the Gibbs family. From the 1860s Henry Wrighton Gibbs (1834-1893) grew vegetables and began dairy farming at the 14-mile peg on Wanneroo Road.	
	Edward John Gibbs (Ted) married Sylvia Leach in 1930 in West Perth, and they went on to have two sons, Len and Allan. The couple's first home was in Gibbs Road. In 1939 Ted entered local government, serving for 17 years. Sylvia joined the Wanneroo Red Cross and became its Secretary. Ted was always involved in activities across Wanneroo, and was instrumental in getting the Wanneroo Showgrounds grassed. Prior to this the Wanneroo boys played football on the sand.	
	In 1945 Ted and Sylvia Gibbs bought a property at Joondalup (the subject of this place record), north of the present-day Joondalup Health Campus and close to the corner of Joondalup Drive and Lakeside Drive. The property overlooked Lake Joondalup and was surrounded by market gardens. There was a long driveway leading off Lakeside drive to the east, lined by an avenue of trees.	
	In 1946 the Gibbs' built a brick home by the lake and put 15 acres under irrigation for market gardening. The bore water on the property proved to have a very high salt water content; 116 grains to the gallon; which caused the vegetables to fail. After several attempts and considerable expense to find fresher water, Ted Gibbs eventually put an underground tank in to store rainwater.	
	On a walk through the Clarkson-owned property one day, Ted Gibbs uncovered a good deposit of high quality sandstone. Gibbs approached Clarkson, resulting in him establishing a lease on the land. Ted Gibbs applied for mineral rights and a permit to quarry stone. It took 18 months to receive approval, but this saw Ted and Sylvia Gibbs turn from market gardening to sandstone quarrying. In 1958 the couple left Joondalup and moved to Mandurah.	
	In 1975 under the Metropolitan Regional Scheme most of the land which now comprises of Yellagonga Regional Park were reserved as 'Parks and Recreation'. Since then most of the private lands within the park have been acquired by State planning authorities.	
Aerial photos show that the house was in a deteriorated state and/or was demolished sometime between 1985 and 1995. The foundations of the former house are now part of Regional Open Space within the Yellagonga Regional Park, and provide a viewing platform for photographers and visitors to Lake Joondalup.

Original Use	Social/Recreational	Theatre or Cinema	
Current Use	Social/Recreational		
Statutory Listings	N/A		
Other Heritage Surveys	RHP - To be assessed 22 Feb 2019		

Cultural Heritage Significance	
Statement of Significance	The Galaxy Drive-In Cinema has historic significance as one of the last drive-ins built and is representative of an iconic place type from a specific time period. It has rarity value as the only remaining drive-in located in the Perth metropolitan area. It has social significance to the local and wider community for its continuity of use.
Values	Historic, Social, Rarity, Representativeness
Level of Significance	Considerable - Very important to the heritage of the City of Joondalup.
Classification and Management	Category 2 - Conservation of the place is highly desirable. The place should be retained and managed sensitively. For buildings, this means original fabric should be retained; and any alterations or extensions should reinforce the significance of the place.

Physical Description			
Construction Materials	Walls: N/A		
	Roof: N/A		
	Other: N/A		
Architectural Period	Late Twentieth Century (1960-)	Architectural Style	N/A
Demolished	No	Year of demolition	N/A
Description	The Galaxy Drive-In Cinema is located on a 1.5ha lot in Kingsley opposite Lake Goollelal. The place consists of a drive-in screen in one corner of the lot, with the projection house in the opposite corner. The projection house is a red brick, single storey building that also contains the café and toilet block. The surface of the lot is coated with bitumen tarmac, with upright speaker stands at regular intervals across the lot. The screen is made from steel frame with a flat white screen at the front. The entrance to the drive-in is via an uphill road, which results in an elevated view across the lake area. The entrance is via two large, steel gates. Prior to development of the adjacent residential lot, both gates led into the drive-in area. Access is currently via the left gate. The perimeter shows a neon sign advising that this is the Galaxy Drive-In. The entire lot is surrounded by vegetation and a blue Colorbond fence.		
Condition	Fair – assessed from street view only		

Historical Description			
Heritage Themes	Peopling WA - Demographic Development		
	Cultural Life - Recreation – Arts, Culture and Entertainment		
Construction Date/s	1972		
Associations	Architect:		
	Builder:		
	Previous owners or occupants:		
	Other:		
Historical Notes	The boom of Perth's suburban drive-ins began with the opening of 'The Highway', Bentley, in October 1955. Over the following two years, three more drive-ins were opened, reaching a combined capacity of 6,000 cars. Within four years there were no less than ten drive-ins in Perth. In 1957 Perth's fifth drive-in, the Metro of Innaloo, opened with considerable fanfare. A throng of 300 people were invited to the gala opening, including members of Parliament, civic leaders, heads of commerce and of industry. In all, eight drive-in cinemas opened in Perth metropolitan area in the 1950s, a further nine in the 1960s, and five in the 1970s. This included the Galaxy Drive-in Cinema at Kingsley. In country areas the introduction of drive-in cinemas was slower, with just three established in the 1950s. This changed rapidly and numbers soon grew to more than sixty in regional areas by the late-1960s.		
	The Galaxy Drive-in Cinema in Kingsley was built in 1972, at a time when the introduction of color TV, combined with the rise in property values, caused city drive-ins to decline. At the time the area surrounding the Galaxy Drive-in was undeveloped bushland. By the end of 1970s, Whitfords Avenue had been constructed to the north, and the nearby areas had been cleared for residential development to commence in the early-1980s.		
	During the mid-1990s the northern portion of the Galaxy Drive-in car park was subdivided and sold, with new houses being constructed on the land. The semicircular car parking space was made smaller, but the café, toilet block and screen were not relocated to accommodate the reduction in parking. Apart from this subdivision, little has changed to the Galaxy Drive-in since its construction. The predominant change has occurred in the delivery of sound associated with the cinematography: film sound is no longer projected into cars via speaker poles, it is now delivered through car radios.		
	In 2023, the Galaxy Drive-In Cinema is rare as the only one in operation in the Perth metropolitan area. There are only two surviving country drive-ins; at Koorda (constructed 1965) and Port Denison (constructed 1966). The Galaxy Drive-In offers a regular screening of movies and is a popular entertainment venue.

Description	<p>Shepherds Bush is located within the Spearwood Dune System and comprises of sand derived from Tamala Limestone. It contains vegetation characteristic of the northern Swan Coastal Plain including regionally significant Banksia and Jarrah open woodland with the occasional Allocasuarina fraseriana (Sheoak) and tuart tree. Vegetation is relatively pristine in the interior and west.</p> <p>The reserve covers 14.3662ha of bushland and is bounded by Newhaven Place to the north, Barridale Drive to the east, Robertson Road Cycleway to the south and Shepherds Bush Drive to the west. The Barridale Drive side has some urban landscaping with paths and a grassed area, with angle parking along the boundary. There is also a playground and large grassed recreation oval.</p>

	Previous owners or occupants:	
	Other:	
Historical Notes	<p>The suburb of Kingsley is thought to be named after the village of Kingsley, near Winchester in County Hampshire, England. George Shenton, who leased land in the area, was from this village but the connection has yet to be confirmed. It is thought that Shepherd's Bush was subsequently named after a district of London, in keeping with the English theme.</p> <p>A reserve was gazetted on 08 September 1961. The following year the Metropolitan Region Scheme (MRS) was established, setting out the broad pattern of land use for the whole Perth Metropolitan Region, at which time the area was zoned as Urban, putting the area under development pressure. On 12 October 1979 the reserve was set aside for Recreation.</p> <p>Up until the early-1970s, Kingsley was primarily rural, used for stock grazing and market gardening. By 1979 Whitfords Avenue had been built and a small suburban development was formed south of it, forming the now western boundary of a much larger reserve than now exists. The northern and eastern boundaries of the original reserve was developed intensively between 1985 and 1995, leaving the current reserve parameters. The suburb had a rich bush presence which attracted many of the first settlers to the area.</p> <p>The area was described by Conservation and Land Management in 1987 as having flora generally of high-quality, enough to warrant conservation.</p> <p>‘Bush Forever’ was a strategic plan released in 2000 for the conservation of bushland within the Swan Coastal Plain portion of the Perth Metropolitan Region. A key objective of Bush Forever was to retain the Swan Coastal Plain’s rich biodiversity by protecting, where possible, representative areas of each of the 26 naturally occurring unique vegetation types (called ‘vegetation complexes’) that occur within the Swan Coastal Plain portion of the Perth Metropolitan Region. Shepherds Bush was designated as Bush Forever Area 39 in 2000. The MRS Amendment 1082/33 – Bush Forever and Related Lands (2010) amended the zoning from ‘Urban’ to ‘Parks and Recreation’.</p>	

Historical Notes	<p>On 14 January 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p> <p>Within the 'Perth and Peel Green Growth Plan for 3.5million' released in December 2015 by the West Australian State Government, Shepherds Bush was included as a proposed specific conservation commitment, to be classified as a 'conservation reserve'. In 2016, the 'Shepherds Bush Reserve Management Plan' was developed by the City of Joondalup. To inform the report, a flora, fauna and fungi survey was conducted in spring 2015. The results of this survey were combined with previous surveys to develop a comprehensive species list and ecological assessment of the site. The majority of the native vegetation on site is in very good or good condition and surveys have identified 110 native flora species (including one priority species and two significant species of the Perth Metropolitan Region), two native mammals, 29 native birds (including two species of conservation significance), 10 native reptile species and 34 native invertebrates.</p> <p>In 2023, Shepherds Bush is Crown Land, managed by the City of Joondalup and reserved for the purposes of Parks and Recreation. It is classified as a Major Conservation Area and is ranked in the City of Joondalup's top five bushland natural areas due to its high biodiversity values.</p>

66 | City of Joondalup Local Heritage Survey 2024

<p>Historical Notes</p>	<p>The winery was established by Ezio Luisini, who settled in the area in 1924. The winery operated from 1929 until 1986 and was at one time the largest privately owned winery in WA. It operated as a sideline to his wine cellar on William Street in Perth. Ezio Luisini became an important patron of the Italian community in WA, and his wine cellar was a well-known landmark for the Italian community, especially for new migrants.</p> <p>Ezio Luisini died in 1964. The business was taken over by his nephew Ernie Mondello. By the 1980s the winery succumbed to pressures of surrounding urban development. In 1988 the land was redeveloped into suburban lots. Wine sales continued from the winery building until 1989, and then the winery closed. All buildings associated with the winery were demolished in 1989 with the exception of the main cellar which contains the original 1929 section and 1950s additions. The place was purchased by the State Government in 1989, and has been closed to the public since. In 2001 the National Trust took up a lease to investigate the place's future potential.</p> <p>In June 2023 the State Government announced that Luisini Winery will undergo a multi-million dollar conversion into an eatery as part of a broader revamp of Yellagonga Regional Park that will include the installation of a nature playground and boardwalk in partnership with the Department of Biodiversity, Conservation and Attractions. The WA Government will invest \$8.5m over four years to improve and protect the Yellagonga Regional Park. The redevelopment will be carried out in a public-private partnership between the National Trust of Western Australia and Be Our Guest Holdings, with the restaurant component expected to take around 18 months to complete. Plans for the site include preserving most of the concrete wine barrels and honouring the current hand-built structures by reusing limestone walls, wooden eaves and steel doors. The overarching vision for the place is 'to help create a Kings Park of the north by including an all-abilities nature playground on the banks of Lake Goollelal, with signage in Aboriginal, English and Italian.'</p>

Kingsley Montessori School

LHS No. 12.

Place No. (inHerit):

Place Details			
Former and other names	Children's House		
Street Address	18 Montessori Place		
Locality	Kingsley		
Location Description			
GIS coordinates	-31.81225116, 115.80775192		
Reserve No.		Diagram/Plan No.	P007453
Lot No.	2	Vol/Fol	1306/608
Place Type	Group of buildings		
Original Use	Educational	Primary School	
Current Use	Educational	Primary School	
Statutory Listings	N/A		
Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	The Kingsley Montessori School has historic significance as the first school in the Joondalup area to provide the Montessori method of education. The place has social significance for the community, families and students who currently attend and have attended the school in the past.
Values	Historic, Social, Representativeness
Level of Significance	Little - Has elements or values worth noting for community interest but otherwise makes little contribution.
Classification and Management	Category 4 - Conservation of the place is not necessary. Should the place be proposed for demolition, or substantially altered so that its heritage values are lost, the City may request that the owner provide an Archival Record as a condition of approval of the development application.

Physical Description			
Construction Materials	Walls: Brick – Common		
	Roof: Metal – Colorbond		
	Other:		
Architectural Period	Late Twentieth Century (1960-)	Architectural Style	N/A
Demolished	No	Year of Demolition	N/A
Description	<p>The Kingsley Montessori School is located at the end of Montessori Place, Kingsley. The road slopes downwards away from the school, revealing an expansive view of Lake Goollelal. Set back from the road in reconstructed bushland, the school features multiple single storey buildings made from a variety of materials. The reception building has a painted brick façade with a metal roof with pronounced overhang. The second front-facing building features a brick façade, and a verandah on the road facing side. The pillars supporting the roof are brick, and the undercover area is paved. The pitched roof features solar panels.</p> <p>The design is representative of a school with extensions added as needed. The buildings surround a central, paved play area. Some of the buildings to the rear of the lot have covered walkways connecting them made of shade sail. The school site is representative of the Montessori teaching method of discovery, featuring cottage gardens, sandpits and play spaces within a natural setting. The buildings are delineated by low limestone walls, and the entire school complex is surrounded by a 1.2m high chain link fence.</p>		
Condition	Fair – assessed from street view only		

Historical Description		
Heritage Themes	Social Services - Education	
	Peopling WA - Demographic Development	
Construction Date/s	1962	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	
	Other:	Willemein Duyker-de-Vries
Historical Notes	<p>The Montessori method of education has been present in Western Australia since 1928, with some of the first classes taught in establishments such as the Sacred Heart Junior High School in Mount Lawley (1929) and St Vincent's Foundling Home in Subiaco (1934).</p> <p>The Kingsley Montessori School was founded in 1962 as a Children's House for three- to six-year-olds. Mrs Willemein Duyker-de Vries and Frank Duyker-de Vries purchased a 5-acre bushland block and the first classroom was constructed in bushland overlooking Lake Goollelal. The school was officially opened in November 1963 by the Minister for Transport and Police, James Frederick Craig. In 1969 a second classroom was added to accommodate expanding numbers of students. With the realisation that recruitment of qualified staff was a potential barrier to success, Duyker-de Vries started her own Montessori training course. This was officially recognised and accredited in 1986 by the West Australian Government as a Certificate in Montessori Education.</p> <p>The continuing success of the School resulted in the establishment of the urban Erdkinder (Earth Children) group in 1972, marking the opening of the secondary school. The Australian Montessori Society was established in 1973 and commenced financial support of the school.</p>	

70 | City of Joondalup Local Heritage Survey 2024

Historical Notes	<p>The Kingsley Montessori School celebrated its 21st year in 1983. Willemein Duyker-de-Vries successfully lobbied the Wanneroo Council to change the street name where the School is located from Robertson Road to Montessori Place. The 1980s saw evidence of the continual environmental and physical evolution the School was known for, including reorientation and enlargement of rooms, the establishment of a playing field, and care and conservation of nearby bushland. In 1990 the School's Management Committee was formed and in 1992 the International Baccalaureate studies was added to the secondary school curriculum. The Kingsley Montessori School was the first Montessori school in the world to offer this course to senior secondary students.</p> <p>The 2000s heralded the School's involvement in the Joondalup Festival Parade, and in 2002 the celebration of its 40th year. In 2022 the school formally purchased the remaining land held by Duyker de Vries, allowing for expansion and the construction of new buildings. In 2008 new primary and secondary buildings (now lower and upper primary) and a new amphitheatre were built, officially opening in 2009.</p> <p>Willemein Duyker-de-Vries passed away in 2014.</p>

Tom Simpson Park, Mullaloo

LHS No. 13.

Place No. (inHerit):

Place Details			
Former and other names			
Street Address	19 Oceanside Promenade		
Locality	Mullaloo		
Location Description			
GIS coordinates	-31.78460251, 115.73482739		
Reserve No.	32074	Diagram/Plan No.	P009195
Lot No.	8891	Vol/Fol	LR3046/981
Place Type	Urban Park		
Original Use	Social/Recreational	Other – See Historical Notes	
Current Use	Park/Reserve		
Statutory Listings	N/A		
Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	Tom Simpson Park has historic significance for its association with local identity Thomas Simpson, who donated the land for the establishment of the beach reserve. The place has social significance for the community through its association with the Mullaloo beach shacks, holiday making and recreation, and aesthetic significance for its setting and location.
Values	Aesthetic, Historic, Social
Level of Significance	Some - Contributes to the heritage of the City of Joondalup.
Classification and Management	Category 3 - Conservation of the place is desirable. The place should be retained and managed sensitively. For buildings, this means original fabric should be retained wherever feasible; most importantly that which is visible from the street. Any alterations or extensions should reinforce the significance of the place.

Demolished	No	Year of demolition	N/A
Description	Tom Simpson Park is comprised of a well maintained public open space, bordered by a site-specific car park, a beach access way and a café. The park also borders Bush Forever Area 325, delineated by a multi-use pedestrian pathway. Toilets blocks are located at either end of the park space; the southern block has a large mural and mosaic work, while the northern block has a pathway lined by limestone blocks with sculpted tiles attached depicting a coastal theme. The park includes children's play equipment, multiple seating areas with shelters, and BBQ facilities. Interpretive signage on the edge of the conservation area provides information on Tom Simpson, and the conservation of the dunes.		
Condition	Good – assessed from street view only

	Peopling WA – Demographic Development	
Construction Date/s	1974	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	Tom Simpson
	Other:	
Historical Notes	<p>Thomas William Simpson ran a dairy business in North Perth. In the 1920s he purchased around 3,100 acres from the Midland Rail Company property which is today occupied by the suburbs of Hillarys, Kallaroo, Craigie and Padbury. He leased the coastal section for beach shacks, and the rest of his landholding to graziers and dairy operators who supplied his business with milk. He also used the land to run his trotting horses. Simpson was a well-known and respected person in WA racing circles, and a member of the WA Trotting Association for 38 years. This included a term as President, and eventual presentation of life membership.</p> <p>In 1939, Simpson donated three hectares of land at Mullaloo to the Wanneroo Road Board, on condition that it become public open space. The rest of Simpson's land was eventually sold in 1954 for the sum of £38,000. The land was bought by a syndicate of shack owners, Whitfords Beach Limited, in 1967, and subsequently purchased by another syndicate consisting of Taylor Woodrow General Agencies and another company, for subdivision and development in 1971. Part of the sale contract allowed the selection of any half-acre for himself, but Simpson died in 1968 without having made any selection.</p> <p>The land Simpson donated to the public was gazetted for 'Recreation & Parking' on 6 July 1973, and the land began to be developed in 1974 with a car park and grassed area which defines the park today. In 1990 the grassed area of the foreshore between Iluka Avenue in the north to Merrifield Place in the south was formally named Tom Simpson Park, at a ceremony attended by Wanneroo mayor Wayne Bradshaw, and the late Tom Simpson's daughters Sylvia Morffitt, Dr Elsie Simpson, and Dorothy Carstairs.</p> <p>On 14 March 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p>

Description	The 'Little Pinnacles' are located within a densely vegetated conservation reserve, Bush Forever Area 325, south of Mullaloo Beach North car park. One side of the reserve is bordered by a carpark, and the other by Oceanside Promenade. The conservation reserve is delineated from the coastal dunes by a gelding fence and a dual use pathway. The vegetation within the site is so dense the feature is unable to be seen and fences make the area inaccessible. Photographs supplied, taken c. 2008, show the limestone pillars protruding from the sand dunes.		
Condition	N/A		

Historical Description		
Heritage Themes	Environment	
Construction Date/s	N/A	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	
	Other:	
Historical Notes	<p>Along the metropolitan coast north of Perth, sandy beaches broken by limestone headlands are common. There are many theories around how pinnacles are formed, but the most popular being a combination of factors: that they have formed by erosion (especially water corrosion and wind erosion) of the surrounding material to leave the more resistant parts as pinnacles, and are remnants of the Tamala Limestone, i.e. that they formed due to a period of extensive solutional weathering or karstification.</p>	
	<p>The coastal dunes between Marmion and Two Rocks include a wide variety of coastal features from rocky headlands and cliff shorelines to wide sandy beaches. The Little Pinnacles, also known as The Little Desert of Mullaloo, are what scientists refer to as solution pipes, dating back 2.5 million years to the Pleistocene Age. They have become exposed over the years by the removal of the dune sands by wind erosion.</p>	
	<p>Through the development of management plans and conservation reserves, public access and use is controlled to ensure the integrity of these formations are not lost. In 1976 when the coastal area of Mullaloo was subject to residential development, the Mullaloo Progress Association submitted to the Department of Environment and Conservation to make 50ha of heath-covered dunes including The Little Pinnacles into a national park.</p>	
	<p>Although not comparable to The Pinnacles south of Jurien Bay, the Little Pinnacles of Mullaloo are the last remaining example in the metropolitan area of the heathland environment that once stretched along the coast. The area was gazetted as a Recreation Reserve on 9 December 1997. On 12 January 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p>	
	<p>The Little Pinnacles are today also afforded protection by being located within Bush Forever Area 325 which extends from Burns Beach in the North to Hillarys in the South. ‘Bush Forever’ was a strategic plan released in 2000 for the conservation of bushland within the Swan Coastal Plain portion of the Perth Metropolitan Region. A key objective of Bush Forever was to retain the Swan Coastal Plain’s rich biodiversity by protecting, where possible, representative areas of each of the 26 naturally occurring unique vegetation types (called ‘vegetation complexes’) that occur within the Swan Coastal Plain portion of the Perth Metropolitan Region.</p>	
	<p>In 2023, although there is a dual use pathway that runs along the beach, the area is inaccessible to the public as it is fully fenced. Dense vegetation also obscures the geological feature from the roadway and car park.</p>

	Other:	Tom Ostle	
Historical Notes	<p>The coastal beaches of Mullaloo, Hillarys and Whitfords have been popular with holiday makers since the 1920s. Pre-World War II, fisherman lived permanently on the nearby sand dunes in shacks made from tin and hessian.</p> <p>Tom's Rock is named after Tom Sykes Ostle (1901-1970), who frequented this well-known fishing spot in the 1940s and 1950s located between Mullaloo and Ocean Reef Boat Harbour. The rocks are accessible at low tide, and at the height of their popularity were mentioned in fishing magazines, reportedly as a good spot for fishing herring.</p> <p>The Ostle family were well-known early market gardeners located at the 14-mile peg on Wanneroo Road. As with many families during that era, the Ostle family fished and camped at Ocean Reef and Mullaloo on holidays and weekends. In his later years Tom retired to Walcha Street, Mullaloo and fished at Tom's Rock every day. Ruth Horsley, Tom Ostle's daughter, recalls going to the place as a young girl and that it was not easy to get to. The place was only accessible through climbing a steep incline, and when it became a popular fishing spot Tom built a series of concrete steps for better access. Tom Ostle died at his favourite fishing spot on 8 October 1970.</p> <p>The concrete steps were still in situ in 2004, though heavily overgrown and in need of repair. In 2023 there is no remaining evidence of them.</p> <p>Note: It is not known who erected the cross located on the top of the cliff, if it relates to Tom Ostle, or if it is a memorial to another person or event.</p>

Hepburn Heights, Padbury

LHS No. 16.

Place No. (inHerit): P04522

Place Details			
Former and other names	Hepburn Conservation Area; Pinnaroo Park; Bush Forever Area 303		
Street Address	319 Hepburn Avenue		
Locality	Padbury		
Location Description	Bounded by Hepburn Avenue to the south, Parkinhurst Rise to the east, and linkage to the Pinnaroo Valley Memorial Park to the north		
GIS coordinates	-31.81641931, 115.77151434		
Reserve No.	42987	Diagram/Plan No.	P218324
Lot No.	11900	Vol/Fol	LR3117/18
Place Type	Large Conservation area		
Original Use	Park/Reserve		
Current Use	Park/Reserve		
Statutory Listings	N/A		
Other Heritage Surveys	National Trust of Australia (WA) - Classified {Landscape} 02 Dec 1991 Register of the National Estate Interim List 30 June 1992 Place ID 18055		

Cultural Heritage Significance	
Statement of Significance	Hepburn Heights has scientific significance for its biodiversity and the habitat it provides to a variety of species. It has aesthetic significance for its natural bush landscape and vegetation, and historic and social significance as the site of natural bushland area retained in the face of development as a result of community action.
Values	Aesthetic, Historic, Scientific, Social
Level of Significance	Considerable - Very important to the heritage of the City of Joondalup.
Classification and Management	Category 2 - Conservation of the place is highly desirable. The place should be retained and managed sensitively. For buildings, this means original fabric should be retained; and any alterations or extensions should reinforce the significance of the place.

Physical Description			
Construction Materials	Walls: N/A		
	Roof: N/A		
	Other: N/A		
Architectural Period	N/A	Architectural Style	N/A
Demolished	No	Year of demolition	N/A
Description	Hepburn Heights is comprised of a prominent wooded hill in the south, and the southern and western slopes of a valley in the north. A total of 314 species of flora have been recorded, including 250 native species. The fauna of the area are typical of the jarrah and banksia woodlands of the northern Swan Coastal Plain. The area is fully fenced to ensure fauna is protected, and limestone pathways invite visitors and bush walkers. Interpretive signage provides an overview of the species located within the conservation area.		
Condition	N/A		

Historical Description		
Heritage Themes	Environment	
Construction Date/s	1993	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	
	Other:	
Historical Notes	In May 1972 Hepburn Heights land was transferred to the Crown and vested as a 'C' Class Reserve. The purpose of Crown Reserve 33286 was for tertiary education (Government Gazette, 6 April 1973.) It was anticipated that a tertiary facility would be built on the site, with considerable bushland left in its natural state. This view was widely held until 1987, when State Planning Minister Bob Pearce announced plans to develop Hepburn Heights Bushland for housing. Following the announcement, concerned community members formed the Hepburn Woodlands Preservation Group.	
	In May 1988, the City of Wanneroo supported the rezoning of Hepburn Heights from Public Purpose to Residential, despite growing community concerns. This was evidenced when Opposition Leader Barry McKinnon presented 12, 928 signatures to State Government opposing development. The City of Wanneroo subsequently revoked its decision in June of the same year, and the matter was referred back to the City's Town Planning Committee.	
	The petition requested the Government undertake an Environmental Protection Authority (EPA) Survey of the bushland, but in July 1988 the EPA noted that there was no environmental reason to prevent development. By July 1989 LandCorp was presenting development options to the Planning Minister, Pam Beggs. In a report leaked to 'The West Australian' newspaper in December 1989, Kings Park Board Botanist Kingsley Dixon declared Hepburn Heights Bushland healthier than Kings Park. Dr Dixon went on to comment that the team who had assessed the bushland was impressed with its environmental value and reserve potential. The City of Wanneroo continued to oppose State Government plans to develop the site.	
	The 1990s saw the continued fight by residents for the retention of Hepburn Heights Bushland. Plans for development of the site wavered from Homeswest housing, an aged care facility, and a mosque, while City of Wanneroo Councillors' admonished State Government for overlooking the site as a potential wildflower tourist attraction. The battle between the State Government and the Wanneroo Council over the validity of amendments to the Metropolitan Region Scheme escalated to such a point that a Supreme Court hearing was scheduled for 20 March 1991. Faced with exorbitant costs, Wanneroo City Council dropped legal action to prevent development.	

82 | City of Joondalup Local Heritage Survey 2024

<p>Historical Notes</p>	<p>The battle turned to 'residents versus bulldozers', with clearing of the Hepburn Heights Bushland commencing in April 1991. Landcorp defends its proposal to turn the bushland into a residential area despite receiving a 15,000 petition against the proposal. Residents gather support from the Conservation Council of WA and botanist Mary White. In December 1991 the National Trust of Australia (WA) classified Hepburn Heights Bushland as important remnant vegetation. A second environmental study was commissioned and forwarded to the Heritage Commission in Canberra.</p> <p>On learning of LandCorp's decision to commence clearing of the site in 1992, the Australian Heritage Commission stressed the importance of the values of the site to the Government. Environmental consultants Alan Tingay and Associates prepared a management plan to protect the 18.5ha of public open space at Hepburn Heights. The Wanneroo City Council broadly supported the draft management plan when it is released for public comment in June 1993.</p> <p>Years of campaigning to save the site resulted in over 18,000 people signing petitions and protesting the development of the natural bushland at Hepburn Heights. On 22 March 1994 the Hepburn Heights Conservation Area was vested in the City of Wanneroo, subject to LandCorp uniformly fencing the entire Hepburn Heights reserve.</p> <p>The residents of the area demonstrated their commitment to the bush and woodland, in all saving 38% of the Hepburn Heights bushland to be enjoyed by future generations.</p> <p>The 'Hepburn Heights - Pinnaroo Park Area' listing in the Australian Heritage Database, Place ID 18055 reads:</p> <p>The site is significant as a transitional zone between the Quindalup dune system and the Cottesloe and Karrakatta divisions of the Spearwood dune system. Naturally vegetated examples of such transitional zones are now increasingly rare on the Swan Coastal Plain due to extensive clearing for urban development. The vegetation of the site is highly diverse. A total of nineteen vegetation association types have been mapped for Hepburn Heights/Pinnaroo Park. The flora of the site is also diverse for an area this size in the Perth metropolitan region. A total of 250 species of native flora have been recorded for the Spearwood dune system areas of Hepburn Heights/Pinnaroo Park alone. The site contains populations of three species of flora of special significance: <i>Ptilotus caespitulotus</i>; <i>Cartonema phyllioides</i>; and, the poorly known species <i>Carpobrotus</i> <i>cg</i> <i>modestus</i>. Several vegetation associations which are limited to limestone outcrops and shallow soil over limestone are found on the site. These include <i>Acacia truncata</i>, <i>Acacia truncata</i>/<i>Dryandra sessilis</i>, and limestone mallet (<i>Eucalyptus decipiens</i>) low woodland. With the urbanisation of the region, the site has become a refuge site for woodland and heath bird species. The site is also likely to form part of a network of feeding, nesting and habitat areas utilised by nomadic and migratory bird species.</p> <p>On 12 January 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.</p> <p>'Bush Forever' was a strategic plan released in 2000 for the conservation of bushland within the Swan Coastal Plain portion of the Perth Metropolitan Region. A key objective of Bush Forever was to retain the Swan Coastal Plain's rich biodiversity by protecting, where possible, representative areas of each of the 26 naturally occurring unique vegetation types (called 'vegetation complexes') that occur within the Swan Coastal Plain portion of the Perth Metropolitan Region. Hepburn Heights was included in the Whitfords Avenue Bushland Bush Forever Area 303 in 2000.</p> <p>In 2023, the area is a recognised conservation area of 21.7909ha. Fencing ensures fauna is protected, and limestone pathways invite visitors and bush walkers. Interpretive signage provides an overview of the species located within the conservation area.</p>

Pinnaroo Valley Memorial Park, Padbury

LHS No. 17.

Place No. (inHerit): P09497

Place Details			
Former and other names	Bush Forever Area 303		
Street Address	746 Whitfords Avenue		
Locality	Padbury		
Location Description	Bounded by Mitchell Freeway & Whitfords Avenue		
GIS coordinates	-31.8053408, 115.77801985		
Reserve No.		Diagram/Plan No.	P045211
Lot No.	1001	Vol/Fol	2696/460
Place Type	Urban Open Space		
Original Use	Monument/Cemetery		
Current Use	Monument/Cemetery		
Statutory Listings	N/A		
Other Heritage Surveys	RHP - <i>To be assessed 28 Jun 2002</i>		

Cultural Heritage Significance	
Statement of Significance	Pinnaroo Valley Memorial Park has aesthetic significance as an expansive landscape inclusive of lake, natural vegetation and fauna. The place has social and spiritual significance as a memorial place for families of those interred in the park. It is representative of an environmentally responsible cemetery.
Values	Aesthetic, Social, Spiritual
Level of Significance	Some - Contributes to the heritage of the City of Joondalup.
Classification and Management	Category 3 - Conservation of the place is desirable. The place should be retained and managed sensitively. For buildings, this means original fabric should be retained wherever feasible; most importantly that which is visible from the street. Any alterations or extensions should reinforce the significance of the place.

Physical Description			
Construction Materials	Walls: N/A		
	Roof: N/A		
	Other: N/A		
Architectural Period	N/A	Architectural Style	N/A
Demolished	No	Year of demolition	N/A
Description	<p>The main entrance to Pinnaroo Valley Memorial Park is on Whitfords Avenue, Padbury. It has been developed and maintained as a natural bushland cemetery planted only with native species. The natural environment provides a haven for many native animals including kangaroos. Headstones, plaques and tablets to memorialise graves are flush with the lawn and made only of bronze or natural stone. There is a large, limestone coloured memorial building with peaked tiled roof where memorial ceremonies are held, and areas of carparking adjacent. There is a circular area with amphitheatre-style seating, and a man-made lake with a gazebo on a small island. Roads with carparking and pedestrian paths meander throughout the landscape.</p>		
Condition	Good – assessed from street view only		

Historical Description		
Heritage Themes	Social Services - General Social Services	
Construction Date/s	1978	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	Pinnaroo Memorial Park Board
	Other:	Metropolitan Cemeteries Board
Historical Notes	<p>On 18 May 1962 Pinnaroo Valley was declared a public cemetery and a board of trustees was appointed with H.L. Downe J.P as Chairman. The 303-hectares allocated for cemetery purposes was developed as a memorial park similar to King's Park. The aim was to create 'the living among the dead' concept encouraging people to walk through the park and have picnics, using the barbecue and playground facilities. Only native tree species and wildflowers were used in the landscaping. In keeping with the natural bushland theme burial areas have been named after native flora.</p>	
	<p>On 22 May 1977, Sir Thomas Meagher, by then chairman of the Pinnaroo Memorial Park Board and chairman of Karrakatta and King's Park boards, denied that BBQ and bushland areas would replace traditional headstones and rose gardens. Headstones, plaques and tablets were permitted to memorialise graves, to be flush with the lawn and made of bronze or natural stone. The cemetery was to be non-denominational.</p>	
	<p>On 28 April 1978 Pinnaroo was officially opened by Cyril Rushton, Minister for Local Government. It was the first opening of a major cemetery in WA since 1899. Pinnaroo Valley Memorial Park received its first burial in May 1978: Cecil Malcolm Cockman (b.1887, Wanneroo). He was the son of James and Emma Cockman and the grandson of James Cockman, who arrived in the Swan River Colony in 1829 aboard the 'Calista'. Cecil died on 21 May 1978. Although the official opening had occurred, the cemetery was not yet authorised for internments. The family lobbied members of parliament to have him interred there.</p>	
	<p>Management of the place passed to the Metropolitan Cemeteries Board in 1988. The 303ha was reduced to 119ha by 1996 due to residential development, with 32ha in the southern portion of the place protected as part of Bush Forever Area 303.</p>	
	<p>The East Chapel and Crematorium were opened in 2002. The West Chapel was constructed in 2012.</p> <p>In 2023 Pinnaroo Valley Memoria Park is home to many native animals, the most common being kangaroos. A lake created in the middle of the park is named after Sir Thomas Meagher who was a member of Pinnaroo Valley Cemetery Board for 17 years. The grounds are a popular attraction for walks, jogging and picnics. The park is widely considered to be the most environmentally responsible cemetery in Australia.</p>

Geneff Park, Sorrento

LHS No. 18.

Place No. (inHerit): P16582

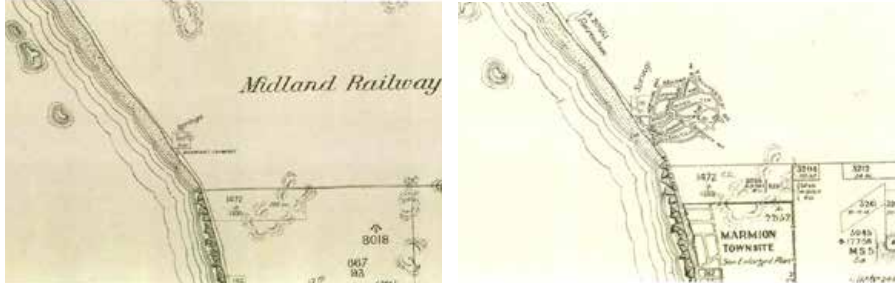

Place Details			
Former and other names	Whaling Station (site of); Marmion's Chimney; Sorrento Community Hall		
Street Address	22 Padbury Circle		
Locality	Sorrento		
Location Description			
GIS coordinates	-31.83069006, 115.74852237		
Reserve No.		Diagram/Plan No.	P005180
Lot No.	369	Vol/Fol	1094/419
Place Type	Historic Site		
Original Use	Industrial/Manufacturing	Other - see Historical Notes	
Current Use	Park/Reserve		
Statutory Listings	N/A		
Other Heritage Surveys	RHP - Does not warrant assessment 31 May 2002		

Cultural Heritage Significance	
Statement of Significance	The site of the Whaling Station, acknowledged by a plaque in Geneff Park, has historic significance for its association with Patrick Marmion and the Marmion family and for its connection to the establishment of the whaling industry in the area and in the State. Geneff Park has social significance for its association with local identity George Geneff who made a significant contribution to the development of Sorrento. The place has aesthetic significance to the community for its setting and location.
Values	Aesthetic, Historic, Social
Level of Significance	Historical Site - Has significance for its former use, an event, or its role in the development of the City of Joondalup.
Classification and Management	Category 5 - This site is generally a place that has few visible material remains that relate to its former use and significance. This place should be included in heritage initiatives such as interpretive signage, heritage/walk trails, research, and education projects.

Historical Description		
Heritage Themes	Cultural Life – Recreation – Sport	
	Economy – Manufacturers and secondary Industry	
	Peopling WA – Demographic Development	
	Integrated Stories - Non-British Migrants	
Construction Date/s	1849; 1966	
Associations	Architect:	
	Builder:	
	Previous owners or occupants:	Patrick Marmion
	Other:	George Geneff
Historical Notes	On 4 July 1849, Irish-born Patrick Marmion wrote a letter to Governor Fitzgerald requesting a piece of land twenty miles north of Fremantle for the purpose of erecting a whaling establishment.	
	My present intention (if I obtain permission) is to erect a house for the whalers and 'to set a proper sort of tryworks with English bricks etc. to make this affair a not merely temporary concern.	
	Marmion asked for and received a quick response, with a letter the following day advising him that 'His Excellency is of the opinion it would be desirous for you to purchase 10 acres of land in the locality you allude to...'. The letter went on to articulate the price per acre at One Pound, and if Marmion was inclined to purchase the grant, '...the Governor will grant you a free depasturing license for the surrounding unoccupied Crown Land for 12 months.'	
	The whaling operation began; The Perth Gazette of 13 July 1849 reported that: <i>Mr. Marmion has hired the schooner Pelsart for the purpose of carrying on a whale fishery on the north coast opposite the Wanneroo [sic] district, and His Excellency has granted him permission to occupy a small tract of land on the coast during the season.</i>	
	Three boats and crew eventually operated from the whaling station, but it lasted for little more than three years. According to contemporary reports, the whaling industry suffered from the diversion to gold digging. Patrick Marmion died in 1856, aged forty.	
	The rendering works' chimney was a remnant of the whaling operation, and became a beacon for passing ships. It remained until the late-1970s as a reminder of Marmion's enterprise. Historical maps show that the actual site of the chimney was closer to the beach, approximately south of the Sorrento Surf Lifesaving Club and near Lot 25 (No. 1) Padbury Circle. The suburb of Marmion and the adjacent Marmion Marine Park were both named after Patrick Marmion.	
	In 1946, the Wanneroo Roads Board purchased the land from the estate of William Padbury, descendant of the first land grant recipient Walter Padbury, for £5,000 for the purposes of recreation. Geneff Park and the Sorrento Community Hall was built in 1966. A plaque was placed on a large limestone rock in what was then called Padbury Reserve by the Royal Western Australian Historical Society to commemorate Marmion's Waling Station. It was one of a series of sites that the Society had recognised along the South West coast as whaling stations, other being King George Sound, Augusta, Castle Bay, Bunbury and Fremantle.	

Historical Notes	<p>The park was renamed from Padbury Reserve in honour of Geoff Geneff (1897-1977) who was born in Bulgaria and came to Australia at 13 years of age. Geneff was not only a successful entrepreneur and businessman, but also played a very active part in community affairs. He was one of the founders of the Sorrento Surf Life Saving Club and served as its first President in 1959. He also founded and served as Chairman of the Marmion Sorrento Progress and Ratepayers' Association.</p> <p>Over the years and in 2023 Geneff Park, and the Sorrento Community Hall on the western side at the entrance, have provided a venue for the annual Carols by Candlelight, local P & C events, community groups including the Sorrento Playgroup, and the like. Within the park on a limestone rock along a boardwalk is a plaque that commemorates Marmion's whaling enterprise.</p>
Historical Photos	 <p>Extracts of Maps 1917 and 1948, showing location of Marmion's Chimney. (City of Joondalup)</p>

Place Type	Individual Building		
Original Use	Residential	Single Storey Residence	
Current Use	Other - see Historical Notes		
Statutory Listings	Local Heritage List 1/11/2009		
Other Heritage Surveys	RHP assessed below threshold 13/04/2018		

Cultural Heritage Significance	
Statement of Significance	<p>Duffy House (fmr), Woodvale, comprising a single storey iron, brick and limestone cottage (1911-1913), and a ruinous limestone dairy building (1925) has cultural heritage significance for the following reasons:</p> <ul style="list-style-type: none"> the place is a representative example of the development of the market gardening and dairying industries in Western Australia in the early 20th century; the place is a rare, representative example of the practice of cottage market gardening in the wetland areas along the Swan Coastal Plain; the place is likely to yield information, through archaeological investigation, about the former use of the site as a market garden, as a dairy, and as a simple worker's residence since the early twentieth century; the place is a good example of vernacular architecture, combining Federation and Georgian elements applied to a rural residence; and the place has aesthetic value as it retains much of its original open wetland setting within Yellagonga Regional Park, which is becoming less common in the State due to increased urbanisation.
Values	Aesthetic, Historic, Scientific, Rarity, Representativeness
Level of Significance	Considerable - Very important to the heritage of the City of Joondalup.
Classification and Management	Category 2 - Conservation of the place is highly desirable. The place should be retained and managed sensitively. For buildings, this means original fabric should be retained; and any alterations or extensions should reinforce the significance of the place.

Physical Description			
Construction Materials	Walls: Stone - Limestone		
	Roof: Metal - Corrugated Iron

Architectural Period	Federation (c.1890-c.1915)	Architectural Style	Bungalow
Demolished	No	Year of demolition	N/A
Description	<p>Duffy House (fmr), Woodvale comprises a single storey cottage built 1911-1913, and a ruinous dairy, built 1925 located approximately 100m to the south west. It sits in an open rural setting between Beenypup Swamp and Lake Goollelal.</p> <p>The cottage is a simple corrugated iron, red brick and limestone residence constructed in a vernacular style, incorporating Federation and Georgian elements. The front has a symmetrical façade with centrally placed door flanked by sash windows. The interior layout, commencing from the front entrance, includes a hallway connecting two front rooms and former kitchen to the rear, with another room situated adjacent to the kitchen.</p> <p>The former dairy is a simple limestone rubble building in a ruinous condition. Situated on a raised earth platform, the entrance faces east toward Beenypup Swamp. A single window opening exists on the northern side.</p>		
Condition	Fair – assessed from street view only

	Other:	

92 | City of Joondalup Local Heritage Survey 2024

<p>Historical Notes</p>	<p>In 1909, after having already managed the place since 1890, a portion of George Shenton's Perthshire Location 103 holding (Lots 24 and 25) was transferred to Barney Duffy. In 1912, his son Frederick John Duffy (1875-1924) purchased Lot 25, comprising just over 25 acres. Frederick employed a local builder, George Dawson, to construct a family residence on Lot 25, which is now known as Duffy House, Woodvale. By 1913, the house was complete and comprised four rooms with a front verandah, built of local limestone sourced from the quarry at Perry's Paddock, Cottage and Stables (P09484). A ceiling was never constructed, as Frederick, on advice from a local doctor, believed that it would be healthier not to do so.</p> <p>Frederick Duffy and his wife, Eva Matilda nee Cockman, lived in a stone cottage further up the Wanneroo Road at the 13-mile peg so it is assumed the house was never occupied by them. Frederick Duffy was the first secretary of the Wanneroo Roads Board (1903-1924) and he and the extended Duffy family were prominent members of the community.</p> <p>The proximity of the land to Beenyup Swamp, as well as reference to contemporary historical land titles, suggests that the Duffy's market garden may have been located south east of the cottage. However, given that the Duffy family owned land parcels surrounding the original allotment, there is the potential that the market garden area extended elsewhere (and may not be located within the current boundaries of the place).</p> <p>After Frederick Duffy's death in 1924, Eva and the young family were unable to maintain the vegetable garden and abandoned it in favour of establishing a dairy. In 1925, the Duffy family established the dairy in a building 100m to the south west of the cottage.</p> <p>In later years, despite most of the Duffy children leaving the family house, the second youngest son, John, remained and ran the dairy with his brother Bernard (Bob), who from 1955 until the mid-1980s was the owner of Perry's Paddock, Cottage and Stables. The dairy continued production until 1976.</p> <p>In the 2000s, an area of Woodvale, including Duffy House, was ceded to the City of Joondalup. This meant that the Duffy House became, by default, the oldest extant residence in Joondalup.</p> <p>The archaeological record of the place is likely to be highly intact. As the site was occupied as a private residence until c. 2009 and no major development has been undertaken within Yellagonga Regional Park, limited ground disturbance has occurred. Some elements of the dairy have been removed; however, this appears to have involved the removal of above-ground features and is therefore unlikely to have impacted on the archaeological potential relating to the dairy. Some archaeological potential inside the kitchen may be compromised, as vandalism has disturbed the original floorboards and underlying ground.</p> <p>In 2019, conservation works were undertaken for the building, including a new roof and verandah. The dairy was partially deconstructed as the structure was unsafe. Material from the dairy has been retained onsite for future use. Architectural plans of the conservation work and progress pictures are available from the City of Joondalup.</p> <p>In 2023, the City of Joondalup and the Department of Biodiversity, Conservation and Attractions will commence works within Yellagonga Regional Park and the Duffy House site to support improved access, path connections and revegetation activities. Proposed works include a pathway connecting Duffy Terrace and Duffy House, widening of the existing entry road to Duffy House, and revegetation works to the south. The City of Joondalup will be progressing an expression of interest for a potential commercial operator.</p>

Pearsall House (fmr), Woodvale

LHS No. 20.

Place No. (inHerit): P09513

Place Details			
Former and other names	William (Charles) Pearsall's House		
Street Address	67 Woodvale Drive		
Locality	Woodvale		
Location Description			
GIS coordinates	-31.78926136, 115.80327902		
Reserve No.		Diagram/Plan No.	D002615
Lot No.	28	Vol/Fol	1755/754
Place Type	Individual Building		
Original Use	Residential	Single Storey Residence	
Current Use	Religious	Other – See Historical Notes	
Statutory Listings	N/A		
Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	Pearsall House (fmr), Woodvale has historic significance for its associations with the Pearsall family, who had considerable impact on the development of the district. The place has aesthetic significance as an example of an early homestead in Joondalup.
Values	Aesthetic, Historic, Social
Level of Significance	Considerable - Very important to the heritage of the City of Joondalup.
Classification and Management	Category 2 - Conservation of the place is highly desirable. The place should be retained and managed sensitively. For buildings, this means original fabric should be retained; and any alterations or extensions should reinforce the significance of the place.

Physical Description			
Construction Materials	Walls: Stone - Limestone		
	Roof: Metal - Corrugated Iron		
	Other:		
Architectural Period	Inter-War (c.1915-c.1940)	Architectural Style	Bungalow
Demolished	No	Year of demolition	N/A
Description	Pearsall House (fmr) is a single storey, former residence constructed of painted limestone blocks and a corrugated hipped iron roof that continues over the verandah. The verandah extends around three sides of the house and is supported by jarrah posts at regular intervals. A concrete floor extends around the entire building, interrupted only by the skillion-roofed addition to the rear. The façade has a centralised doorway entrance with a large lawned area in front, and climbing roses adorning the verandah posts. The building is fenced on three sides with Colorbond. The front of the house is exposed to both the carpark associated with the Church, and the nearby road.		
Condition	Fair – assessed from street view only		

Historical Description		
Heritage Themes	Economy – Rural Occupations	
	Infrastructure – Transport and Communications	
	Peopling WA - Demographic Development	
Construction Date/s	1922	
Associations	Architect:	
	Builder:	Alan Brown
	Previous owners or occupants:	Charles Frederick Thomas Pearsall (1910-2001)
	Other:	
Historical Notes	The house is the former residence of William Charles Pearsall, known as Charles. The suburb of Pearsall was named after him in honor of his long contribution to the community and his position as a member of the Wanneroo Road Board.	
	Originally from Albury, William Charles Pearsall left Victoria in 1906 when he was 24. He paid his way from Melbourne to Perth by shoveling coal on a freighter. Pearsall met and married Constance Backshall of Leederville in 1908. They lived at 36 Salisbury Street behind the Oxford Hotel. Pearsall had a workshop at 66 Vincent Street (1915), and then 133 Oxford Street (1918) for a plumbing and metal working business with his partner Fred Phillips. Pearsall was skilled in making milk buckets, billy cans and water cans, but developed respiratory problems and was advised by his doctor to move to the country.	
	In 1922 William Charles Pearsall, along with his brother Bert Pearsall and his father-in-law, moved to a seven and a quarter acre lot on Cockman Road, which is now Duffy Terrace and Woodvale Drive. He paid £400 for the acreage and house, which although recently built, was unfinished. The house had a long cement passage, but the other rooms had the more common tongue and groove, jarrah floorboards.	
	The family intended to establish a market garden, but soon found it difficult as when they ploughed the fields, they found ironstone a foot to 18 inches beneath the surface. Water sat on the ironstone and the vegetable crops withered. Disappointed with this venture, William Charles Pearsall returned to metal working. He manufactured cans and water tanks: in those days everyone in Wanneroo needed a water tank.	
	The Pearsall family were the first to screen silent pictures for the community, located in the old Wanneroo Road Board Hall in the mid-1920s.	

96 | City of Joondalup Local Heritage Survey 2024

Historical Notes	<p>In December 1929, William Charles Pearsall applied for permission to open Wanneroo's first petrol station. The garage was erected at the 13-mile peg, 21km north of Perth on Wanneroo Road (the present junction of Ocean Reef Road and Wanneroo Road). The Pearsalls moved to a new house adjacent, at 4 Calabrese Avenue and on the corner of Villanova Street, Wanneroo. The garage was run largely by William and Constance's son Charles, known as Charlie. He also carried out a business contract to deliver mail from Wanneroo through to Yanchep, and did the mail run on his weekends off from the garage. As the roads in the area were of poor quality for vehicles, he delivered the mail by horseback.</p> <p>Modifications to Pearsall House (fmr) in Woodvale have included verandah posts, a concrete verandah, and an additional concrete fascia walled room at the rear. Aerial photographs show that a driveway and carparking was built south of the house, and new buildings to the south and east were erected between 1985 and 1995. In 2008/09 more carparking was built to the north side of the former house, and in 2012 a new building was erected for the Woodvale Baptist Church on the south west corner of the lot.</p> <p>In 2023, the former residence is owned and used by the Woodvale Baptist Church, which was founded in 1985.</p>

15 Aboriginal Cultural Heritage (ACH) Directory in LGA - JOONDALUP, CITY OF

Disclaimer

The *Aboriginal Cultural Heritage Act 2021 (ACH)* recognises, protects, conserves, and preserves Aboriginal cultural heritage (ACH), and recognises the fundamental importance of ACH to Aboriginal people and its role in Aboriginal communities past, present and future. The Act recognises the value of ACH to Aboriginal people as well as to the wider Western Australian community.

Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported to the ACH Council or exists on the Directory.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you email the details to the Department at AboriginalHeritage@dph.wa.gov.au and we will make every effort to rectify it as soon as possible.

South West Settlement ILUA Disclaimer

Your heritage enquiry is on land **within or adjacent** to the following Indigenous Land Use Agreement(s): Whadjuk People Indigenous Land Use Agreement.

On 8 June 2015, six identical Indigenous Land Use Agreements (ILUAs) were executed across the South West by the Western Australian Government and, respectively, the Yued, Whadjuk People, Gnaala Karla Booja, Ballardong People, South West Boorarah #2 and Wagyl Kalp & Southern Noongar groups, and the South West Aboriginal Land and Sea Council (SWALSC).

The ILUAs bind the parties (including 'the State', which encompasses all State Government Departments and certain State Government agencies) to enter into a Noongar Standard Heritage Agreement (NSHA) when conducting Aboriginal Heritage Surveys in the ILUA areas, unless they have an existing heritage agreement. It is also intended that other State agencies and instrumentalities enter into the NSHA when conducting Aboriginal Heritage Surveys in the ILUA areas. It is recommended a NSHA is entered into, and an 'Activity Notice' issued under the NSHA, if there is a risk that an activity will 'impact' (i.e. by excavating, damaging, destroying or altering in any way) an Aboriginal heritage site. The Aboriginal Heritage Due Diligence Guidelines, which are referenced by the NSHA, provide guidance on how to assess the potential risk to Aboriginal heritage.

Likewise, from 8 June 2015 the Department of Mines, Industry Regulation and Safety (DMIRS) in granting Mineral, Petroleum and related Access Authority tenures within the South West Settlement ILUA areas, will place a condition on these tenures requiring a heritage agreement or a NSHA before any rights can be exercised.

If you are a State Government Department, Agency or Instrumentality, or have a heritage condition placed on your mineral or petroleum title by DMIRS, you should seek advice as to the requirement to use the NSHA for your proposed activity. The full ILUA documents, maps of the ILUA areas and the NSHA template can be found at <https://www.wa.gov.au/organisation/departments-of-the-premier-and-cabinet/south-west-west-native-title-settlement>.

Further advice can also be sought from the Department of Planning, Lands and Heritage at AboriginalHeritage@dph.wa.gov.au.

Terminology

ID: Reported ACH is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-000000001. For ACH places on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** ACH location is shown as accurately as the information submitted allows.
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact AboriginalHeritage@dph.wa.gov.au.
- **Culturally Sensitive Nature:**
 - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
 - **Men only:** Only *males* can view restricted information.
 - **Women only:** Only *females* can view restricted information.

Status:

- **ACH Directory:** Aboriginal cultural heritage place or cultural landscape.
- **Pending:** Aboriginal cultural heritage place or cultural landscape with information in a verification stage.
- **Historic:** Aboriginal heritage places determined to not meet the criteria of Section 5 of the Aboriginal Heritage Act 1972. Includes places that no longer exist as a result of land use activities with existing approvals.

ACH Type:

- **Cultural Landscape:** a group of areas interconnected through the tangible elements of Aboriginal culture heritage present.
- **Place:** an area in which tangible elements of Aboriginal cultural heritage are present.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy Place Status: A status determined under the previous *Aboriginal Heritage Act 1972*:

- **Registered Site:** the place was assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** information was received in relation to the place, but an assessment was not completed to determine if it met section 5 of the *Aboriginal Heritage Act 1972*.
- **Stored Data/Not a Site:** The place was assessed as not meeting Section 5 of the *Aboriginal Heritage Act 1972*.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

OUTCOMES	10
APPENDIX.....	11

OVERVIEW

The City collected feedback on its draft Local Heritage Survey from Thursday 25 January 2024 to Thursday 15 February 2024. A total of 6 valid submissions were received throughout the 22-day advertised consultation period, and a further 1 submission was received *outside* of the consultation period.

A total of 33 stakeholders were directly engaged by the City of Joondalup, including:

- Landowners of properties listed in the existing Municipal Heritage Inventory
- Landowners of properties listed in the advertised draft Local Heritage Survey that were not on the Municipal Heritage Inventory
- South West Aboriginal Land and Sea Council
- Community members who nominated a heritage place in the previous community consultation and the place is included in the advertised draft Local Heritage Survey
- Community members who nominated a heritage place in the previous community consultation and the place is not included in the advertised draft Local Heritage Survey
- Resident/ratepayer groups
- Industry groups/peak bodies

The 7 submissions received varied widely in content are included in full in this report.

STAKEHOLDERS

A total of 35 stakeholders were directly engaged by the City of Joondalup. Stakeholders identified included:

- Landowners of properties listed in the existing Municipal Heritage Inventory = 5
- Landowners of properties listed in the advertised draft Local Heritage Survey that were not in the Municipal Heritage Inventory = 2
- South West Aboriginal Land and Sea Council = 1
- Community members who nominated a heritage place in the previous community consultation and the place was included in the advertised draft Local Heritage Survey = 4
- Community members who nominated a heritage place in the previous community consultation and the place was not included in the advertised draft Local Heritage Survey = 4
- Resident/ratepayer groups = 17
 - Beldon Residents Association Inc
 - Heathridge Residents' Association
 - Connolly Residents Association
 - Currambine Residents' Association
 - Edgewater Community Residents' Association
 - Harbour Rise Home Owners Association Inc
 - Heathridge Residents' Association
 - Iluka Homeowners Association
 - Kallaroo Residents' Association
 - Kingsley & Greenwood Residents Association
 - Marmion, Sorrento, Duncraig Progress and Ratepayers Association
 - Mullaloo Beach Community Group Inc
 - North Shore Country Club and Residents Association
 - Padbury Residents' Association Inc
 - Warwick Residents' Group
 - Whitford Community, Ratepayers & Recreation Association Inc
 - Woodvale Waters Landowners Association
- Industry groups/peak bodies = 2
 - Wanneroo & Districts Historical Society
 - The Royal Western Australian Historical Society Inc

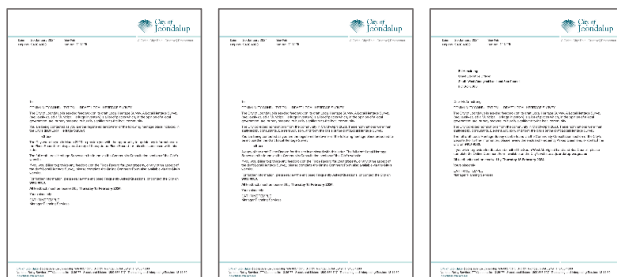

Additional stakeholders, including interested residents and ratepayers, were also indirectly engaged by the City via the consultation materials described below.

CONSULTATION MATERIALS

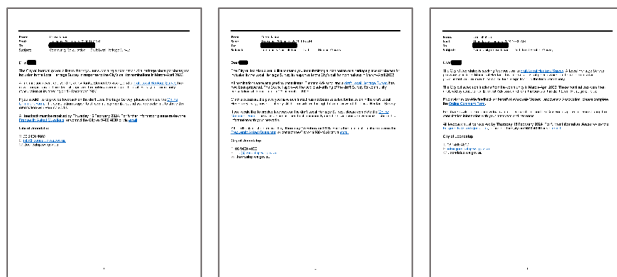

Landowners of properties listed in the existing Municipal Heritage Inventory and those included in the advertised draft Local Heritage Survey were sent information packs through the post on 25 January 2024. Information packs contained a cover letter, a copy of the draft Place Record for the nominated site, and a Frequently Asked Questions document. The cover letter directed these stakeholders to complete an Online Comment Form located on the City's website.

Community members who participated in the previous consultation and resident/ratepayer groups were sent emails on 25 January 2024 which advised them of the consultation and directed them to provide written feedback via the Online Comment Form. These stakeholders were also encouraged to promote the consultation and the Online Comment Form to their members and networks.

Cover letter to landowners of properties listed in the existing Municipal Heritage Inventory, cover letter to landowners of properties included in the advertised draft Local Heritage Survey, and cover letter to the South West Aboriginal Land and Sea Council (see Appendix 1–3 for full):

Emails to community members who nominated a place in the previous consultation and emails to resident/ratepayer groups (see Appendix 4–6 for full):

Frequently Asked Questions (see Appendix 7 for full)

Online Comment Form (see Appendix 8 for full):

The screenshot shows the 'City of Joondalup Draft Local Heritage Survey' online comment form. It includes a header with the City of Joondalup logo and title. Below the header, there is a section for 'Online Comment Form' with a text area for comments and a 'Submit' button. The form also includes a 'Back' button and a 'Close' button.

In addition to directly contacting identified stakeholders via post and email, the City advertised the consultation to other community members via the following means:

- Webpage linked through the “Community Consultation” section of the City’s website visible from 25 January 2024 to 15 February 2024.
- Item published in the Community Consultation eNewsletter emailed to subscribers on 25 January 2024.
- Items published in the Joondalup Voice insert of the *PerthNow Joondalup* community newspaper and emailed to subscribers of the Joondalup Voice eNewsletter on 25 January 2024 and 8 February 2024.
- Facebook post published through the City’s Facebook account on 25 January 2024.

Community Consultation webpage (see Appendix 9 for full):

The screenshot shows the 'Community Consultation - Draft Local Heritage Survey' webpage. It features a header with the City of Joondalup logo and title. Below the header, there is a section for 'Community Consultation' with a text area for comments and a 'Submit' button. The webpage also includes a 'Back' button and a 'Close' button.

Community Consultation eNewsletter (see Appendix 10 for full):

The screenshot shows the 'Community Consultation' eNewsletter. It features a header with the City of Joondalup logo and title. Facebook post (see Appendix 15 for full):

RESPONSE RATE

The City collected a total of 6 valid submissions throughout the 22-day advertised consultation period. Submissions were considered valid if they contained contact details enabling identification and were received within the advertised consultation period. This data is shown in the table below.

An additional 1 submission was received *outside* of the consultation period and the City has determined that this can be included in this Community Consultation Outcomes Report; noting that this is outside of the City's usual processes. This submission is provided at Appendix 17.

	Invited to comment	Response received	Response rate

OUTCOMES

QUESTION: “Please provide your feedback on the draft Local Heritage Survey”

Respondents were asked to provide their feedback on the draft Local Heritage Survey. The verbatim responses from individual community members are provided below. One response was received from an identified stakeholder (CF Town Planning & Development on behalf of Galaxy Drive-in Cinema); this response is provided at Appendix 16.

Note that the submission that was received outside of the consultation period is not included below, this is instead provided at Appendix 17.

Please provide your feedback on the draft Local Heritage Survey (N = 5)[†]
<i>The report is very informative and a good reference for the history of Joondalup. Page 67 has photos following the section on Luisini winery which are not of the winery. The Kingsley Montessori school being the first school in the area should be classified at the same level as Shepherds Bush. It is an example of a dedicated education group with vision and the fortitude to establish a school. The school has made good use of its site maintaining its environmental value.</i>
<i>Can more be done to protect endangered plants and wildlife endemic to the area?</i>
<i>A comprehensive doc. I would like to see places, items on register, specifically identified to say that they have developed prior to City of Joondalup establishment and prior to European settlement. I like the terminology “colonisation” used to refer to time since arrival and settlement of Europeans to the area. Developments in the first 25 years of city lifespan, should also be identified to show their place in the timeline of this area. A trail to help locals and visitors find some of these places would be helpful. There are a few places I didn’t know about and I’ve lived in COJ since 2002.</i>
<i>I found the report interesting and learned about some local history.</i>
<i>Good afternoon, Thank you for the opportunity to give feedback. You have a plan for notable and historic places. Do you have one for notable and historic trees? We have notable trees on our property and a massive eucalyptus on the front verge. We use an arborist to look after our trees but what will happen to them after we are gone? Thank you for all the lovely shade trees you’ve planted in Kingsley Drive. [- -]</i>

[†] Words that may identify respondents or contain offensive language have been removed and replaced with square brackets, ie [- -]. No alterations have been made to spelling/grammar.

COMMUNITY CONSULTATION — DRAFT LOCAL HERITAGE SURVEY

The City of Joondalup is seeking feedback on its draft Local Heritage Survey. A Local Heritage Survey (previously called a Municipal Heritage Inventory) is a list of places which, in the opinion of a local government, are, or may become, culturally significant to the local community.

You are being contacted as you are the registered landowner of the following heritage place included in the City's draft Local Heritage Survey:

<Site>

The City wrote to you in March 2023 to provide you with the opportunity to update any information on the Place Record for this place. A copy of the updated Place Record for this site is enclosed with this letter.

The full draft Local Heritage Survey can be found via the Community Consultation section of the City's website.

If you would like to provide any feedback on the Place Record for your property, or any other aspect of the draft Local Heritage Survey, please complete the Online Comment Form also available via the City's website.

For further information, please review the enclosed Frequently Asked Questions, or contact the City on **9400 4000**.

All feedback must be received by **Thursday 15 February 2024**.

Yours sincerely

APPENDIX 7 — Frequently Asked Questions (page 1)

Draft Local Heritage Survey Frequently Asked Questions

What is the purpose of the community consultation?

To seek community feedback on the City's draft Local Heritage Survey.

What is a Local Heritage Survey?

A Local Heritage Survey (previously called a Municipal Heritage Inventory) is a list of places which, in the opinion of a local government, are, or may become, culturally significant to the local community.

A Local Heritage Survey is distinct from a Heritage List, which forms part of a local government's Local Planning Scheme. A Heritage List is generally a smaller list of only the most significant places. Unlike a Local Heritage Survey, a Heritage List is legally binding and connects to planning laws.

The Western Australian Heritage Act 2018 requires all local governments to prepare a Local Heritage Survey, and to periodically update that survey.

What is "heritage"?

Heritage is what we inherit from previous generations and recognise as something that we want to pass on to future generations. Heritage helps us to understand the story of both Western Australia and the local community — our history, identity and diversity.

Heritage is wide-ranging and consists of buildings, structures, gardens, cemeteries, landscapes, heritage areas, shipwrecks and archaeological sites. The City wants to protect and pass on significant examples of these places to future generations so they will be able to enjoy a rich and diverse cultural environment and understand what came before them.

Because heritage is not only about buildings, the term "heritage place" is used.

How was the City's draft Local Heritage Survey developed?

The City collected nominations for heritage places from the community in March–April 2023. These nominations, together with the ten heritage places already listed on the City's 1994 Municipal Heritage

Inventory, were analysed by external consultants, Element Advisory.

The consultants evaluated the nominations against the following heritage values defined by the Heritage Council of Western Australia, and based on the Burra Charter (2013):

- Aesthetic value
- Historic value
- Scientific value
- Social value
- Spiritual value

The consultants also identified a broad context for understanding the evolution of the City's history and cultural landscape, and the patterns and forces that have shaped it over time. Nominations were further evaluated against this thematic history, to ensure that the survey includes places which cover, as best as possible, the City's key historic themes and time periods.

As part of this process, additional heritage places (not nominated by the community) were also identified by the consultants and included in the City's draft Local Heritage Survey.

More detailed information can be found in the draft Local Heritage Survey document.

What happens when a place is included in the Local Heritage Survey?

A Place Record for each place will be included in the Local Heritage Survey. The Place Record includes a brief history, physical description, heritage values using the assessment criteria, and a statement summarising its significance.

The Place Record only contains information that is already available through public records and does not contain any identifying information about any owners of a place.

There are no monetary benefits to owners of places included in the Local Heritage Survey; however, every place identified helps paint a picture of the City's unique history.

City of Joondalup | Boas Avenue Joondalup WA 6027 | PO Box 21 Joondalup WA 6919 | T: 9400 4000 | joondalup.wa.gov.au
CREATED JANUARY 2024

(page 2)

What does inclusion of a property in the Local Heritage Survey mean for development?

If a place is included in the Local Heritage Survey, there are no changes to the normal development processes and requirements. The Local Heritage Survey does not have a statutory implication for planning and development.

If a place is included in the separate Heritage List (in the Local Planning Scheme), this does have implications for owners who propose to demolish, alter, or develop, as planning approval is required in order for an assessment to be made on the impact of the proposal upon the heritage value of the place.

As part of development of the City's draft Local Heritage Survey, the consultants have recommended eight heritage places for inclusion in the separate Heritage List. The formal adoption of any additions to the List will be progressed separately at the completion of the preparation of the Local Heritage Survey, and will include separate community consultation. More detailed information can be found in the draft Local Heritage Survey document.

Why were some nominated places not included in the City's draft Local Heritage Survey?

Nominations from the community were evaluated against specific heritage values, as well as the thematic history prepared as part of the draft Local Heritage Survey. Nominated places which have more than one heritage value and/or contributed to a comprehensive coverage of the City's key historic themes and time periods, were selected for inclusion in the draft Survey. The remaining nominations may still be considered through future reviews of the Local Heritage Survey.

Some nominated places, which were not included in the draft Local Heritage Survey, may require significantly more research, or specialist expertise to prepare an adequate Place Record. More detailed information can be found in Attachment 3 to the Council report on the Local Heritage Survey (CJ277-12/23), which was presented to Council on Tuesday 12 December 2023.

Will the Local Heritage Survey include Aboriginal heritage places?

The *Heritage Act 2018* does not apply to places that have cultural heritage significance solely on account of their connection with Aboriginal tradition or culture. As such, these sites have not been considered as part of the Local Heritage Survey.

Aboriginal heritage sites are administered under separate legislation and require both specialist archaeological and anthropological skills, as well as cultural sensitivity, which may preclude the disclosure of information to the public.

The Western Australian Department of Planning, Lands and Heritage and the application of the

Aboriginal Heritage Act 1972 will ensure that significant aspects of Aboriginal history and culture, relating to the period before colonial settlement, are recorded and preserved.

How do I provide comments on the City's draft Local Heritage Survey?

Community members can provide comments using the Online Comment Form available via the Community Consultation section of the City's website at joondalup.wa.gov.au

If you are unable to access the Online Comment Form, or need assistance with submitting your feedback, please contact the City on **9400 4000** or via email to info@joondalup.wa.gov.au

When is the community consultation period open?

The community consultation period is open from Thursday 25 January 2024 — Thursday 15 February 2024.

What happens next?

Following the community consultation period, the draft Local Heritage Survey will be presented back to Council for final endorsement.

The outcomes will also be made available via the Community Consultation section of the City's website at joondalup.wa.gov.au

If you would like to be informed via email when the outcomes will be presented to the Council, please select the box on the Online Comment Form and ensure you provide your email address.

Who do I contact for more information?

Further information on the draft Local Heritage Survey can be found via the Community Consultation section of the City's website at joondalup.wa.gov.au by contacting the City on **9400 4000** or via email to info@joondalup.wa.gov.au

Community Consultation – Draft Local Heritage Survey

Categories: Community ConsultationPublished on 25/01/2024

The City of Joondalup is seeking feedback on its draft Local Heritage Survey. A Local Heritage Survey (previously called a Municipal Heritage Inventory) is a list of places which, in the opinion of a local government, are, or may become, culturally significant to the local community.

A Local Heritage Survey is distinct from a Heritage List, which forms part of a local government's [Local Planning Scheme](#). A Heritage List is generally a smaller list of only the most significant places. Unlike a Local Heritage Survey, a Heritage List is legally binding and connects to planning laws. The Western Australian *Heritage Act 2018* requires all local governments to prepare a Local Heritage Survey, and to periodically update that Survey.

The City collected nominations from the community in **March–April 2023**. These nominations were then analysed by consultants, Element Advisory, and form the basis of the draft Local Heritage Survey. The consultants have also provided recommendations for places to be included in the City's Heritage List.

The draft Local Heritage Survey can be accessed below. Please use the Online Comment Form to submit feedback.

ONLINE COMMENT FORM >

For further information, please review the Frequently Asked Questions, or contact the City on the details below.

Community Consultation

5TH
YEAR
ANNIVERSARY

Thursday 25 January 2024

Dear

Thank you for your interest in community consultation at the City of Joondalup in 2023. Throughout the year we promoted eight different community consultation opportunities for you to participate in. If you are interested in the outcomes of these consultations, the City publishes detailed Community Consultation Outcomes Reports on its website.

[Outcomes Reports](#)

View the latest community consultation opportunities

Draft Iluka–Burns Beach Foreshore Reserve Management Plan

The City of Joondalup is seeking feedback on its draft Iluka–Burns Beach Foreshore Reserve Management Plan. The study area for the draft plan includes Iluka Foreshore Reserve (Iluka) and Burns Beach Foreshore Reserve (Burns Beach).

(continues...)

The aim of the draft Iluka–Burns Beach Foreshore Reserve Management Plan is to provide a framework to protect and enhance biodiversity values whilst maintaining appropriate community access and awareness of the natural area.

To view the draft plan and provide feedback, please click 'Have Your Say' below.

Submissions accepted: Thursday 25 January 2024 — Thursday 15 February 2024.

APPENDIX 11 — Joondalup Voice item in *PerthNow* Joondalup community newspaper (p 13, 25 January 2024)

PERTHNOW.COM.AU

THURSDAY, JANUARY 25, 2024 • 13

COUNCILLOR'S COLUMN – CR JOHN CHESTER

South-East Ward News
Kingsley's Legana Park and Greenwood's Kanangra Park will each get new play spaces as part of the City's 2023/24 Capital Works program.
The park upgrades will include the replacement of ageing playground infrastructure, extension of the footpath networks and installation of mulched garden beds.
The Legana Park upgrade is scheduled for completion in April with the Kanangra Park project expected to be finished the following month.
Also in Greenwood, road resurfacing works, incorporating kerb replacement and storm water upgrades, are scheduled for Morrell Court, Elias Court and Oleaster Way over the coming weeks.

Kingsley to host bike comp!
Shepherds Bush Park in Kingsley will host a bike competition for 11–25-year-olds on **Saturday 24 February**, as part of the City's annual BMX, Skate and Scooter series.
The competition will take place at the park's popular pump and jump track from **3.00pm – 5.00pm**. Registration is from **2.00pm**.
Competitions will also be held at Kinross Skate Park on **Saturday 17 February** and at Mirror Park in Ocean Reef on **Saturday 2 March**.

Reclassification in works
In December 2023, Joondalup Council adopted an amendment to the *City of Joondalup Local Planning Scheme No. 3* that could result in about 30 hectares of bushland being reclassified from Public Open Space to Environmental Conservation reserve.
The reclassification would offer these natural areas greater protection from future development.

Many of these 31 areas of land have biodiversity and conservation values and form significant ecological links.

Council meeting dates
The times and dates for Council meetings have been set for 2024.
They are **Tuesday 27 February, Tuesday 26 March, Tuesday 23 April, Tuesday 28 May, Tuesday 25 June, Tuesday 23 July, Tuesday 27 August, Tuesday 17 September, Tuesday 22 October, Tuesday 19 November and Tuesday 10 December**.
All meetings will commence at **6.30pm**.
The August meeting will be held at **12noon** allowing school students to attend.

Special meeting of Council
A Special Meeting of Council will be held in the Council Chamber on **Wednesday 31 January, from 6.00pm**.
The purpose of this meeting is for Council to consider the 2022-23 Annual Report and Financial Report. A date for the Annual General Meeting of Electors will also be set.

Premier attraction
Western Australian Premier Roger Cook will offer a congratulatory address at tomorrow's City of Joondalup Australia Day Citizenship Ceremony at Joondalup Resort, where about 300 people, from more than 40 different countries of origin, will be granted citizenship.
The ceremony is one of the biggest of its kind across the Perth metropolitan area.
One of the highlights will be the presentation of the City's 2024 Community Citizen of the Year Awards in the categories of Citizen of the Year, Youth Citizen of the Year, Senior Citizen of the Year and Active Citizenship – Group/Event.

Sorrento Surf Life Saving Club Facility - Redevelopment Project

The City is planning to redevelop the Sorrento Surf Life Saving Club facility on West Coast Drive, Sorrento.

The redevelopment will include the demolition of the existing facility and construction of a new surf club facility; public amenities; passive recreation areas; additional car parking; and a commercial café/restaurant.

A copy of the redevelopment plans and frequently asked questions document can be viewed on the City's website at joondalup.wa.gov.au

For further information, please contact the City on **9400 4000** or via email on info@joondalup.wa.gov.au

25TH YEAR ANNIVERSARY

City of Joondalup

MAYOR'S COLUMN - HON. ALBERT JACOB

Motoring fest back on grid
The Tyrepower Joondalup Festival of Motoring (JFOM) roars back to life in May 2024, six months after the Mariginiup-Wanneroo bushfires led to the event's last-minute postponement.
The two-day festival of speed will be staged in the Joondalup City Centre on **Saturday 4 and Sunday 5 May**.
The free family-friendly program will feature static vehicle displays across the event site, activations, food vans, bars and music. The revised line-up also incorporates a new element, the JFOM Trash or Treasure Car Jumble where attendees can explore a range of automotive wonders.

The highlight for many will be Sunday's Joondalup City Sprint, where motorists, in cars of all shapes and sizes, take on a challenging 2.2km circuit in a time-trial format.
For updated event information, visit jfof.com.au

Joondalup's 2024 Citizens of the Year
The City's Community Citizens of the Year were announced at our Australia Day Citizenship Ceremony on **Friday 26 January**.
Congratulations and thanks to these selfless and inspiring members of our community:

2024 City of Joondalup Community Citizen of the Year, Catherine Kolomyjek.
2024 Community Youth Citizens of the Year, Harry and Tom Linehan.
2024 Senior Citizen of the Year, Russell "Nev" Maw.
2024 Active Citizenship for Community Group or Event of the Year, Fostering Hope Australia.

Have your say!
The City is seeking feedback on its draft *Iluka-Burns Beach Foreshore Reserve Management Plan* and draft Local Heritage Survey.
The draft *Iluka-Burns Beach Foreshore Reserve Management Plan* provides a framework to protect and enhance biodiversity values of the area, while maintaining appropriate community access.
A Local Heritage Survey is a list of places which, in the opinion of a local government, are, or may become, culturally significant to the local community.
Submissions to both consultations can be made at joondalup.wa.gov.au. The public comment period for both closes on **Thursday 15 February**.

Tonight's the night to party
Tonight, the City of Joondalup hosts its premier concert event at Joondalup Resort.
The 2024 Valentine's Concert features Australian singing superstars Paulini and Tim Campbell, accompanied by the Perth Symphony Orchestra, who will take us back to the heady days of the late-90s – the era when our City was formed.
With more event coaches than ever to get you to and from the concert, it's a great opportunity to leave your car at home. Gates open from 5.00pm with the music starting at 7.30pm.
Visit joondalup.wa.gov.au for details.

APPENDIX 15 — Facebook post (published 25 January 2024)

APPENDIX 16 — Submission from CF Town Planning & Development on behalf of Galaxy Drive-in Cinema (page 1)

12 February 2024

Chief Executive Officer
City of Joondalup
PO Box 21
JOONDALUP WA 6919

Attention: Mr Chris Leigh – Director of Planning & Community Development

Dear Chris

SUBMISSION (OBJECTION)
CITY OF JOONDALUP DRAFT LOCAL HERITAGE SURVEY
LOT 26 (NO.159) GOOLLELAL DRIVE, KINGSLEY (GALAXY DRIVE-IN CINEMA)
CITY OF JOONDALUP

We act on behalf of the landowners of the Galaxy Drive In-Cinema at Lot 26 (No.159) Goollelal Drive, Kingsley. The purpose of this submission is to formally **object** to the abovementioned property being identified as part of the City of Joondalup's Draft Local Heritage Survey and possible future entry on the Heritage List.

Whilst we are aware that the Draft Local Heritage Survey is only identifying properties that may have heritage significance and does not currently result in any implications on the future development of the land at this stage, the key concerns are raised in regard to the subject land being featured within the Survey and then included within the City of Heritage List at a later date (as recommended by the Draft Local Heritage Survey). This will have overwhelming implications for the landowner moving forward.

Unfortunately, the recommendation to include the subject land on the City's Heritage List in the future (i.e. recommendation for conservation of the site) fails to take into consideration the financial and logistical implications that will be experienced by the landowner. As such, any listing of the property will be very detrimental to the future use and control of the property.

In light of the above, the following information is provided in support of the landowner's request to remove the subject land from the Draft Heritage Survey and/or any future entry into the City's Heritage List:

Background

The Galaxy Drive-in Cinema has been operating for fifty (50) years and it is noted that the premises is the last drive-in cinema operating within the Perth metropolitan area.

The complex is currently owned by an elderly lady, which continues the operation of the venue because it was her late husband's wish for her to keep it going. Unfortunately, the venue runs at a large loss, with little to no investment being made to upkeep the cinema and/or the land itself.

1

(page 2)

CF Town Planning & Development

Reasons to Exclude from Survey/List

1. As outlined above, this drive-in cinema is the last one operating within the Perth metropolitan area. The reason is that such venues are not financially viable and are no longer in favour with patrons and that movie goers would prefer to attend an enclosed cinema complex that offers greater comfort and experience. Given this, the old drive-in cinema is no longer economically viable to operate. As outlined above, the current landowner operates this venue at a loss and for personal reasons only.
2. The placement of the land on a Heritage Survey/List will restrict any future development of the site. The subject land is classified 'Residential' zone under the City of Joondalup's current operative Local Planning Scheme No.3 (LPS No.3), with a dual density coding of R20/40. Furthermore, the land is located within a 'Housing Opportunity Area' (HOA). As such, the subject land has good development potential to deliver much needed additional housing within a well serviced area. Any entry of the subject land on the City's Heritage List in the future would prevent or restrict the development of the land at the detriment of the landowners and will forego the opportunity to provide new housing in the area.
3. In addition to the above point, the inability (or any restrictions imposed) to develop the land in the future will be a financial burden on the landowner and potentially de-value the land. The City cannot expect or request the landowner to endure such a financial burden or loss so that the venue can be retained for a perceived community benefit. In simple terms, any entry of the subject land on a Heritage List and subsequent restriction/prevention of re-development is not fair to the landowner.
4. In the instance that the property is ultimately entered into the City's Heritage List and conservation is enforced (as suggested in the Survey), with re-development prohibited or restricted, who will be responsible for the maintenance, upkeep and costs associated with the property (including payment of rates and any interest on loans)? It is assumed that these expenses will fall on the landowner, which provides a further burden to the loss of development potential and decreased property value.
5. A review of the buildings on the subject land has identified that they do not comprise any heritage character or value (see Figure 1). In fact, the buildings are run-down and unsightly. Therefore, it is noted and understood by the landowner that the property is being considered by the City not because of the heritage value of the structures/property but the social or cultural value only. As such, retention of the site in the future is not considered to be important and necessary. A photographic record and placement of some of the equipment in the State Museum would be more appropriate and beneficial to the community than preserving the site/existing development on the land in its current form.

Figure 1 – The existing buildings on the subject land do not have any heritage value. As such, there is no need or value in retaining the buildings in the future.

CVF Nominees Pty Ltd ABN: 86 110 057 395

(page 3)

CF Town Planning & Development

6. The current patronage of the venue is very low and at some point, the drive-in cinema will stop operating and the landowner will become incapable of continuing the function of the venue. Once the operations cease, the venue will not be accessible by the public and the property will remain vacant. This will be a poor planning outcome, as the site could be developed in the future to a higher order use (i.e. medium density residential development).
7. On closure of the drive-in cinema, there will be no upkeep and the venue will become more run-down and be a blight on the surrounding area. In addition, the general public will not have access to the site to experience its perceived heritage value and the only appearance of the venue will be from the street. The current view of the site from the street is a high colorbond fence, which fails to provide any positive contribution to the streetscape (see Figure 2). It is concluded that the recommendation to preserve the site to only view a colorbond fence is pointless.

Figure 2 – One the venue is closed to the public, only colorbond fence and the screen will be visible. This provides little to no benefit to the community and the streetscape.

8. The subject land abuts low to medium density residential development along its northern, western and southern lot boundaries (see Figure 3). As outlined previously, the property will become run-down and a blight on the area once the drive-in cinema is closed. This will have a negative impact on the adjoining residential properties and pose as a security risk for those properties.
9. In light of the above, it is difficult to accept or appreciate that any future preservation of the drive-in cinema development on the land has any real value to the community or the landowner.

(page 4)

CF Town Planning & Development

Figure 3 – Aerial Site Plan.

Solution

Whilst the landowner appreciates the nostalgia associated with the past and the once popular drive-in cinema, the conservation of the land does little to benefit the community once the use stops operating. It is viewed that the more appropriate means of recognising the site would be as follows:

- Undertaking a photographic record of the site for the City's archives and for display with a local library;
- Collect sample items from the cinema (i.e. projector, speakers stands, signage etc) and place them within a museum or library so that the public can truly appreciate and enjoy the past; and
- Incorporate a plaque of artwork within any future development of the land.

In light of the above, the landowner has no objections (and is willing to assist) with allowing the City of Joondalup (or an appointed representative) to take photographic records of the site. Furthermore, once the venue ceases operating, the landowner is more than willing to make available various items associated with the drive-in cinema to be collected by the City of Joondalup for placement within a museum or library.

Planning & Development Consultants
Address: 3/1 Mulgool Road, Malaga WA 6090
Tel: 9249 2158 Mb: 0407384140 Email: carlof@people.net.au
CVF Nominees Pty Ltd ABN: 88 110 067 395

(page 5)

The above suggestions is more appropriate for this site so that the Galaxy Drive-In Cinema can be truly remembered as a significant social/recreational venue from the past.

CONCLUSION

It is concluded that the identifying the subject land in the Draft Heritage Survey and potential entry into the City's Heritage List to conserve the site is detrimental to the landowner and provides little value to the community once the drive-in cinema ceases operating.

In light of the concerns raised within this submission and on behalf of the landowners, we hereby request that the City of Joondalup **remove** the Galaxy Drive-In Cinema on Lot 26 (No.159) Goollelal Drive, Kingsley from the draft Heritage Survey and refrain from placing the site on the City of Joondalup's Heritage List.

We now look forward to the City of Joondalup's favourable consideration of our submission in this matter and its subsequent written advice regarding Council's decision.

Should you have any queries or require any additional information regarding any of the matters raised above please do not hesitate to contact me on [REDACTED] or [REDACTED].

Yours faithfully,

[This email requires a response.](#)

Ref: [Community Consultation Council Policy](#)

[REDACTED]
[REDACTED]

Hi [REDACTED]

I have noted that the chained (subject) consultation commenced during the WA School Holiday period, which is contrary to the referenced City policy. Extract:

"The City will ensure that the timing and duration of consultation activities has due regard for conflicting priorities such as public holidays, school holidays, Council elections and/or other consultation activities."

- Submissions were accepted: Thursday 25 January 2024 — Thursday 15 February 2024.
- WA Public School holiday period 15/12/2023 - 30/01/2024.

Unfortunately, I was not able to submit further information to this recent consultation during this busy timeframe.

I am also concerned that the consultation did not meet the referenced policy criteria for providing appropriate material to the participants:

"The City will endeavour to make appropriate background information and contextual material available to consultation participants to support understanding of the relevant legal, statutory, strategic and/or local context."

As chained and attached, the content I submitted was appropriate and relevant to the small boat lunching facility heritage of Pinnaroo Point. The City / contractor excluded this relevant heritage content, provided dated and

(continues)

erroneous information in the Pinnaroo Point "Place Record", admitted to not attending the site for review and was subsequently not prepared to provide a brief.

Subsequently, the survey participants would not have been provided with appropriate background information and contextual material to enable them to evaluate the heritage values.

Re: "Given that it is almost January, please consider this email + attachment as a submission to this proposed consultation."

Q1 Please confirm that my chained content was added to the consultation input as requested?

Re: "It was not necessary for the consultants to visit the site to verify the colonial to present day use of this site as a "small boat launching facility". I have submitted questions to council w.r.t the Pinnaroo Point "small boat launching facility" and provided references to the City's own council files that record this place as a "a small boat launching facility".

Q2) Will you accept the attached documents to reaffirm the council's own small boat launching heritage information which is unfortunately missing from the Pinnaroo Point "Place Record" for this survey, despite my many early contributions?

Re: "We will have the opportunity to review and update the place record for Pinnaroo Point following advertising in response to any submissions received. I will be sure to consider your comments below as part of this review process."

Q3) Please clarify your commitment to update the Pinnaroo Point place record "following advertising...". How can this result in the transmission of relevant information to the consultation process?

Regards,

Subject: Local Heritage Survey - [REDACTED] Website Feedback

Hi [REDACTED]

I appreciate you responding to my feedback.

It was not necessary for the consultants to visit the site to verify the colonial to present day use of this site as a "small boat launching facility". I have submitted questions to council w.r.t the Pinnaroo Point "small boat launching facility" and provided references to the City's own council records that record this place as a "a small boat launching facility".

I previously provided a document to council w.r.t the above-mentioned questions, entitled: PR – Small boat launching Facility at Pinnaroo Point ~
This document is re-attached for your reference.

As stated in the submission, there are few remaining physical elements relating to this usage, but include:

- i) Gravel seaward extension of John Wilke Tarn to create a launching place,
- ii) DoT signs designating the place as a launching site (as per CoJ council records),
- iii) Trailer turning circle with enclosed rigging area,
- iv) Signpost restricting parking adjacent to the rigging area.

These historical elements need preservation / recognition in connection with the colonial to present day usage as a "small boat launching facility".

(continues)

In support of this argument, the Hillarys Beach Club (2 storey Tavern, strangely omitted from the council report) contains a western architectural feature of a "sail feature" in recognition of the history of this place. Sadly, the potential demise of this location for small boat launching may be intrinsically linked to parking congestion created by the recent opening of this private facility.

I am concerned when you advise that "advertising will take place in January/February next year."
Advertising / consulting in the January school holidays would be contrary to the City consultation policy.

Given that it is almost January, please consider this email + attachment as a submission to this proposed consultation.

Regards,

[Redacted]

Subject: RE: [Redacted] - Website Feedback

Hi [Redacted]

Thank you for your feedback below, and for providing the nomination for Pinnaroo Point.

The City engaged consultants Element Advisory to prepare the draft Local Heritage Survey, including preparation of place records. I have been in contact with Element this morning regarding your feedback, and they advised that there were some areas they weren't able to access during their site visit due to construction at the time.

Public advertising of the draft Local Heritage Survey was approved by Council at their 12 December meeting, and it is envisioned that this advertising will take place in January/February next year. We will have the opportunity to review and update the place record for Pinnaroo Point following advertising in response to any submissions received. I will be sure to consider your comments below as part of this review process.

Thank you again for your feedback, and please feel free to give me a call if you would like to discuss further.

Kind regards

TY OF JOONDALUP - BRIEFING SESSION AGENDA - 05.12.2023 PAGE 1147
ATTACHMENT 13.1.1.2

History of the place — please tell us what you know of the history of the place (attach separate documents or photos if necessary):
<ul style="list-style-type: none"> Moolaloo Point — historical beach-craft launching facility. Moolaloo Point — sailing and windsurfing have had significant user groups since the 1980s; 07/1992 City of Wanneroo Council detailed... "Moolaloo Point... concept plan for the main car park, access road and turnaround area..." Pinnaroo Point — 2001, the first kitesurfing lessons were conducted at Pinnaroo Point. 14/08/2001 City of Joondalup Council minutes, background — "This access road has been in use for many years...to launch small boats...designated launching area at Pinnaroo Point...beach craft, especially sailing craft did not have a viable alternative".
Why do you think this place is important to the story of Joondalup?
The residents and visitors to the City of Joondalup highly value water access and enjoyment. Ocean Reef Marina (ORM) and Hillarys Boat Harbour (HBH) upgrade projects are testament to the high number of people requiring access for trailable and motorised watercraft. However, the ORM and HBH launching facilities do not cater for board sailing craft (windsurfing / kitesurfing / wing-surfing). Developments at Pinnaroo Point are also likely to hinder access for board sailing craft. The history and ongoing growth in popularity of beach and board sailing craft needs to be acknowledged.
Describe the place and it's setting as clearly as possible (photographs may be uploaded below):
Sandy beach point utilised throughout recorded history for the launching of small boats.
What parts of the place are original?
Original foreshore and primary dunes exist, albeit very eroded. Original small boat launching facilities still exist.

Refer to Appendix 18

Pinnaroo Memorial Park

Name of place:	Pinnaroo Memorial Park
Address:	Whitfords Avenue
Suburb:	Padbury
Postcode:	6025
Current owners or occupants:	Metropolitan Cemeteries Board
Why do you think this place is important to the story of Joondalup?	This memorial park is an important part of Joondalup's history because a lot of the residents are either buried or cremated there. It is such a significant place for the history of the district, and it is also a beautiful park and is an asset to the Joondalup district.

Pinnaroo Point, Hillarys

LHS No. 05.

Place No. (inHerit):

Place Details			
Former and other names	Bush Forever Area 325		
Street Address	239 Whitfords Avenue		
Locality	Hillarys		
Location Description			
GIS coordinates	-31.80222297, 115.73125108		
Reserve No.	39497	Diagram/Plan No.	P417135
Lot No.	500	Vol/Fol	LR3172/1
Place Type	Urban Park		
Original Use	Social/Recreational		
Current Use	Park/Reserve		
Statutory Listings	N/A		
Other Heritage Surveys	N/A		

Cultural Heritage Significance	
Statement of Significance	Pinnaroo Point has historic significance for its association with recreation and fishing, and holiday making at the beach shacks formerly present in the area. It has aesthetic and social significance to the community who appreciate its setting and location as a recreational space.
Values	Aesthetic, Historic, Social
Level of Significance	Little - Has elements or values worth noting for community interest but otherwise makes little contribution.
Classification and Management	Category 4 - Conservation of the place is not necessary. Should the place be proposed for demolition, or substantially altered so that its heritage values are lost, the City may request that the owner provide an Archival Record as a condition of approval of the development application.

Description	Pinnaroo Point is comprised of a well-maintained park area in a coastal setting which is set within the Bush Forever Area 325. The park features barbeque facilities, ablution blocks and wide grassed areas with picnic tables. Interpretive signage provides information about the conservation area. A multi-use pedestrian pathway provides a buffer between the park and the beach. The park is bordered on the eastern side by a car park.		
Condition	N/A		
Historical Description			
Heritage Themes	Environment Cultural Life - Recreation - Sport		
Construction Date/s	N/A		
Associations	Architect:		
	Builder:		
	Previous owners or occupants:		
	Other:	Beach Shacks	
Historical Notes	The coastal beaches of Mullaloo, Hillarys and Whitfords have been popular with holiday makers since the 1920s. Pre-World War II, fisherman lived permanently on the nearby sand dunes in shacks made from tin and hessian. A line of shacks ran right along the shoreline, north and south of Pinnaroo Point. It was a colourful sight, even though it ultimately contributed to damage of the frontal dune system.		
	An extension to the West Coast Highway linking Sorrento to Mullaloo was opened in 1971, providing public access to new beaches. Prior to the extension, the only access to the beaches in this stretch of coast was by boat or four-wheel drive. The beach shacks were demolished in 1972 when the surrounding area was developed for housing.		
	The reserve was gazetted on 5 September 1986 for 'Parks and Recreation.' On 29 February 2000 the vesting was changed from the City of Wanneroo to the City of Joondalup.		
	In 2023, Pinnaroo Point is a public open space, popular with families and synonymous with beach culture.

Small boat launching facility at Pinnaroo Point

Summary

The "small boat launching facility" at Pinnaroo Point has been in operation since at least 1973 for the launching of surf cats.

The launching facility was developed further by the City of Wanneroo in the 1990s.

Perth Coastal Recreational Use Study by CSRR (2018) - *Pinnaroo Point itself is Categorised as a minor activity node, providing...special beach access for kite and wind surfing...*

The facility continues to operate today for the launching of beach-craft.

On many occasions during summer beach-craft are launched / landed every few seconds...

*Many more vessels are launched per day from the Pinnaroo Point facility,
...than from either of the nearby marinas.*

Brief history

07/1990 City of Wanneroo (CoW) minutes introduced a Foreshore Plan and plans for associated facilities at what is now called Pinnaroo Point (but was then called Mullaloo Point).

Sailing and windsurfing have had significant user groups since the 1980s.

14/08/2001 CoJ Minutes acknowledged that sailing craft could not launch from the ramps:
For boat owners, the ramps at the two Marinas are sufficient to launch most types of watercraft.

However, these facilities do not cater favourably for wind driven craft in particular sailing boats

...which depending on weather conditions, need to be launched at different angles...

A more detailed history of the Pinnaroo Point Small Boat Launching Facility follows.

Moolalloo Point – historical beach-craft launching facility

Figure 1 Moolalloo Point (now Pinnaroo Point) - historical "beach craft" launching facility.

*Local Government beaches and parks have been utilised
since the early 70s to launch "beach craft".*

1919 Colonists named the place Moolalloo Point – Aboriginal word: place of the rat kangaroo.

- The name was changed to Mullaloo Point during urbanisation in the 1950s.

Mullaloo Point

- Since 1973, Whitfords Sea Sports Club conducted regular surf catamaran events held at Sorrento beach and Mullaloo Point (now Pinnaroo Point).
- Since 1979 Whitfords Sea Sports Club conducted dingy sailing lessons (also from the original ORM).
- Since the early 1980s, windsurfing lessons were conducted near Mullaloo Point.
- 07/1990 City of Wanneroo (CoW) minutes introduced a Foreshore Plan and plans for associated facilities at what is now called Pinnaroo Point (but was then called Mullaloo Point).

Sailing and windsurfing have had significant user groups since the 1980s.

Pinnaroo Point

The location was renamed *Pinnaroo Point* with the access road John Wilkie Tarn.

25/05/2023 12:00:00 AM

- In 1992 the City of Wanneroo planned small boat launching facilities for Pinnaroo Point.
- In the Late 90's Whitfords Bay Sailing club (WBSC) conducted catamaran sailing and Windsurfing WA (WWA) conducted windsurfing from waters adjoining Pinnaroo Point.
- 07/1992 CoW council detailed - "...Mullaloo Point...concept plan for the main carpark, access road and turnaround area...".
- 03/1998 my submission to CoJ - DP33-01/98 CLOSURE OF VEHICLE ACCESS TO THE BEACH AT PINNAROO POINT - [765-23] -
"A low gate (less than 0.5 metre from ground) to allow sailboard rigging to be passed over without damage."
- 1999 CoJ Local Government and Public Property Local Law - "The City's current Governor approved district extension enables its Local Government and Public Property Local Law 1999 to apply 200 metres seawards from the low water mark...".
- 7/12/1999 CoJ Joint Commissioners amendments - "...prohibited personal watercraft rather than all boats, from launching from the beach...".
- 19/12/2000 CoJ council minutes, P56 - "There is a limestone access road to the beach at Pinnaroo Point, Hillarys for the launching of boats...has been used to launch boats for many years...only small boats can launch from Pinnaroo Point...Whitfords Bay Sailing Club...launch boats from the area as well as other users of the area."
- By 2001, the first kitesurfing lessons were conducted at Pinnaroo Point.
- 22/05/2001 CoJ resolved - "keep the access road open for the launching of watercraft" and instigated a management plan to "restrict vehicular access" - to prevent the launching of PWC.
- 14/08/2001 CoJ council minutes, background - "This access road has been in use for many years...to launch small boats...designated launching area at Pinnaroo Point...beach craft, especially sailing craft did not have a viable alternative".
- 08/2001 CoJ installed signs -
"Safety notices to identify the place as a launching facility...".
- 14/08/2001 council minutes and management plan directed the installation of a low chain.
- I corresponded again with The City after a high metal gate was erected creating an effective restriction to the passage of windsurfing vessels.
- 16/11/2010 Beach Management Plan Adopted, P33 Pinnaroo Point -
"Designated beach launching and landing areas...John Wilkie Tarn Access Path".
- 20/02/2018 CoJ Beach Management Activities Policy P2 - "Only highly conflicting activities will be subject to exclusion zones, licence requirements or designated areas". "Medium conflicting - Windsurfing".
- Since 2019, board sailing has become more regular between Hillarys and Ocean Reef due to the popularity of foiling disciplines, including wing-surfing.
- From 2024 the IOC will run foiling only disciplines for Olympic board sailing.
- For several years, Perth coastal areas have become a training ground for Olympic hopefuls.

BEN J125

2018 Beach Emergency Numbers were devised. John Wilkie Tarn access is designated BEN J125

- 10/2018 DLGSC / Curtin University / CSRR: Perth Coastal Recreational Use Study: "Pinnaroo Point...minor activity node, providing...
special beach access for kite and wind surfing..."

Building sustainable neighbourhoods

LIVEABILITY AND DIVERSITY FOR FUTURE GENERATIONS

Local Planning Strategy Review Issues Investigation Papers

Background and Summary

April 2024

Introduction

This report and the associated issues papers part of a suite of documents and reports to inform *building sustainable neighbourhoods*.

Building sustainable neighbourhoods is a strategic planning project being delivered by the City of Joondalup, which will review the housing component of the Local Planning Strategy. The project forms part of a broader statutory process which formally reviews the City's Local Planning Strategy and Local Planning Scheme No. 3.

Project background

The *Planning and Development Act 2005* requires all local governments to maintain a local planning scheme, including regular five-yearly review of the scheme.

Commencing a review of the City's Local Planning Strategy was scheduled for the 2022/23 financial year. At its May 2021 meeting, Council agreed to bring forward the review of the housing component of the Local Planning Strategy to the 2021/22 financial year in response to ongoing, expressed community concern regarding the impacts of infill housing. The decision follows a number of preceding projects, community consultations, and decisions with respect to housing and infill in the City of Joondalup.

All processes associated with preparing, reviewing, and amending local planning schemes and strategies are specified in the *Planning and Development (Local Planning Schemes) Regulations 2015*. In accordance with the regulations, the City of Joondalup will review both its Local Planning Strategy and Local Planning Scheme No. 3, with the review of the housing component being progressed as a distinct sub-project: *building sustainable neighbourhoods*.

Building sustainable neighbourhoods will make recommendations for how the City's strategic planning framework can meet the City's future housing needs, including where different housing densities and types should be located within the City.

The scope of work associated with the review has been organised into five phases, shown below:

Phase 1 of the project undertook technical work and community consultation to identify issues relating to housing and livability in the City and to set actions to be undertaken in Phase 2 to investigate the issues identified.

Phase 2 of the project undertook investigations into the issues identified in phase 1 to, the outcomes of these investigations are presented in the following report.

Reporting structure and purpose

The issues papers provide the details of investigations undertaken for each of the issues identified in Phase 1. Each issue and its associated investigations have been categorized into the following four investigative papers:

- Issue Paper 1 – Issue Category: Allocation of density
- Issue Paper 2 – Issue Category: Liveability outcomes for infill housing
- Issue Paper 3 – Issue Category: Structural issues
- Issue Paper 4 – Issue Category: Housing supply, demand and affordability

The issues papers outline for each issue, the relevant statutory context or background for the issue, work the City is currently undertaking to address the issue, and opportunities to address issues further where appropriate.

Opportunities identified will inform the development of specific actions to be included in the drafting of the Local Planning Strategy in Phase 4, after a strategic approach for the allocation of density, dwelling typologies and land use has been developed and endorsed in Phase 3.

Issue papers contents overview:

The following provides an overview of the issues addressed through each paper and their key findings. Refer to specific issues papers for further information for each issue.

Issue Category 1: Allocation of density	
Issues	Summary of Key findings
Lack of community alignment on preferred spatial allocation of density.	<ul style="list-style-type: none"> • The City of Joondalup needs to plan for an additional 22,630 dwellings by 2050 as set out within the State Government planning framework. • The City is required to demonstrate capacity for additional infill development through its Local Planning Strategy in locations which reflect broader strategic planning objectives set out in the state planning framework. • There is opportunity for community input into the development of strategic options for the spatial allocation of density in Phase 3, however this input will need to be balanced with the broader strategic planning objectives set out in the state planning framework. • The Western Australian Planning Commission (WAPC) and the Minister for Planning issue final approval for Local Planning Strategies, including the spatial allocation of density.

Issue Category 2: Liveability outcomes for infill housing	
Issues	Summary of Key findings
Infill development changing the established suburban character in infill areas	<ul style="list-style-type: none"> The City's <i>Development in Housing Opportunity Areas Local Planning Policy</i> (HOALPP) includes objectives which require developments to ensure that the design of infill development remains consistent with the established streetscape character where the 'deemed to comply' development standard is not met. There is opportunity for the City to undertake character studies for particular infill areas and consider introducing additional development controls to ensure that new development is consistent with the identified existing, or future desired, streetscape character. It is noted these types of provisions are typically implemented for heritage areas and can have implications for existing landowners and affordability of new dwellings. It is acknowledged that some established neighbourhoods in the City may benefit from new development, and that development controls can plan for desired future character.
Poor liveability outcomes for medium density housing	<ul style="list-style-type: none"> Established State and local government planning policies include provisions to ensure improved liveability outcomes for infill development within the City of Joondalup through minimum outdoor space, landscaped areas, habitable room sizes, ventilation and access to natural light requirements. The recently amended R-Codes include provisions to ensure improved liveability outcomes for medium density developments. The City's Design Review Panel provides an additional layer of design scrutiny for larger scale infill developments. Options to amend provisions relating to liveability may have onflow effects to other design aspects for infill developments, including affordability. The recently amended R-Codes Volume 1 was modified to remove 'medium density' provisions for single houses in R30 and R40 areas due to affordability concerns. This indicates a reduced State Government appetite for additional modifications which may impact affordability.
Poor sustainability outcomes for medium density housing	<ul style="list-style-type: none"> Established State and local government planning policies include provisions to ensure improved sustainability outcomes for infill development within the City of Joondalup through minimum landscaping and tree planting requirements and solar passive design requirements. The City of Joondalup would require WAPC approval to further amend provisions relating to landscaping, tree provision and solar passive design in the R-Codes through a local planning policy, or through the local planning scheme. The recently amended R-Codes include provisions to improve sustainability outcomes for medium density developments. Amendments to the National Construction Code (ie. building legislation separate to planning frameworks) will take additional

	<p>steps to improve thermal performance and energy efficiency for new residential developments.</p> <ul style="list-style-type: none"> • There is opportunity for the City to provide incentives or requirements for environmentally sustainable design through the Local Planning Strategy and subsequent planning frameworks. These should be considered in the context of housing affordability, should be tested with the community and development industry, and are likely to be subject to WAPC and Ministerial approval . • Other, non-planning approaches may be available to improve sustainability outcomes within infill housing, including financial incentives and community education.
Loss of tree canopy in infill areas and resultant urban heat impacts	<ul style="list-style-type: none"> • The City already undertakes a number of tree planting programs across the public realm, including the Leafy City Program, Winter Tree Planting Program and the Streetscape Enhancement Program. • Tree protection is also considered for the private realm through the City's local planning framework, and through the State planning framework. • For the private realm, changes to the local planning framework will be investigated to increase tree plantings, and to retain existing trees. • Potential approaches for improving tree canopy on private land include expanding the City's significant tree register to include trees on private land, providing incentives and support for tree management, and introducing a requirement to obtain development approval to remove certain large trees on private land. • The State Government has committed to developing an Urban Greening Strategy for Perth and Peel which is expected to provide guidance for Local Governments to address issues around tree canopy loss. • Depending on the options being considered, high-level community and industry engagement may be required, as well as consideration of budgeting and resourcing matters. Some options will also require approval from the WAPC.
Increased on street parking	<ul style="list-style-type: none"> • Minimum parking requirements for new developments in the City of Joondalup are set out through relevant state and local planning policies. • WAPC approval is required to amend parking standards set out in the R-Codes. • Options to reduce the potential impacts of on-street parking in infill areas may have additional cost, amenity and environmental implications.
Amenity impacts of infill developments on adjoining properties	<ul style="list-style-type: none"> • Measures to address potential amenity impacts from adjoining developments are set out in the R-Codes, Local Planning Scheme No. 3 and local planning policies. • Neighbouring amenity is mostly impacted by overlooking, overshadowing and building bulk.

	<ul style="list-style-type: none"> The HOALPP modifies the R-Codes with the intent of reducing amenity impacts on adjoining neighbours, where a lot is developed to a higher density. WAPC approval is required to further modify provisions relating to overlooking and overshadowing.
Capacity of established infrastructure to service population growth due to infill development	<ul style="list-style-type: none"> State government service providers forward plan for future infrastructure provision as population densities increase within established urban areas as a result of infill development. Service provider bodies are generally guided by strategic planning documents and demand modelling as uptake of density occurs over time. The City has a number of strategic plans and initiatives to address infrastructure provision to cater for the City's growing population. A Local Planning Strategy is a land use planning instrument, and is therefore limited in its ability to affect the delivery and provision of infrastructure projects. It can however be guided in its strategic aspirations by established and future planning for transport, social and service infrastructure.
Lack of developer contribution to neighbourhood improvement in infill areas	<ul style="list-style-type: none"> Development contribution plans are a tool through which developer contributions can be levied for community infrastructure where a need and nexus can be demonstrated as a result of population growth in particular areas. <i>State Planning Policy 3.6 – Infrastructure Contributions</i> provides guidance for the implementation of development contribution plans. The use of development contribution plans in an infill development context is problematic with issues related to the equity of cost sharing and timing uncertainty. Opportunities exist outside of development contribution plans to leverage additional community benefit through development controls and/or policy incentives.
Issue Category 3 Structural Issues	
Issues	Summary of Key findings
Misaligned developer and policy objectives and lack of policy understanding influencing built form outcomes	<ul style="list-style-type: none"> Stakeholder engagement with developer representative bodies and individual developers was undertaken to better understand developer influences and how development outcomes are impacted by statutory planning mechanisms. Key takeaways from this engagement include: <ul style="list-style-type: none"> Return on investment is maximised for infill developments by building larger houses. Land value impacts on a landowners' ability to develop certain housing typologies. Access to financing for a housing development can be dependent on the particular housing typology proposed. Restrictive policy provisions can significantly impact on the affordability of a development. Opportunity for continued engagement with the development industry in the development of future planning policies.

	<ul style="list-style-type: none"> A recent review and update of the City's development application checklists has improved transparency for applicants when lodging a development application as to the specific policy requirements which are applicable to their development.
Complexity of planning framework results in difficulty to engage meaningfully with community	<ul style="list-style-type: none"> Community consultation for development applications is guided by principles set out in the <i>Planning and Development (Local Planning Schemes) Regulations 2015</i> and the City's <i>Planning Consultation Local Planning Policy</i>. A recent review of the City's consultation material has been undertaken to improve transparency and provide additional information to give adjoining landowners a greater understanding of what they are being asked to make comment on. This has been undertaken in response to the feedback received in Phase 1 consultation.
Issue Category 4: Housing supply, demand and affordability	
Issues	Summary of Key findings
Reduced housing affordability	<ul style="list-style-type: none"> Housing in Australia has become less affordable over time due to a number of supply, demand and economic influences. Housing affordability in Western Australia has followed similar trends, although affordability issues are not as acute as they are in eastern states markets. Local Governments have minimal influence in housing affordability beyond ensuring capacity for additional housing supply within a Local Planning Strategy and Scheme. Opportunities exist for further measures to be implemented to remove barriers and incentivise/mandate the provision of affordable housing through new developments. Additional approaches need to be considered in the context of their limitations.
Limited access to housing	<ul style="list-style-type: none"> Housing supply is influenced by a broad range of factors, some of which are outside of the influence of Local Government. The City will need to plan for a greater diversity of housing options to cater for future demographic changes. The City's current local planning strategy provides sufficient capacity for additional housing to be delivered through the market. Market conditions and buyer preferences present obstacles for the development of a greater diversity of dwelling typologies. Provisions included within the amended Residential Design Codes (medium density codes) provide additional incentives for increased diversity in housing typologies through small dwellings provisions.

Revised Residential Design Codes

The State Government has recently released the amended *State Planning Policy 7.3 – Residential Design Codes* (R-Codes), which includes new provisions related to medium density development.

The transitional implementation of the amended R-Codes enables the continued application of R-Code variations through local planning instruments such as the City's *Residential Development*

Local Planning Policy (RDLPP), and the *Development in Housing Opportunity Areas Local Planning Policy* (HOALPP) for a period of 24-months. Within this period the City will be required to undertake a review of its local planning policies and seek approval from the Western Australian Planning Commission (WAPC) for the continued application of policies, or modified versions of policies where deemed appropriate.

A number of the issues discussed in subsequent issues papers which relate specifically to R-Code provisions are therefore recommended to be addressed through this local planning policy review process, noting that there will be further opportunity to modify local planning policies through actions included within the draft Local Planning Strategy document developed in Phase 4.

Building sustainable neighbourhoods

LIVEABILITY AND DIVERSITY FOR FUTURE GENERATIONS

Local Planning Strategy Review

Issue Paper 1

Issue Category: Allocation of density

April 2024

Issue	Phase 2 Action
Lack of community alignment on preferred spatial allocation of density.	Issues investigation paper to undertake a review of the State Government's planning framework to understand requirements and criteria for the allocation of density in the City.

Key Findings:

- The City of Joondalup needs to plan for an additional 22,630 dwellings by 2050 as set out within the State Government planning framework.
- The City is required to demonstrate capacity for additional infill development through its Local Planning Strategy in locations which reflect broader strategic planning objectives set out in the state planning framework.
- There is opportunity for community input into the development of strategic options for the spatial allocation of density in Phase 3, however this input will need to be balanced with the broader strategic planning objectives set out in the state planning framework.
- The Western Australian Planning Commission (WAPC) and the Minister for Planning issue final approval for Local Planning Strategies, including the spatial allocation of density.

State planning instruments to guide allocation of density:

There are a number of State Government strategic planning documents which guide the spatial allocation of density in the Perth metropolitan area. Strategic guidance and specific spatial requirements set out in these documents which are relevant to housing provision are outlined for each document below.

Planning instrument	Purpose	Requirements
Perth and Peel @ 3.5 million	Sets out broad direction for land use planning and infrastructure provision for Perth and Peel.	Strategic guidance: <ul style="list-style-type: none"> • Sets out principles of urban consolidation to limit urban sprawl and encourage greater housing diversity. • Sets requirements for Local Governments to ensure strategic planning objectives for urban consolidation are reflected in strategic planning documents. • Maintains the target for 47 per cent infill development within the Perth and Peel Regions as set out originally in Directions 2031 and beyond. Specific spatial requirements for density: <ul style="list-style-type: none"> • None stipulated as the document provides overarching strategic direction. • Specific planning requirements are set out in the sub-regional planning frameworks.
North-West Sub-regional Planning Framework	Establishes a long-term and integrated planning framework for land use and infrastructure provision for the	Strategic guidance: <ul style="list-style-type: none"> • Sets out key planning framework principles for Local Planning Strategies to address. • Principles include the need to develop a consolidated urban form that limits urban sprawl and places a greater emphasis on urban infill and increased residential density. • Principles include increasing the number of people living close to where they work.

	north-west sub-region.	<ul style="list-style-type: none"> Integrate land use and public transport to contribute to maintaining air quality. Maximise the use of and add value to existing transport, community/social and service infrastructure by concentrating urban and employment opportunities in these locations. <p>Specific spatial requirements for density:</p> <ul style="list-style-type: none"> Sets an additional dwelling target for the City of Joondalup of 22,630 dwellings by 2025, 20,670 of which are to be delivered as infill development. Stipulates ten principles for urban consolidation to provide criteria by which appropriate locations for infill development can be identified.
State Planning Policy 4.2 – Activity Centres	Sets out planning directions for the development of and planning for activity centres in Perth and Peel.	<p>Strategic guidance:</p> <ul style="list-style-type: none"> Sets planning directions for the development of and planning for activity centres in Perth and Peel. Urban consolidation aspirations which reflect those set out in <i>Perth and Peel @ 3.5</i>. Provides a hierarchy of activity centre classifications. Guidance for the allocation of density within and around activity centres. <p>Specific spatial requirements for density:</p> <ul style="list-style-type: none"> Sets out average residential density targets applicable to activity centre classifications and indicative associated densities within walkable catchments. Sets out spatial requirements for activity centre plans (core, frame and centre points and associated walkable catchments).
Liveable Neighbourhoods (2009)	Planning direction for the preparation and assessment of structure plans, activity centre plans and large-scale subdivisions.	<p>Strategic guidance:</p> <p>Neighbourhood development to ensure:</p> <ul style="list-style-type: none"> Compact walkable neighbourhoods which cluster around activity centres. Safe, pedestrian friendly eligible streets. Mixed use development and activity centres that optimize commercial opportunities. Housing diversity, responsive built form and local employment and amenity within a walkable neighbourhood. <p>Specific spatial requirements for density:</p> <ul style="list-style-type: none"> Provides indicative density allocations for catchments around activity centres and high-frequency transport routes. It is noted that this document is currently under review with the development of <i>Neighbourhood Design</i> underway.

Current approach to the spatial allocation of density:

The following outlines the planning areas within the current Local Planning Strategy and Local Planning Scheme which provide capacity for additional infill development to satisfy the requirements of the *North-West Sub-regional Planning Framework*.

Planning instrument	Details
Joondalup Activity Centre Plan	<ul style="list-style-type: none"> • 'Centre' zoned land within the Local Planning Scheme. • <i>Joondalup Activity Centre Plan</i> provides development control provisions. • Provides capacity for an additional 6,941 dwellings.
Whitfords Activity Centre Plan	<ul style="list-style-type: none"> • 'Centre' zoned land within the Local Planning Scheme. • <i>Whitfords Activity Centre Plan</i> provides development control provisions. • Provides capacity for an additional 724 dwellings.
Sorrento Activity Centre Plan	<ul style="list-style-type: none"> • 'Centre' zoned land within the Local Planning Scheme. • <i>Sorrento Activity Centre Plan</i> provides development control. • Development application approved through the State Development Assessment Unit for 77 additional dwellings.
Ocean Reef Marina	<ul style="list-style-type: none"> • Currently being progressed by Development WA. • Provides capacity for 1,300 dwellings when completed.
Housing Opportunity Areas (HOAs)	<ul style="list-style-type: none"> • 10 areas within the City, located around major activity centres and high frequency public transport routes and nodes. • Administered through the application of dual R-coding (e.g. R20/40) to relevant properties within the Local Planning Scheme. • Provides capacity for an additional 21,239 number of dwellings. • Further detail on individual HOAs can be accessed in the City's Local Housing Strategy.

Statutory application of residential density allocation:

The spatial allocation of residential density in the City of Joondalup is set out within the City's Local Planning Scheme through zones and residential density codings designated within the Local Planning Scheme maps. Density codes, which determine how many dwellings can be developed on a lot, can also be designated in a relevant structure plan or precinct plan.

Any changes to the spatial allocation of density in the City would be implemented through amendments to the Local Planning Scheme.

Opportunities for improved community alignment:

The issue of lack of community alignment in relation to the spatial allocation of density in the City of Joondalup presents an opportunity for the community to be involved in future development of strategic options for the spatial allocation of density in Phase 3 of the project. It is important to note that the State Government planning framework is clear in its strategic objectives for urban consolidation around activity and transport nodes, and local planning frameworks are required to be consistent with State Government objectives. As such in seeking community input, the City will need to ensure these spatial parameters are clearly communicated to the community so as to not set false expectations.

Recommendation:

It is recommended that the City undertakes community consultation activities in accordance with the proposed Phase 3 scope of work and community consultation approach to provide the opportunity for greater community alignment in relation to the spatial allocation of residential density in the City of Joondalup.

Building sustainable neighbourhoods

LIVEABILITY AND DIVERSITY FOR FUTURE GENERATIONS

Local Planning Strategy Review Issue Paper 2

Issue Category: Liveability outcomes for infill housing

April 2024

Issue	Phase 2 Action
Infill development changing the established suburban character in infill areas.	<p>No actions for phase 2.</p> <p>Further action to address this issue will be undertaken as part of the options development in Phase 3 including but not limited to potential character studies for various planning catchments, and development of the local planning strategy in Phase 4.</p>

Investigations into character statements/studies for infill areas are best undertaken once a strategic approach for the allocation of density is endorsed at the end of Phase 3. Notwithstanding, the following section provides an overview of current development controls in place to consider existing and desired future character within infill areas, as well as opportunities for character to be further addressed through the planning framework.

Key Findings:

- The City's *Development in Housing Opportunity Areas Local Planning Policy* (HOALPP) includes objectives which require developments to ensure that the design of infill development remains consistent with the established streetscape character where the 'deemed to comply' development standard is not met.
- There is opportunity for the City to undertake character studies for particular infill areas and consider introducing additional development controls to ensure that new development is consistent with the identified existing, or future desired, streetscape character. It is noted that these types of provisions are typically implemented for heritage areas and can have implications for existing landowners and affordability of new dwellings.
- It is acknowledged that some established neighbourhoods in the City may benefit from new development, and that development controls can plan for desired future character.

Mechanisms currently in place:

The following sets out mechanisms currently in place to require new developments within infill areas to be made to be consistent with the established neighbourhood urban form and character.

Planning instrument	Development type	Summary of requirements
HOALPP	All development in a HOA at a higher density	<p>One of the overall objectives of the HOALPP is to ensure that new development enhances and respects the desired character of the locality and provides a neighbourhood within which the residents can identify.</p> <p>The following sub-sections of the development standards within the HOALPP set out objectives requiring new developments in infill areas to remain consistent with the established streetscape character:</p> <ul style="list-style-type: none"> 2. Urban Design – Lot Subdivision 4. Building Height 7. Resident Parking – Location

		It is noted that other sub-sections include objectives which require development to be complementary to the streetscape and to maximise residential amenity to the street through design features and urban form.
--	--	---

Opportunities to address issue further:

The following outlines potential options for additional planning controls relating to urban form and character for new developments within infill areas.

Planning instrument	Key Considerations
Local planning policy:	<p>A local planning policy could:</p> <ul style="list-style-type: none"> • Apply to a specific neighbourhood or area. • Apply more broadly to a specific type of infill area (i.e. train station precinct, shopping centre precinct, urban corridor precinct, suburban renewal precinct etc.) • Set out a character statement for the established area. • Distinguish between buildings in character areas that contribute to the integrity of the streetscape, and those which do not. • Set out objectives for the desired development character outcome for the precinct. • Set out development controls through a local planning policy which includes requirements to achieve objectives for the desired character outcome for the precinct. <p>Examples:</p> <ul style="list-style-type: none"> • City of Bayswater - Character Protection Areas Policy • City of Vincent – Character Area Guidelines Local Planning Policy <p>Other considerations:</p> <ul style="list-style-type: none"> • Neighbourhood character changes over time as building trends change and older dwelling stock is renewed through redevelopment. This occurs in both low and medium density contexts. • Neighbourhood character can be reflected in new developments by way of development controls around building height and scale, as well as built form/typology. • Provisions for specific character elements such as roof types, materials and colours are used primarily for identified heritage precincts. • Some established neighbourhoods in the City may benefit from new development where housing stock is run down or of a lower quality. • Development controls for new development can plan for desired future character. • Neighbourhood character is also established through public infrastructure and facilities such as road and footpath design, as well as light poles and street trees etc. which sits outside of the scope of a local planning strategy. • Investigations into the implementation of development controls to manage character change in infill areas should consider the need to ensure planning policy is not overly restrictive so to place burdensome restrictions on landowners that can have costly implications for residents who are looking to redevelop or modify their property.

Precinct Plan	<p>Precinct Plan could:</p> <ul style="list-style-type: none">• Assess the established precinct's structural elements such as nodes of activity, movement network, public spaces, block and lot patterns, street layout, landscape features, existing heritage and other factors which contribute to the precincts significance, character, and sense of place.• Undertake heritage and/or character studies where the unique urban or architectural character is identified to inform the design response.• Establish a future vision for the precinct which explains how the precinct design will contribute to character and sense of place.• Where unique character or heritage is identified, implement development controls through the precinct structure plan which protects the established character of a precinct. <p>Other considerations:</p> <ul style="list-style-type: none">• Precinct plans can be applied to activity centres, transport stations, urban corridors and mixed-use precincts.• Precinct structure plans are required to respond to guidance and outputs set out in State Planning Policy 7.2 – Precinct Design.
---------------	--

Recommendation:

It is recommended that the City explores neighbourhood character through community consultation and technical work undertaken in Phase 3 of the Local Planning Strategy review to inform key actions to be included within the Local Planning Strategy.

Issue	Phase 2 Action
Poor liveability and design outcomes for medium density housing.	Investigate actions currently being taken to address dwelling liveability in infill areas.

Key Findings:

- Established State and Local Government planning policies include provisions to ensure improved liveability outcomes for infill development within the City of Joondalup through minimum outdoor space, landscaped areas, habitable room sizes, ventilation and access to natural light requirements.
- The recently amended Residential Design Codes include provisions to ensure improved liveability outcomes for medium density developments.
- The City's Design Review Panel provides an additional layer of design scrutiny for larger scale infill developments.
- Options to amend provisions relating to liveability may have onflow effects to other design aspects for infill developments, including affordability.
- The recently amended R-Codes Volume 1 was modified to remove 'medium density' provisions for single houses in R30 and R40 areas due to affordability concerns. This indicates a reduced State Government appetite for additional modifications which may impact affordability.

Consultation outcomes reporting indicated concern in relation to liveability for new dwellings developed as infill housing in the City's medium density areas (HOA's). Specifically noted as having the greatest impacts on liveability were:

- Lack of outdoor space
- Small bedroom and living room sizes
- Lack of ventilation
- Lack of access to natural light

Mechanisms currently in place:

The below summarises the provisions included within relevant state and local planning policies which address liveability for infill development in infill areas (Housing Opportunity Areas).

Outdoor space:

Adequate outdoor living space contributes to the overall liveability of a dwelling as it provides private outdoor space for entertaining, leisure, gardening and connection to the outdoors.

Planning instrument	Development type	Summary of Requirements
R-Codes Vol 1 & HOALPP	<ul style="list-style-type: none"> All single and grouped dwellings in HOAs. Multiple dwellings in areas coded R60 and lower. 	Provisions set out: <ul style="list-style-type: none"> Minimum area and dimension requirements for outdoor living areas. Accessibility to outdoor living areas from a living room/primary living space. Minimum portion of outdoor living area without permanent roof cover.

R-Codes Vol 2 & HOALPP	Multiple dwellings in areas coded R80 and over.	Provisions set out: <ul style="list-style-type: none"> • Minimum area and dimension requirements for private open spaces/balconies. • Screening limitations to ensure adequate outlook from balconies and living spaces. • Integration of service equipment within private open space (e.g. A/C units) into design and not visible from the street.
---------------------------	---	--

Bedroom and living room sizes:

Minimum room dimensions and sizes for common habitable rooms such as bedrooms and living rooms results in improved liveability for dwellings wherein habitable spaces are functional and able to flexibly accommodate furniture and personal goods.

Planning instrument	Development type	Summary of Requirements
R-Codes Vol 1 - Part C R-Codes Vol 2 & HOALPP	All single, grouped & multiple dwellings in HOAs.	Provisions set out: <ul style="list-style-type: none"> • Minimum dimension requirements for habitable rooms. • Minimum area requirements for habitable rooms. • Minimum ceiling height requirements.

Ventilation:

Adequate ventilation improves the overall liveability of a dwelling as it allows for the capture and use of prevailing cool breezes through habitable spaces, resulting in improved air quality within the home and reduced reliance on mechanical ventilation methods such as air conditioners.

Planning instrument	Development type	Summary of Requirements
R-Codes Vol 1 - Part C R-Codes Vol 2 & HOALPP	All single, grouped & multiple dwellings in HOAs.	Provisions set out: <ul style="list-style-type: none"> • Requirements for operable windows to all rooms with the exclusion of storerooms. • Minimum openable area requirements for windows.

Access to natural light:

Access to natural light is important for liveability as it allows for improved comfort for internal living and outdoor living environments. Passive solar design allows for optimised solar gain in winter and protection from heat gain in summer.

Planning instrument	Development type	Summary of Requirements
R-Codes Vol 1 - Part C R-Codes Vol 2 & HOALPP	All single, grouped & multiple dwellings in HOAs.	Provisions set out: <ul style="list-style-type: none"> • Requirements for access to at least two hours of direct sunlight between 9am and 3pm on winter solstice for outdoor living areas and habitable rooms. • Restriction on use of lightwells or skylights as the primary source of daylight to habitable rooms. • Requirements for external shading devices to restrict direct light intrusion during summer months and allow direct light intrusion during winter months.

		<ul style="list-style-type: none"> • Minimum glass area requirements per floor area of habitable rooms. • Minimum un-obscured glazing requirements for windows.
--	--	---

Joondalup Design Review Panel:

Residential development proposals required to be referred to the Joondalup Design Review Panel are as follows:

- All multiple dwelling developments
- Grouped dwelling development of five or more dwellings.

The Joondalup Design Review Panel reviews proposals in the context of:

- The relevant planning framework
- The 10 design principles provided in *State Planning Policy 7: Design of the Built Environment*.

When considering applications on which recommendations have been made by the Joondalup Design Review Panel, the decision-maker is required to have due regard to that recommendation.

Opportunities to address issue further:

The following outlines policy and statutory considerations where further amendments/modification to the development provisions outlined above may be sought to further address issues concerning liveability and design of infill developments.

Category	Key considerations
Amend/replace liveability and design provisions through a local planning policy.	<ul style="list-style-type: none"> • Amendments to development provisions relating to liveability and design set out in the R-Codes Volumes 1 and 2 through a local planning policy may require WAPC approval. • The HOALPP currently replaces or modifies R-Code provisions for room sizes, ventilation and solar access. • The recently amended R-Codes Volume 1 includes provisions for room size, ventilation and solar access for medium density infill developments. • Any proposed modifications to the above provisions should be considered in the context of their impact on development affordability and the need to still allow for practical outcomes for smaller subdivided blocks. • It is noted that the State Government recently delayed the implementation of amendments to the R-Codes Volume 1, to pull back on onerous provisions which were considered to adversely impact on housing provision and affordability for single houses in R30 and R40 density codes.
Amend Joondalup Design Review Panel terms of reference.	<ul style="list-style-type: none"> • The terms of reference for the JDRP currently require infill developments of five or more grouped dwellings, and all multiple dwellings to be referred for review.

	<ul style="list-style-type: none">• Amending the terms of reference to include a greater number, or all infill development applications would have significant impacts on resourcing, processing times for development applications and time/capacity implications for panel members.• Amending the terms of reference would have affordability implications for smaller development applications if the terms of reference were amended to include a greater proportion of infill developments.
--	---

Recommendation:

The City is required to review its local planning policies in relation to the recently amended R-Codes Volume 1 within the next 24 months. As such it is recommended that provisions relating to liveability are considered in relation to those set out in the R-Codes Vol 1 as part of this review process.

It is noted that the revised Local Planning Strategy document will include actions which relate to the further review or modifications of local planning policies to address issues identified. It is therefore considered that there will be additional opportunity for issues relating to liveability to be addressed further as a part of actions included in the revised Local Planning Strategy.

Issue	Phase 2 Action
Poor sustainability outcomes for medium density housing.	Investigate actions currently being taken to address sustainability in infill areas.

Key Findings:

- Established State and local government planning policies include provisions to ensure improved sustainability outcomes for infill development within the City of Joondalup through minimum landscaping and tree planting requirements and solar passive design requirements.
- The City of Joondalup would require WAPC approval to further amend provisions relating to landscaping, tree provision and solar passive design in the Residential Design Codes through a local planning policy, or through the local planning scheme.
- The recently amended Residential Design Codes include provisions to improve sustainability outcomes for medium density developments.
- Amendments to the National Construction Code will take additional steps to improve thermal performance and energy efficiency for new residential developments.
- There is opportunity for the City to provide incentives or requirements for environmentally sustainable design through the Local Planning Strategy. These should be considered in the context of housing affordability, should be tested with the community and development industry, and are subject to WAPC support.
- Other, non-planning approaches may be available to improve sustainability outcomes within infill housing, including financial incentives and community education.

Mechanisms currently in place:

Environmentally Sustainable Design

Environmentally sustainable design principles aim to improve the health and comfort of buildings for occupants whilst improving energy and resource efficiency of new dwellings.

Environmentally sustainable design principles include:

- Locating indoor and outdoor living and entertainment areas to the north, maximising access to winter sun and, with eaves, minimising summer sun.
- Renewable energy generation (including rooftop solar).
- Using water and energy efficient appliances.
- Placing windows and doors on opposite sides of the room to create good natural cross-ventilation.
- Using light coloured roofs and walls to reflect heat.
- Integration of landscaping and trees to provide shade and stormwater management, and to contribute to local biodiversity.

The table below summarises the provisions included within relevant State and local planning policies which address environmentally sustainable design for infill development in medium density areas (HOAs).

Planning instrument	Development type	Summary of requirements
---------------------	------------------	-------------------------

HOALPP	All development in a HOA at the higher density code.	<ul style="list-style-type: none"> • Minimum landscaped area requirements. • Tree canopy and deep soil area requirements. • Solar passive design requirements (including northern aspect and cross ventilation).
R-Codes Vol 2	Multiple dwellings in areas coded R80 and over.	<ul style="list-style-type: none"> • Solar passive design requirements (including northern aspect and cross ventilation). • Energy efficiency requirements. • Water management and conservation requirements. • Tree canopy and deep soil area requirements.
Environmentally Sustainable Design Local Planning Policy	Residential, commercial and mixed-use buildings (excluding single and grouped dwellings).	<p>While the policy sets out that applicable development applications must be accompanied by an Environmentally Sustainable Design Checklist, there are no requirements to implement any sustainability measures.</p> <p>The following sustainability measures are only <i>encouraged</i> through the policy:</p> <ul style="list-style-type: none"> • Solar passive design • Sustainable building materials • Renewable energy technologies • Energy, water and material efficiency • Water-wise native gardens • Indoor air quality enhancement

In addition to the abovementioned planning instruments, the National Construction Code (ie. building legislation separate to planning frameworks) has recently been updated to improve energy efficiency requirements for new dwellings, which are considered through the building permit application process. Further information is provided below.

Energy Efficiency Requirements under the National Construction Code:

The 2022 edition of the National Construction Code (NCC 2022) was adopted in Western Australia on 1 May 2023, and will become the mandatory standard for new dwelling construction on 1 May 2025. The NCC 2022 raises the minimum level of thermal performance for new single houses, grouped dwellings and apartments from the equivalent of 6 stars to the equivalent of 7 stars under the Nationwide House Energy Rating Scheme (NatHERS). For the average new home, achieving a 7-star NatHERS rating may require elements such as better insulation, higher quality glazing, lighter roof and wall colours (to reduce heat gain), and solar passive building orientation.

NCC 2022 also requires consideration of the energy efficiency of appliances used in new homes and encourages on-site renewable energy systems (particularly rooftop solar). Together with the requirement for achieving a 7-star NatHERS rating, these changes will improve occupant comfort and amenity, and increase energy efficiency in new homes.

Opportunities to address issue further:

The following outlines potential options for additional planning mechanisms relating to sustainability outcomes for new developments within infill areas.

Category	Approaches	Key considerations
Incentives for environmentally sustainable design measures for new dwellings	Development concessions and/or bonuses (e.g. reduced open space or additional building height) may be included within the local planning scheme, or within an existing or new local planning policy	<ul style="list-style-type: none"> Approval from the WAPC would be required for an amendment to the planning scheme, and may be required if amending the provisions of the Residential Design Codes through a local planning policy. Consideration should be given to community and development industry views on potential development bonuses and concessions. Consideration should be given to the existing and upcoming energy efficiency requirements under the National Construction Code.
	Reduced processing timeframes ('fast tracking') for development applications which incorporate environmentally sustainable design measures	<ul style="list-style-type: none"> This approach would require sufficient resourcing to ensure development applications are processed within the advertised timeframes.
Minimum requirements for environmentally sustainable design measures for new dwellings	These requirements could be included within the local planning scheme, or within an existing or new local planning policy	<ul style="list-style-type: none"> Sustainability requirements could be implemented on a sliding scale, with fewer requirements for smaller dwellings and greater requirements for larger dwellings. Approval from the WAPC would be required for an amendment to the planning scheme, and may be required if amending the provisions of the Residential Design Codes through a local planning policy. Consideration should be given to the existing and upcoming energy efficiency requirements under the National Construction Code. Consideration should be given to community and development industry views on which measures would be most feasible and cost-effective. Impact on housing affordability to be considered. In light of the existing housing market and supply pressures currently being experienced, measures which are seen to be hindering housing supply and affordability are unlikely to be supported by the community or WAPC.

Outside of the planning system, the City may improve sustainability outcomes for new dwellings through the following measures:

- Financial incentives (e.g. grants/rebates or concessions on Council rates) for the incorporation of environmentally sustainable design measures within new dwellings. Consideration would need to be given to the resourcing implications of this approach.
- Community education. The City of Vincent, for example, provides extensive information on environmentally sustainable design on the City's website, including a video series exploring how to implement it for new buildings, as well as the associated occupant, owner and community benefits.

It is noted that the City provides a range of environmental publications on its website which provide information and guidance in relation to the following:

- Environmentally sustainable initiatives for the home in the ['Think Green Living Guide'](#).
- A self-assessment and guidance as to how to be more energy efficient in the home through the [DIY Home Energy Audit](#).

Recommendation:

The City is required to review its local planning policies in relation to the recently amended R-Codes Volume 1 within the next 24 months. As such it is recommended that provisions relating to landscaping, tree canopy and solar passive design are considered in relation to those set out in the R-Codes Vol 1 as part of this review process.

It is noted that the revised Local Planning Strategy document will include actions which relate to the further review or modifications of local planning policies to address issues identified. It is therefore considered that there will be additional opportunity for issues relating to environmentally sustainable design to be addressed further as a part of actions included in the revised Local Planning Strategy.

Issue	Phase 2 Action
Loss of tree canopy in infill areas and resultant urban heat impacts.	<ul style="list-style-type: none">Investigate actions currently being taken to address urban tree canopy reduction.Investigate planning mechanisms available to local government to support retention of tree canopy.

Key Findings:

- The City already undertakes a number of tree planting programs across the public realm, including the Leafy City Program, Winter Tree Planting Program and the Streetscape Enhancement Program.
- Tree protection is also considered for the private realm through the City's local planning framework, and through the State planning framework.
- For the private realm, changes to the local planning framework will be investigated to increase tree plantings, and to retain existing trees.
- Potential approaches for improving tree canopy on private land include expanding the City's significant tree register to include trees on private land, providing incentives and support for tree management, and introducing a requirement to obtain development approval to remove certain large trees on private land.
- Depending on the options being considered, high-level community and industry engagement may be required, as well as consideration of budgeting and resourcing matters. Some options will also require approval from the WAPC.

Benefits

The urban tree canopy provides a range of environmental and community benefits, including mitigating the urban heat island effect, mitigating and adapting to the effects of climate change, supporting biodiversity, and enhancing the green and leafy character of the City.

The protection and integration of the natural environment with the urban environment is a key element that contributes to the City's character and liveability. The City's *Local Planning Strategy* identifies the following as an objective: "*Protect and enhance the amenity and attractiveness of the suburbs, with emphasis on maintaining and improving streetscapes and recognising the important role trees play in the urban environment*". Community desire for more trees and greener spaces is also captured within the City's *Strategic Community Plan 2022-2032*.

Existing work being undertaken:

Tree planting on public land:

The City has a number of different programs which involve the planting of trees on public land. The table overleaf shows the contribution that each of these programs make to the overall planting of trees on public land within the City.

Planting location	Program name	Number of trees planted (2023)
Residential verges	Winter Tree Planting Program	596 (15%)
	Leafy City Program	1,677 (43%)
Parks	Playspace Renewals and Winter Tree Planting Program	737 (19%)
Road Reserves	Streetscape Enhancement Program	917 (23%)
TOTAL		3,927

Residential Verges – Winter Tree Planting Program:

Under the Winter Tree Planting Program, the City supplies and plants trees on residential verges free of charge at the request of the property owner. Upon request, one tree is allocated for a standard (non-corner) property, and up to three trees are allocated for a corner lot.

Residents can make a request for a tree through the City's website and can choose the species of tree from the City's Street Tree List. This voluntary program can be accessed by residents located both within and outside of HOAs.

Residential verges - Leafy City Program:

The Leafy City Program is a non-voluntary (no-opt-out) residential verge planting program. Suburbs receiving the Leafy City Program have been identified as 'hot-spots' via thermal mapping and tree-canopy surveying, with the selection of specific streets being supported by the advice of the City's arborist, landscape architects and civil engineers.

The number of trees planted under the Leafy City Program varies each year, depending on the size of the suburb, the configuration of footpaths and services, and the size of any HOA present. For instance, it is anticipated that approximately 2,000 trees will be planted under the 2023-24 *Leafy City Program*, which is more than double those planted in 2021. Since the program was launched in 2017, over 4,500 new trees have been added to the City's residential verges.

One of the major benefits of the Leafy City Program is that the planting of trees within most residential verges on a street at the same time can create a consistent 'tree-boulevard' effect, which greatly improves the visual amenity of local streets once the trees are established.

At the November 2023 Council meeting, Council resolved to expand the Leafy City Program into HOAs, which had previously been excluded from the program.

Parks - Winter Tree Planting Program and Playspace Renewals:

The City has an ongoing annual program to assess where additional trees may be planted within parks. Tree planting for individual parks, including parks within HOAs, is undertaken as part of the Winter Tree Planting Program. Planting within parks can also occur during infrastructure projects, such as playspace renewals, if the existing tree canopy for that park is considered to be lacking.

The number of trees planted within parks varies annually based on the capacity of the Winter Tree Planting Program and number of infrastructure projects being undertaken.

Road reserves - Streetscape Enhancement Program:

Tree plantings for the City's major road reserves are provided through the Streetscape Enhancement Program. This program includes tree planting in non-residential verges, and both raised and street-level, painted median strips.

The planting of trees within street-level, painted medians is generally not desirable due to:

- limited space for root growth, and heat reflection from the road, which can lead to canopy development being stunted
- planting locations can be significantly limited by vehicle crossovers and requirements to maintain sightlines along the road.

Notwithstanding, where feasible, the planting of trees within street-level, painted medians in HOAs has largely been completed.

Cost for street tree removal:

The City has mechanisms in place to ensure that the full value of trees on public land is factored into any proposal to remove those trees (for example to facilitate a new vehicle crossover as part of an approved development).

Where a proposed development on private land involves the removal of a street tree, the applicant is required to not only pay the associated removal and replacement costs, but also pay for the amenity value of the tree calculated using the Helliwell Method.

The Helliwell Method is a globally recognised system which calculates a financial amenity value of the tree using a number of criteria including its life expectancy, tree size, rarity, importance in the landscape and the presence of other trees.

Significant Tree Register:

The City maintains a Significant Tree Register for trees (including individual trees, a stand of trees, or an avenue of trees) on land owned or managed by the City. Members of the community can nominate trees for inclusion on the register and the City will review those nominations against certain criteria. Trees may be considered for inclusion in the register based on their visual/aesthetic, botanic/scientific, ecological and historical/ commemorative/cultural and social value. Where trees are placed on the register, the City will prepare a tree management plan and monitor the trees to ensure their ongoing health.

There are currently 12 significant tree locations on the City's Significant Tree Register, all located on public land.

Planting of street trees as part of development approval:

In accordance with the City's *Development in Housing Opportunity Areas Local Planning Policy*, development proposals for single houses, grouped dwellings and multiple dwellings are required to include the planting of one street tree on the adjacent verge for every 10 metres of lot frontage. The tree is to be shown on the development plans, and a condition of approval is imposed requiring the tree to be planted and maintained to the City's specifications.

Tree planting on private land:

State and local planning framework:

The R-Codes Volumes 1 and 2 have been reviewed and updated in recent years to better protect and enhance the urban tree canopy.

The City's local planning framework, including the *Development in Housing Opportunity Areas Local Planning Policy*, also provides requirements relating to trees on private land.

Amendments to the Residential Design Codes has also included provisions for tree canopy provision. These provisions will continue to be replaced by the tree planting requirements in the HOALPP for a 24-month period, during which time the City will undertake a review of its policies in relation to the recently amended Residential Design Codes.

The table below summarises the requirements relating to tree canopy within the State and local planning framework.

Planning instrument	Development type	Tree requirement
R-Codes Volume 1	All single houses and grouped dwellings	<ul style="list-style-type: none"> Minimum number of trees to be planted per dwelling, and in communal parking areas. Retention of trees in communal open space (where provided).
	Apartments/multiple dwellings within areas of less than R60	<ul style="list-style-type: none"> Minimum number of trees to be planted based on site area. Retention of trees in communal open space (where provided).
R-Codes Volume 2	Apartments/multiple dwellings within areas R80 or higher	<ul style="list-style-type: none"> Trees meeting certain criteria to be retained. Minimum number and size of trees required to be planted or retained based on site area. Deep soil area can be reduced where an existing tree is retained.
Development in Housing Opportunity Areas Local Planning Policy	All single houses, grouped dwellings and apartments/multiple dwellings within HOAs developed at higher density code	<ul style="list-style-type: none"> Minimum percentage of site to be landscaped. Minimum number and size of trees to be planted or retained based on size of landscape area. Additional trees to be planted in verge.

Trees required as per the above are to be shown on the development plans, and a condition of approval is imposed requiring the tree/s to be planted and maintained to the City's specifications.

Opportunities for increasing tree canopy:

A report was presented to the November 2023 Council meeting which outlined the existing approaches to protecting and expanding tree canopy within the City (noted above), as well as potential approaches to further protect and expand the City's tree canopy. Council resolved as follows:

- 1 NOTES that the City will continue to promote awareness of the Winter Tree Planting Program;

- 2 *SUPPORTS the inclusion of Housing Opportunity Areas within the Leafy City program, noting that this will be undertaken within current budgets and resources;*
- 3 *REQUESTS the Chief Executive Officer to investigate the following as part of the review of the City's Local Planning Strategy and Local Planning Scheme No.3:*
- 3.1 expanding the City's existing significant tree register to include trees on private land; and*
- 3.2 possible incentives and support for tree management on private land;*
- 3.3 additional controls for the retention of mature trees, in particular hollowed trees.*

The matters for further investigation as part of the City's Local Planning Strategy and Local Planning Scheme No.3 (Resolution 3) are discussed further below.

Approaches	Key considerations
<p>Expanding the City's existing Significant Tree Register to include trees on private land.</p> <p>This approach would require a scheme amendment to establish the requirement to obtain development approval to remove a tree listed on the register.</p> <p>A local planning policy may also be prepared to guide the assessment of development applications received for the removal of trees listed on the register.</p> <p>Incentives could also be offered to landowners who have a listed tree on their property.</p>	<p>This is the WAPC's preferred approach to tree retention on private land. While some local governments with a significant tree register require consent from the affected landowner for a tree to be nominated and placed on the list, others allow nominations to be made and considered without landowner consent.</p> <p>While significant tree registers can play an important role in telling the social and cultural story of a local area, it is not considered that this approach by itself would have a significant impact on tree retention on private land.</p> <p>Consideration should be given to:</p> <ul style="list-style-type: none"> • Preparedness by, and capacity of, the City to undertake compliance action against landowners, including the possible imposition of financial penalties, where a tree on the significant tree register is removed without development approval having first been obtained. • Sufficient engagement with the community to ensure that landowners are aware of their obligations to obtain development approval to remove a tree listed on the significant tree register. Even with an effective engagement approach, compliance action against landowners for removing a tree, which they can currently do without development approval, may not be well received by the community. • The potential increase in development applications associated with this option. Additional resources may be required to support this increased application load, including undertaking compliance action where required.
<p>Incentives and support for tree management. Examples include:</p> <ul style="list-style-type: none"> • Development concessions and bonuses (e.g. increased building height); 	<ul style="list-style-type: none"> • Criteria would need to be established to determine which trees would be eligible for such incentives and support (e.g. trees on the significant tree register, or large canopy trees meeting certain size criteria).

Approaches	Key considerations
<ul style="list-style-type: none"> Maintenance support (e.g. additional green verge collections); and Financial incentives (e.g. concessions on Council rates). 	<ul style="list-style-type: none"> Approval may be required from the Western Australian Planning Commission if amending the provisions of the Residential Design Codes through a local planning policy. Consideration should be given to community and development industry views on potential development bonuses and concessions (e.g. increased building height). The City would need to provide resourcing to deliver financial incentives or additional tree maintenance support.
<p>Additional controls for the retention of mature trees on private land. This could involve:</p> <ul style="list-style-type: none"> Developing of a set of broad tree criteria (for example canopy diameter, tree height and/or trunk size, trees with hollows); and Establishing the requirement to obtain development approval to remove trees on private land meeting the criteria. <p>Incentives could also be offered to landowners who have a tree meeting the established criteria.</p>	<p>This approach would be a significant departure from the existing planning framework. The City of Nedlands progressed a scheme amendment to implement this approach and it was not supported by the Minister for Planning.</p> <p>The Western Australian Local Government Association (WALGA) has prepared a model local planning policy to facilitate this approach.</p> <p>Consideration should be given to:</p> <ul style="list-style-type: none"> Preparedness by, and capacity of, the City to undertake compliance action against landowners, including the possible imposition of financial penalties, where a tree meeting the specified criteria is removed without development approval having first been obtained. Sufficient engagement with the community to ensure that landowners are aware of their obligations to obtain development approval to remove a tree meeting the specified criteria. Even with an effective engagement approach, compliance action against landowners for removing a tree, which they can currently do without development approval, may not be well received by the community. This option would likely lead to an increase in development applications being received. Additional resources may be required to support this increased application load.

Recommendation:

It is recommended that the actions outlined as part of Council's resolution be further investigated and/or implemented through actions included as part of the revised Local Planning Strategy.

Issue	Phase 2 Action
Increased on-street parking in infill areas.	Investigate parking issues and options relevant to medium density infill areas

Key Findings:

- Minimum parking requirements for new developments in the City of Joondalup are set out through relevant state and local planning policies.
- WAPC approval is required to amend parking standards set out in the Residential Design Codes.
- Options to reduce the potential impacts of on-street parking in infill areas may have additional cost, amenity and environmental implications.

Consultation outcomes reporting indicated the following issues in relation to increased on-street parking in infill areas.

- On-street parking is often the result of inadequate onsite parking provision for infill developments.
- On-street parking results in compromised safety for road users and pedestrians.

Mechanisms currently in Place:

The following sets out relevant parking standards which currently apply to the City's medium density infill areas through the *Residential Design Codes* (R-Codes) and the *Development in Housing Opportunity Areas Local Planning Policy* (HOALPP).

The following provides relevant definitions:

Definitions	
Location A (inside HOAs)	Resident parking ratios shall be in accordance with Location A (SPP 7.2) where: <ul style="list-style-type: none"> a. Development is within an 800 metre walkable catchment of a train station within or adjacent to a HOA. b. Development is within a 200 metre walkable catchment of a high frequency bus stop.
Location B	Includes all land that is not within Location A.
High frequency	A public transport route with timed stops that runs a service at least every 15 minutes during week day peak periods (7 to 9am and 5 to 7pm).

The tables below summarise the requirements for residential and visitor parking within the State and local planning framework for housing developed within medium density infill areas (HOAs).

The City requires WAPC approval to modify any parking standards through a local planning policy or scheme provision.

Residential Parking:

Planning instrument	Development type	On-site residential parking requirement																				
R-Codes Vol 1 & HOALPP	Single houses, grouped dwellings, Aged persons dwellings and ancillary dwellings, Multiple dwellings within areas coded R60 or less	Minimum car parking requirements:																				
		<table><tr><th>Location A</th><th>Minimum parking space(s) (per dwelling)</th></tr><tr><td>Ancillary dwelling</td><td>0</td></tr><tr><td>Studio and 1 bedroom dwelling</td><td>0</td></tr><tr><td>2 bedroom dwelling</td><td>0</td></tr><tr><td>3+ bedroom dwelling</td><td>1</td></tr><tr><th>Location B</th><th>Minimum parking space(s) (per dwelling)</th></tr><tr><td>Ancillary dwelling</td><td>0</td></tr><tr><td>Studio and 1 bedroom dwelling</td><td>1</td></tr><tr><td>2 bedroom dwelling</td><td>1</td></tr><tr><td>3+ bedroom dwelling</td><td>1</td></tr></table>	Location A	Minimum parking space(s) (per dwelling)	Ancillary dwelling	0	Studio and 1 bedroom dwelling	0	2 bedroom dwelling	0	3+ bedroom dwelling	1	Location B	Minimum parking space(s) (per dwelling)	Ancillary dwelling	0	Studio and 1 bedroom dwelling	1	2 bedroom dwelling	1	3+ bedroom dwelling	1

			2+ bedroom dwellings	1 bay per dwelling	1.25 bays per dwelling										
Visitor	1 bay per four dwellings up to 12 dwellings 1 bay per eight dwellings for the 13th dwelling and above														

Opportunities to address issue further:

The following outlines opportunities for the City to further address on-street parking as a result of infill development.

Category	Approaches	Key considerations
Local planning policy	<ul style="list-style-type: none"> Increased visitor parking requirements Increased residential vehicle parking requirements. 	<ul style="list-style-type: none"> WAPC approval required to modify R-Codes – previous proposals to increase onsite parking have not been supported. Requirements for additional visitor or residential parking bays on site compromises space on the lot for living/open space/landscaping or requires additional height allowances to compensate for lost ground floor area to parking. Additional building height can have implications for neighbouring amenity and affordability.
Infrastructure upgrades in infill areas	<ul style="list-style-type: none"> Street upgrades to include formalised visitor parking bays in verges. 	<ul style="list-style-type: none"> Has resourcing implications. Has cost implications. Reduction in verge landscaped area. Potentially inequitable as not all sites can accommodate verge parking. Was implemented previously and did not meet community expectations.
Parking compliance	<ul style="list-style-type: none"> Street parking restrictions in infill areas. 	<ul style="list-style-type: none"> Has resourcing implications. Has cost implications.

	<ul style="list-style-type: none"> Residential permit requirement for street parking in infill areas. 	<ul style="list-style-type: none"> Parking restrictions would impact established landowners within infill areas.
Typology restrictions	<ul style="list-style-type: none"> Through the application of density codes and policy provisions, the City can limit certain types of dwellings in street typologies wherein the nature of the street, and lots means on street parking creates greater issues for movement and safety. E.g. restricting multiple dwellings in cul-de-sacs. 	<ul style="list-style-type: none"> Has implications for the total yield of additional dwellings the City will achieve through its local planning strategy. Down-coding of lots would mean the need for upcoding elsewhere to demonstrate capacity. The HOALPP and scheme provisions currently provide restrictions for multiple dwellings to be developed in certain locations.

Recommendation:

The City is required to review its local planning policies in relation to the recently amended R-Codes Volume 1 within the next 24 months. As such it is recommended that provisions relating to car parking are considered in relation to those set out in the R-Codes Vol 1 as part of this review process.

It is noted that the revised Local Planning Strategy document will include actions which relate to the further review or modifications of local planning policies to address issues identified. It is therefore considered that there will be additional opportunity for issues relating to parking to be addressed further as a part of actions included in the revised Local Planning Strategy. This is also recommended as parking provision requirements will be dependent on the strategic approach to the allocation of density and housing typologies which is endorsed following Phase 3.

Issue	Phase 2 Action
Amenity impacts of infill developments on adjoining properties.	Investigate actions currently being taken to address impacts of transitional density change in infill areas.

Key Findings:

- Measures to address potential amenity impacts from adjoining developments are set out in the Residential Design Codes and local planning policies.
- Neighbouring amenity is mostly impacted by overlooking, overshadowing and building bulk.
- The HOALPP and in the case of overshadowing, the City's local planning scheme, modifies the Residential Design Codes with the intent of reducing amenity impacts on adjoining neighbours, where a lot is developed to a higher density.
- WAPC approval is required to further modify provisions relating to overlooking and overshadowing.

Consultation outcomes reporting indicated concern in relation to adverse impacts of infill developments on adjoining established low density dwellings. Specifically noted as having the greatest impacts on amenity were:

- Overlooking/loss of privacy
- Overshadowing
- Impact of building bulk

Mechanisms currently in place:

The tables below summarise the provisions included within relevant state and local planning policies which act to minimise overlooking/loss of privacy for infill development in medium density areas (HOAs).

Overlooking/loss of privacy:

The R-Codes set out provisions which aim to limit overlooking from upper floor bedroom and living room windows, as well as balconies and elevated outdoor living areas. The R-Codes acknowledges that these provisions are not intended to completely restrict overlooking, however it aims to protect visual privacy to as much as reasonably practicable in an urban context.

Planning instrument	Development provision	Summary of requirements
R-Codes Vol 1 R-Codes Vol 2	Setback requirements for windows	<ul style="list-style-type: none"> • Minimum 'cone of vision' setbacks to lot boundaries from major openings (windows to bedrooms, living rooms and studies etc.). • Cone of vision radius is dependent on the applicable density code of the adjoining lot.

	Setback requirements for unenclosed outdoor active habitable spaces	<ul style="list-style-type: none"> Minimum 'cone of vision' setbacks to side boundaries from unenclosed outdoor active habitable spaces (balconies, elevated decks etc.)
	Window screening requirements	<ul style="list-style-type: none"> Minimum screening height requirements where setbacks are not able to be met. Minimum screening material and obscurity standards.
	Where adjoining lots are developed at a lower density, setbacks are determined by reference to the lower density code.	

Overshadowing:

The R-Codes, the HOALPP and Local Planning Scheme No. 3 set out provisions to limit excessive overshadowing to neighbouring properties as a result of development.

Planning instrument	Development provision	Summary of requirements
R-Codes Vol 1 R-Codes Vol 2 & HOALPP	Maximum overshadowing standards	<ul style="list-style-type: none"> Maximum percentage of adjoining sight area overshadowing requirements per the development intensity of the affected property. Consideration for maximum proportionate overshadowing where a development site shares its southern boundary with a lot and the lot is bound to the north by another lot.

Impact of building bulk:

The R-Codes and HOALPP set out provisions to manage the bulk of developments through minimum street and side and rear building setback requirements, maximum building height requirements, maximum site fill requirements and maximum plot ratio requirements for multiple dwellings. These tools can be used to ensure that bulk impacts on adjoining properties are managed appropriately while not being overly burdensome to develop housing on a site.

Planning instrument	Development provision	Summary of requirements
HOALPP	Street setbacks	<ul style="list-style-type: none"> Minimum and average setbacks to the street.
R-Codes Vol 1 R-Codes Vol 2 & HOALPP	Side and rear setbacks	<ul style="list-style-type: none"> Minimum side and rear setbacks for ground and upper floors. Maximum boundary wall length. Maximum and average boundary wall height. Exemption for walls over these dimensions where they abut another wall of similar proportions
HOALPP	Building height	<ul style="list-style-type: none"> Sets maximum building height of two storeys.

R-Codes Vol 1	Site works	<ul style="list-style-type: none"> Maximum levels of fill within a site. Building setbacks take level of fill into consideration when calculating wall height.
R-Codes Vol 2	Plot ratio	<ul style="list-style-type: none"> Sets maximum allowable volume of development within a building envelope. Applies to multiple dwellings only.

Opportunities to address issues further:

The following outlines policy and statutory considerations where further amendments/modification to the development provisions outlined above may be sought to further address issues concerning amenity impacts from infill developments.

Category	Key considerations
Overlooking/loss of privacy	<ul style="list-style-type: none"> Development controls which manage overlooking/loss of privacy are set out in the R-Codes Volumes 1 and 2 and require WAPC approval for the City to modify the requirements through a local planning policy. The intent of overlooking provisions within the R-Codes is not to completely prevent all overlooking as it is recognised that this is not practicable within an urban context. Any proposed modification would need to consider the impact on design and development viability for new developments, particularly in urban areas where prevention of overlooking completely is not practically achievable.
Overshadowing	<ul style="list-style-type: none"> Development controls which manage overshadowing are set out in the R-Codes Volumes 1 and 2 and require WAPC approval for the City to modify or replace requirements through a local planning policy. These requirements are already modified through the HOALPP to provide stronger restrictions regarding overshadowing for new developments in HOAs. Any proposed modification would need to consider the impact on design and development viability for new developments, particularly in light of the development of smaller lots where two-storey development options may be the only way to achieve a liveable development outcome. In application the more restrictive requirements currently set out in the HOALPP and the Local Planning Scheme have been noted to be overly restrictive for development on narrow east/west facing lots.
Impact of building bulk	<ul style="list-style-type: none"> Development controls which manage street setbacks, lot boundary setbacks, building height and site works can be amended or replaced through a local planning policy without requiring WAPC approval. Currently the HOALPP replaces or modifies R-Code provisions for lot boundary setbacks and building height for infill development occurring in HOAs to manage impact on adjoining properties. Opportunity remains for the City to further modify these provisions through future amendments to the HOALPP or through the introduction of a new Local Planning Policy. Any proposed modifications to the above provisions should be considered in the context of their impact on development viability and the need to still allow for liveable outcomes for smaller subdivided blocks.

Recommendation:

The City is required to review its local planning policies in relation to the recently amended R-Codes Volume 1 within the next 24 months. As such it is recommended that provisions relating to neighbouring amenity are considered in relation to those set out in the R-Codes Vol 1 as part of this review process.

It is noted that the revised Local Planning Strategy document will include actions which relate to the further review or modifications of local planning policies to address issues identified. It is therefore considered that there will be additional opportunity for issues relating to neighbouring amenity to be addressed further as a part of actions included in the revised Local Planning Strategy. This is also recommended as elements such as lot boundary setbacks and building heights will be dependent on the strategic approach to the allocation of density and housing typologies which is endorsed following Phase 3.

Issue	Phase 2 Action
Capacity of established infrastructure to service population growth due to infill development.	<ul style="list-style-type: none">• Review and synthesise existing projects being undertaken by the City regarding infrastructure and service provision to understand how the City is planning for delivery of community, transport and other infrastructure.• Engage with service providers to seek preliminary information on potential capacity issues for various infrastructure portfolios.

Key Findings:

- State government service providers forward plan for future infrastructure provision as population densities increase within established urban areas as a result of infill development.
- Service provider bodies are generally guided by strategic planning documents and demand modelling as uptake of density occurs over time.
- The City has a number of strategic plans and initiatives to address infrastructure provision to cater for the City's growing population.
- A Local Planning Strategy is a land use planning instrument, and is therefore limited in its ability to affect the delivery and provision of infrastructure projects. It can however be guided in its strategic aspirations by established and future planning for transport, social and service infrastructure.

Consultation outcomes reporting indicated concern in relation to the capacity of existing infrastructure to cater to population growth as a result of infill development. This included concern in relation to:

- The capacity of the established road network and public transport network to accommodate additional trips/usage.
- The capacity of established community infrastructure such as schools, main roads, water, power etc.
- The provision of social infrastructure such as parks, community facilities and other public spaces.
- The provision of sustainable transport infrastructure.
- The provision of improved state and local government transport infrastructure.

State Government service providers:

The following sets a summary of how different state government service providers plan for future service and infrastructure provision in established urban areas where residential densities are likely to increase. This information was ascertained following engagement with the below service providers.

Service Provider	Future planning for infrastructure
ATCO Gas	<ul style="list-style-type: none"> • ATCO conducts capacity modelling annually for the gas network to ensure gas availability for future growth. • ATCO refers to developer masterplans for new growth areas or historical growth in an area as input to modelling. Where large developments are proposed, ATCO will work with Councils and developers to future plan for the gas network to support growth in demand. • Through annual capacity modelling of the gas network, ATCO identifies areas for reinforcement via different options such as new gas regulating station, new pipelines or pressure increases to ensure gas availability for current and future gas users. • ATCO Gas' Sustainability Strategy sets out sustainability considerations in planning and development of future gas infrastructure.
Department of Education	<ul style="list-style-type: none"> • Strategic planning for school sites is guided by Operational Policy 2.4 – Planning for School Sites (OP2.4) which was developed by the WAPC in partnership with the Department of Education. • OP2.4 considers demand for school sites in the planning and design of land for residential purposes. This includes setting of general provisions for the number of school sites to be applied per number of dwellings in a locality. This takes into consideration the existing number of public, private and independent schools within a particular location. • OP2.4 sets out the need to ensure that strategic planning for residential purposes is done in consultation with both government and non-government education providers in order to assess the need for additional primary school infrastructure.
Infrastructure WA	<ul style="list-style-type: none"> • Infrastructure WA (IWA) provides advice to Government on strategic infrastructure matters, primarily through the State Infrastructure Strategy. • IWA reviews relevant agencies' strategic asset plans on an annual basis, to support improved long-term public infrastructure planning. • IWA provides advice to the government annually to support the preparation of the 10-year State Infrastructure Program. This advice includes IWA's assessment of the priority infrastructure needs at a state/regional level over the mid-term, based on information provided in agencies strategic asset plans and other relevant data.
Main Roads WA	<ul style="list-style-type: none"> • Main Roads completes strategic-level modeling to forecast future road network volumes using land use information sourced from the Department of Planning, Lands, and Heritage (DPLH). This information would capture residential land use densities included as part of approved local planning strategies. • Main Roads relies on DPLH land use information as well as district, and local structure plans, to identify future infill housing figures, population, and employment data, to consider the required capacity of the high-order road network. • Main Roads also considers current and future local road network expansion plans when considering where capacity building may be required as a result of infill development.

Public Transport Authority	<ul style="list-style-type: none"> • The PTA maintains a Rail Growth Plan (RGP) which outlines a strategic approach to meet forecast demand through to 2051. In developing the RGP, forecast patronage was determined using the Strategic Transport Evaluation Model (STEM) in conjunction with a detailed station-level analysis incorporating real-life PTA SmartRider data. • The PTA also focuses on sections of the rail network that provide a higher level of service such as the Whitfords-Cockburn Shuttle service which provides a five-minute frequency during the peak periods. It is anticipated that the service frequency will increase in the future with new supporting infrastructure known as High-Capacity Signalling. • Further, the PTA follows the Station Access Mode Hierarchy which prioritizes access for pedestrians, cyclists, bus users and driving. Planning new stations, and upgrading existing stations, follows this framework to ensure people can access public transport easily, sustainably and safely into the future. • The PTA also maintains a Service Development Plan for bus network which contains a list of projects including frequency upgrades to existing bus services. • With regard to bus service planning, the PTA draws upon Local Government planning strategies and structure planning to inform the Service Development Plan. However, with respect to increased demand from infill housing, PTA is responsive to patronage in determining whether additional capacity is required. However, the timing of introducing frequency upgrades is determined by available funding and patronage. Further given the PTA operates an integrated network many bus routes are timed to connect with train services, therefore bus service frequencies are influenced by train line frequencies. • The PTA undertakes a disciplined and rigorous approach to making decisions about when and how it should invest in its network. The main goal of analysing potential investment solutions, whether qualitatively or quantitatively, is to assess which projects are likely to contribute the most to the public interest (i.e. which projects will maximise the return to the community for every dollar invested). The PTA follows its Project Management Framework and many supporting frameworks which help the PTA to make informed decisions around future planning, funding and delivery.
Water Corporation	<ul style="list-style-type: none"> • The Water Corporation undertakes modelling for water and sewer infrastructure based on information set out in strategic planning frameworks across Western Australia. • This modelling is used to identify where upgrades might be required to water and sewer infrastructure in future as development uptake in infill areas occurs. • Modelling is undertaken for an ultimate build out scenario based on strategic planning information and where upgrades are needed, they are included in Water Corporations capital program. • There is inherent additional capacity within the water and sewage infrastructure network to accommodate infill development, however this varies dependent on location.

	<ul style="list-style-type: none"> As such any such changes proposed to density codes in the City of Joondalup will be subject to further review by and engagement with Water Corporation as the project progresses.
Western Power	<ul style="list-style-type: none"> Western power utilises specific demand modelling to forecast demand over the next 10-year period. Housing development is an input to this modelling, among others. Forecasting is used to develop long term infrastructure plans for service the modelled demand. Sources for data input includes future housing data ascertained from WALGA, amongst other federal and state government data sources as well as Australian Bureau of Statistics, Commonwealth Scientific and Industrial Research Organisation and Australian Energy Market Operator.

Local government infrastructure planning:

The following sets out plans and programs which guide how the City plans for and provides additional services and infrastructure provision as the population grows.

Plan/Program/Strategy	Future planning for infrastructure
Capital Works Program	<ul style="list-style-type: none"> The annual Five-Year Capital Works program provides detailed information on the City's capital works projects planned over the next five years. These program areas include: <ul style="list-style-type: none"> Parks Development Foreshore and Natural Areas Management Parks Equipment Streetscape Enhancement Local Road Traffic Management Blackspot Program Parking Facilities Road Construction (including Bridges and Underpasses) Pathways (New and Replacement) Stormwater Drainage Lighting (Street and Public Open Space) Road Preservation and Rehabilitation Building Construction Works Major Projects The Five-Year Capital Works Program has been developed to meet anticipated community infrastructure needs and the future development of the City with the strategic direction for the Program provided by the Strategic Community Plan 2022-23 and the 20 Year Strategic Financial Plan.
Major road network review	<ul style="list-style-type: none"> The City uses annual State funding programs to apply for upgrading road sections and intersections to accommodate increased traffic growth along its higher order road network. In the past this process was completed as a result of reviewing traffic count data and in response to public enquiries regarding congestion and accessibility issues. In 2018, the City commissioned ARUP to complete a body of work referred to as the Major Road Network Review (MRNR) which involved ARUP assessing the Level of Service of intersections along

	<p>the City's major roads and suggesting improvements based on the Level of Service operations of those intersections.</p> <ul style="list-style-type: none"> • Following this external work being completed, the City then reviewed the list of recommended projects and ranked the intersection upgrades in order to apply to have these intersections upgraded using the Main Roads WA Metropolitan Regional Road Grant (MRRG) Road Improvement program. • The MRRG program focusses primarily on upgrading roads and intersections experiencing congestion and access issues and allocated funding support to all Local Government on a 2/3 State vs 1/3 LG funding arrangement. Projects are given a score as part of the funding application process and then considered against other projects applied for by other local governments for funding consideration.
Active Transport Planning	<ul style="list-style-type: none"> • The City provides and maintains active transport networks, including pathways, cycle lanes and shared zones, to encourage active transport use. Supported with lighting and CCTV surveillance, the infrastructure helps to promote and support active transport options within the broader community. • The aim is to have a healthy and active community and reduce mobility-related carbon emissions in line with the State Government's <i>Bicycle Network Plan 2014–2031</i> and <i>Western Australian Cycling Network Hierarchy</i>. • The City promotes active transport options through community education and information on external funding opportunities that encourage the uptake and continued use in the community. • The City is not responsible for subsidising the cost of micromobility (e-scooters, e-bikes etc.) equipment or equipment used in active transport, such as clothing, helmets, safety pads, sunglasses or sunscreen.

Recommendation:

The review of the Local Planning Strategy will require continued engagement with State Government service providers as the project identifies a preferred strategic approach for the spatial allocation of density and prepares the new Local Planning Strategy document.

It is anticipated that once a preferred strategic approach to the allocation of density is confirmed through Phase 3, the City will undertake necessary technical studies to inform infrastructure provision where applicable. This is anticipated to include further engagement with State Government service providers, as well as undertaking studies such a transport impact assessment to consider the impacts of any changes to the spatial allocation of density on the local road network.

The project will continue to have input from the relevant technical experts within the City in relation to strategic land use planning to inform future infrastructure delivery through the capital works program to accommodate future population growth.

Issue	Phase 2 Action
Lack of developer contribution to neighbourhood improvement in infill areas.	Investigate issues and options for development contribution schemes for infill development

Key Findings:

- Development contribution plans are a tool through which developer contributions can be levied for community infrastructure where a need and nexus can be demonstrated as a result of population growth in particular areas.
- *State Planning Policy 3.6 – Infrastructure Contributions* provides guidance for the implementation of development contribution plans.
- The use of development contribution plans in an infill development context is problematic with issues related to the equity of cost sharing and timing uncertainty.
- Opportunities exist outside of development contribution plans to leverage additional community benefit through development controls and/or policy incentives.

Overview of Development Contribution Plans:

Infrastructure contributions may be levied by local governments under local planning schemes towards the cost of infrastructure necessary to accommodate urban growth.

Contributions for initial development infrastructure (e.g. roads, open space, schools, public utilities) are generally levied directly through the subdivision development process, or where cost-sharing arrangements are proposed, through a Development Contribution Plan (DCP).

A DCP is an arrangement between a local government and specified landowners to share the costs involved with delivering new infrastructure within a specified Development Contribution Area.

Contributions for community infrastructure (e.g. sporting and or community facilities) are generally levied through a DCP and need to be justified through a Community Infrastructure Plan. Contributions are for initial capital requirements only, and not for ongoing maintenance or operating costs of the infrastructure.

A DCP is traditionally used in large greenfield contexts where there are multiple landowners and formal coordination (and cost sharing) of the provision of infrastructure is required. As the City of Joondalup does not have any significant greenfield development sites that are not under a single ownership, the use of a DCP has not been required.

A DCP can also be applicable to infill settings, however have a number of constraints when applied within an infill context as outlined below.

State planning guidance for developer contributions:

The below provides an overview of state government planning guidance in relation to developer contributions and how they are able to be applied.

Planning instrument	Overview
State Planning Policy 3.6 – Infrastructure Contributions	<ul style="list-style-type: none"> Policy provides a framework to ensure that infrastructure contributions systems are transparent, equitable and accountable. Applies to all development settings in WA where new development results in demand for additional infrastructure, services and facilities. Acknowledges a DCP may not be suitable for all development settings, where the rate of development may result in difficulties to realise the intended infrastructure within the life of the DCP. Use of a DCP in urban infill areas should be given a degree of caution as growth rates are typically slow.
State Planning Policy 4.2 – Activity Centres & State Planning Policy 7.2 – Precinct Design	<ul style="list-style-type: none"> Policies provide a framework to guide the planning and development for the function, land use, access and urban form considerations for activity centres and their associated precinct structure plans. Applies to activity centres set out in State Planning Policy 4.2 classified as Strategic, Secondary or District Centres. In accordance with <i>SPP 7.2 – Precinct Design Guidelines</i>, precinct structure plans for activity centres should address the need generated by any increased population for additional: <ul style="list-style-type: none"> Public open space and recreations facilities Schools and other community facilities Transport and servicing infrastructure Affordable housing It may be appropriate that a range of mechanisms are used to address some of this provision including development incentives and/or developer contributions.

Key Considerations for a DCP in an infill context:

Need and the nexus:

A DCP should clearly demonstrate the need for infrastructure (need) and the connection between the development and the demand created (nexus).

Contributions to a DCP for community infrastructure cannot exceed \$5,000 per dwelling and all items are required to be justified with the demand demonstrated through a Community Infrastructure Plan.

A DCP may not be suitable in established metropolitan areas due to the difficulties in establishing the need and the nexus of additional infrastructure, or the uncertainty around the rate of growth and certainty regarding the timing of delivery of the infrastructure.

The City recently undertook a Social Needs Analysis to identify where there is need associated with social infrastructure and services in the City (e.g. playgrounds, public open space, organised sport facilities etc.). Social need was not specifically identified in relation to medium density infill areas in this report. This is likely due in part to the relatively slow uptake of infill development in HOAs (approximately 1,200 additional dwellings across all HOAs since 2011).

Equity of cost sharing for infill infrastructure:

Infrastructure contributions should be levied equitably from all identified stakeholders within a contribution area.

Established residential areas which are currently up-coded, or may be up-coded for increased density in future, provide the opportunity for landowners to redevelop sites at an increased density, however there is no obligation for a landowner to redevelop, and one or more sites may never be redeveloped.

This creates an equity issue for the cost sharing of infrastructure insofar that applying a DCP would result in either:

- A DCP that levies contributions only from landowners who are redeveloping their properties, however the infrastructure provided would benefit not only those redeveloping, but also those not developing.
- A DCP that levies a contribution from all landowners within an up-coded area thereby imposing a charge on landowners that are not redeveloping and not creating a demand for additional or upgraded infrastructure.

State Planning Policy 3.6 sets out the need for infrastructure contributions to be levied equitably from identified stakeholders within a contribution area, based on the relative contribution to need.

Timing and lifespan uncertainty:

A DCP is required to have a set lifespan as it is anticipated that a development or redevelopment will be completed within that period.

The current rate of uptake in infill areas is uncertain and differs by location given differing market factors. This makes it difficult to provide accuracy as to when an infrastructure item should be delivered to meet demand.

This could result in pre-funding infrastructure by the City before a correlating demand exists (if ever), or the delivery of infrastructure within an identified timeframe at a scale inconsistent with the ultimate demand.

Ensuring reasonable cost:

Infrastructure items funded through a DCP, and total cost of infrastructure contributions imposed, should be reasonable and align with the needs of the community and consider the impact on housing affordability.

As above, the City's Social Needs Analysis did not identify any significant need specifically for infill development areas.

Work currently undertaken by the City:

The City currently does not have any Development Contribution Plans in place for infill development areas, or any other development. Infrastructure in the City is provided through private land developers or as needed through the City's Capital Works Program.

Opportunities to leverage community benefit:

The following outlines opportunities for additional community benefit to be leveraged from development other than through a DCP.

Opportunity	Key Considerations
Incentive and performance-based provisions in local planning frameworks	<ul style="list-style-type: none"> Provisions included a local planning framework through policy or scheme provisions which are linked to the delivery of broader community benefits, including infrastructure and public realm upgrades. These would typically only be practicable for large scale developments where there is communal open space or public realm components to the development.
Use of rating mechanisms available under the Local Government Act 1995	<ul style="list-style-type: none"> Application of specified area rates (SARs) can be applied to land which exhibits particular characteristics. This would have equity and affordability implications for landowners in areas where SARs are applied. SARs currently apply to designated areas within the City such as Iluka, Woodvale Waters, Burns Beach and Harbour Rise Estate. SARs can be used to fund maintenance and development of higher quality public facilities and infrastructure such as parks and footpaths. The City is required to use the money from SARs for the purpose for which the rate is imposed and in the financial year in which it is imposed.

Recommendation:

Based on the above considerations and the historic slow uptake of infill development in medium density areas (HOAs), it is recommended that the City not consider a Development Contribution Plan for infill development areas.

Building sustainable neighbourhoods

LIVEABILITY AND DIVERSITY FOR FUTURE GENERATIONS

Local Planning Strategy Review

Issue Paper 3

Issue Category: Structural issues

April 2024

Issue	Phase 2 Action
Misaligned developer and policy objectives and lack of policy understanding influencing built form outcomes.	Engage with industry to understand development influences and how statutory planning mechanisms may be able to influence better outcomes.

Key Findings:

- Stakeholder engagement with developer representative bodies and individual developers was undertaken to better understand developer influences and how development outcomes are impacted by statutory planning mechanisms. Key takeaways from this engagement include:
 - Return on investment is maximised for infill developments by building larger houses.
 - Land value impacts on a landowners ability to develop certain housing typologies.
 - Access to financing for a housing development can be dependent on the particular housing typology proposed.
 - Restrictive policy provisions can significantly impact on the affordability of a development.
 - Opportunity for continued engagement with the development industry in the development of future planning policies
- A recent review and update of the City's development application checklists has improved transparency for applicants when lodging a development application as to the specific policy requirements which are applicable to their development.

Review of development application lodgement material:

The issue of a lack of developer understanding influencing built form outcomes was raised during Phase 1 engagement with State and local government planning officers.

It was noted that in some cases, developers or those preparing plans (ie. draftspersons and designers) did not have a comprehensive understanding of relevant local planning policies prior to undertaking preliminary design works for a site, and therefore would run into numerous issues once the development application was lodged, often resistant to then make significant changes to the established design for the site.

To address this, the City has undertaken a review of the development application lodgement checklists, to ensure that they reflect the particular requirements of relevant local planning policies that may apply to certain types of development.

Specific to infill development, the development application checklist which applicants are required to fill out and submit with their application, now includes requirements for developers to acknowledge whether or not they have provided information on the plans which relates to specific provisions in policies relating to infill development. (e.g. landscaping plans, building performance diagrams etc.). This will ensure that developers are required to acknowledge the additional requirements set out by local planning policies which apply to infill development applications prior

to lodgement which in turn, will mean a greater likelihood that these considerations have influenced the proposed design.

Stakeholder engagement:

To better understand the factors that influence development outcomes in the City of Joondalup, the City undertook a round of consultation through engagement with developer representative bodies and individual developers.

The intention of this consultation was to improve the City's understanding of factors influencing the development industry when designing and lodging development and subdivision applications for infill development in the City. This will give the City a better understanding of the context within which infill dwellings are developed to allow for the Local Planning Strategy to ensure that it achieves a balance between meeting additional housing need while ensuring housing meets the liveability and sustainability expectations of the community and best practice planning.

Outcomes of stakeholder engagement:

The engagement was undertaken through a survey sent to a list of individual developers who had lodged development applications for infill development in the City of Joondalup within the last two years, as well as through meetings set up with the following developer representative bodies:

- Housing Industry Association
- Planning Institute of Australia

Key takeaways of this engagement with developer representative bodies are summarised below:

Topic	Summarised feedback
<i>Housing Trends</i>	
	<ul style="list-style-type: none">• In the Australian housing market, larger houses result in more value. Developers and landowners will seek to maximise their return on investment by maximising the value and therefore size of their dwelling.• Infill development is typically a product developed for downsizing/low maintenance living. This is inconsistent with provisions for increased landscaping and trees.
<i>Market Influence</i>	
	<ul style="list-style-type: none">• Land value directly impacts the ability for a landowner to develop a particular dwelling type on a lot (e.g. double storey).• Banks are typically hesitant to finance a development where it is considered to either be an overcapitalisation for the lot (based on size and location) or where there is no precedent for that typology in the area.
<i>Statutory Planning Mechanisms</i>	
	<ul style="list-style-type: none">• Provisions included within the amended R-Codes Volume 1 for small dwellings should work to incentivise greater dwelling diversity for infill developments.• Policy provisions for larger room sizes, increased street setbacks, increased landscaping, tree planting etc. result in a smaller envelope for development on the lot. This can impact viability for the development as it forces a design to be double storey where in some cases landowners can

	<p>not afford that typology, or are unable to get finance for that typology based on the land value.</p> <ul style="list-style-type: none"> • Incentives in policy a good way to push for better outcomes.
<i>Best Practice Discussion</i>	
	<ul style="list-style-type: none"> • Opportunities for engagement to improve planning literacy in the community. • Density codes should be appropriate to the street typology. • Highest densities should be in close proximity to activity centres and transport nodes, and taper down with distance.

Key takeaways from survey question responses from individual developers are summarised below.

Survey Question	Summarised feedback
<i>Development viability factors</i>	
a. What are the main considerations for a property developer when determining how to redevelop an established residential property at a higher density? (e.g. density code, market demand for a particular housing type, return on investment, planning controls for built form? etc).	<p>Main considerations include:</p> <ul style="list-style-type: none"> • Return on investment. • Potential sale price. • Market demand for a housing product based on location of the block. • What are the risks/implications from planning policy. • Time for project completion. • Client preferences
b. In the context of the City of Joondalup, are there particular design aspects for infill developments that are typically 'must haves' for a development to be viable? (e.g. minimum number of bedrooms or bathrooms, number of car spaces, single story? etc).	<p>Typically in the context of the City of Joondalup, the following design aspects are important for the viability of a project:</p> <ul style="list-style-type: none"> • Single storey • Three bedrooms • Two bathrooms • Double garages • Single garages are more viable for aged and dependent dwellings
c. Are there design related obstacles you commonly encounter in the development application (or pre-lodgement) process in the City of Joondalup?	<ul style="list-style-type: none"> • Landscaping and deep soil areas for trees are typically difficult to meet, especially where a landowner is only able to afford a single storey dwelling. • Street setback and garage setback requirements add additional uncertainty for the ability to meet other policy requirements.
d. How significantly do land values impact on the type/design (e.g. number of beds & baths, single or double story, inclusion of architectural detail/amenity) of infill developments?	<ul style="list-style-type: none"> • Higher land values require yield for a development to be greater to ensure a development is viable. This means at least a three bedroom, two bathroom development with a double garage becomes important. • The likelihood of a double storey dwelling typology being developed increases with land value.
<i>Statutory planning mechanisms</i>	
a. In the context of infill development, do incentives in policy work/are they readily utilised? If yes, are there any specific	<ul style="list-style-type: none"> • Often the impact of tree retention on the design or yield for a development means that they are typically not retained, even where there are incentives.

<p>development incentives which would be readily utilised by the development industry?</p> <p>Examples of development incentives include:</p> <ul style="list-style-type: none"> • Retention of a mature tree allowing for reduced landscaping requirements. • Height bonuses where lots are amalgamated. • Additional plot ratio allowance for meeting minimum green start energy rating. 	<ul style="list-style-type: none"> • For green energy ratings, the current cost of construction and the increased cost of green initiatives makes the incentive unviable.
<p>b. In your view, how effective is the design guidance included in the R-Codes Vol. 2 when designing apartments? Do you think the same level of guidance would be worthwhile for grouped dwellings in a low and medium density context?</p>	<ul style="list-style-type: none"> • Guidance included in draft medium density codes is sufficient to guide draftspersons/architects when designing infill developments.
<p>c. Would an overall vision of the desired development outcomes in infill areas be utilised/useful for developers? For example, this could look like wording, and/or imagery to describe/show the intended built form outcomes for an infill area, included in a Local Planning Policy/Precinct Structure plan.</p>	<ul style="list-style-type: none"> • Feedback from Local Government on the overall vision and goals for infill development areas is crucial. • Opportunity for engagement with developers when designing policy provisions would be very beneficial. • Depicting examples of desired outcomes in a vision would be helpful.
<p><i>Market influence in development outcomes</i></p>	
<p>Infill development in the City of Joondalup in medium density areas tends to be reflective of a family home typology (e.g. three bed x two bath with a double garage) even on small subdivided blocks.</p> <p>a. From a developer perspective, what are the factors influencing this trend?</p> <p>b. Would policy which requires greater diversity in dwelling mix for infill developments in the City of Joondalup result in a change in development trends?</p>	<ul style="list-style-type: none"> • Generally the market demand in the City of Joondalup is for a three bedroom x two bathroom product. • Small dwelling provisions included within the medium density code will be beneficial for incentivising a greater diversity of dwelling typologies. • Incentives which offer reduced landscaping, open space and outdoor living area for two bedroom single garage homes would assist with incentivising this typology.
<p><i>Development industry ideas for improving development outcomes:</i></p>	
<p>a. Do you believe statutory requirements which reflect those set out in the draft Medium Density Codes and the City's Development in Housing Opportunity Areas Local Planning Policy for minimum room sizes, minimum ventilation and light access and landscaping and tree planting requirements are effective in addressing issues around liveability and sustainability for infill development?</p>	<ul style="list-style-type: none"> • Generally agree that some standards need to be in place, but to a certain extent where development viability is not stifled. For example tree planting requirements often mean that a development needs to lose its alfresco roof which is an undesirable outcome. • The medium density code strikes a reasonable balance of practicality from a development perspective, whilst delivering sustainable and liveable built form outcomes. • HOALPP takes policy requirements too far, wherein development becomes unviable.

If no, how do you believe these issues are best addressed?	
--	--

Implications for the Local Planning Strategy:

There are some key takeaways which are important for the City to consider when preparing the Local Planning Strategy and development control around infill development:

- Affordability implications from policy provisions have a real impact on landowners in the City when looking to develop housing within infill areas. While it is important that the City ensures new development meets community expectations by way of liveability and sustainability, the City also has a role to provide additional housing to meet the needs of the community and broader State Government planning directions. It is therefore important to ensure that development controls for infill development are not so onerous that they render development of affordable housing products to be unviable. This indicates opportunity for the City to test any revised development controls with the development industry before implementing future changes as part of the Local Planning Strategy review.
- The City can draw upon the recently amended R-Codes Volume 1 to ensure that development achieves a balance of delivering well designed liveable and sustainable homes while still allowing additional housing to be developed to meet community need.
- Development of an overall vision for infill areas would assist with communicating to the development industry the overall intended outcomes for infill areas. This vision should be developed with community input and can be considered as part of future actions undertaken as part of Phase 3 of the Local Planning Strategy review.
- There is opportunity for the City to explore how it provides pre-lodgement advice for infill developments, and where improvements in this area may be possible, and the resource and budget implications of this.

Recommendation:

As development industry is the arm through which the majority of housing is delivered in WA, it is recommended that the City continues to engage with industry where input is valuable. Based on the feedback provided it is considered that industry engagement would be beneficial for the development and testing of development controls/provisions in future new or modified local planning policies that augment the R-Codes, which are implemented in response to actions included in the Local Planning Strategy.

Issue	Phase 2 Action
Complexity of planning framework results in difficulty to engage meaningfully with the community.	Review of the City's development application consultation materials to identify areas where greater transparency can be provided.

Key Findings:

- Community consultation for development applications is guided by principles set out in the *Planning and Development (Local Planning Schemes) Regulations 2015* and the City's *Planning Consultation Local Planning Policy*.
- A recent review of the City's consultation material has been undertaken to improve transparency and provide additional information to give adjoining landowners a greater understanding of what they are being asked to make comment on. This has been undertaken in response to the feedback received in Phase 1 consultation.

Mechanisms currently in place:

The below summarises current mechanisms the City uses to provide consistency and transparency in its engagement with the community for development applications:

Planning instrument	Overview
Planning Consultation Local Planning Policy	<ul style="list-style-type: none"> Outlines requirements for when and how community consultation is required to be undertaken for a development application. Ensures consistency in the City's approach to community consultation for development applications.
Website consultation portal	<ul style="list-style-type: none"> Provides the platform through which community members are able to view development application plans being advertised and provide a submission.
Mailing of letters	<ul style="list-style-type: none"> Method by which community members are notified of a development application which might affect them. Letters provide: <ul style="list-style-type: none"> An overview of how the City undertakes planning assessments Which design elements of the development application are seeking discretion How community members are able to make a submission. Contact details for the assessing Urban Planner.
Duty planner service	<ul style="list-style-type: none"> A service provided by the City where community members are able to attend the City's administration building, or make a telephone call, without appointment anytime between the hours of 8.30am and 5pm on a weekday to discuss planning matters, including advertised development applications with the on-duty Urban Planner.

Statutory context:

Methods of consultation and length of consultation periods are guided by the *Planning and Development (Local Planning Schemes) Regulations 2015* (LPS Regulations) and the City's *Planning Consultation Local Planning Policy*. In particular, the LPS Regulations specify the maximum length of time that consultation can occur and this cannot be increased.

Review of consultation material:

A review of the City's consultation methods and material has been undertaken recently in response to the feedback received. This review has resulted in the following work being undertaken:

- Consultation letters and website text has been restructured and where possible, plain language has been used. Letters now include information pertaining to discretions requested by the applicant and the associated design objective against which the variation will be assessed.
- A set of frequently asked questions documents have been prepared which are now included in all consultation letters sent, and are accessible from the City's consultation portal on the website.
- Different FAQ documents have been prepared for associated development application types, including applications for:
 - Single houses and grouped dwellings
 - Minor residential development
 - Home businesses and short-term accommodation
 - Commercial and high-density multiple dwellings
- The FAQ documents set out information relating to the following:
 - How development applications are assessed by the City.
 - How and when the City conducts community consultation.
 - Who can submit feedback on planning applications.
 - What aspects of the planning application community members can submit feedback on.
 - How to make a submission.
 - Next steps after consultation.
 - Privacy information.
 - Contact details for the City's Planning Services team.
- The City is progressing the development of a Glossary of Planning Terms which will be uploaded to the City's website for community members to access when reviewing development plans for consultation.

The changes made are being monitored and if necessary, further amendments be made.

Opportunities to address issues further:

Given the work undertaken as outlined above, it is considered that the issues raised have been adequately addressed within the parameters for consultation set out in the LPS Regulations and the *Planning Consultation Local Planning Policy*. It is however noted that documents and policies that relate to community consultation are dynamic and continue to be regularly reviewed and updated where changes are required or where further improvements are identified.

Building sustainable neighbourhoods

LIVEABILITY AND DIVERSITY FOR FUTURE GENERATIONS

Local Planning Strategy Review

Issue Paper 4

Issue Category: Housing supply, demand and affordability

April 2024

Issue	Phase 2 Action
Reduced housing affordability.	Investigate housing affordability broadly and identify whether there are any planning mechanisms available to local government to support housing affordability.

Key Findings:

- Housing in Australia has become less affordable over time due to a number of supply, demand and economic influences.
- Housing affordability in Western Australia has followed similar trends, although affordability issues are not as acute as they are in eastern states markets.
- Local Governments have minimal influence in housing affordability beyond ensuring capacity for additional housing supply within a Local Planning Strategy and Scheme.
- Opportunities exist for further measures to be implemented to remove barriers and incentivise/mandate the provision of affordable housing through new developments.
- Additional approaches need to be considered in the context of their limitations.

Affordability trends and influences:

The following summarises housing affordability metrics and trends which are included in [CoreLogic's Housing Affordability Report 2023](#) to measure and track housing affordability nationally.

Affordability Metrics:

- Value to income ratio
 - Median household income vs. median dwelling value
- Years to save deposit
 - Measure of affordability for households that do not yet own a home.
- Serviceability
 - Measure of mortgage serviceability for median income households
- Rent to income ratio
 - Measure of the percentage of gross annual income required to rent on new leases.

Affordability Trends:

- The value of a dwelling with an affordable loan amount for the median dwelling incomes was \$479,000 in September 2023, while the actual median house price during that period was \$700,000 nationally. In Perth, the dwelling value to income ratio increased from 4.7 in March 2020 to 5.9 in September 2023 meaning that average house prices have risen at a higher rate than median incomes over the same period, thus reducing the purchasing power of prospective home buyers.
- The number of years required to save a 20% deposit has increased to over 10 years nationally for the median dwelling value as house prices have increased. This is up from 8.7 in March 2020. The number of years required to save a 20% deposit in Perth sits currently at 7.8 years, up from 6.3 years in March 2020.

- Serviceability for mortgages has deteriorated nationally with the portion of income required to service a new home loan, rising to 46.2% from 29.9% in March 2020. This is reflected in the increases to the cash rate since the record low in March 2020 to respond to the Covid-19 pandemic. The portion of income required to service a new mortgage in Perth rose from 21.4% in March 2020, to 36.1% in September 2023.
- Advertised rent values nationally have increased 28.4% since March 2020. The portion of income required to service rent on a new lease in Perth has increased from 21.8% in March 2020 to 29.8% in September 2023.

The above trends are interlinked, wherein the historic trend of households transitioning from renting to home ownership has been disrupted by rising rental costs depleting savings and making it harder to secure a loan. This is further impacted by rising deposit requirements as home values rise, and the cost of finance increasing in recent years with interest rate rises. These conditions have resulted in a fall in home ownership for lower income households over time and reduced buying power for non-homeowners.

Affordability Influences:

The following outlines broad factors which have influenced trends in affordability across the Perth metropolitan area and Australia.

- Increased demand for housing influenced by:
 - High net migration and population growth over time.
 - Changes in average household sizes since the Covid-19 pandemic.
 - Historic long term income growth and low interest rates driving demand for individual home ownership.
 - Tax concessions for property investment driving demand for housing.
 - First homebuyer grants and economic stimulus grants offered through the Covid-19 pandemic driving demand for housing.
- Under-supply of housing influenced by:
 - Planning constraints in the provision of development-ready greenfield land and slow uptake of infill development in existing suburbs.
 - Interest rate increases due to cash rate rises imposed by the reserve bank reducing borrowing power and keeping more of the population on the rental market for longer, reducing rental supply.
 - Labour and materials shortages increasing construction costs and therefore the cost of building new housing, reducing the supply of overall housing and keeping more of the population on the rental market for longer, also reducing supply.

Local government opportunities:

The ability of a local government to influence housing affordability is limited beyond ensuring a supply of additional housing is not unduly hindered through the Local Planning Strategy and Scheme.

Notwithstanding this, the below outlines opportunities for additional measures which could be undertaken to influence affordability. These opportunities have in-part been informed by the State Government's Planning Provisions for Affordable Housing Discussion Paper 2013.

Opportunities	Key Considerations
Barrier reduction strategies	<ul style="list-style-type: none"> Barrier reduction strategies seek to remove or reduce controls that inhibit the development of affordable housing. These controls may include restrictions on the development of smaller development types, minimum dwelling sizes, or provisions that require expensive finishes or materials on dwellings. Planning provisions which implement additional design requirements for dwellings above those required within the Residential Design Codes can in some cases require design changes for dwellings which result in an overall increased build cost. Whilst this does not impact the provision of affordable housing specifically, it can impact on the affordability of new houses developed. It is noted that development controls also play an important role in ensuring good liveability and sustainability outcomes, and this should be factored in when considering barrier reduction strategies.
Planning incentives	<ul style="list-style-type: none"> Affordable housing incentives could be incentivised through local planning policy by allowing for density or height bonuses for the provision of housing through partnership agreements with the Housing Authority (now Department of Communities) or non-profit housing providers recognised by the Housing Authority. It is noted that the responsibility for the delivery of social and affordable housing sits under the responsibility of the State Government. Other Local Government experience with affordability incentives of this nature have not resulted in the successful uptake implementation of such policy provisions. Incentives would need to be considered to ensure their intended outcomes are workable within the local housing market and do not have adverse impacts on the amenity of the location for other residents.
Sale of surplus City owned land for affordable housing projects	<ul style="list-style-type: none"> This approach is similar to the City's current approach for aged and dependent persons dwellings. Would need to consider the need for affordable housing in the City and if this is great enough to consider this approach. Would need to consider best practice for the delivery of social and affordable housing wherein it is not best delivered entirely within one development on a single site.
Increase supply of housing	<ul style="list-style-type: none"> Creating capacity for additional supply of housing in established areas to meet increased demand can contribute to improvement in housing affordability in WA. The City has a role in planning for additional housing supply through its Local Planning Strategy and Scheme. The City's current Local Planning Strategy provides capacity for additional dwellings through activity centres and Housing Opportunity Areas in order to meet the infill and additional dwelling requirements of the Sub-Regional Planning Framework. Delivery of additional housing in an infill context needs to be managed carefully to ensure development outcomes are in alignment with community expectations with respect to liveability and sustainability.

Recommendation:

The Local Planning Strategy, as a land use planning document has limited influence over housing affordability, beyond planning for capacity for additional housing supply. As such it is recommended that the City does not take further action in relation to this issue beyond ensuring that the revised Local Planning Strategy continues to plan for additional dwelling capacity.

It is noted that feedback from the Department of Communities indicates a number of current actions being taken by the State Government to invest in social housing and homelessness measures to contribute to addressing housing affordability issues in Western Australia.

Issue	Phase 2 Action
Limited access to housing.	Investigate planning mechanisms available to local government to: <ul style="list-style-type: none">• Incentivise higher density housing in activity centres• Support a diversity of dwelling types• Address the requirements of the WAPC <i>Residential Accommodation for Ageing Persons Position Statement</i>

Key Findings:

- Housing supply is influenced by a broad range of factors, some of which are outside of the influence of Local Government
- The City will need to plan for a greater diversity of housing options to cater for future demographic changes
- The City's current local planning strategy provides sufficient capacity for additional housing to be delivered through the market.
- Market conditions and buyer preferences present obstacles for the development of a greater diversity of dwelling typologies.
- Provisions included within the amended Residential Design Codes (medium density codes) provide additional incentives for increased diversity in housing typologies through small dwellings provisions.

Consultation outcomes reporting and the supply and demand analysis indicated the following issues in relation to the supply of housing in the City:

- Too little housing available for purchase or rent in the City.
- Limited diversity in housing typologies and location to meet community needs.
- Undersupply of 'downsizing' housing options which prevents empty nesters from retiring in place.
- Limited supply of aged care accommodation.

Factors influencing housing supply

Limited access to housing is a complex issue which is influenced by a number of factors, many of which are outside of the control of Local Governments. Factors impacting the current supply of housing at a State level and more broadly at a national level are summarised below:

- Historic under-supply of housing to meet population growth:
 - Data provided by .id informed decisions demonstrates how new housing supply since 2002 has not adjusted to meet demand driven by fluctuations in population growth in Australia over that period.
- Economic policy:
 - Income growth coupled with low interest rates and tax incentives which drive investment in housing have led to increased demand for housing in Australia over time.

- Changing household trends:
 - Average household sizes in Australia following the COVID-19 pandemic have resulted in an increased demand for housing, which is not influenced by net population growth.
- Affordability constraints:
 - CoreLogic reports that house prices in Australia have risen 193% over the last 20 years, while wages have only increased by 82% concurrently. This has impacted housing affordability nationally as it makes it harder for home buyers to accumulate the required 20% deposit, and to service mortgage repayments therefore driving up demand in rental markets.
- Labour and material constraints:
 - Labour and material constraints influenced by the COVID-19 pandemic and global supply chain issues have affected the ability of the building industry to meet demand for construction of new dwellings. This therefore increases demand for established housing on the market.

State Government actions

Economic Incentives:

The State Government has introduced a number of taxation concessions for apartment developments to reduce roadblocks for apartment developments and increase the rate of housing supply. These are summarised below:

- Expansion of the off-the-plan duty concession scheme to include apartments under construction to provide duty relief for people who purchase apartments and new developments.
- Introduction of the 50% land tax exemption for built-to-rent projects.
- Introduction of the \$10,000 incentive for property owners to transition existing short-term rental accommodation to long term rental homes.
- Introduction of the Infrastructure Development Fund to assist with enabling infrastructure such as water, wastewater and electricity for eligible apartment projects.

Planning Reform:

The following summarises recent state government planning reform which has been implemented to accelerate the delivery of additional housing through the planning system:

- A new permanent significant development pathway for projects valued over \$20million.
- Reforms to clarify decision making in local government for single houses.
- Reforms to Development Assessment Panels.
- Improving existing planning processes to cut unnecessary red tape.
- Reform of the Western Australian Planning Commission.

City of Joondalup housing supply

The supply and demand analysis undertaken in Phase 1 of this project for the City's residential housing profile sets out the following relevant key findings:

- 87% of the current housing supply in City of Joondalup is single houses, followed by 11% medium density and 1% high density.
- Families were the most common household type.
- The greatest growth to 2042 in household type is expected for couples and singles.
- Younger and ageing populations will create future demand for medium density housing typologies.
- Dwelling forecasts estimate the need for between 5,273 and 8,065 additional dwellings by 2041.
- 2.3% of households had an unmet need for affordable housing.

These attributes were reflected in the commentary provided through community consultation in relation to a lack of diverse housing options available for first home buyers and downsizers.

Market conditions for apartment developments are currently poor, with market demand analyses showing a drop in apartment sales in Perth since 2015. This presents as an obstacle to the provision of a diverse supply of housing given apartment style developments commonly provide alternative housing typology options compared to single dwelling developments.

Currently the City's Local Planning Strategy and Scheme provides capacity for additional housing through the following mechanisms:

Planning area	Yield at buildout (additional dwellings)	Remaining capacity (additional dwellings)
Joondalup Activity Centre	10,102	6,941
Whitfords Activity Centre	739	724
Sorrento Activity Centre	77	77
Ocean Reef Marina	1,300	1,300
HOA 1	4,883	4,629
HOA 2	1,283	1,234
HOA 3	485	443
HOA 4	2,890	2,814
HOA 5	5,109	4,776
HOA 6	2,451	2,365
HOA 7	1,954	1,891
HOA 8	1,616	1,578
HOA 9	936	889
HOA 10	626	620

The above indicates capacity for an additional 30,281 dwellings to be developed through the market within the City's current Local Planning Strategy and Scheme should the ultimate buildout scenario occur.

The current strategy and scheme use zoning to guide dwelling typologies, however there are currently no policy provisions which set out a requirement for a dwelling typology mix to be provided in developments at a higher density.

Mechanisms in place

The following outlines planning policy mechanisms currently in place to require or incentivise a greater dwelling typology mix for new developments.

Planning instrument	Summary of requirements
R-Codes Vol 1 – Part C	<ul style="list-style-type: none"> Part C of the Residential Design Codes includes provisions relating to small dwellings. Provisions allow for a reduction in site area by up to 35 per cent for the development of a 'small dwelling' meaning a single house with an internal floor area no greater than 70m².
R-Codes Vol 2	<ul style="list-style-type: none"> R-Codes volume 2 includes provisions relating to dwelling mix. Provisions set out that developments of greater than 10 dwellings should include at least 20% of apartments of differing bedroom numbers where there are no established dwelling mix provisions within a local planning strategy or instrument already.

Opportunities to address housing supply issues further

The following sets out opportunities for the City to improve access to housing.

Opportunities	Key Considerations
Zoning changes to allow for greater dwelling typology mix	<ul style="list-style-type: none"> Given the City of Joondalup has a dwelling mix of 87% single houses, 11% medium density and 1% high density, a greater diversity in dwelling typologies would be achieved through the creation of more medium and high-density developments (i.e. grouped and multiple dwelling developments). This can be planned for through the appropriate zoning of land for higher density development. Zoning of land to higher densities needs to also consider the appropriate co-location of density with transport infrastructure and access to amenities such as activity centre land uses and high quality open space. It also needs to be considered in the context of the established urban environment and how development controls would need to be implemented to manage transitional impacts on adjoining established low density properties.
Incentivise higher density developments in activity centres	<ul style="list-style-type: none"> Amendments to activity centres could include incentive provisions to make high density development more viable for developers. Incentives to increase housing diversity set out in <i>Perth and Peel @ 3.5 million</i> include: <ul style="list-style-type: none"> Parking or height concessions for developments well located with public transport infrastructure which provide a diversity of dwelling typologies. Ensuring efficient and timely assessment for major developments. Incentivising amalgamation of lots for multiple dwelling developments (e.g. density bonuses for amalgamations). Identifying opportunities for higher density housing developments on urban zoned land.

Opportunities	Key Considerations
Residential accommodation for ageing persons position statement	<ul style="list-style-type: none"> • The position statement forms part of the strategic consideration of aged persons accommodation in the City. • Includes statutory requirements for Local Planning Strategies and Schemes. • Opportunity therefore exists for the following to be contemplated and included within the Local Planning Strategy to address future need for residential aged care facilities and independent living complexes, including the following: <ul style="list-style-type: none"> ○ Identification of demographic profile trends to anticipate projected demand for aged persons housing and residential care needs. ○ Medium to long-term aged persons' housing and residential aged care beds provision targets aligned to demand. ○ Analysis of the gaps in the existing provision of aged persons housing and residential aged care and opportunities and constraints for the delivery of land use options to facilitate future provision. ○ Identification of specific sites associated densities and applicable development standards for residential aged care facilities and independent living complexes. ○ Incentives intended to be outlined in the local planning scheme to facilitate increased supply including incentives.

Recommendation:

The City's current Local Planning Strategy provides capacity through density zoning that allows for the development of additional dwellings, and additional dwelling typologies. It is therefore recommended that in reviewing the City's Local Planning Strategy, this capacity is maintained through any changes made to the spatial allocation, and intensity of density codes. This approach has been confirmed through advice provided by the WAPC.

It is noted that provisions included within the revised Residential Design Codes are intended to act to incentivise the future development of a diverse range of housing typologies to cater for future community need.

1 EXECUTIVE SUMMARY

This analysis has been developed to provide an overarching strategy to guide planning and development for activity centres and employment land in the City of Joondalup until 2043. The quantum and diversity of floorspace to meet demand in the City and the appropriate catchment were examined through a needs assessment, conducted in accordance with the Western Australian Planning Commission's (WAPC) State Planning Policy 4.2 – Activity Centres (SPP 4.2).

The supportable levels of Shop-Retail floorspace that can be located at centres has been estimated using retail gravity modelling and benchmarked floorspace productivity estimates. This methodology ensures future floorspace estimates are supportable and will not impact the vitality of activity centres. The supportable level of Non Shop-Retail floorspace has been estimated using floorspace per person provision ratio analysis. This method identifies current gaps that need to be addressed, then uses changes in retail floorspace to estimate increased demand for floorspace over the assessment period (refer to Section 8 Needs Assessment for more detail).

The following acronyms are used throughout the document¹:

- State Planning Policy – Activity Centres (**SPP4.2**)
- Western Australian Planning Commission's (**WAPC**)
- Employment Self-Sufficiency (**ESS**)
- Knowledge-Intensive Producer Services (**KIPS**)
- Land Use and Employment Survey (**LUES**)
- Department of Planning, Lands and Heritage (**DPLH**)
- Planning Land Use Categories (**PLUC**)
- WA Standard Land Use Categories (**WASLUC**)
- Shop-Retail (**SHP**)
- Non Shop-Retail (**Non SHP**)

Shop-Retail (SHP) floorspace and employment refers to PLUC Shop/Retail. Non Shop-Retail (Non SHP) floorspace and employment refers to all other commercial PLUCs including Entertainment / Recreation / Culture, Health / Welfare / Community Services, Manufacturing / Processing / Fabrication, Office / Business, Primary / Rural, Residential, Other Retail, Service Industry, Storage / Distribution and Utilities / Communication. Further definitions and explanations can be found in Section 13, PLUC Glossary and Other Terminology.

¹ Refer to Appendix 3 for all acronym definitions

1.1 Floorspace Results and Hierarchy

The assessment area for the Needs Assessment and Hierarchy Review included all of the City of Joondalup and the City of Wanneroo and most of the City of Stirling. Current floorspace estimates for the activity centres in this area were based on approved planning documents, data provided by the City of Joondalup, the City's Local Commercial Strategy 2013, and DPLH Land Use and Employment Survey 2015.

Shop-Retail and Non Shop-Retail floorspace estimates have been developed through a combination of:

- Floorspace Gap Analysis (Section 7.2 Commercial PLUC Gaps)
- Needs Assessment (Section 8 Needs Assessment)

The analyses were used to determine any potential gaps that currently exist across the City's activity centres and the demand for floorspace that could result due to population growth, accounting for competing centres in the assessment area. Floorspace estimates were also considered for industrial areas.

An updated Activity Centre Hierarchy was determined based on the results of the Needs Assessment (Figure 1 shows the current floorspace for the updated hierarchy). Section 9.1 Potential Activity Centre Hierarchy Changes further details the process of determining floorspace values for the City's activity centres.

Three dwelling growth scenarios were utilised to estimate the potential capacity requirements of the City's activity centres over a 20-year period.

- Scenario 1 is an outcome of WA Tomorrow population projections for the City of Joondalup and represents a conservative projection
- Scenario 2 utilises Forecast ID's dwelling projections for the City of Joondalup by 'Small Area' and represents an aspirational but achievable target by 2043
- Scenario 3 (Full Buildout) is unconstrained and represents complete development of all available current and future urban land as provided by the City of Joondalup through official planning frameworks such as Activity Centre Plans and Local Housing Strategy (Figure 2).

Figure 2. City of Joondalup Dwelling Growth Scenarios Summary

Scenarios	Summary	Dwellings by 2043 / Full Buildout
Scenario 1	Base case	58,973
Scenario 2	Target level	70,436
Scenario 3 (Full Buildout)	Maximum capacity	81,530

Activity Centre Needs Assessment and Hierarchy Review

Source: ABS Census 2021, WA Tomorrow 2021, Forecast ID 2021, City of Joondalup 2023

It is recommended the City of Joondalup's Activity Centre Hierarchy adopt Scenario 2 for planning over the next 20 years and Scenario 3 (full buildout) as a long term capacity estimate. This will provide a flexible planning framework within which the City can approve floorspace as needed, should demand arise (Figure 3).

Industrial Floorspace

The level of Light Industrial floorspace is examined in Section 8.7 Industrial Floorspace Projections. Industrial floorspace supply in the City of Joondalup consists of that found along Canham Way, Greenwood, and in Joondalup City (Figure 4).

Figure 4. City of Joondalup Industrial Areas (m²)

Industrial Complex	Floorspace
Joondalup City	163,387
Canham Way	22,051

Source: DPLH LUES 2015

It is estimated that demand for the City's industrial floorspace will grow from a total of 185,400m² to 212,900m² in 2043 under Scenario 1 and to 222,200m² under Scenario 2 (Figure 5).

Figure 5. Industrial Floorspace Projections (m²)

Scenarios	2028	2033	2038	2043	Full Buildout
Scenario 1	185,438	187,615	199,557	212,940	-
Scenario 2	185,438	192,051	206,265	222,156	-
Scenario 3	-	-	-	-	241,279

Source: Pracsys 2023, DPLH LUES 2015

Potential Strategic Floorspace Requirement

There may be the need for an additional 10,944 jobs by 2043 to meet Sub-regional employment targets. The commercial floorspace associated with Joondalup City's retail, health and education land uses require up to 369,604m² additional floorspace. This is assumed to be a mix of office, health and education sector uses and is an increase of 42% compared to the 2043 Scenario 2 estimate (see Section 10.1, Figure 63).

Employment Estimates

The associated employment projections for Shop-Retail, Non Shop-Retail, and Light Industrial floorspace have been examined in Section 8.8 Employment Projections. The level of strategic employment required for the City to meet the North West Sub-Regional ESS target was also examined in Section 10 Strategic Employment Analysis.

1.2 Implementation

In creating an attractive business environment within the City's activity centres, the role of the City is to act as a central regulator, coordinator and facilitator, working to understand the challenges facing local businesses including; linking businesses with appropriate resources, advocating on behalf of local businesses, and supporting specific projects where appropriate. Key implementation points include:

- An evidence-based approach to activity centre development is recommended. This approach is aligned with SPP4.2 and provides the City with the flexibility to assess applications on a case-by-case basis to ensure the viability and vibrancy of the Activity Centre Hierarchy is maintained
- The role of the City is to act as a central regulator, coordinator and facilitator, working to understand the challenges facing local businesses to support sustainable activity centre development
- Three levers that are available to the City of Joondalup include:
 - Control (planning regulations)
 - Influence (advocacy)
 - Monitor (measurable outcomes to inform progress towards desired future)
- The City's activity centres are mostly population-driven; the Joondalup City Centre offers the opportunity for additional strategic employment, two coastal centres provide opportunity for tourism related strategic employment. Population driven centres will develop naturally, with the City having a role in attracting and providing the amenities that support liveability. Strategic employment will develop based on comparative and competitive advantages; the City can advocate for government investment, communicate opportunities to attract private sector investment and control the development of key centres such as Joondalup City to facilitate strategic opportunities.

Potential planning directions and actions that have arisen from the analysis have been summarised by activity centre (Figure 6). Activity centres included in the summary are those that are classified as District Centres or above and that have been projected to support a greater floorspace. Floorspace projections and activity centre characteristic for all Strategic, Secondary and District Centres has been included in Appendix 1: Activity Centre Summaries. It should be noted that the role of the City is limited in planning for Ocean Reef Marina and Hillarys Boat Harbour as these areas are controlled by the State Government.

Figure 6. Activity Centre – Potential Planning Directions and Actions

Activity Centres	Planning Direction	Action	Rationale ²	Timeframe
Joondalup City	1. To plan for and ensure adequate supply of commercial and industrial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2033.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term
		3. Amend local planning strategy to account for the supportable level of Light Industrial floorspace.	Section 8.7 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term

² The year referred to for growth in demand is the year in which demand reaches a point that there is sufficient turnover productivity for a centre to warrant expansion, based on the analysis.

Activity Centre Needs Assessment and Hierarchy Review

Activity Centres	Planning Direction	Action	Rationale ²	Timeframe
	2. To plan for and meet employment and ESS targets.	1. Support strategic opportunities and plan for strategic industries and employment.	Section 10 and Section 10.1 recognises that Joondalup City will be the primary driver of strategic opportunities and increasing the City's ESS level. Planning for the City centre requires flexibility to allow for up to 45,000 jobs by 2050.	Long term
	3. Allow for sufficient development capacity to support the required workforce to meet ESS targets.	1. Incorporate appropriate plot ratio and height restrictions (potentially based on meeting specific conditions) to allow the City Centre to accommodate sufficient floorspace to meet ESS targets.	The Needs Assessment provides floorspace estimates to meet population related demand. By 2043 an additional 369,604m ² of commercial floorspace may be required to meet ESS targets.	Ongoing
	4. Support activation of CBD (outside Lakeside Joondalup)	1. Apply six principles of economic activation when opportunities for redevelopment / revitalisation occur. The focus should be to either position high density residential in locations that promote pedestrian traffic along key active frontages and / or to activate key frontages where high pedestrian traffic is occurring	The CBD outside Lakeside Joondalup needs to be activated to reduce retail vacancies	Medium / Long Term
	5. Support reduction of office vacancies in the City Centre	1. Implement planning initiatives to support economic development (need to be developed / included)	Office floorspace growth and uptake will need to be driven by factors other than population growth. Providing higher quality office space (i.e. A Grade) can make the City's offices more attractive; it is not the only deciding factor for a business however.	Ongoing
Whitford City	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2033.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term
Warwick Grove	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2033.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term

Activity Centre Needs Assessment and Hierarchy Review

Activity Centres	Planning Direction	Action	Rationale ²	Timeframe
Ocean Reef Marina	1. To capitalise on strategic employment potential associated with tourism	2. Identify opportunities to encourage ongoing tourism growth associated with the Marina	The Ocean Reef Marina will be a significant tourism asset. While it will be developed with tourism in mind the City should look to maximise the benefit from the significant State and Local investment. Planning can support economic development through appropriate initiatives (i.e. free alfresco dining permits, reduced rates, zoning adjacent land for tourism uses such as accommodation) but is limited by State Government's control of the activity centre.	Ongoing
Hillarys Boat Harbour	1. To capitalise on strategic employment potential associated with tourism	2. Identify opportunities to encourage ongoing tourism growth associated with the Harbour	The Harbour is a significant visitor attractor for the City with retail, entertainment, recreation and accommodation strengths. There is the opportunity to continue to grow the attractiveness of the Harbour, particularly with the significant population growth planned in the City of Wanneroo. Planning can support economic development through appropriate initiatives (i.e. free alfresco dining permits, reduced rates, zoning adjacent land for tourism uses such as accommodation) but is limited by State Government's control of the activity centre.	Ongoing
Currambine Central	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2038 under Scenario 1 or 2033 under Scenario 2.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of the allocation of floorspace gaps and growth in demand by 2038 under Scenario 1 and 2033 under Scenario 2.	Medium term
Woodvale Boulevard	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of the allocation of floorspace gaps and growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term
Belridge	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term

Activity Centre Needs Assessment and Hierarchy Review

Activity Centres	Planning Direction	Action	Rationale ²	Timeframe
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of the allocation of floorspace gaps and growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term

Further implementation details and recommendations can be found in Section 11 Implementation Recommendations.

2 INTRODUCTION

The City of Joondalup (the City) conducted a gap analysis of the City's current Local Planning Strategy and a review of the current State Planning Policy requirements. The assessment indicated the need to revise specific elements of the City's Local Commercial Strategy (LCS) to align the Local Planning Framework with the requirements of State Planning Policy 4.2 Implementation Guidelines (SPP 4.2). Pracsys was engaged by the City to undertake a Needs Assessment and activity centre hierarchy review to provide background analysis and recommendations to be included in the review of the City's Local Planning Strategy.

This report includes:

- An analysis of the City's demographic and economic context
- An analysis of demand for population goods and services
- Analysis of local and regional industry drivers
- A strategic review of relevant local and state policies and frameworks
- A review of retail trends
- A benchmark gap analysis to inform activity centre floorspace opportunities
- A Needs Assessment to determine supportable retail, non-retail and light industrial floorspace and employment based on expected population growth scenarios
- An activity centre hierarchy from 2023 to 2043
- Other employment land requirements to meet sub-regional employment targets

3 DEMOGRAPHIC ANALYSIS

The contextual demographic analysis was confined to the City of Joondalup (Figure 7). The demographics of the City's residential population were largely analysed with reference to Greater Perth and other Local Government Areas (LGA) that were relevant to better understand the broader influences in the area. The City's commercial property market profile was analysed as required by SPP 4.2 Implementation Guidelines where data is available. Socio-economic factors were identified to develop a comprehensive analysis of the LGA. The Needs Assessment analysis to determine future supportable floorspace will adopt a wider catchment to account for the significant reach of the City's major activity centres including Joondalup City Centre (Strategic Centre), Whitford Secondary Centre, Clarkson Secondary Centre and Stirling Strategic Centre.

Figure 7. City of Joondalup Map

Source: ABS 2021, Pracsys 2023

3.1 Age Profile

The City of Joondalup's age profile by five-year brackets has been compared to Greater Perth using data from the 2021 ABS Census (Figure 8). The City has an older population compared to that of Greater Perth with approximately 39% of the residents aged 50+, compared to 34% in Greater Perth. Employment aged persons, typically between 20 to 49 years of age are underrepresented (36%) compared to that of Greater Perth (42%). Demand for aged services may be higher in the City due to this distribution of age groups.

The City is also home to a higher proportion of secondary and university-aged persons (14 to 19 years of age). This is likely to be maintained due to the presence of ECU University and appropriate amenities should be provided in activity centres (particularly the City Centre). Examples of appropriate amenities can be found in the City's Social Needs Analysis report.

Figure 8. City of Joondalup and Greater Perth Age Profile

Source: ABS Census 2021

3.2 Population Growth

Population growth from 2021 to 2031 has been analysed using WA Tomorrow forecast bands which represent different growth scenarios for the City of Joondalup (Figure 9). The population within the City increased by 5,558 people between the 2016 and 2021 Census. Based on WA Tomorrow Band C forecasts, the population in the City is set to increase to 1,935 persons by 2031 (1% annual population growth versus Greater Perth average of 2% annual growth).

**Figure 9. City of Joondalup Population Forecasts**

Band	2021	2031	Change - Number of People	Annual Average Growth Rate 2021-2031
A	160,125	161,684	1,681	1.0010
B	160,125	162,371	2,368	1.0015
C	160,125	161,938	1,935	1.0012
D	160,125	163,146	3,143	1.0019
E	160,125	163,479	3,476	1.0022

Source: WA Tomorrow 2021, ABS Census 2021

Population growth from 2021 to 2031 has been analysed using WA Tomorrow Band C to compare change for the City of Joondalup against the neighbouring LGA of the City of Wanneroo (Figure 10). The City of Wanneroo is estimated to grow 105,737 people (51%) from 2021 to 2031. The City of Stirling is expected to grow by approximately 21,000 persons over the same period. Forecast.id has estimated that an additional 10,700 persons will reside in the City of Joondalup from 2031 to 2041; the City of Wanneroo's population is estimated to grow by 82,400 persons over the same timeframe.

Figure 10. City of Joondalup and City of Wanneroo Population Growth

Source: WA Tomorrow 2021, ABS Census 2021

Retail and commercial demand in the City is likely to experience limited change from localised growth until 2031. Increases in population in surrounding areas will likely generate demand at secondary centres and the City Centre. These centres will be key to providing access to goods, services and employment in the North West Sub-Region.

3.3 Family Composition

The City of Joondalup's family composition has been compared to the Greater Perth average using 2021 ABS Census (Figure 11). The City's family composition profile indicates a higher proportion of couple families relative to Greater Perth (86% versus 83%). The difference is largely as a result of the higher proportion of couple families with children in the City at 48% families and Greater Perth's greater one parent families (15% versus 13%). The City's level of families with children may indicate a need for demographic specific commercial uses such as childcare.

Figure 11. City of Joondalup and Greater Perth Family Composition

Source: ABS Census 2021

3.4 Household Type

The City of Joondalup's household type has been compared against that for Greater Perth using tenure data from the 2021 ABS Census (Figure 12). The City of Joondalup has a greater proportion of owned dwellings relative to Greater Perth (80% versus 59%) of which 51% of dwellings in the City are owned with a mortgage compared to 46% of dwellings in Greater Perth. A high proportion of renters would indicate the presence of low-density housing and so the City's lower proportion of renters (15% versus 24%) suggests the region is home to low-density, separate housing. The proportion of homeowners with mortgages in the City indicates the presence of working-age adults and supports the analysis of the City's age profile and family composition.

Figure 12. City of Joondalup and Greater Perth Household Type

Source: ABS Census 2021

3.5 Educational Attainment

The level of educational attainment for the City of Joondalup has been compared against that for Greater Perth using data from the 2021 ABS Census (Figure 13). The City has a similar education profile to that of Greater Perth with approximately 25% of residents having attained a university education when compared to 26% in Greater Perth. Greater Perth has a higher proportion of people whose highest level of education attainment was secondary education level. Segments with higher levels of education are more likely to participate in arts and cultural activities; there may be an opportunity to increase the availability of these activities in the City's key activity centre.

Figure 13. City of Joondalup and Greater Perth Highest Level of Educational Attainment

Source: ABS Census 2021

3.6 Occupation

The occupation of City of Joondalup residents has been compared against that for Greater Perth using data from the 2021 ABS Census (Figure 14). 40% of residents in the City are managers or professionals compared to 36% in Greater Perth. In general, residents in the City work have higher skilled occupations. In Greater Perth, labourers, technicians, trades workers, and machinery operators accounted for 26% of the population compared to the City's 22%. People occupied in higher-skilled professions (managers/professionals) likely have a greater level of disposable income. It is also likely that many of these residents are travelling outside the City for work.

Figure 14. City of Joondalup and Greater Perth Employment by Occupation Group

Source: ABS Census 2021

3.7 Cultural Diversity

The cultural diversity of the City has been compared against that for Greater Perth using country of birth data from the 2021 ABS Census (Figure 15). Oceania and Antarctica represent the largest place of birth of both the City and Greater Perth with 63% and 62%, respectively. The City has a significant proportion of persons from the United Kingdom (17%), which contributes to the difference between the City's North-West Europe population (20%) against Greater Perth's (12%). There are lower levels of Culturally and Linguistically Diverse (CALD) population in the City compared to Greater Perth. The City of Wanneroo presents a similar cultural diversity composition to the City of Joondalup whereas the City of Stirling has a higher level of CALD population such as those born in Eastern Europe and South Asia. In this sense, activity centres in the south of the City may face greater demand for culturally specific goods and community services.

Activity Centre Needs Assessment and Hierarchy Review

Figure 15. City of Joondalup and Greater Perth Country of Birth

Source: ABS Census 2021

4 ECONOMIC/INDUSTRY ANALYSIS

This section considers industrial and socio-economic factors specific to the City. The income and expenditure analysis used for the Needs Assessment modelling will involve a larger catchment as seen in Section 8.1 Demand Analysis.

4.1 Business Entries and Exits

The volume of business entries and exits in the City of Joondalup has been examined based on 2023 ABS data (Figure 16). Total business entries have increased by 7% per year on average while business exits have decreased by 4% in the City since 2019. The number of entering businesses employing more than five employees decreased while non-employing business entries and entering businesses with one to four employees grew by 7% each. Exiting businesses employing twenty or more employees increased by 16% from 2019. Growth in business entries can generally be attributed to profitable industries which encourage new businesses to enter the market.

Figure 16. City of Joondalup Business Entries and Exits

Source: ABS 2023

An analysis of the number of businesses by industry between 2018 and 2022 shows that the strongest growth broadly occurred in the services sector (Figure 17). Other services, administrative and support services, and health care and social assistance were some of the fastest-growing industries in this period. Mining is the fastest growing industry at 7% however this is of relatively low volume with growth from 58 businesses to 79 businesses (this is likely related to office floorspace or home-based businesses). The industries with the largest number of businesses in 2022 includes construction (3,455), professional services (2,083) and real estate (1,104). Growth in businesses may increase demand for business-to-business goods and services which would be suitably located in a service commercial area.

Figure 17. City of Joondalup Average Annual Growth in Business Entries by Industry

Source: ABS 2023

4.2 Commercial Vacancies

Commercial vacancies have been analysed to provide an indication to the performance and effective utilisation of activity centre land (Figure 18). The City Centre and non-shopping centre retail share a commercial vacancy rate of approximately 13%. Within the City Centre, 22% of office space is vacant while medical uses have a vacancy level of 3%. Lakeside Joondalup records no vacancies. These results indicate that auxiliary medical uses in the Hospital are performing well in the City centre while general office and retail are less competitive; Lakeside Joondalup is a high-performing centre and likely draws retail uses away from the rest of the City centre. Floorspace gap analysis identified that the City's activity centre hierarchy as a whole has a much lower level of vacant floorspace compared to other LGAs that have Strategic Centres (see Section 7 Floorspace Gap Analysis). This indicates that the City's activity centres are generally performing well.

**Figure 18. City of Joondalup Vacancy by Floorspace Type and Location**

Source: Y Research 2022 (weighted average of office and medical uses are shown)

Four benchmark LGAs have been used to compare the City's vacant commercial floorspace distribution, the Cities of Fremantle, Bayswater, Swan and Canning. These areas have been chosen for the following reasons:

- They all currently have strategic centres
- All include significant retail and entertainment floorspace
- Most include hospital floorspace
- They are inner metropolitan areas that are somewhat distanced from the Perth CBD; the average likely provides an aspirational target in terms of service provision (floorspace per person)

Floorspace to population ratios (service ratios) are used to provide relative comparisons and by accounting for the size of an LGA's population (Figure 19). Section 7 Floorspace Gap Analysis will follow a similar methodology to consider broader floorspace demand and opportunities using PLUC codes to quantify potential floorspace gaps in the City relative to its benchmarks. The City of Joondalup has a low-level of vacant commercial floorspace ratio relative to the benchmark LGAs. The City of Fremantle appeared to be an outlier and was removed to test provide a more refined comparison. This resulted in a modified average service ratio of 0.34m² vacant floorspace per person, well above the City of Joondalup average (0.19m² per person). As mentioned previously, a low vacant service ratio suggests that the City's activity centres are utilised effectively and are performing well.

Figure 19. Benchmark LGA Vacant Floorspace

	City of Joondalup	City of Fremantle	City of Bayswater	City of Swan	City of Canning	Average
Population	160,003	28,893	64,674	133,851	90,187	95,522
Vacant Commercial Floorspace (m ²)	31,066	164,579	21,302	41,450	47,001	61,080
Vacant Floorspace to Population Ratio (m ²)	0.19	5.70	0.33	0.31	0.52	1.41

Source: DPLH LUES 2015, ABS 2021

4.3 Commercial Rents

Publicly available Shop-Retail rent information was analysed against retail rent trends for WA by centre classification (Figure 20). Commercial rent data is constrained because of City's relatively low level of commercial vacancies and undisclosed rent figures. Average Shop-Retail rent in the City was approximately 600 \$/m², less than the average for Neighbourhood Shop-Retail uses across WA. The City's largest centres, Joondalup City and Whitford City had limited rent information available with those commercial uses with rent data being 'Showrooms' and 'Bulky Goods' suppliers. In this sense, the average Net Face Rent for Shop-Retail uses in the City is likely higher than that found in the analysis.

Figure 20. Shop-Retail Net Face Rent at Different Activity Centre Classifications (\$/m²)

Source: CBRE Perth Retail Market 2023, Real Commercial 2023, Pracsys 2023

Publicly available office rent information for Joondalup City Centre was analysed against office rent trends for Perth by centre grade (Figure 21). Average Office rent in the City was approximately 276 \$/m² across four office spaces, less than the average for Perth. While commercial rents may appear relatively low, comparison data takes into account rent in Perth CBD which faces high demand.

Figure 21. Office Net Face Rent at Different Office Grades (\$/m²)

Source: Savills Australia Perth Office Briefing 2023, Real Commercial 2023, Pracsys 2023

4.4 Labour Force

The City's employed population accounts for 67% of the population against Greater Perth's 65% (Figure 22). Greater Perth has a proportion of people looking for work who are unemployed. On a more detailed level, the City's greater proportion of employed population is an outcome of more part-time workers (24%) compared to Greater Perth (22%).

Figure 22. City of Joondalup and Greater Perth Labour Force

Status	City of Joondalup	Greater Perth
Employed	67% (83,730)	65%
Unemployed	3% (3,862)	4%
Labour Force	70% (87,592)	69%
Not in the labour force	30% (38,161)	30%

Source: ABS Census 2021

4.5 Industry of Employment

The industries in which residents of the City work in and the industries that hold the workers in the City were analysed (Figure 23). Residents predominately work in knowledge-intensive service industries. Health care (14%), construction (12%) and education and training (12%) employ the greatest proportion of residents. Preschool and school education accounts for 8% of residents. Retail trade, largely made up of food and beverages services and store-based retailing, accounts for 5% of the resident population's employment. Those employed in the City predominately work in health care (22%), retail trade (15%) and education and training (18%). The distribution of employment by industry is somewhat misaligned in the professional service and construction industries, meaning these residents are more likely to travel outside the City for work.

Figure 23. City of Joondalup Industry of Employment

Source: ABS Census 2021

4.6 Employment Quality

Employment quality can be described by considering industry uses and the required level of knowledge. The City has an employment quality breakdown broadly in line with that of Greater Perth (Figure 24). It does however have higher levels of knowledge-intensive employment and consumer services (see Section 13.2 Appendix 1 Employment Quality Categories for further detail).

**Figure 24. City of Joondalup and Greater Perth Employment Quality**

Source: ABS Census 2021

Strategic employment combines exports and supporting knowledge-intensive producer services (KIPS). Consumer services are significantly above that of Greater Perth; persons employed in these industries are likely those who also reside in the City's boundaries. The levels of consumer services and knowledge-intensive consumer services (KICS) are greater than that of Greater Perth, this identifies that there is a good provision of consumer services locally and reflects the role of the City's activity centres in providing access to consumer goods and services to the wider region.

4.7 Employment Self-Sufficiency

Resident workers refer to those who reside in the City and work in the City. Employment self-containment (ESC) is a measure of the proportion by which residents of an area also work in that area. 27% of working residents in the City are employed within the LGA (Figure 25). Perth, Stirling, and Wanneroo employ approximately 38% of the City's residents. Industries within the City that employ the most residents include retail trade, education and training and health care. 26% of residents who work outside of the City are employed in construction and health care alone.

Figure 25. City of Joondalup ESS and ESC

Workforce Measures	City of Joondalup
Total employment	49,576
Resident workers	23,651
Labour force	87,592
ESC	27%
ESS	57%

Source: ABS Census 2021

Activity Centre Needs Assessment and Hierarchy Review

Employment self-sufficiency (ESS) is a measure of the availability of jobs in an area compared to the resident labour force. The City's ESS is 57% meaning that for every 100 residents in the labour force, there are 57 jobs available locally. This is relatively close to the North-West Sub-Regional Planning Framework (2011) target of 59.5% by 2050. The City Centre will be key in achieving the strategic ESS target, particularly considering the population growth expected in the City of Wanneroo.

5 STRATEGIC CONTEXT

The State and Local planning frameworks and other contextual documentation was reviewed to identify relevant overarching objectives and to understand factors influencing future catchments and employment targets for activity centres.

The following table summarises the key relevant planning and contextual documents and identifies critical aspects relevant to the City's activity centres (Figure 26).

Figure 26. Strategic Alignment

Document	Summary	Directions Relevant to the City
Perth and Peel @ 3.5million Department of Planning, Lands and Heritage, 2018 	<p>Perth and Peel is a land use planning and infrastructure framework for Western Australia at a population of 3.5 million.</p> <p>A core aim is in promoting local employment opportunities to increase the number of people who live and work within the same region.</p> <p>This includes a focus on attracting strategic economic and employment land uses within the strategic metropolitan centres and key industrial centres, while maximising use of existing and proposed infrastructure.</p>	<ul style="list-style-type: none"> • Future development can maximise existing infrastructure • Strengthen employment nodes to strengthen future, industry, commerce and community • Maintain and enhance employment self-sufficiency to reduce long and costly commutes and increase the economic sustainability of areas. • Leverage the opportunity to provide a mix of retail and entertainment uses to improve the liveability of the centre and attractiveness to visitors. • Maximise appropriate development within the Joondalup City Centre including higher density residential and higher intensity employment. This includes boundary areas such as Edgewater, which also has a train station
State Planning Policy 4.2 Activity Centres Department of Planning, Lands and Heritage, 2020 	<p>Activity centres are multi-functional community focal points that vary in size and function.</p> <p>SPP 4.2 aims to develop activity centres which meet different levels of community need and enables employment goods and services to be accessed equitably and efficiently by the community.</p> <p>The density and diversity of housing in and around activity centres is maximised to improve land efficiency and housing variety.</p> <p>Development within activity centres aims to be well-designed, cohesive and functional and capitalises on the use of existing and planned infrastructure.</p>	<ul style="list-style-type: none"> • The activity centre network meets different levels of community need and enables employment, goods and services to be accessed efficiently and equitably by the community. • The primacy of activity centres is reinforced, and out-of-centre development that undermines the hierarchy of activity centres is discouraged. • New activity centres or the expansion and consolidation of existing activity

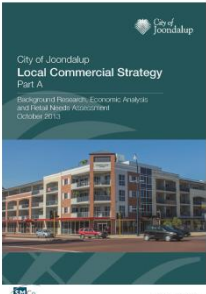

Document	Summary	Directions Relevant to the City
	<p>Walking, cycling and public transport, to and between activity centres, should be maximised while private vehicle trips and dependence on parking is reduced.</p> <p>Identifies strategic, secondary, district, neighbourhood and local centres.</p>	<p>centres does not unreasonably undermine existing centres.</p> <ul style="list-style-type: none"> • Sufficient development intensity and appropriate land use mix is provided, that supports the role and function of activity centres and facilitates a competitive retail and commercial market. • The density and diversity of housing in and around activity centres is maximised to improve land efficiency and housing variety, and assist with delivering the objectives and outcomes of the strategic planning framework for the applicable region. • Development within activity centres is well-designed, cohesive and functional and that capitalises on the use of existing and planned infrastructure. • Access to and within activity centres by walking, cycling and public transport is maximised while private vehicle trips and dependence on parking is reduced. • Planning and development of activity centres balances the environmental, social and economic values of activity centres to provide a net positive benefit to local communities.
<p>Key Changes - State Planning Policy 4.2 Activity Centres for Perth and Peel (2010) and State Planning Policy 4.2 Activity Centres (2023)</p>	<p>DPLH published a summary matrix identifying the changes made between the 2010 and 2023 revisions of SPP 4.2.</p> <p>Key changes included:</p> <ul style="list-style-type: none"> • Policy application areas • Policy objectives • Activity Centre Hierarchy • Specialised Centres • Activity centre function and characteristics • Activity centre density targets • Diversity performance target • Retail needs assessment • Retail sustainability • Bulky goods retail • Supermarkets • Out-of-centre development • Model centre framework 	<ul style="list-style-type: none"> • Specialised Centres – emphasis placed on benefits of clustering business activity. The City Centre acts as a form of specialised centre with a hospital and a university campus; there is the opportunity to leverage this critical infrastructure for business activity • Activity centre function and characteristics – details main role and typical attributes and provides implementation guidelines. • Activity centre density targets – identifies average density and walkable catchment for centres with and without a station. • Diversity performance target – removed, diversity driven by land use,

Activity Centre Needs Assessment and Hierarchy Review

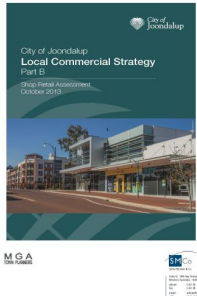

Document	Summary	Directions Relevant to the City
		<p>employment, proximity to public transport etc.</p> <ul style="list-style-type: none"> Retail needs assessment – required to be undertaken for local planning strategies <u>and</u> district structure plans, and precinct plans which are > 5 years old. Implementation guidelines expanded. Retail sustainability assessment (Net Benefit Test) - focus on net benefit to the community. Only required for a major development that exceeds identified need or an out of centre development. Bulky goods retail – realigned with SPP 4.2. with clarification between large shops and bulky goods. Supermarkets - guidance provided on recommended locations for shops of different sizes. Out-of-centre development – stronger provisions to limit this type of development. Model centre framework – removed and replaced with SPP 7.2 Precinct Design and associated guidelines.
<p>State Planning Policy 7.2 Precinct Design</p> <p>Department of Planning, Lands and Heritage, 2021.</p> 	<p>Precincts areas that require a higher level of planning and design focus due to their complexity.</p> <p>Precinct types include activity centres (as per SPP 4.2) station precincts, urban corridors, residential and/or mixed-use areas, and areas identified by the WAPC</p>	<ul style="list-style-type: none"> SPP 7.2 aims to ensure that precinct planning, and design is undertaken in a co-ordinated manner to accommodate growth and delivery quality-built environment outcomes which provide social, economic and environmental benefits. The policy recognises the need to design and plan for a broader range of precinct-based contexts and conditions, including activity centres, stations, urban corridors, and infill areas.

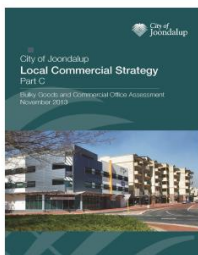

Document	Summary	Directions Relevant to the City
Diversify WA (2019) 	<p>Diversify WA is an Economic Development Framework identifying avenues for economic growth and development throughout the State</p>	<p>The vision set out by Diversify WA states “a strong and diversified economy delivering secure, quality jobs through increased investment across a broad range of industries”</p> <p>There are a number of cross-sector activities that are relevant to the City including</p> <ul style="list-style-type: none"> • Supply chain development • Advanced manufacturing • Science, Innovation and technology <p>Additionally, a number of external focused sectors that have opportunities in the City:</p> <ul style="list-style-type: none"> • Tourism, events and creative industries • International Education • Health and medical life sciences <p>The City of Joondalup may have opportunities to contribute to the development objectives through medical and university institutions.</p>
City of Joondalup Local Commercial Strategy Part A (2013) – Background Research, Economic Analysis and Retail Needs Assessment 	<p>The Local Commercial Strategy (LCS) was developed as a part of the City's review of the District Planning Scheme (DPS) No. 2 and compliments the draft Local Planning Strategy, draft Local Housing Strategy, and draft Joondalup City Centre Structure Plan.</p> <p>Part A of the LCS provides policy context, an assessment of current and future economic growth and trends, and analysis of issues and challenges relevant to the City's commercial areas.</p> <p>A centres “health check” was undertaken and considered factors such as vacancy rates, turnover rates, reliance on retail, and general amenity and accessibility.</p> <p>The health check found that the Beldon neighbourhood centre was in very poor health overall, with Heathridge, Coolibah Plaza and Ocean Reef being in poor health. The Joondalup City Centre was found to be an average performing centre.</p>	<p>Key implications identified within Part A were:</p> <ul style="list-style-type: none"> • The need to develop a new LCS (adopted BY Council as a Local Planning Strategy) to align with SPP 4.2. • Joondalup as a Strategic Metropolitan Centre is the key element within the commercial strategy. • Develop a new structure plan for the Warwick Secondary Centre. • The Zones within the DPS can be simplified and the allowable land uses clarified.
City of Joondalup Local Commercial Strategy Part B (2013) – Shop Retail Assessment	<p>Part B of the Local Commercial Strategy provides the interpretation of the Part A outcomes and provides strategies and measures that seek to optimise economic benefits to business within the City of Joondalup.</p>	<p>The Part B report identifies nine specific recommendations:</p> <ul style="list-style-type: none"> • Revision of the District Planning Scheme • The aims and objectives in the scheme should reference the Local Planning

Activity Centre Needs Assessment and Hierarchy Review

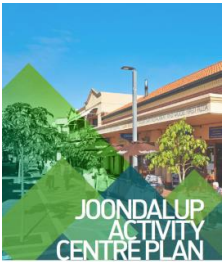

Document	Summary	Directions Relevant to the City
		<p>Strategy and associated supporting documents.</p> <ul style="list-style-type: none"> • Revise current zones in the Scheme and the Zoning Table (Table 1) to be more consistent with Local Planning Manual guidelines, revised R-Codes and SPP 4.2. • Building setbacks for non-residential development should be reviewed to move away from a 'one size fits all' approach and enable greater activation of small format retailing. • Reference should be made in the scheme to the centre hierarchy, centre diversity requirements and employment generation proposals in the context of the Local Planning Strategy and specifically the Local Commercial Strategy. • Ensure that activity structure plans are prepared and endorsed by the WAPC where required under SPP 4.2. • DSP Schedule 1 interpretations should be consistent with the Model Scheme Text and Regulations in order to provide consistency and certainty to developers. • District Planning Scheme to include Strategy Map and indicative retail floor spaces in LPS. • Revise Local Planning Strategy to incorporate the draft Local Commercial Strategy taking account of the strategies contained in section 3.2 of the Part B report. • Strategy Plan (Appendix X) outlining all activity centres within the City, recommended position in the retail hierarchy, indicative Shop-Retail floorspace thresholds, current overall health of the centre and other individual centre considerations
City of Joondalup Local Commercial Strategy Part C (2013)–	Part C of the Local Commercial Strategy provides analysis of Bulky Goods Retail and Commercial Office Development within the City, and guidance on floor space, timing and location of future development.	<p><i>Bulky Goods Developments</i></p> <ul style="list-style-type: none"> • Position Joondalup as a high order bulky goods store destination by concertation of bulky goods

6 RETAIL TRENDS

The City should encourage development within its activity centres in line with current retail trends to maximise expenditure and overall demand. This being said, the City's main goal should be to address the policy outcomes specified in the SPP4.2., ensuring the establishment of a hierarchy of activity centres that promotes, employment, equitable access of goods and services and primacy of activity centres.

The identified trends highlight the fast-changing nature of retail that businesses need to adapt to. It is key to ensure that planning for activity centres allows for flexibility in uses and floorspace areas. The following trends are worth considering as activation and development opportunities arise (Figure 27)³.

Figure 27. Retail Trends and Drivers

Trend	Description	Drivers
Conscious Retail	Conscious retail is increasingly keeping customers loyal to a brand /distributor.	Many consumers have made a lifestyle choice to have a smaller global footprint, support brands that provide better conditions for factory workers in developing countries, or support local products. Consumers are often willing to pay a premium for these products.
Data Retail	'Big Data' is being used to continually monitor and respond to changing consumer desires, shortening the product cycle.	Collecting and analysing data on retail sales is being used to inform all parts of the retail sale process, from supply chain to understanding customer satisfaction with their purchase. Retailers who don't use data to inform their decisions are much less likely to understand their customer's preferences or forecast demand and may find it difficult to remain competitive with those who do.
International Retail	The last few years have seen an influx of international brands penetrating the Australian market.	An untapped Australian market and Australian's demanding goods they can see online but cannot purchase locally. Additionally, the ability to geoblock products and charge higher prices in the Australian market has driven demand.
Omnichannel Retail	Digital marketing has been used to keep customers loyal to a brand/distributor.	The emergence of digital marketing across a range of devices, platforms and applications have provided multiple channels for retailers to market their products. Physical stores need an online presence to be competitive, as a consumer may shop using both means at different times.
Mobile Devices	Accessing retail via mobile devices and integrating mobile devices.	Mobile devices are providing unprecedented 24/7 access to retail offerings.
Subscription retail	Subscription retail allows retailers to encourage increased loyalty and connection to their brand.	Retailers need a business model that 'locks in' customers to increase the threshold of switching brand
Fast Retail	Business models comprised of virtual stores accessible from anywhere with fast distribution networks.	Technology has enabled customers to decide when, how and where to go. Consumers are no longer beholden to opening

Activity Centre Needs Assessment and Hierarchy Review

Trend	Description	Drivers
		times or physical geography, consumer desires rather than retailers are driving consumption.
Retailtainment	Entertainment as an integral part of the retail experience.	The popularity of online retail channels has resulted in physical retailers needing to provide a retail experience or social experience as a point of difference. Millennials integrate retail and entertainment as a single social experience.
Small Retail	Speciality shops and smaller floorplates are becoming more popular.	Smaller stores with more curated selections, and speciality shops with niche products and more knowledgeable staff are predicted to be more competitive than larger stores where products can be harder to find.
Personal Retail	Consumers are increasingly desiring products that can be personalised.	Consumers are going shopping with a strong idea of what they want, rather than shopping to see what is available and fits their needs. They want to find a product that reflects their personal brand and is tailored to their needs rather than generic and mass-produced.
Ethical Consumerism	Consumers are considering the ethical and environmental impact of their purchases; where the product was produced and if it reflects their values.	This has been driven by a range of factors such as COVID-19, social media raising awareness around working conditions and environmental impact, news, Oxfam and other organisations that rate brands.
Ecommerce	The rise of online shopping coincides with a rise in e-commerce. Online shopping provides the ability of consumers to stay home and e-commerce has revolutionised who can be a retailer.	This has been driven by fast-paced lives, the rise of social media, more people starting online businesses. Online shopping is what customers are doing and ecommerce is what businesses are doing. This also means in-store shopping has to be enticing or convenient enough to attract consumers.
Buying Local	Supporting local businesses and individuals	Consumers are becoming increasingly willing to purchase from small businesses and locally. This has been accelerated through COVID-19 to support small, struggling businesses and due to a lack of imported goods.
Open Air Shopping Experiences	People are starting to prefer outdoor malls rather than enclosed malls.	People wanting to be in nature, prefer to walk between shops outside rather than in a shopping centre, however, the trade area pull is larger for indoors than outdoors
Circular Fashion	More consumers are turning to be a part of a circular economy model in which they consume and give away items in a more sustainable manner.	This has been driven by second-hand ecommerce like Etsy, people both buying and selling as individuals or small 'brands' and the growth of the sharing economy.
Authenticity	Customers are increasingly wanting to feel a personal connection with brands and are becoming more aware of manipulative advertisements.	Increased availability of information is making consumers more aware of marketing tactics. This is making consumers more inclined to purchase from brands/retailers they feel are authentic.
Virtual Reality	Retailers are increasingly looking to differentiate themselves through the integration of technology with the customer experience.	Augmented Reality (AR) and Virtual Reality (VR) technologies have had a significant impact on the retail sector. AR and VR provide immersive and engaging experiences for customers, enabling them to visualize and interact with products in new ways such as virtual storefronts. This trend can reduce the footprint required of physical stores.

7 FLOORSAPCE GAP ANALYSIS

Floorspace gap analysis is a critical tool in urban planning that helps identify and address gaps in the supply and demand for floorspace within a given area. By comparing the current supply of floorspace to benchmark areas, gaps can be identified, and appropriate strategies can be developed to address them.

In this section, we will conduct a floorspace gap analysis to understand the current state of floorspace supply and demand in the City. We will explore different types of floorspace based on the Department of Planning, Lands and Heritage (DPLH) Planning Land Use Categories (PLUC) and WA Standard Land Use Categories (WASLUC). Detailed definitions of PLUC have been included in Appendix 13.3 PLUC Glossary. Four benchmark Local Government Areas have been used to identify gaps, the Cities of Fremantle, Bayswater, Swan and Canning. These areas have been chosen for the following reasons:

- They all currently have strategic centres
- All include significant retail and entertainment floorspace
- Most include hospital floorspace
- They are inner metropolitan areas that are somewhat distanced from the Perth CBD; the average likely provides an aspirational target in terms of service provision (floorspace per person)

Floorspace to population ratios (service ratios) are used to provide relative comparisons and quantify potential gaps. The gap analysis will consider broader floorspace demand using PLUC codes. This will include:

- A population-driven overview based on comparison of the City's activity centres. Population-driven industries and jobs are those that share a positive relationship with the size of a population such as real estate, small-scale medical services and retail.
- A strategic employment overview based on comparison of all employment centres in the identified catchment. Strategic industries and jobs share no relationship to population and are based on a region's unique characteristics. Strategic industries are important to a region's success as they bring in expenditure from outside the region's boundaries. Strategic industries may involve the presence of natural resources, strong transport connections or a significant cluster of complementary industries (i.e. Mining, Professional Services such as Engineering, etc.). Strategic industries can be a major driver of economic growth as they often service a larger area, exporting goods and services outside of its region and attract non-resident employment.
- With an understanding of gaps at a PLUC level, detailed WASLUC uses will be assessed to provide specific strengths, population-driven gaps and strategic gaps. This will inform recommendations for land use mixes in the City's centres.

7.1 Current Commercial Supply by PLUC

DPLH LUES 2015 data contains eleven commercial land uses categories. The combined floorspace of Other Retail and Shop-Retail accounts for approximately 35% of total floorspace within the City's activity centres (Figure 28).

Figure 28. City of Joondalup Floorspace by PLUC

PLUC	City of Joondalup Floorspace (m ²)
RET	50,260

UTE	42,160
HEL	251,785
Total	990,516

Source: DPLH LUES 2015

Types of floorspace the City of Joondalup has a high concentration of include:

- HEL – Health/Welfare/Community Services
- OFF – Office/Business
- ENT – Entertainment/Recreation/Cultural

Floorspace where the city seems to have a lower concentration include:

- MAN – Manufacturing/Processing/Fabrication
- SER – Service Industry

Strengths in strategic industries within the City are likely associated with Office/Business and Health/Welfare/Community Services floorspace. This would be associated with the Joondalup Hospital and ECU Campus.

7.2 Commercial PLUC Gaps

Population-level PLUC gaps have been estimated based on a comparison of the City's activity centre floorspace (commercial centres in the Land Use and Employment Survey) to the benchmarks' centre floorspace (Figure 29). Cells that are not highlighted represent an oversupply in floorspace while those highlighted in grey represent an undersupply/gap.

Total	43,344

Source: DPLH LUES 2015

Within the City's activity centres there are significant surpluses in Health/Welfare/Community Services (Health) and Utilities/Communications floorspace types. Utilities are specifically related to communication, transportation and energy consumption, while Health includes hospitals, schools, and religious activities. There is less Vacant Floor Area relative to the benchmark areas which indicates the City has high performing activity centres. Services Industry and Office/Business gaps represent an under provision and an opportunity to expand local offerings in commercial spaces. Gaps in Manufacturing exist primarily due to a lower provision of appropriate service commercial areas that cannot be addressed due to a lack of developable commercial land.

The identified gaps for Retail, Other Services, Office Business, Storage, Residential (i.e. short-stay accommodation) are distributed in the Needs Assessment across the City's activity centre Non Shop-Retail floorspace based on their role in the hierarchy. Further detail regarding the allocation of commercial floorspace gaps can be found in Section 8.6 Non Shop-Retail Floorspace Projections.

7.3 Detailed Commercial WASLUC Gaps

Commercial WASLUC gaps have been identified to provide an understanding of the potential mix of uses that could eventuate as employment centres develop (Figure 30).

The WASLUC assessment has been used to identify significant and relevant:

- Local strengths
- Gaps in specific population-driven uses
- Gaps in specific strategic uses

Figure 30. City of Joondalup Strengths, Strategic and Population Gaps

Source: DPLH LUES 2015

7.4 Current Industrial Supply by PLUC

The City of Joondalup offers a relatively limited amount of industrial floorspace. The City's industrial land uses are predominantly light industrial and service commercial and are located along Canham Way, Greenwood and in Joondalup City. Storage/Distribution and Entertainment/Recreation/Culture are the largest land uses, accounting for 31% and 17% of industrial floorspace, respectively (Figure 31).

Types of industrial floorspace the City of Joondalup has a high concentration of include:

- ENT – Entertainment/Recreation/Cultural
- SER – Service Industry
- STO – Storage/Distribution

Floorspace where the City seems to have a lower concentration include:

- MAN – Manufacturing/Processing/Fabrication
- UTE – Utilities/Communications

7.5 Industrial PLUC Gaps

Population-level PLUC gaps have been estimated based on a comparison of the City's industrial land uses (industrial centres in the Land Use and Employment Survey) to the benchmarks' industrial floorspace (Figure 32). Cells that are not highlighted represent an oversupply in floorspace while those highlighted in grey represent an undersupply/gap.

Within the City's industrial areas, there is a significant under supply of Storage/Distribution and Manufacturing/Processing/Fabrication floorspace types. Storage and distribution land uses often involve warehousing or wholesaling of goods usually conducted from large structures, or involving large bulk goods, but does not include activities that attract the general retail trade activities.

It is unreasonable to expect the City to take advantage of certain industrial gaps, such as manufacturing, as the City has little undeveloped or underutilised land that could hold large-scale industrial land uses. It is likely the City's industrial areas will continue to experience pressure to accommodate office, large format retail, shop/retail and entertainment uses due to the extent of developable land and buffers between potential industrial uses and existing residential developments. Resident's demand for light industrial goods and services is likely satisfied by industrial areas outside the City's boundaries such as Wangara and Balcatta.

7.6 Detailed Industrial WASLUC Gaps

Industrial WASLUC gaps have been identified to provide an understanding of the potential mix of uses that could eventuate as employment areas develop (Figure 33).

The WASLUC assessment has been used to identify significant and relevant:

- Local strengths
- Gaps in specific population-driven uses
- Gaps in specific strategic uses

Canham Way Light Industrial Complex

Canham Way is one of the City of Joondalup's two light industrial complexes according to DPLH LUES 2015. The City has asked requested that the site be assessed to consider the appropriateness of light industrial uses against activity centre.

7.6.1.1 Summary of the Principles of Economic Activation

Principles of economic activation can be applied to support the development of vibrant and viable activity centres. Pracsys uses Six Principles of Economic Activation to assess the relative performance of centres from an economic perspective. This includes how key anchors such as supermarkets drive pedestrian traffic (activation), how businesses can benefit from this pedestrian traffic, and suitable locations for less high traffic uses such as other retail. The principles can also be applied to other commercial uses based on their drivers and access considerations. The following table (Figure 34) provides a summary of the six principles to give context to the assessment of Canham Way's uses.

Figure 34. Summary of Six Principles of Activation

Principle	Summary
1. Purpose of Place 	The role of the Centre based on its size and classification: <ul style="list-style-type: none"> Addresses the question – what does this place represent to its target user population (residents, workers, visitors)? This should link to the SPP4.2 identified roles of centre classifications.
2. Access – Arrival Points 	This refers to the means by which centres are accessed and the arrival points: <ul style="list-style-type: none"> Decisions about access begin 5km from the place Transport networks should be planned to travel through centres (not bypass them) – ensure the design funnels people and traffic into the core Congestion and a mix of transport nodes is beneficial It is better to arrive at the “front door” of the place, not around the back
3. Origins – Car Parking and Transport Nodes 	Origins are areas from which pedestrian movements begins: <ul style="list-style-type: none"> Parking and transport nodes are the drivers of pedestrian movement Strategic distribution of car parks and transport nodes will maximise pedestrian movement Location is more important than numbers Space the car parks around the periphery of the centre Street parking is important (for commercial areas) <ul style="list-style-type: none"> Use fees to ensure turnover of parking but not so much that consumers do not park

Principle	Summary
	<ul style="list-style-type: none"> ○ Relax time limits in appropriate areas to ensure customers have time to undertake shopping trips relevant to proximate uses
4. Exposure – Pedestrian Movement 	Exposure indicates Active Frontages that are exposed to high levels of pedestrian traffic: <ul style="list-style-type: none"> • Economic activation is driven by the frequency and concentration of transactions • Channel movements <ul style="list-style-type: none"> ○ Concentrate transactions by pushing people past as many shop windows as possible ○ Rents and sales are directly related to pedestrian traffic (e.g. a butcher will pay higher rent to be at supermarket entry) • Minimise possible routes from origin to destination points (e.g. car park to main attraction) as architectural “permeability” is not always a good thing
5. Destinations – Major attractions 	Destinations are areas that attract high concentrations of customers/people: <ul style="list-style-type: none"> • Identify main destination – what will bring users into the core? • Assess user behaviour <ul style="list-style-type: none"> ○ Number of visits ○ Timing of visits (time of day, seasonality) • Give major destinations special treatment <ul style="list-style-type: none"> ○ Understand what they need ○ Build a centre around them • Amplify the impact of attractions by creating support amenities and infrastructure to maximise frequency, length of stay and expenditure
6. Control – Strategic Sites 	Key Sites are locations that could be considered future destinations and/or suitable sites for anchor tenants (i.e., supermarkets). Tenure control is a significant advantage for overall development success <ul style="list-style-type: none"> • Tenure control is vital for overall development success – determine which sites (supporting what uses) must stay in public ownership • Identify active frontages and take control of key sites or implement appropriate planning measures (i.e., a set of preferred uses for a site) • Corner sites drive uses on either side (more appropriate for high turnover uses such as a café where there is high pedestrian traffic) • Not all areas in a place need to be active – be selective

7.6.1.2 Canham Way Analysis

Canham Way, Greenwood is located at the intersection of Hepburn Avenue and Wanneroo Road. The complex is located across from Kingsway City shopping centre and is bordered by residential areas to the south and west. The City of Joondalup Local Planning Scheme No.3 (LPS No.3) zones the majority of the complex as Light Industry with a small proportion attributed to Commercial zoning. The industrial complex contains Shop-Retail uses such as Greenwood Plaza’s chemist and deli, and a Salvation Army store. DPLH Land Use Survey (LUES) 2015 recognises Canham Way as an industrial complex with a floorspace of 22,051m² with Storage/Distribution accounting for approximately 10,000m² and Shop-Retail accounting for 510m². The six principles of economic activation have been applied to the industrial complex along Canham Way to assess the appropriateness of light industrial and service commercial uses against activity centre uses (Figure 35). Light industrial and service commercial uses have been found to be more appropriate for Canham Way than activity centre uses although some shop/retail uses could be appropriate for workers and visitors to the centre.

Figure 35. Canham Way Analysis

Principles of Economic Activation	Light Industrial Uses	Activity Centre Uses
Purpose of Place	The primary land uses along Canham Way consist of service commercial uses such as car repair shops, office spaces, bulk suppliers, and martial arts facilities. There are light industrial uses to the north east including heavy machinery hire and construction materials. The light industrial and service commercial uses differentiate the complex from the nearby Kingsway City shopping centre. They are also suitably located adjacent to an activity centre as per SPP4.2.	Users of Canham Way are unlikely to visit the area to interact with activity centre uses such as Shop-Retail offerings due to the complex's proximity to Madeley district centre, Kingsway City. The complex may be able to support uses reflected in SPP4.2's role of a Local Centre whereby walkable access to convenience goods and services are provided such as cafés, fast food outlets and delis. These should however be focused on addressing the need of workers and visitors. This scale of use already exists in Canham Way's Greenwood Plaza.
Access	Canham Way serves as the primary means of accessing light industrial and service commercial uses in the area. It is accessed primarily by car and is suitably located at the intersection of Wanneroo Rd and Hepburn Ave. Motor vehicle access is suited to light industrial and service commercial uses. Those accessing light industrial uses are unlikely to be travelling by public transport and are thereby not as impeded by the limited public transport options. Canham Way running through the complex supports the purchase and delivery of industrial goods.	Businesses face towards Canham Way reducing the attractiveness to the significant traffic along Hepburn Ave. This impacts its suitability as an Activity. The limited public transport mix and connectivity of the complex indicates that activity centre uses would be less accessible to a wide range of visitors, contrary to SPP4.2 objectives. Activity centre uses would provide walkable access for local residents that live to the south east of the Hepburn Ave and Wanneroo Rd intersection.
Origins	The location of individual car parks at each land use along Canham Way serves as the primary origin points for users of the complex. This is appropriate for industrial uses which often represent single-purpose trips, bulk goods purchases and car-related services.	Individual car parks as origin points are less suited to activity centre uses. Activity centre uses benefit from car parking located on the periphery of the centre as it encourages pedestrian movement past as many shop fronts as possible. The location of the nearest bus stop outside the complex reduces the likelihood of pedestrians due to its distance from the stores.
Exposure	The complex's individual car parks reduce pedestrian movement and exposure to storefronts due to their centrality to a visitor's destination. Light industrial uses require less pedestrian activation as they offer higher-value goods and services that likely represent a user's primary purpose for visiting.	Shop-Retail uses are often not the primary purpose for visitors but gain attraction due to their complementary or supplementary nature and proximity to a more significant Shop-Retail use. The industrial complex's individual car parks and limited public transport are not appropriate for activity centre uses as they do not support pedestrian movement past shop fronts.
Destinations	The uses with the highest visitation in the industrial complex are likely the Shop-Retail uses including the Salvos store and two service stations. These uses are suited to service commercial areas; fuel station are car based and serve workers, Salvos are low visitation uses that benefit from lower rent and large showroom-like spaces. Light industrial and service commercial uses require large spaces and vehicular access. The also are less reliant on anchor uses or complementary and supplementary relationships with other businesses in the same complex.	Successful activity centres typically follow a concentric pattern by which a major destination (i.e., supermarket) lies in the core of the centre and draws pedestrians inwards past less significant stores. The layout of the industrial complex does not follow a typical activity centre layout and would need to be revised to support anchor tenants. The viability of a major Shop-Retail use at Canham Way may also be unsupportable due to its proximity to Kingsway City.

Principles of Economic Activation	Light Industrial Uses	Activity Centre Uses
Control	Joondalup Service Industrial Area and Canham Way are the City of Joondalup industrial uses only industrial use offerings. There is approximately 1.16 square metres per person of industrial floorspace in the City compared to 9.11 in the neighbouring City of Wanneroo and almost 8.14 in the City of Stirling. Retaining and developing Canham Way as a light industrial complex may be beneficial to meet the demand of the City's residents due to the relatively limited supply of industrial uses. Joondalup Service Industrial Area's industrial uses face the encroachment of activity centre uses that cannot survive in Joondalup City, further reducing the extent of light industrial uses. Enhancing industrial uses at the Canham Way would also reduce the extent of car trips outside the City to access industrial goods and services.	Supporting the development of activity centre uses would involve rezoning a greater proportion of the complex from Light Industry to Commercial or Mixed Use. However, the development of activity centre uses would likely reflect those associated with a Local Centre such as a convenience store, café or liquor store due to Canham Way's proximity to Kingsway City and Greenwood Village. The complex would likely be unable to support a major anchor without additional population.

Source: Pracsys 2023

7.6.1.3 Results

The appropriateness of light industrial and service commercial uses has been assessed against activity centre uses using the six principles of economic activation for Canham Way. The analysis concludes that light industrial and service commercial uses better suit the complex largely because of proximity to major activity centres, limited public transport access, individual land use parking, the layout of the complex and lack of industrial areas in the City of Joondalup.

While this is the most suitable use based on the current context, it may not be the highest and best use of the site in the long term. Should residential development or other non-retail commercial uses be options the City would consider (i.e. aged care facility, etc.) the rezoning of the land could provide higher value uses at the site. These are beyond the scope of this analysis and would require the City to make significant changes to the planning for the centre along with feasibility assessments. Future reviews should re-assess demand for land uses to ensure the Canham Way industrial area best meets the needs of the Joondalup community.

8 NEEDS ASSESSMENT

The Needs Assessment has projected the demand for SHP and Non SHP floorspace in activity centres over time. Three methods were used for projecting floorspace demand:

- SHP: Shop-Retail floorspace was projected using gravity modelling. This incorporates current and known future supply with spatial data for demand based on household income and expenditure
- Non SHP: all other commercial (Non Shop-Retail) floorspace⁴ is projected based on the identified floorspace gaps apportioned across centres based on their current size. Centre floorspace is then projected based on modelled Shop-Retail floorspace growth, accounting for changing supply and demand
- Industrial: demand for industrial floorspace was modelled for the City's industrial centres based on projected population growth

8.1 Demand Analysis

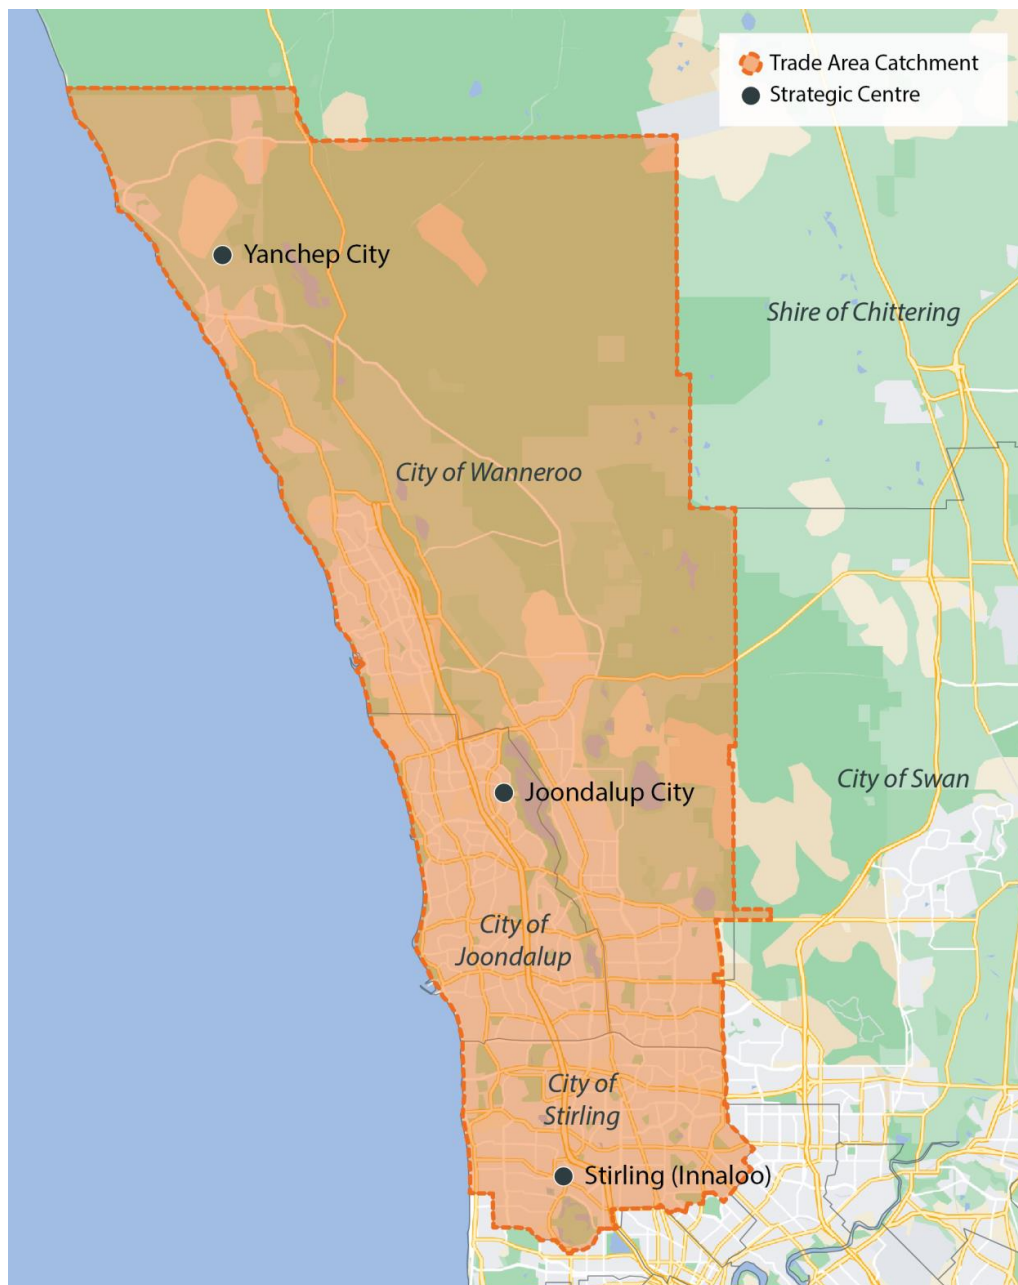

Trade Area

The catchment, or trade area, is the spatial boundary from which commercial floorspace generates most of its customers. The trade area definition allows for the measurement of the number of potential customers, their expenditure potential, and an assessment of the competitive environment. The trade area for the Needs Assessment was developed with the users and competitors of the City's largest activity centre in mind, Joondalup City Strategic Metropolitan Centre. SPP4.2 states that strategic centres provide for the needs of regional and sub-regional area, playing an important role in the activity centre hierarchy by providing a wide range of goods and services through well-served public transport access. The modelled trade area for the City's activity centres largely encompasses the City of Joondalup, the City of Wanneroo and the City of Stirling (Figure 36). The trade area is used in the gravity model and ensures that all centres that could reasonably influence the viability of the prospective centre are included in the Needs Assessment.

⁴ Non-SHP Floorspace represents the summation of MAN, OFF, PRI, STO, RET, SER, ENT & RES floorspace.

Figure 36. Trade Area Boundary

Source: Pracsys 2023

The approximate trade area of the proposed development is estimated to contain 210,000 dwellings in 2023 (Figure 37)⁵. Based on dwelling growth forecasts, the number of dwellings in the trade area is expected to

⁵ The ABS Census 2021 dwelling count by SA1 areas augmented by WA Tomorrow population projections (median band).

increase to 250,000 by 2033, reflecting a forecast increase in dwellings of 20 per cent. By 2038, the number of dwellings in the trade area is projected to reach 280,000, reflecting a 33 per cent increase from the current level. It is likely that the majority of the growth can be attributed to the City of Wanneroo as the City of Joondalup and the areas included from the City of Stirling are largely developed.

Figure 37. Trade Area Dwelling Growth

Source: ABS Census 2021, WA Tomorrow 2021

Income and Expenditure

Trade area household income levels contribute directly to the success of retail developments, as the level and composition of spending on retail goods and services is primarily determined by household income. Households in the trade area have been equally distributed into five levels of weekly income. Generally, lower-income quintiles spend a higher proportion of their income on basic goods and services; upper-income quintiles have more disposable income available to spend on comparison retail items. 2021 ABS Census data has been used to assess the distribution of household income within the trade area against Greater Perth as a benchmark (Figure 38).

Figure 38. Trade Area and Greater Perth 2021 Weekly Income

Source: ABS Census 2021

Incomes in the trade area have a lower representation than the Greater Perth benchmark across the first, second, and third quintiles with a higher proportion of households in the fourth (28% versus 16%) and fifth quintiles (19% versus 17%). This would suggest that households in the trade area have a stronger level of discretionary spending relative to the Greater Perth average however there is likely variation in the composition of household income in Greater Perth because of the negative impacts of COVID-19.

2016 ABS census data for Greater Perth has been compared with 2021 trade area data for a more accurate comparison without the effect of COVID-19 (Figure 39). Incomes in the trade area are similar to Greater Perth benchmark in the second quintile (19% versus 17%), the third quintile (20% versus 23%) and the fourth quintile (28% and 26%) with a higher proportion of households in the first quintile (14% versus 8%). The difference in the fifth quintile accurately reflects the trade area's age profile, as the trade area has a higher proportion of people over 60 years of age who may have reduced income levels. The relatively higher proportion of household incomes in the fourth quintile likely indicates a strong level of discretionary spending within the catchment which will stimulate greater goods and services provision.

Figure 39. Trade Area and Greater Perth 2016 Weekly Income

Source: ABS Census 2021, ABS Census 2016

ABS Household Expenditure Survey data was used to estimate the average spend per household by income quintile, from which the total expenditure pool of the catchment has been derived. The model combines the propensity to spend on commodities based on household income quintiles to derive the total Shop-Retail expenditure in the area. Given projected household growth, Shop-Retail expenditure is estimated to increase from \$7,200 million in 2023 to \$8,500 million in 2033, reflecting growth of 17 per cent (Figure 40).

Figure 40. Trade Area Shop-Retail Expenditure Pool, 2022-2045

Source: ABS Census 2021, ABS HHES Survey 2017/2018

Shop-Retail expenditure in the trade area is predicted to reach \$9,400 million by 2038 – an increase of 30 per cent from current levels. The increase in trade area expenditure reflects the expansion in residential dwellings expected to occur within the trade area over the next 10 – 15 years. Some of this turnover is projected to be lost to online leakage; however, this is expected to be less prominent with respect to convenience retail than other types, such as comparison retailing. The effect of online leakage on the viability of the proposed development is expected to be minimal.

8.2 Supply Analysis

This section provides an overview of the activity centre environment within the catchment and City of Joondalup and floorspace values for the activity centres themselves. Existing retail floorspace supply within the trade area has been derived through data from multiple sources, including:

- The Department of Planning Land Use and Employment Survey (LUES) 2015/17
- Property Council Shopping Centre Directory 2021
- City of Joondalup Local Commercial Strategy (LCS) 2013
- Secondary Research (various structure plans, property manager websites, etc.)

The gravity model accounts for current and known future supply. The City has provided a detailed summary of expansions since DPLH LUES 2015 for both Shop-Retail and Non SHP floorspace (Figure 41).

Source: City of Joondalup Commercial Development Data 2023

The City's activity centres in 2023 included an estimated 359,600m² of Shop-Retail floorspace, approximately 42% of the total Shop-Retail supply within the catchment. The City's full activity centre hierarchy is outlined in Section 9 Activity Centre Hierarchy. A selection of centres identified within the catchment are listed in Figure 42. The trade area includes a wide range of retail offerings, from Strategic and secondary centres such as future Yanchep City and Stirling to various district, neighbourhood and local level centres. City of Joondalup LCS 2013 floorspace values were used where DPLH LUES 2015 values were less than LCS 2013 values.

Non Shop-Retail floorspace accounts for all commercial floorspace with the exclusion of Shop-Retail uses. The City's activity centres included an estimated 719,000m² of Non SHP floorspace. Non Shop-Retail floorspace for each centre in the City is provided in Section 9 Activity Centre Hierarchy with the allocation of floorspace gaps. Selected Non SHP floorspace for selected centres are listed below in Figure 43.

Figure 43. City of Joondalup Non Shop-Retail Floorspace Supply⁶

⁶ There is limited information on non-commercial floorspace development since 2015, therefore, the LUES 2015 data is used. The only impact of this data is a minor reduction in future floorspace demand due to a smaller base estimate; this has no material effect on results.

Activity Centres in the Trade Area	Non SHP Supply (m ²)	Proportion of Floorspace Non SHP
Other Centres	53,291	
Total	719,588	

Source: DPLH LUES 2015

A desktop analysis and review of planning documentation within the City of Joondalup, City of Stirling and City of Wanneroo was undertaken to identify any planned future Shop-Retail floorspace developments within the trade area and surrounds (Figure 44). The centres have been accounted for in the modelling based on their development timeframe. Centres reached their full buildout floorspace in 2050 where a development timeframe was not provided. Ocean Reef Marina was included in the analysis before its full buildout because of its importance to the City's activity centre hierarchy.

Figure 44. Future Developments and Expansions

8.3 Dwelling Growth Scenarios

The floorspace projections for the City's activity centres has been estimated based on detailed dwelling estimates from WA Tomorrow Forecasts, Forecast ID and the City of Joondalup. Three scenarios have been developed for inclusion in the analysis:

- Scenario 1 is an outcome of WA Tomorrow population projections for the City of Joondalup and represents a conservative projection
- Scenario 2 utilised Forecast ID's dwelling projections for the City of Joondalup by 'Small Area' and represents an aspirational but achievable target by 2043

⁷ Utilised a summary of the Woodlands, Station and Southern precincts Shop-Retail floorspace NLA from the Stirling City Centre Structure Plan 2014

- Scenario 3 (Full Buildout) is unconstrained and represents complete development of all available current and future urban land as provided by the City of Joondalup through official planning frameworks such as Activity Centre Plans and Local Housing Strategy

In summary, Scenario 1 represents the base case scenario, Scenario 2 represents a target level and Scenario 3 can be considered the City's maximum dwelling capacity based on the current planning framework (Figure 45).

Figure 45. City of Joondalup Dwelling Growth Scenarios Summary

Scenarios	Summary	Dwellings by 2043 / Full Buildout
Scenario 1	Base case	58,973
Scenario 2	Target level	70,436
Scenario 3 (Full Buildout)	Maximum capacity	81,530

Source: ABS Census 2021, WA Tomorrow 2021, Forecast ID 2021, City of Joondalup 2023

Scenario 1 and Scenario 2 total dwelling figures may not align with the values from their sources as initial dwelling figures from the 2021 ABS Census have been cleaned to omit 'Negative Income', 'Null Income' and 'Not Applicable/Not Stated' dwellings as these are not relevant in determining demand for activity centre uses. The Full Buildout scenario does not start with the level of dwellings provided in the 2021 ABS Census but by the dwelling amounts outlined in the City's planning frameworks⁸.

These growth allocations were grouped by ABS Statistical Area Level 1 (SA1) for modelling and Statistical Area Level 2 (SA2) for reporting. The average annual growth rate was used for each area as there is no detail regarding annual uptake of dwellings. The allocation of demand to identified SA2s using WA Tomorrow, Forecast ID and City of Joondalup forecasting has been estimated to show the distribution of residential development (Figure 46).

⁸ Planning frameworks cited to determine the base number of dwellings in the full buildout scenario were provided by the City and include Joondalup Activity Centre Plan 2018, Whitford Activity Centre Plan 2015, an approved development application, Development WA and the City of Joondalup Housing Strategy.

Figure 46. Scenario 1, Scenario 2 and Full Buildout Dwelling Projections

8.4 Model Calibration

The Needs Assessment uses gravity modelling to estimate the expected level of productivity for each activity centre in the City and broader assessment area. The gravity model's estimates of centre turnover were calibrated against known or modelled turnover data where possible (Figure 47). Selected turnover values were increased where the shopping centre floorspace was significantly less than the activity centre's total floorspace (i.e. turnover data is available for Lakeside Joondalup, it forms a portion of the Joondalup Activity Centre and the total turnover was adjusted to account for the wider City Centre). Where centres were near the border or outside of the trade area the approximate proportion of their expenditure expected to be derived from the trade area was used to adjust their turnover (i.e. Innaloo (Stirling) would have a catchment that goes outside the catchment, the total turnover was adjusted to only reflect turnover from the catchment).

Figure 47. Available Turnover Data

Shopping Centre (related activity centre)	Turnover (\$)	% from Catchment
Lakeside Joondalup (expanded for Joondalup City)	819,725,039	100%
Whitford City (Whitford City)	433,200,000	100%
Warwick Grove (Warwick Grove)	245,600,000	100%
Currambine Central (Currambine Central)	136,417,690	100%
Hillarys Boat Harbour (Hillarys Boat Harbour)	5,500,000	100%
Woodvale Boulevard (Woodvale Park)	55,288,511	100%
Greenwood Village (Greenwood Village)	37,000,000	100%
Ocean Keys (Clarkson)	389,799,000	100%
Kingsway City (Kingsway City)	130,000,000	100%
Butler Central (Butler)	73,500,000	100%
Banksia Grove Village (Banksia Grove)	65,538,745	100%
The Square Mirrabooka (Mirrabooka)	266,867,483	50%
Innaloo (Stirling)	330,800,000	50%
Karrinyup (Karrinyup)	332,000,000	75%
Dog Swamp (Dog Swamp)	49,727,969	50%
Stirling Central (Stirling Central)	81,931,687	100%

Source: Vicinity Centres 2022, Property Council Shopping Centre Directory 2021

Where published data was not available, a scan for outliers (centres where the gravity model may have distributed too much or too little expenditure) was undertaken. The model ensures that centres in the City will only increase in floorspace if their productivity achieves a benchmark level at a given point in time (Figure 48).

**Figure 48. Benchmark Floorspace Productivity**

Centre Type	Benchmark Floorspace Productivity (\$/m ²)
Strategic	7,708
Secondary	7,708
District	8,885
Other Retail Centre (including Highway Commercial)	6,958
Local or Neighbourhood Centre	8,671

Source: Property Council 2021, escalated to 2023 dollars

Larger centres typically hold a greater mix of less productive land uses (i.e. clothing retail has a lower floorspace productivity than a supermarket) resulting in a lower benchmark floorspace productivity.

8.5 Shop-Retail Floorspace Projections

It is estimated that the City's Shop-Retail floorspace will grow from 359,600m² to 409,700m² in Scenario 1. In Scenario 2 this would increase to 429,500 m² with a full buildout of 456,600m² (Scenario 3) (Figure 49).

Figure 49. Shop-Retail Floorspace Projections (m²)

Scenario	2023	2028	2033	2038	2043	Full Buildout
Scenario 1	359,574	370,664	374,792	390,712	409,740	-
Scenario 2	359,574	373,231	383,439	404,876	429,528	-
Scenario 3	-	-	-	-	-	456,649

Source: Pracsys 2023

Centres in the City that experience increases in their Shop-Retail floorspace include Joondalup City and Warwick Grove. The City's relatively low dwelling growth likely plays a major role in the level of floorspace projected for the future. These are seen to be conservative estimates as dwelling density may increase outside of the City's Housing Opportunity areas. Section 9.1 Potential Activity Centre Hierarchy Changes documents the changes to Shop-Retail floorspace by individual centre.

8.6 Non Shop-Retail Floorspace Projections

Non Shop-Retail floorspace in the City has been projected by:

- Subtracting the total commercial floorspace from Shop-Retail floorspace to get current Non Shop-Retail floorspace
- Applying the identified activity centre gaps to relevant centres
- Applying a benchmark ratio of Shop-Retail to Non Shop-Retail floorspace to establish future centre size (for new centres)
- Using the forecast change in Shop-Retail floorspace based on gravity modelling

Non Shop-Retail floorspace such as Other Retail and Service Industry in activity centres are often supporting uses that either co-locate with Shop-Retail uses or in adjacent activity centres.

Non Shop-Retail Floorspace gaps have been identified in Section 7.2 Commercial PLUC Gaps and represent potential opportunities for the City to expand its commercial offerings. Including the identified gaps ensures that the local provision of floorspace meets benchmarked levels of service provision (Figure 50).

Figure 50. Non Shop-Retail Gap Allocation

Floorspace PLUC	Gap (m ²)	Assumption
RET & SER	68,631 (29,622 RET and 39,009 SER)	This gap has been allocated across the City's activity centres based on their proportion of total floorspace. This allocation is based on each centre's capacity and reflects their role in providing a certain degree of access to goods and services relative to their centre classification.
OFF	33,167	This floorspace gap has been allocated solely to Joondalup City. As a strategic metropolitan centre Joondalup City offers the necessary facilities to host a large amount of Office/Business floorspace as it currently accounts for almost 50% of the City's OFF land use. Joondalup City's high level of transport connectivity makes it the most suitable location for businesses in the City. Achieving a higher level of commercial floorspace provision will require economic development initiatives to support business attraction; this should be targeted at supporting key strengths such as health and education.
STO	36,338	This gap has been largely allocated to Joondalup City with the remaining floorspace allocated to District Centres and above. Storage/Distribution land use is often complementary to other commercial uses such as RET and MAN. While current demand for STO is likely being absorbed by uses in the City of Wanneroo, STO is a necessity for commercial and industrial land uses.
RES	19,616	The majority of the City's RES gap has been allocated to Ocean Reef Marina and Joondalup City as centres that are most likely to hold larger hotels, short-stay accommodation. This floorspace gap is associated with tourism and can contribute to increasing strategic employment (see Section 10, Strategic Employment Analysis)
MAN	32,556	Despite the City's low local provision of floorspace relative to benchmarked levels, the City's floorspace gap in Manufacturing/Processing/Fabrication does not represent an opportunity for further commercial expansion because the City is largely developed and there is limited land available for large-scale land uses.

Source: Pracsys 2023

A combination of averages of other similar centres was used to calculate a benchmark ratio for finding a reasonable Non Shop-Retail floorspace for centres without Non Shop-Retail floorspace figures; this applies to future centres and centres that have developed since the 2015 LUES. Local centres generally consist of a greater amount of Shop-Retail floorspace while larger centres offer a greater mix of commercial uses. A ratio of 60:40 (SHP:NON SHP) applied to local centres such as Harbour Rise and Canham Way, and neighbourhood centres; a ratio of and 66:33 was applied for district centres.

The allocation of undersupplied floorspace leads to an additional Non Shop-Retail floorspace of approximately 158,000m². The gap floorspace has been evenly distributed between 2028 and 2033 to reflect the likely timeline over which it could be addressed. It is estimated that the City's Non Shop-Retail floorspace

will grow from 719,600m² currently to 1,010,500m² in 2043 under Scenario 1. It is estimated to reach 1,057,300m² under Scenario 2 and 1,143,700m² at full buildout (Scenario 3) (Figure 51).

Figure 51. Non Shop-Retail Floorspace Projections (m²)

Scenarios	2023	2028	2033	2038	2043	Full Buildout
Scenario 1	719,588	807,965	896,740	949,910	1,010,490	-
Scenario 2	719,588	809,787	918,391	983,545	1,057,261	-
Scenario 3	-	-	-	-	-	1,143,673

Source: Pracsys 2023, DPLH LUES 2015, City of Joondalup Commercial Development Data 2023

Centres in the City that experience the greatest increases in their Non Shop-Retail floorspace include Joondalup City and Whitford City. Section 9.1 Potential Activity Centre Hierarchy Changes documents the changes to Non Shop-Retail floorspace by individual centre.

8.7 Industrial Floorspace Projections

Industrial floorspace in the City has been projected by applying population forecasts to the current supply of industrial uses. Industrial floorspace supply in the City of Joondalup consists of that found along Canham Way, Greenwood and in Joondalup City (Figure 52).

Figure 52. City of Joondalup Industrial Areas (m²)

Industrial Complex	Floorspace
Joondalup City	163,387
Canham Way	22,051

Source: DPLH LUES 2015

It is estimated that demand for the City's industrial floorspace will grow from a total of 185,400m² to 212,900m² in 2043 under Scenario 1 and to 222,200m² under Scenario 2 (Figure 53).

Figure 53. Industrial Floorspace Projections

Scenarios	2023	2028	2033	2038	2043	Full Buildout
Scenario 1	185,438	185,438	187,615	199,557	212,940	-
Scenario 2	185,438	185,438	192,051	206,265	222,156	-
Scenario 3	-	-	-	-	-	241,279

Source: Pracsys 2023, DPLH LUES 2015

Joondalup City accounts for 100% of the increase in the projected industrial floorspace. This is due to the context of Canham Way, which is bound by major roads and residential development; there is limited opportunity for additional development.

8.8 Employment Projections

The employment supported by activity centres has been estimated based on employment to floorspace ratios for Shop-Retail, Non Shop-Retail and Industrial employment in the City (Figure 54).

Figure 54. Floorspace to Employment Ratios (m² per job)

Floorspace	Ratio
Shop-Retail	29m ² per job
Non Shop-Retail	53m ² per job
Industrial	76m ² per job

Source: DPLH LUES 2015

These ratios have been applied to floorspace projections; it is estimated that under Scenario 1, employment in the City's activity centres will increase from approximately 29,500 jobs to 36,300 jobs in 2043 (Figure 55). Scenario 2 will result in 37,900 jobs and full buildout will support a total of 40,400 jobs.

Figure 55. Employment Projections by Land Use and Scenario

Land Uses		2023	2028	2033	2038	2043	Full Buildout
Shop-Retail	Scenario 1	13,607	13,984	14,124	14,664	15,309	-
	Scenario 2	13,607	14,071	14,417	15,144	15,981	-
	Scenario 3	-	-	-	-	-	16,901
Non Shop-Retail	Scenario 1	13,454	14,894	16,341	17,207	18,194	-
	Scenario 2	13,454	14,921	16,686	17,746	18,944	-
	Scenario 3	-	-	-	-	-	20,363
Industrial	Scenario 1	2,445	2,445	2,474	2,631	2,808	-
	Scenario 2	2,445	2,445	2,532	2,720	2,929	-
	Scenario 3	-	-	-	-	-	3,181
Total	Scenario 1	29,507	31,323	32,938	34,502	36,311	-
	Scenario 2	29,507	31,436	33,636	35,610	37,854	-
	Scenario 3	-	-	-	-	-	40,445

Source: Pracsys 2023, DPLH LUES 2015

9 ACTIVITY CENTRE HIERARCHY

The Activity Centre Hierarchy has been developed through analysis and in collaboration with the City. This section provides estimates for the level of supportable floorspace at each activity centre going forward until 2043. It should be noted that the level of supportable floorspace is dependent on population and the City can base decisions regarding the provision of floorspace at activity centres on the level of population growth that is realised by a given time point.

The following dwelling forecasts by Small Area Level 2 ABS spatial areas provide an understanding of the growth that has informed modelling; these can be monitored to inform decisions regarding centre development (Figure 56).

Figure 56. Distribution of Additional Dwellings Scenarios by 2043 / Full Buildout

Area	Scenario 1	Scenario 2	Full Buildout
Craigie - Beldon	3,492	4,688	5,094
Currambine - Kinross	5,649	5,674	5,740
Duncraig	6,269	6,421	8,123
Greenwood - Warwick	3,969	6,215	6,535
Heathridge - Connolly	3,982	4,361	4,543
Hillarys	3,618	4,588	4,179
Iluka - Burns Beach	5,904	5,983	6,255
Joondalup - Edgewater	4,851	7,293	14,172
Kingsley	4,766	5,388	5,159
Mullaloo - Kallaroo	3,599	4,438	4,381
Ocean Reef	2,322	3,591	4,525
Padbury	2,322	3,507	3,774
Sorrento - Marmion	4,184	4,184	4,244
Woodvale	4,047	4,103	4,805
Total	58,973	70,436	81,530

Source: ABS Census 2021, WA Tomorrow 2021, Forecast ID 2021, City of Joondalup 2023

Where centres are not able to grow, their estimated supportable increase in floorspace should be distributed throughout other centres that are relatively proximate. Further recommendations regarding the implementation of the findings are included in Section 11 Implementation Recommendations.

9.1 Potential Activity Centre Hierarchy Changes

There are a number of new centres and current centres that have been recently classified or could potentially change centre classification based on projected growth and associated floorspace projections since the City of Joondalup's last activity centre hierarchy in the Local Commercial Strategy 2013. Modelling and City of

Joondalup contextual understanding have identified selected centres that may be subject to classification or reclassified based on projected increases in their floorspace (Figure 57).

Figure 57. Activity Centre Classification and Reclassification

Centre Name (Status, Provided Classification)	Modelled Shop-Retail Floorspace (m ²)	Finding
Ocean Reef Marina (Future, District)	12,000m ²	This is a new centre. The role and function of the centre is likely to be similar to Hillarys Boat Harbour District Centre. The centre aligns with SPP4.2 District Centre characteristics through its planned facilitation of job opportunities, specialisation in tourism and provision of high-density housing.
Currambine Village (New, Neighbourhood)	6,492m ²	Currambine Village fits the role of Neighbourhood centre as Currambine Village supports a major retail tenant and the Currambine locality already contains a District Centre. This follows the initial classification provided in the City of Joondalup's LCS 2013. Current projections do not indicate a need to reclassify this centre.
Iluka Plaza (New, Neighbourhood)	1,500m ²	Iluka Plaza aligns with SPP4.2's role and function for a Neighbourhood Centre. The centre is expected to be a local focal point for community needs. This follows the initial classification provided in the City of Joondalup's LCS 2013. Current projections do not indicate a need to reclassify this centre.
Harbour Rise (New, Local)	350m ²	The centres relatively limited floorspace constrains it to a role as a small local centre. This follows the initial classification provided in the City of Joondalup's LCS 2013. Current projections do not indicate a need to reclassify this centre.
Smallman Crescent – 93 Wanneroo Road (Current, Highway Commercial)	30m ²	The centre largely consists of bulk supply stores and limited Shop-Retail Floorspace. Its location along Wanneroo Road means it likely does not service the convenience needs of the local community and does not align with SPP4.2's definition of a local centre. Current projections do not indicate a need to reclassify this centre.
Belridge (Current, Neighbourhood)	6,148m ²	Belridge Neighbourhood Centre is projected to be able to support additional floorspace. However, under the current rate of population growth the additional floorspace is only supportable by 2038. The centre is within the floorspace threshold for a Neighbourhood Centre, there is no need to change the centre definition.

Source: City of Joondalup Commercial Development Data, LCS 2013, DPLH LUES 2015

These floorspace changes were added into the model and tested. Current floorspace estimates and classifications for activity centres across the City were calculated to establish the current hierarchy based on the base case dwelling growth (Figure 58).

Figure 58. Updated Activity Centre Hierarchy Floorspace

Source: Source: DPLH LUES 2015, CoJ LCS 2013, City of Joondalup Commercial Development Data 2023

It is recommended the City of Joondalup's Activity Centre Hierarchy adopt Scenario 2 for planning over the next 20 years and Scenario 3 (full buildout) as a long term capacity estimate. This will provide a flexible planning framework within which the City can approve floorspace as needed, should demand arise (Figure 59). These results should be interpreted as guiding estimates that can be used in conjunction with the population projections to assess future centre planning and development applications. These estimates do not need to be reached by the defined time point, instead they should be used to support appropriate development when population milestones are reached or if need can be demonstrated (see Section 11 Implementation Recommendations). The employment projections were modelled by centre (Figure 60).

Figure 59. Scenario 2 and Scenario 3 (Full Buildout) Activity Centre Hierarchy Floorspace Projections

10 STRATEGIC EMPLOYMENT ANALYSIS

The City's Activity Centre Hierarchy will only support a component of the employment required to meet the regional employment targets. The employment required to support the City will be supported through activity centres, homebased employment, industrial complexes and other commercial centres. Estimating employment targets is a function of labour force and the Employment Self-Sufficiency targets set out by the North West Sub-Regional Planning Framework. The City's current ESS of 57% is relatively close to the Sub-Regional target of 59.5% by 2050. The sub-regional base from which the target was set however is much lower at 49.2% (Sub-regional Framework Estimate for 2011). The City of Joondalup may need to support a higher level of employment to meet the ESS target given its strategic importance in the Sub-Region. For the purposes of this analysis we will assume it meets the Sub-Regional target of 59.5% ESS.

The City's estimated population by 2043 is approximately 185,000 persons under Scenario 2⁹. The labour force participation rate for the City in 2021 was 70%; it is assumed this ratio is held constant overtime and the labour force estimate in 2043 is 129,064. The additional employment required to support the City's population under Scenario 2 in 2043 is 41,472 jobs. Assuming the likely proportion of home-based employment remains constant at 46.5%, approximately 22,187 additional jobs will be required on employment land in the City to achieve the defined employment targets. The Activity Centre Hierarchy will reach approximately 37,400 jobs in Scenario 2, generating approximately 8,351 additional jobs. This means that an additional 10,944 jobs are required above Scenario 2 projections to meet Sub-Regional employment targets. To meet the demand for jobs employment will need to be driven predominantly by the strategic opportunities identified in the City. The key strategic opportunities have been aggregated and the employment potential summarised (Figure 61).

Figure 61. Strategic Opportunity Potential Contribution to Employment Targets

Strategic Opportunity	Assessment	Additional Employment Potential Strategic Employment
Joondalup City Activity Centre	<p>Joondalup City is a strategic metropolitan centre with an aspirational goal of being recognised as the Central Business District of the North West Corridor. Joondalup City's precincts are clusters of industries and represent strategic employment opportunities.</p> <p>The centre employed approximately 17,025 people in 2015 and is planned to support up to 45,000 jobs by 2050¹⁰. Joondalup City is expected to support an additional 5,390 jobs based purely on population growth (Needs Assessment for Scenario 2, 2043).</p> <p>Accounting for these, Joondalup City has the potential to support an additional 22,585 jobs. These will need to be</p>	22,585

⁹ City of Joondalup Population Households and Dwellings, Forecast ID 2021

¹⁰ City of Joondalup, 2021, Joondalup Activity Centre Plan

Activity Centre Needs Assessment and Hierarchy Review

Strategic Opportunity	Assessment	Additional Employment Potential Strategic Employment
	strategic in nature as they are over and above the jobs required by the catchment population.	
Health Precinct	<p>Joondalup Health Campus (JHC) includes the only hospital in the North West corridor and will likely experience greater demand as a result of the region's increasing and ageing population. JHC employed over 2,400 full-time equivalent staff people in 2015 with a floorspace of around 115,000m². JHC accounts for 7% of Joondalup City's total employment. The hospital has since expanded significantly and will need to continue to expand to meet the projected growth from the City of Wanneroo.</p> <p>Additional employment opportunities associated with research and expanded care offering should be explored with the continued growth of the health precinct. These would be additional to the identified population growth and support employment opportunities that help reach the ESS target.</p>	
Education and Learning Precinct	<p>Education and learning at Joondalup City are largely comprised of North Metropolitan TAFE and Edith Cowan University (ECU). Combined the TAFE and university employed 2,220 in 2015 with a floorspace of around 593,700m². The TAFE and ECU account for 13% of Joondalup City's total employment.</p> <p>Education demand is expected to increase in line with the population growth in the City of Wanneroo, this is likely to occur with a lag between population growth and students due to an expectation that younger persons / couples are more likely to take up houses in newly developed areas.</p> <p>Opportunities for education, health and private sectors to collaborate should be explored. The proximity of the University campus to the City Centre and health precinct create the opportunity to support an innovation precinct. This type of opportunity has been advanced through the WA AustCyber Innovation Hub and could be expanded to support additional strategic employment opportunities</p>	
Tourism	<p>The Ocean Reef Marina development will create significant opportunity for tourism attraction. Tourism is a strategic employment opportunity as it attracts expenditure from outside the regional economy. Hillarys Boat Harbour is also a major visitor attractor with a number of major attractions including the WA Aquarium. With significant population growth planned in the City of Wanneroo, these precincts are likely to experience greater demand from visitors, the City needs to facilitate this demand through appropriate activation and promotion of the centres.</p> <p>The Joondalup City Centre will continue to grow as a strategic centre, particularly with the significant population growth occurring in the City of Wanneroo. As its catchment population grows, so will entertainment and recreation uses that can support visitation. Providing additional short-stay accommodation in the City Centre is a strategic opportunity that can support additional employment.</p>	Not quantified

Source: City of Joondalup 2021, DPLH & WAPC 2018

The identified gap of 10,944 jobs are supportable based on employment estimates for the Joondalup City Centre and tourism opportunities in the City. The economic development framework can provide actions through which planning can incentivise and facilitate desired strategic outcomes (see Section 11, Implementation Recommendations).

10.1 Strategic Floorspace Requirements Estimates

The additional strategic employment to meet ESS targets will require floorspace supplementary to that identified in the Needs Assessment. Floorspace to employment ratios are used to estimate employment (Figure 62). Land associated with tourism opportunities was not estimated due to the significant variability of employment opportunities.

Figure 62. Land to Employment Land Use

Strategic Opportunity	Current Land use	Floorspace to Employment Ratio 2015
Joondalup City	Lakeside Joondalup Joondalup Gate	30m ² per job 90m ² per job
Health	Aged Care Allied Health Hospital	136m ² per job 25m ² per job 6m ² per job
Education	TAFE/ECU	60m ² per job

Source: Joondalup Activity Centre Plan 2021, Pracsys 2023

The weighted average floorspace to employment ratio of office, health and education uses has been used to inform the strategic floorspace assessment. The commercial floorspace associated with Joondalup City's retail, health and education land uses require up to 369,604m² additional floorspace (Figure 63). This additional floorspace will likely need to be developed through taller buildings given there is limited vacant land in the City Centre. The planning framework needs to allow for flexibility when development occurs to ensure capacity is available.

11 IMPLEMENTATION RECOMMENDATIONS

11.1 Supporting High Performance Centres

Principles of economic activation can be applied to support the development of vibrant and viable activity centres. Pracsys uses Six Principles of Economic Activation to assess the relative performance of centres from an economic perspective. This includes how key anchors such as supermarkets drive pedestrian traffic (activation), how businesses can benefit from this pedestrian traffic, and suitable locations for less high traffic uses such as other retail. A summary of six principles has been included that can be applied by the City when considering the suitability of potential retail developments in future (please see Section 7.6.1.1, Summary of the Principles of Economic Activation). This is seen as a critical opportunity for improving the performance of the City Centre outside of Lakeside Joondalup, particularly given the high density population planned for the Centre.

11.2 Applying the Evidence-Base

The Needs Assessment establishes the floorspace supply of Shop-Retail and Non-Shop Retail uses in Activity Centres required to support identified dwelling growth. The analysis has used dwelling projections from WA Tomorrow and the City of Joondalup to develop the estimates. The years associated with the projections are less important than the quantum of population themselves. It is recommended that for planning purposes the City adopt a 'stage gate' interpretation of the results to guide decision making.

Activity Centre Considerations

A number of considerations have been developed to support the City's strategic planning frameworks as evidence-based to maximise viability and resilience of activity centres across the hierarchy (Figure 64).

Figure 64. Activity Centre Planning Considerations

Number	Consideration
1	The floorspace projections in this analysis provide guidance for the City to understand the potential quantum of floorspace that may be demanded at a certain time point. Reaching a certain dwelling number or year does not automatically mean a centre should expand. Actual population growth should be reviewed using Small Area 2 ABS spatial areas and / or Forecast.id small areas within 1km for a local centre, 5km for neighbourhood and District Centres, and 10km for secondary centres. The City can take into account the population estimates in this analysis (see Section 9, Activity Centre Hierarchy) and will need to consider other factors affecting the activity centre hierarchy at the time of receiving an application (i.e. future developments that may not be in this analysis, changing floorspace per person requirements, etc.) in order to assess whether additional floorspace is required in future.
2	The floorspace projections (by centre) and dwelling projections (by small area) in the reported years (i.e. 2028, 2033, 2038, 2043) should be used to monitor the provision of uses across the activity centre network. When a dwelling level is reached in a small area, this is an indication that further floorspace can be considered if private interest arises; even if this occurs prior to the year identified in the Needs Assessment. Interest from private industry can be an indicator of current or future potential demand and should be

Activity Centre Needs Assessment and Hierarchy Review

Number	Consideration
	considered as part of the overall decision-making process. This being said, private interest may undermine the activity centre hierarchy and appropriate measures should be used to ensure development applicants have demonstrated an actual need for additional goods or services (see Consideration 5). If a dwelling level does not occur by an identified year, the dwelling level should be the guiding factor for potential development and not the year.
3	The Needs Assessment provides floorspace quantum estimates for individual centres. These should not be treated as strict floorspace caps but as targeted supportable floorspace with some flexibility for small under or over provisions (the under or over provision should be based on identified need at the time).
4	With regards to the City's planning of activity centres, new local centres should be considered in areas where dwelling development is occurring and there is sufficient demand to support a centre (to be demonstrated by a development applicant). Where new residential developments occur or where there are significant increases in residential density, the City should ensure that planning of new centres addresses the daily/weekly shopping needs of residents through an appropriate distribution of high and lower order centres.
5	<p>The City should consider a number of factors when assessing the potential for a large expansion of a current centre (see SPP4.2, Table 2: Major activity centre use floorspace thresholds) or for a proposed new centre. There should be robust evidence that:</p> <ul style="list-style-type: none"> • There is a need (i.e. high population growth within the centre's catchment) • There is alignment with SPP4.2 objectives (i.e. walkable catchment, public transport access, etc.) • The development would not affect the viability of the activity centre hierarchy • The proposed uses are viable (i.e. if a supermarket is proposed, the applicant's evidence must demonstrate there is sufficient demand for that offering). Where the demand for uses can be demonstrated, there should be flexibility to allow for a variety of uses across all centre types to enable operators to meet specific and potentially changing needs of consumers • There are wider community benefits such as improved service, increased employment, reduced travel times, etc.
6	A current centre in a fully developed area should not be allowed to justify an expansion solely on the basis that another centre has not expanded to the level identified in the Needs Assessment at a given timepoint. This may be reconsidered in developing areas where another centre is constrained and there has been population growth within the catchment (robust evidence should be required as per Consideration 5)
7	<p>New centres may be allowed to incorporate additional floorspace where a current centre cannot expand due to land or other constraints, with some caveats:</p> <ul style="list-style-type: none"> • The new centre should be in a location that provides suitable access to residents of the current centre's catchment • The new centre needs to demonstrate the same robust evidence as above

Source: Pracsys 2024

These considerations should allow the City the flexibility to decide when development is appropriate and ensure that development benefits the community without unduly impacting the surrounding activity centre hierarchy.

Proposed Expansions that Exceed Floorspace Projections

When a proposed expansion of SHP floorspace will result in a centre exceeding its projected floorspace, for the relevant level of additional dwellings / year, the major development thresholds in SPP4.2 will be used as potential additional floorspace allowances by centre classification (Figure 65).

Figure 65. SPP4.2 Major Activity Centre Use Floorspace Threshold

Classification	Established Activity Centre (m ² NLA)	Planned Activity Centre (m ² NLA)
Strategic	10,000	0 – any development in a planned centre is major development
Specialised	3,000	
Secondary	10,000	
District	5,000	
Neighbourhood	3,000	
Local	1,500	

Source: DPLH State Planning Policy 4.2 – Activity Centres Implementation Guidelines

An expansion over the relevant threshold will automatically require a net benefit test. An expansion within the relevant threshold, which exceeds the centre's projected floorspace for the relevant number of dwellings/year, will trigger a review by the City's officers.

- Should the officers be happy that the proposed floorspace meets a 'real' need, the development can be progressed without a Net Benefit Test
- Should the officers not have enough information or if there is insufficient evidence of need for the expansion, a Net Benefit Test will be requested

The City's review will include consideration of:

- The client's justification – the client should provide information as to how a proposed expansion to a centre is in keeping with the roles and characteristics of the centre's classification within the hierarchy, to ensure its classification is maintained and the hierarchy of centres is not undermined
- Population growth using Small Area 2 ABS spatial areas and / or Forecast.id small areas within 1km for a local centre, 5km for neighbourhood and District Centres, and 10km for secondary centres
- Infill / high density development within or directly adjacent to a centre
- Competing centre performance and ability to meet resident need – an officer is to apply their understanding how relevant centres are performing/functioning or by undertaking a site visit during peak shopping hours and counting vacancies
- Other factors that may influence demand such as tourism.

Other Employment Centre Land Use Considerations

Considerations have also been developed for City's relatively limited service commercial and light industrial developments. These recommendations are based on preserving these uses; the City may reconsider these if there is sufficient demand for other high value uses and the City is satisfied that service commercial and light industrial uses are appropriately addressed elsewhere (i.e. Wangara):

- Shop-Retail uses should only be allowed in service commercial and light industrial areas where an applicant can be shown they are providing for demand from local workers and visitors to businesses in the commercial centre
- Service commercial and light industrial uses should be focused in identified employment centres
- The following elements should be used to assess any proposed developments for these uses in new locations:
 - Is there sufficient space for the use in a current employment centre
- If there is not, then does the proposed location have the following attributes:
 - Proximity to relevant consumer/customer (i.e. population – light industry, businesses – heavy industry)
 - Appropriate road and/or freight access
 - Compatible surrounding uses (i.e. heavy industry uses are not compatible with residential development)
 - Access to necessary infrastructure (i.e. special waste disposal requirements, etc.)
 - Land constraints (if site works will be too expensive, commercial uses may not be viable)

The type of uses allowed in service commercial and light industrial areas should be flexible as these areas span both business to consumer and business to business supply chains. The primary goal for the City in planning these areas should be to minimise the encroachment of uses that are most appropriate for activity centres (i.e. Shop-Retail) unless supporting the employee and visitor populations

11.3 Supporting Centre Development

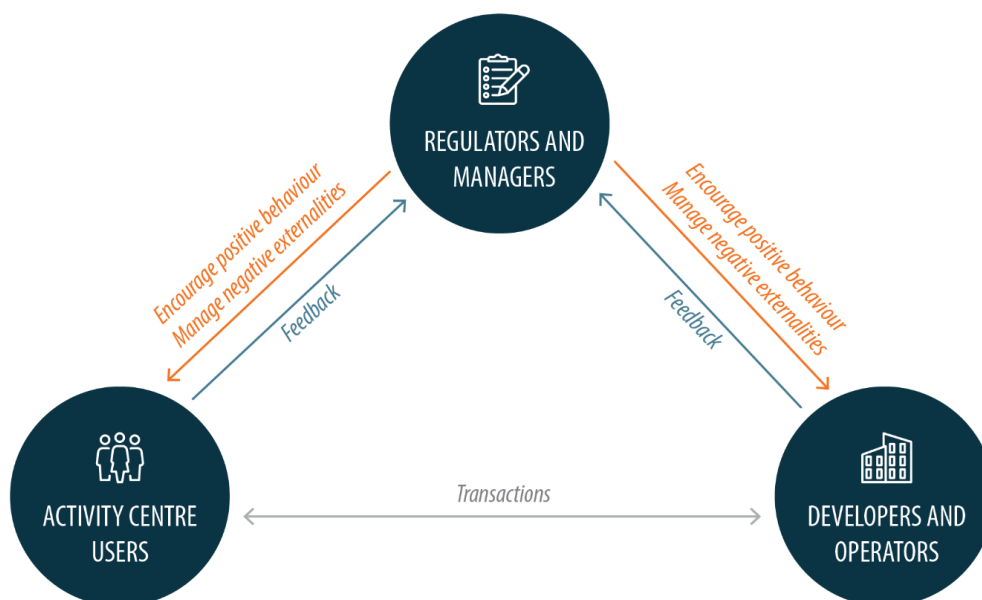

It is assumed that the City of Joondalup will facilitate employment growth through an understanding of the key drivers that attract businesses to the City's centres. Any strategy to reimagine the function, scale or use of the centres should respond to the 'felt needs' of the user groups it caters for, including:

- Activity centre users
- Enterprise developers/operators (and the workers)
- Regulators/managers

Decisions are made to benefit one or more of the user groups in the context of an overarching strategic vision (Figure 66).

Figure 66. User Group Interactions

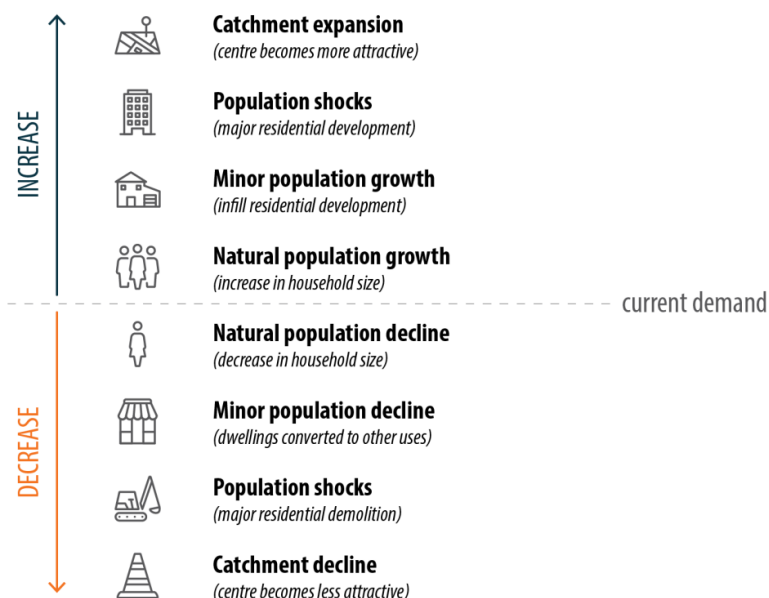

Source: Pracsys 2023

Understanding the drivers of user behaviour is required to achieve vibrant and viable activity centres across the City's Activity Centre Hierarchy. Regulators and managers (e.g. State and Local government and other authorities) can generally only encourage or influence certain behaviours, rather than control them. Ultimately the market and centre users will decide what activity is viable for the centres, with regulators and managers able to exert influence toward the desired approach. It is therefore paramount that the planning for the City's Activity Centre Hierarchy aligns with desired outcomes of users and employment providers.

There are a number of key drivers for population-driven industries that need to be considered when planning for activity centres (Figure 67).

Figure 67. Examples of Demand Drivers for Population-Driven Businesses

Source: Pracsys 2023

A change in any of the above characteristics will promote a change in floorspace and interest from the market for redevelopment. For example, on the demand side, an increase in the level of density surrounding the centre increases the effective userbase and proportion of expenditure that is likely to be directed and captured by the centre, this will provoke a competitive response from developers in which investment will be made to capture this extra expenditure pool.

Similarly, a change in the urban fabric (on the supply side) that makes the centre more attractive will increase the catchment of the centre. This could, for example, be improved streetscaping or connectivity, activation and event strategies within the centre or improved connection to the local tourism areas. This will provoke a similar competitive response from developers wishing to take advantage of the extra expenditure pool.

When considering strategic employment, the relevant industries are largely exogenous to changes in these drivers and principally rely on the comparative advantages of an area (resources, location) and individual decisions of businesses. Changes in strategic employment can be affected through promoting the unique advantages of the area to businesses, encouraging business collaboration and other business-friendly policies. Typical considerations include travel time to major employment centres and travel time to work for employees and the cost of the premises.

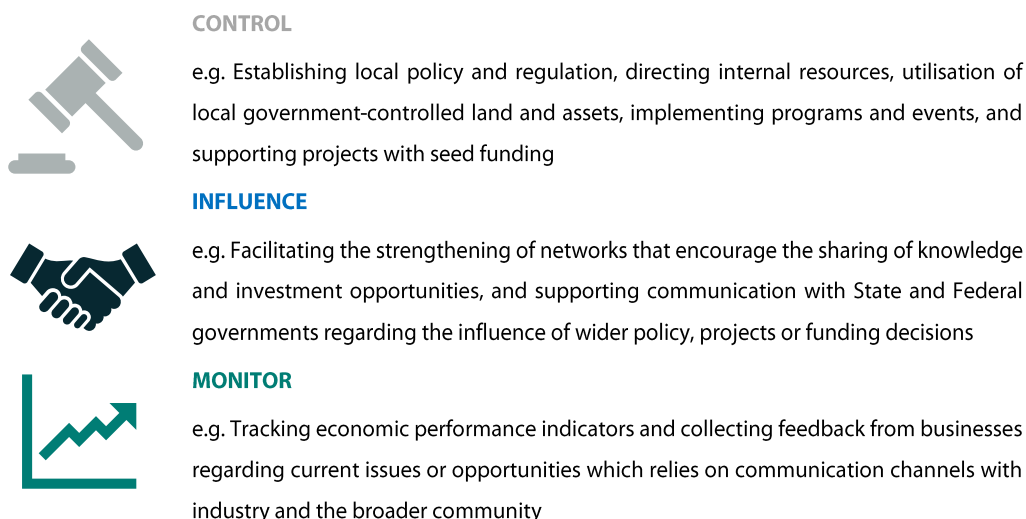

The role of the City in facilitating employment growth is considered in the following section.

11.4 The Role of the City of Joondalup

In creating an attractive business environment within the City's activity centres, the role of the City is to act as a central regulator, coordinator and facilitator, working to understand the challenges facing local businesses

including; linking businesses with appropriate resources, advocating on behalf of local businesses, and supporting specific projects where appropriate. The levers available to the City can be described under the following hierarchy:

Using these levers, the City can actively attract and retain businesses through an understanding of the role, strengths and weaknesses of different centres and employment lands, and how they relate to a business's locational preference drivers and its operational productivity (Figure 68). It should be noted that the role of the City is limited in planning for Ocean Reef Marina and Hillarys Boat Harbour as these areas are controlled by the State Government.

Figure 68. The Role of the City of Joondalup in Supporting Development

Lever	Centre Type	Application
Control	Joondalup City (Strategic Centre)	<p>The City can control the population-driven uses (Shop-Retail) available in Joondalup City through planning and policy measures. It is recommended that these uses be allowed flexibility to develop based on private industry interest in the centre, particularly given its role as a Strategic Centre. With significant density planned for the City centre, the City has the opportunity to improve the retail function of commercial areas in the CBD, outside the Lakeside Joondalup centre. The six principles of activation should be used to inform future planning of movement from high density residential dwellings and the types of uses that are located on high pedestrian traffic areas. The City will also need to encourage entertainment and potentially provide additional recreation uses that support the planned population in the Strategic Centre area.</p> <p>The City has less control over the attraction of strategic uses in the centre and needs to develop a planning approach that incentivises investment (allows for flexibility with regards to development considerations such as height and mix of appropriate uses). The City can use properties and boundaries it controls in the centre strategically to support economic development activities and attract desired uses (e.g. health services, education services, tourism related arts and cultural activities, etc.). The attraction of Strategic Employment is outside the scope of this analysis; however, the key opportunities to attract strategic employment lie in health, education and tourism from a high-level overview.</p>

Activity Centre Needs Assessment and Hierarchy Review

Lever	Centre Type	Application
	Other Activity Centres (e.g. district, neighbourhood)	<p>The City has greater control of the development at its smaller order centres and can use evidence-based decision making to ensure the centres are capable of meeting the needs of the current and future population while also maintaining a viable activity centre hierarchy. The Needs Assessment provides the evidence base with which the City and commercial stakeholders can understand markers for additional floorspace requirements. It is recommended that the floorspace estimates in this report be used as targets and not floorspace caps/limits due to the evolving nature of industries (particularly retail) and the changing nature of consumer demand.</p> <p>There are two centres that have the potential to support additional tourism and contribute to strategic employment, these are Hillarys Boat Harbour and the future Ocean Reef Marina. Further research into economic opportunities is required to understand what planning initiatives would be appropriate.</p>
	Light Industrial Land	<p>The City should look to control the uptake of Shop-Retail uses in light industrial/service commercial areas. These areas generally provide cheaper land and high levels of parking but do not support activated centres, the use of public transport and walkability. Bulky Goods Retail (Other Retail) can be suited to these areas; however, it should be targeted in specific centres and not be allowed to develop to a point that it constrains the development of light industrial uses (uses that require warehousing, large storage, large truck access, separation from residential developments). Despite this, the City's limited industrial land suggests that large-scale industrial uses are unsupportable and thereby Other Retail and Service Commercial (i.e. car repairs) uses may be the extent of Non Shop-Retail land uses in the City's boundaries.</p>
Influence	Joondalup City (Strategic Centre)	<p>The City has an important role in influencing development in the Joondalup City, particularly for catalyst projects and more strategic uses. The City can establish and strengthen existing networks to support the high residential development targets for the Strategic Centre area. The City will likely need to advocate for and facilitate the attraction of key employment opportunities and amenity, including health, education, and entertainment services, that will provide the liveability required to meet population targets.</p>
	Other Activity Centres (e.g. district, neighbourhood)	<p>Other centres should not require much influence to develop. They are driven by population growth that creates private developer interest. Should the City in the future wish to change the role of a centre it may need to use influencing tactics such as communication and advocacy.</p> <p>The City can influence the attraction of tourism industries through appropriate planning; the future Ocean Reef Marina has just gone through a significant planning process, Hillarys Boat Harbour may present the opportunity to increase accommodation and entertainment uses to attract new visitors or increase the duration of stay of current visitors; this is particularly the case with the significant population growth planned for the City of Wanneroo.</p>
	Light Industrial Land	<p>These land uses are similar in nature to those in activity centres, with population growth being the primary driver. It is unlikely the City will need to influence the uptake of these areas.</p>
Monitor	Joondalup City (Strategic Centre)	<p>Ongoing monitoring should be undertaken to ensure that the activity centres and employment land in the City are meeting desired objectives. The Needs Assessment provides the evidence base for monitoring the change in floorspace across the activity centre hierarchy with an understanding of population levels at different time points that may indicate the need for additional floorspace.</p> <p>The City should monitor commercial development, particularly for catalyst projects and strategic uses, based on economic development objectives due to the limited capacity for strategic industrial uses. The City should ensure that it communicates with key stakeholders to understand the needs of businesses associated with Joondalup City and the support that it can offer (e.g. information, planning/policy incentives) to facilitate business growth.</p>
	Other Activity Centres (e.g. district, neighbourhood)	
	Light Industrial Land	

Source: Pracsys 2023

These considerations differ depending on the nature of a business, with population/consumption-oriented businesses having different needs to those that operate business-to-business or are export-driven. The City can use these levers through the Local Planning and Economic Development Frameworks.

11.5 Implementation Summary

Key implementation points include:

- An evidence-based approach to activity centre development is recommended. This approach is aligned with SPP4.2 and provides the City with the flexibility to assess applications on a case-by-case basis to ensure the viability and vibrancy of the Activity Centre Hierarchy is maintained
- The role of the City is to act as a central regulator, coordinator and facilitator, working to understand the challenges facing local businesses to support sustainable activity centre development
- The City has three levers that it can use through the local planning framework:
 - Control (planning regulations)
 - Influence (advocacy)
 - Monitor (measurable outcomes to inform progress towards desired future)
- The City's activity centres are mostly population-driven; the Joondalup City Centre offers the opportunity for additional strategic employment, two coastal centres provide opportunity for tourism related strategic employment. Population driven centres will develop naturally, with the City having a role in attracting and providing the amenities that support liveability. Strategic employment will develop based on comparative and competitive advantages; the City can advocate for government investment, communicate opportunities to attract private sector investment and control the development of key centres such as Joondalup City to facilitate strategic opportunities.

Potential planning directions and actions that have arisen from the analysis have been summarised by activity centre in the City of Joondalup (Figure 69). Activity centres included in the summary are those that are classified as District Centres or above and that have been projected to support expansions in floorspace or are new to the Activity Centre Hierarchy. Floorspace projections and activity centre characteristic for all Strategic, Secondary and District Centres has been included in Appendix 1: Activity Centre Summaries. It should be noted that the role of the City is limited in planning for Ocean Reef Marina and Hillarys Boat Harbour as these areas are controlled by the State Government.

Figure 69. Activity Centre – Potential Planning Directions and Actions

Activity Centres	Planning Direction	Action	Rationale ¹¹	Timeframe
Joondalup City	1. To plan for and ensure adequate supply of commercial and industrial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2033.	Medium term

¹¹ The year referred to for growth in demand is the year in which demand reaches a point that there is sufficient turnover productivity for a centre to warrant expansion, based on the analysis.

Activity Centre Needs Assessment and Hierarchy Review

Activity Centres	Planning Direction	Action	Rationale ¹¹	Timeframe
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term
		3. Amend local planning strategy to account for the supportable level of Light Industrial floorspace.	Section 8.7 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term
	2. To plan for and meet employment and ESS targets.	1. Support strategic opportunities and plan for strategic industries and employment.	Section 10 and Section 10.1 recognises that Joondalup City will be the primary driver of strategic opportunities and increasing the City's ESS level. Planning for the City centre requires flexibility to allow for up to 45,000 jobs by 2050.	Long term
	3. Allow for sufficient development capacity to support the required workforce to meet ESS targets.	1. Incorporate appropriate plot ratio and height restrictions (potentially based on meeting specific conditions) to allow the City Centre to accommodate sufficient floorspace to meet ESS targets.	The Needs Assessment provides floorspace estimates to meet population related demand. By 2043 and additional 369,604m ² of commercial floorspace may be required to meet ESS targets.	Ongoing
	4. Support activation of CBD (outside Lakeside Joondalup)	1. Apply six principles of economic activation when opportunities for redevelopment / revitalisation occur. The focus should be to either position high density residential in locations that promote pedestrian traffic along key active frontages and / or to activate key frontages where high pedestrian traffic is occurring	The CBD outside Lakeside Joondalup needs to be activated to reduce retail vacancies	Medium / Long Term
		2. Align activation initiatives with the City's Draft EDS economic development priority for a high performing CBD	The City's Draft EDS identifies a set of Activities to Leverage including reference to Regional Collaboration, the City's Place Activation Strategy, the City's Advocacy Framework, the Activity Centre Plan and the City Centre Project Cluster plan. Initiatives aimed at activating of the City Centre should align with and draw from the EDS' activities to leverage.	Ongoing
		3. Support implementation of activities identified in the City's City Centre Place Activation Plan economic analysis	The City's City Centre Place Activation Plan provides a breakdown of the CBD's strengths, weaknesses and opportunities. The Plan also provides a set of 15 projects developed through consultation to activate the CBD.	Ongoing

Activity Centre Needs Assessment and Hierarchy Review

Activity Centres	Planning Direction	Action	Rationale ¹¹	Timeframe
	5. Support reduction of office vacancies in the City Centre	1. Implement planning initiatives to support economic development (need to be developed / included)	Office floorspace growth and uptake will need to be driven by factors other than population growth. Providing higher quality office space (i.e. A Grade) can make the City's offices more attractive; it is not the only deciding factor for a business however.	Ongoing
		2. Apply the City's Draft EDS vision for a high performing CBD and precincts. Activities to leverage include referencing the City's Place Activation Strategy, City centre Place Activation Plan, City Centre Project Cluster plan, Activity Centre plan and more.	The documents referred to in the Draft CoJ EDS outline key focus areas and strategic objectives to empower and catalyse the CBD with community consultation. Each framework refers to different aspects of the CBD such as business attraction, advocacy and economic development which will support the City in reducing office vacancies in the CBD.	Ongoing
Whitford City	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2033.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term
Warwick Grove	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2033.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of growth in demand by 2033 and the allocation of floorspace gaps.	Medium term
Ocean Reef Marina	1. To capitalise on strategic employment potential associated with tourism	2. Identify opportunities to encourage ongoing tourism growth associated with the Marina	The Ocean Reef Marina will be a significant tourism asset. While it will be developed with tourism in mind the City should look to maximise the benefit from the significant State and Local investment. Planning can support economic development through appropriate initiatives (i.e. free alfresco dining permits, reduced rates, zoning adjacent land for tourism uses such as accommodation) but is limited by State Government's control of the activity centre.	Ongoing

Activity Centre Needs Assessment and Hierarchy Review

Activity Centres	Planning Direction	Action	Rationale ¹¹	Timeframe
Hillarys Boat Harbour	1. To capitalise on strategic employment potential associated with tourism	2. Identify opportunities to encourage ongoing tourism growth associated with the Harbour	The Harbour is a significant visitor attractor for the City with retail, entertainment, recreation and accommodation strengths. There is the opportunity to continue to grow the attractiveness of the Harbour, particularly with the significant population growth planned in the City of Wanneroo. Planning can support economic development through appropriate initiatives (i.e. free alfresco dining permits, reduced rates, zoning adjacent land for tourism uses such as accommodation) but is limited by State Government's control of the activity centre.	Ongoing
Currambine Central	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2038 under Scenario 1 or 2033 under Scenario 2.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of the allocation of floorspace gaps and growth in demand by 2038 under Scenario 1 and 2033 under Scenario 2.	Medium term
Woodvale Boulevard	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of the allocation of floorspace gaps and growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term
Belridge	1. To plan for and ensure adequate supply of commercial floorspace.	1. Amend local planning strategy to account for the supportable level of Shop-Retail floorspace.	Section 9.1 recognises the potential to support greater Shop-Retail floorspace because of growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term
		2. Amend local planning strategy to account for the supportable level of Non Shop-Retail floorspace.	Section 9.1 and Section 8.6 recognises the potential to support greater Non Shop-Retail floorspace because of the allocation of floorspace gaps and growth in demand by 2043 under Scenario 1 and 2038 under Scenario 2.	Medium term

Source: Pracsys 2023

12 CONCLUSION

This Needs Assessment and Hierarchy Review provides the City of Joondalup with an evidence-based guide to support the ongoing development of its activity centres. The Needs Assessment that can be used as a basis for planning the quantum and distribution of retail and non-retail floorspace across existing and future activity centres in the City. It also considers the non-activity centre employment that is required to meet ESS targets and the land required to support said employment. Demand profiling considered the factors affecting the provision of goods and services in the City's activity centres.

Floorspace gaps were identified based on benchmark Local Government Areas to understand how the diversity of the centres could be improved at a high level (Planning Land Use Category level) and a more in-depth level (Western Australian Standard Land Use Classification level). Gaps were identified relevant to the local activity centre hierarchy; strategic gaps were identified based on assessment of the wider catchment.

Gravity modelling was used to assess the quantum and distribution of retail floorspace based on expected productivity levels. The quantum of non-retail floorspace was based on identified gaps and population growth and was distributed in line with the findings of the retail gravity model.

Three scenarios were assessed based on expected population growth and total capacity for the population in the City of Joondalup. The modelling was undertaken to 2043 to provide a long-term understanding of floorspace and demand. Scenario 1 is an outcome of WA Tomorrow population projections for the City and represents the a conservative projection from WAPC and DPLH planning frameworks. Scenario 2 utilised Forecast ID's dwelling projections for the City of Joondalup by 'Small Area' and represents an aspirational but achievable target by 2043. Scenario 3 (Full Buildout) is unconstrained and represents complete development of all available current and future urban land as provided by the City of Joondalup through official planning frameworks such as Activity Centre Plans and Local Housing Strategy.

The City should follow the SPP4.2 guidelines to implement the information provided by the Needs Assessment. It is recommended the City act as a central regulator, coordinator and facilitator, working to understand the opportunities and challenges facing local businesses and organisations to support sustainable development. The City will need to use the three levers of Control (planning regulations), Influence (advocacy) and Monitor (measurable outcomes to inform progress towards a viable activity centre hierarchy) to ensure plans and activities result in vibrant activity centre hierarchy and viable employment land that support industrial, commercial and residential developments.

Whitford City

Secondary Centre

Purpose: Supports sub-regional economy through providing essential services to their catchment. The centre is the largest in the City apart from the City Centre. It has substantial retail and entertainment offerings that offer multi-purpose visits.

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	51,548	2033: 51,548 2043: 60,868	2033: 61,586 2043: 69,925	Full Buildout: 72,970
Allocated Non Shop-Retail Gap (m ²)	3,100			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	28,988	2033: 33,846 2043: 37,949	2033: 38,397 2043: 43,596	Full Buildout: 45,494

Centre Characteristics

Main Role/Function:

Secondary centres are smaller than strategic centres, serving smaller catchments with fewer services, facilities, and job options, yet they are vital to the sub-regional economy and crucial for providing key services locally.

Walkable Catchment:

400m

Desired Land Uses:

All local, neighbourhood and district level land uses, may be suitable for office space

Warwick Grove Secondary Centre

Purpose: Supports sub-regional economy through providing essential services to their catchment. Provides a significant convenience and comparison retail offering.

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	25,954	2033: 31,724 2043: 32,830	2033: 33,241 2043: 35,723	Full Buildout: 37,847
Allocated Non Shop-Retail Gap (m ²)	2,500			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	22,610	2033: 29,465 2043: 31,802	2033: 32,201 2043: 34,604	Full Buildout: 36,662

Centre Characteristics

Main Role/Function:

Secondary centres are smaller than strategic centres, serving smaller catchments with fewer services, facilities, and job options, yet they are vital to the sub-regional economy and crucial for providing key services locally.

Walkable Catchment:

400m

Desired Land Uses:

All local, neighbourhood and district level land uses, may be suitable for office space

Currambine Central District Centre

Purpose: Supports a smaller catchment with a focus on household shopping needs on a daily to weekly basis, with diversity in goods and services provision

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	19,410	2033: 19,410 2043: 20,856	2033: 19,433 2043: 23,929	Full Buildout: 25,247
Allocated Non Shop-Retail Gap (m ²)	1,700			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	13,955	2033: 14,850 2043: 16,875	2033: 15,724 2043: 19,361	Full Buildout: 20,428

Centre Characteristics

Main Role/Function:

District centres have a greater local community focus and provide job opportunities that reflect their catchments. These centres may have a specialisation in tourism or entertainment.

Walkable Catchment:

400m

Desired Land Uses:

All local and neighbourhood level land uses, may be suitable for office space, bulky goods showrooms, hotels

Ocean Reef Marina

District Centre

Purpose: Although classified as a District Centre the Marina will support a wide catchment with a focus on visitors to the City with a mix of retail, entertainment and recreation.

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1 2033: 12,000 2043: 12,000	Scenario 2 2033: 12,000 2043: 12,000	Scenario 3 Full Buildout: 12,000
Allocated Non Shop-Retail Gap (m ²)	10,700			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1 2033: 11,355 2043: 16,711	Scenario 2 2033: 16,711 2043: 16,711	Scenario 3 Full Buildout: 16,711

Centre Characteristics

Main Role/Function:

District centres have a greater local community focus and provide job opportunities that reflect their catchments. These centres may have a specialisation in tourism or entertainment.

Walkable Catchment:

400m

Desired Land Uses:

All local and neighbourhood level land uses, may be suitable for office space, bulky goods showrooms, hotels

Hillarys Boat Harbour District Centre

Purpose: Although classified as a District Centre the Harbour will support a wide catchment with a focus on visitors to the City with a mix of retail, entertainment and recreation. It has major tourism attractors including Aqua the WA Aquarium.

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	8,603	2033: 8,603 2043: 8,603	2033: 8,603 2043: 8,603	Full Buildout: 8,603
Allocated Non Shop-Retail Gap (m ²)	2,417			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	21,397	2033: 22,605 2043: 23,813	2033: 23,813 2043: 23,813	Full Buildout: 23,813

Centre Characteristics

Main Role/Function:

District centres have a greater local community focus and provide job opportunities that reflect their catchments. These centres may have a specialisation in tourism or entertainment.

Walkable Catchment:

400m

Desired Land Uses:

All local and neighbourhood level land uses, may be suitable for office space, bulky goods showrooms, hotels

Woodvale Park

District Centre

Purpose: Supports a smaller catchment with a focus on household shopping needs on a daily to weekly basis, with diversity in goods and services provision

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	7,004	2033: 7,004 2043: 7,004	2033: 7,004 2043: 7,793	Full Buildout: 8,176

Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	3,466	2033: 3,819 2043: 4,171	2033: 4,171 2043: 4,642	Full Buildout: 4,869

Centre Characteristics

Main Role/Function:

District centres have a greater local community focus and provide job opportunities that reflect their catchments. These centres may have a specialisation in tourism or entertainment.

Walkable Catchment:

400m

Desired Land Uses:

All local and neighbourhood level land uses, may be suitable for office space, bulky goods showrooms, hotels

Greenwood Village

District Centre

Purpose: Supports a smaller catchment with a focus on household shopping needs on a daily to weekly basis, with diversity in goods and services provision

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	4,976	2033: 4,976 2043: 4,976	2033: 4,976 2043: 4,976	Full Buildout: 5,294
Allocated Non Shop-Retail Gap (m ²)	678			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	3,172	2033: 3,511 2043: 3,849	2033: 3,849 2043: 3,849	Full Buildout: 4,095

Centre Characteristics

Main Role/Function:

District centres have a greater local community focus and provide job opportunities that reflect their catchments. These centres may have a specialisation in tourism or entertainment.

Walkable Catchment:

400m

Desired Land Uses:

All local and neighbourhood level land uses, may be suitable for office space, bulky goods showrooms, hotels

Belridge

Neighbourhood Centre (Tested District)

Purpose: Providing household shopping needs on a daily to weekly basis, community facilities and a limited selection of convenient services (Supports a smaller catchment with a focus on household shopping needs on a daily to weekly basis, with diversity in goods and services provision).

Centre Floorspace

Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	6,148	2033: 6,148 2043: 6,148	2033: 6,148 2043: 6,881	Full Buildout: 7,303
Allocated Non Shop-Retail Gap (m ²)	918			
Non Shop-Retail Floorspace (m ²)	Current	Scenario 1	Scenario 2	Scenario 3
	5,688	2033: 6,147 2043: 6,605	2033: 6,605 2043: 7,393	Full Buildout: 7,846

Centre Characteristics

Main Role/Function:

Neighbourhood Centres are a focal point for medium density housing. These centres play an essential role in providing walkable access to services and facilities for the local community (District centres have a greater local community focus and provide job opportunities that reflect their catchments. These centres may have a specialisation in tourism or entertainment).

Walkable Catchment:

200m (400m for District Centres)

Desired Land Uses:

All local level land uses and large shop, recreation and office spaces (District Centres have all local and neighbourhood level land uses, may be suitable for office space, bulky goods showrooms, hotels)

13.2 Appendix 2: Employment Quality Categories

Consumer services

Consumer services have a high transaction frequency and must locate in close proximity to their customer base in order to deal directly with them. Like retail tenancies, consumer services often locate in centres to minimise trip generation and benefit from convenience good attractors. Consumer services can include real estate agents, travel agents, shoe repair, dry cleaning services and beauty salons.

Producer services

Producer services deal directly with other businesses, rather than consumers. Like retail; wholesale producer services must locate close to the businesses they serve, due to the frequency of transactions required. For example, the Coles distribution warehouses must occupy a central location to carry out daily delivery of goods to supermarkets. Producer service industries include manufacturing, construction, and distribution.

Knowledge-intensive consumer services

Knowledge-intensive consumer services are those specialist services that deal directly with consumers, yet typically have a higher productivity and lower transaction frequency. KICS provide a skilled service to consumers that usually requires a higher level of education or training. Depending on the scale of their catchment, KICS may choose to locate within major or regional centres, or larger business districts with greater soft infrastructure and amenity levels. Examples of KICS include general practitioners, accountants, veterinarians and legal services.

Knowledge-intensive producer services

Knowledge-intensive producer services involve businesses dealing directly with other businesses, rather than consumers. Transactions are less frequent, however generally have a higher monetary value, due to the intellectual property or knowledge involved. KIPS businesses often locate near their client businesses, although with low transaction frequency and good communications infrastructure, they are to an extent 'footloose'. This means they can choose to locate in places with relevant physical infrastructure, high retail amenity, or soft infrastructure such as access to a solid education base. Examples of KIPS are engineers, architects, medical scientists and computer software developers.

Export-oriented activity

Export refers to jobs in industries in the subject area of study that have a comparative advantage - deemed strategic due to growth and development through exports and the inflow of funds. Export jobs are producer services, however they occur in strategic industries such as mining, oil and gas and defence. Export jobs are likely to be hands on, involving the physical construction of a marine vessel or operation of machinery on a mine site - as opposed to the mathematical or scientific analysis carried out by KIPS. Strategic industries tend to require physical infrastructure, such as ports, airports or universities.

13.3 Appendix 3: PLUC Glossary

SHP – Shop/Retail

Any activity which involves the sale of goods from a shop located separate to, and/or in, a shopping centre other than those included in Other Retail.

RET – Other Retail

Many of these activities are not normally accommodated in a shopping centre. By virtue of their scale and special nature the goods of these activities separate them from the Shop/Retail category (for example car sales yard or carpet showroom).

OFF – Office/Business

Administrative, clerical, professional and medical offices are activities which do not necessarily require the land area/floor space or exposure of other land uses. Although offices require building and parking facilities, these needs are quite distinct from those of commercial uses and service industries.

HEL – Health/Welfare/Community Services

Government, government-subsidised and non-government activities that provide the community with a specific service, including hospitals, schools, personal services and religious activities.

ENT – Entertainment/Recreation/Cultural

Activities which provide entertainment, recreation and culture for the community and which occur in buildings and/or on land, such as passive and active sports venues, museums, amusements and gambling services.

RES – Residential

Includes all types of residential land use ranging from single housing to nursing homes for the aged, residential hotels, motels, other holiday housing, institutions and religious housing.

MAN – Manufacturing/Processing/Fabrication

This category includes land use activities involving the manufacture, processing and fabrication of all general goods. Both the scale and associated environmental impact of these activities separate them from other land use categories.

STO – Storage/Distribution

Any land use activity which involves the storage, warehousing or wholesaling of goods usually conducted from large structures, or involving large bulk goods, but does not include activities that attract the general retail trade activities.

SER – Service Industry

Activity Centre Needs Assessment and Hierarchy Review

This category includes service industries offering a range of services. The scale and environmental impact of such activities require their separation from other land uses. These services include film processing, cleaning, motor vehicle and other repair services, and other servicing activities, including some construction activities.

UTE – Utilities/Communications

All forms of local, state, national and international communication, transportation and other utilities (for example, electricity, gas, water, sewerage, roads, parking and other transport or communications related activities) covering the public and private sectors.

VFA – Vacant Floor Area

This category accounts for vacant floor areas of buildings, including both non-residential and residential.

13.4 Appendix 4: Other Terminology

Service ratio

Service ratios generally use population as a base to compare a measure across areas while account for their differences in size. Floorspace-to-population ratios (service ratios) are used to provide relative comparisons of floorspace by accounting for the size of an LGA's population.

Labour force

The labour force refers to those employed or actively seeking employment. In this case, the labour force for the City of Joondalup includes not only residents to the Local Government Area but also those employed in the City who are from other LGAs.

Resident workers

Resident workers refer to those employed are employed in the same area that they live. In this case, resident workers are those who work in the City of Joondalup and resident in the City. The other proportion of employment are those who work in the City but do not resident in the City.

Floorspace gap

A floorspace gap refers to the undersupply of floorspace relative to benchmarks. If other LGAs have an average floorspace of 100,000m² and the City of Joondalup has 80,000m², the City would have a floorspace gap of 20,000m².

Strategic gap

Strategic gaps refer to floorspace gaps in strategic industries. Strategic industries and jobs share no relationship to population and are based on a region's unique characteristics. Strategic industries are important to a region's success as they bring in expenditure from outside the region's boundaries. Strategic industries may involve the presence of natural resources, strong transport connections or a significant cluster of complementary industries (i.e. Mining, Professional Services such as Engineering, etc.). Strategic industries can be a major driver of economic growth as they often service a larger area, exporting goods and services outside of its region and attract non-resident employment.

Population gap

Population gaps refer to floorspace gaps in population-driven industries. Population-driven industries and jobs are those that share a positive relationship with the size of a population such as real estate, small-scale medical services and retail.

Non Shop-Retail (Non SHP)

Non Shop-Retail refers to all commercial floorspace and employment that is not PLUC Shop/Retail floorspace or employment this includes MAN, OFF, PRI, STO, RET, SER, ENT & RES PLUCs.

13.6 Appendix 6: Activity Centre Characteristic Summary

The following discussion outlines the role and characteristics of local centres as defined by SPP4.2, as well as boundary considerations guided by SPP4.2. These policy documents provide key guidelines for the function and integration of local centres in community planning.

When establishing the boundaries of an activity centre in accordance with SPP7.2, the following key principles should be considered:

- Topographical features
- Major infrastructure elements
- Public transport stops
- Interface or transition points

Other key considerations by centre type are outlined below.

Local Centre

Local centres primarily provide for the convenience and incidental needs of local communities. These centres are important for offering walkable access to services and facilities, reducing the need for vehicular travel and enhancing community well-being. Local centres should incorporate the following characteristics:

- **Desired Land Use** – Convenience store, shop – small, liquor store, small food outlet/lunch bar, restaurant/café, small bar.
- **Typical Urban Form** - The streetscapes in a local centre should be landscaped and defined by the overall scale rather than individual building styles or heights. New developments should align with the area's existing or planned scale and include on-site landscaping to benefit both residents and the broader community.
- **Average Residential Density** – 25+ Dwellings Per ha / 200m walkable catchment
- **Preferred residential dwelling type** – Low-rise apartments/ multiple dwellings, Townhouses/grouped dwellings, Single houses/Terraces

Neighbourhood Centre

Neighbourhood centres serve as essential local focal points, addressing daily to weekly household shopping needs, hosting community facilities, and offering a small range of other convenience services. Additionally, they are key for promoting medium density housing within their vicinity. Their role is crucial in ensuring walkable access to these services and facilities, thereby supporting the local community's needs. Neighbourhood centres should incorporate the following characteristics:

- Future indicative service population area – 2,000 – 15,000 persons
- Typical transport connectivity and accessibility - Stopping/transfer points of bus networks

- **Desired Land Use** – Shop – large, liquor store – large, market, restricted premises, amusement parlour, educational establishment, recreation – private, small bar, tavern, office – small, medical centre, art gallery
- **Typical Urban Form** - A compact and cohesive urban form that complements the surrounding built form character in scale and style. New development should enhance the public realm, activate the streetscape, and help forge a distinct, appealing character for the centre.
- **Average Residential Density** – 25+ Dwellings Per ha / 200m walkable catchment, 30+ Dwellings Per ha/800m walkable catchment where there is an existing proposed train station within 400 metres.
- **Preferred residential dwelling type** – Low to medium-rise apartments/ multiple dwellings, Townhouses/grouped dwellings

District Centre

District centres mainly service the daily and weekly needs of residents, with their smaller scale and catchment area allowing for a strong local community focus. They offer services, facilities, and employment opportunities that mirror the needs of their catchments. Often, district centres may specialise in areas such as tourism or entertainment, catering to a wider catchment. Centres with a rail station should particularly be a focal point for medium and high-density housing and job opportunities. District centres should incorporate the following characteristics:

- **Future indicative service population area** – 20,000 – 50,000 persons
- **Typical transport connectivity and accessibility** – Focal point for rail and/or bus network, ideally with high frequency bus links
- **Desired Land Use** – Bulky goods showroom, nightclub, cinema/theatre, hotel, motel. District centres with access to a rail station may be suitable for office – large.
- **Typical Urban Form** - District Centres feature mid-rise buildings with continuous, pedestrian-friendly frontages and activated public spaces. New developments should ensure attractive, coherent street frontages at a pedestrian scale, offering passive street surveillance.
- **Average Residential Density** – 25+ Dwellings Per ha / 400 walkable catchment, 35+ Dwellings Per ha/800m – 1200m walkable catchment where there is an existing proposed train station within 400 metres
- **Preferred residential dwelling type** – Medium-rise apartments/ multiple dwellings, Townhouses/grouped dwellings – 2+ storeys

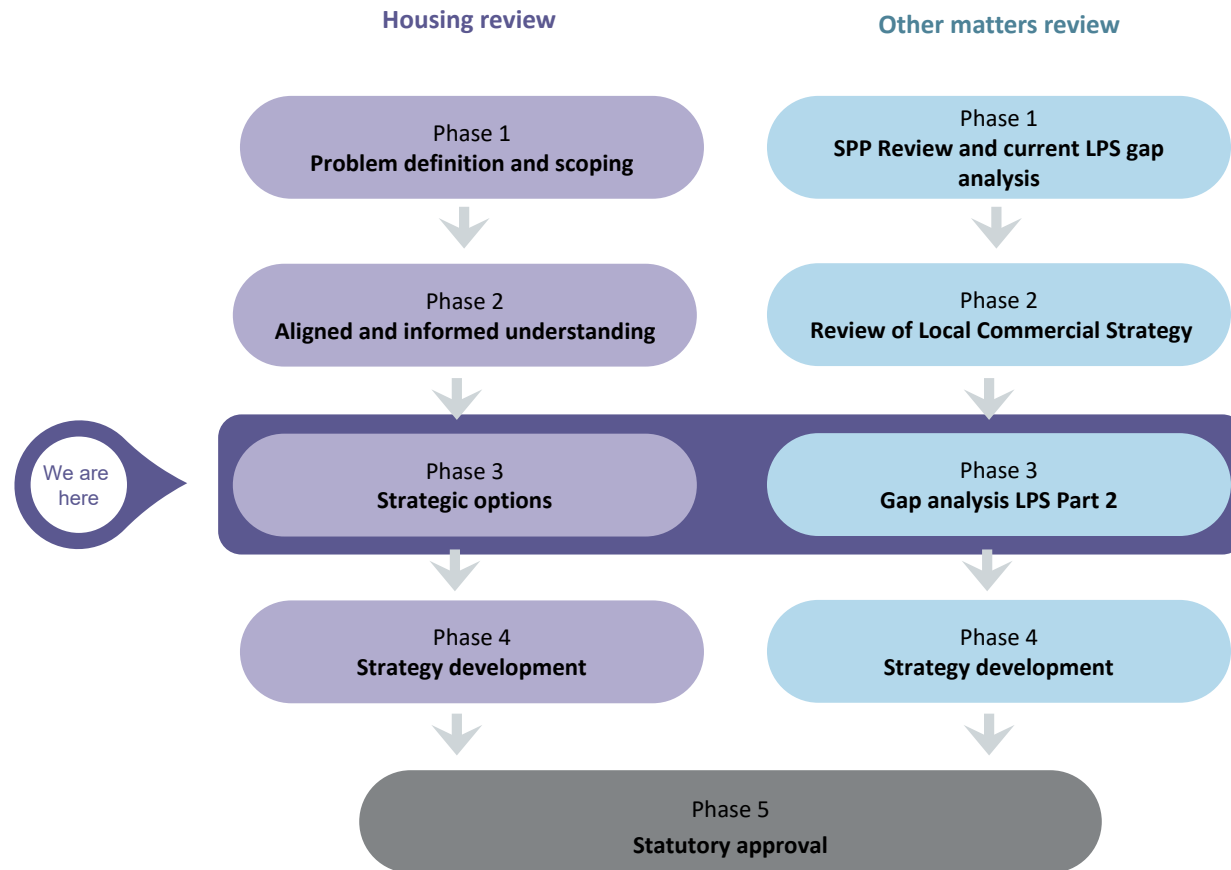

Secondary Centre

Secondary centres, while similar to strategic centres, serve smaller catchments and offer a more limited range of services, facilities, and employment opportunities. They are integral to the regional economy and crucial in providing essential services to their catchments. Secondary centres with rail stations should be targeted for medium and high-density housing, employment growth, and a diversity of land uses. Secondary centres should incorporate the following characteristics:

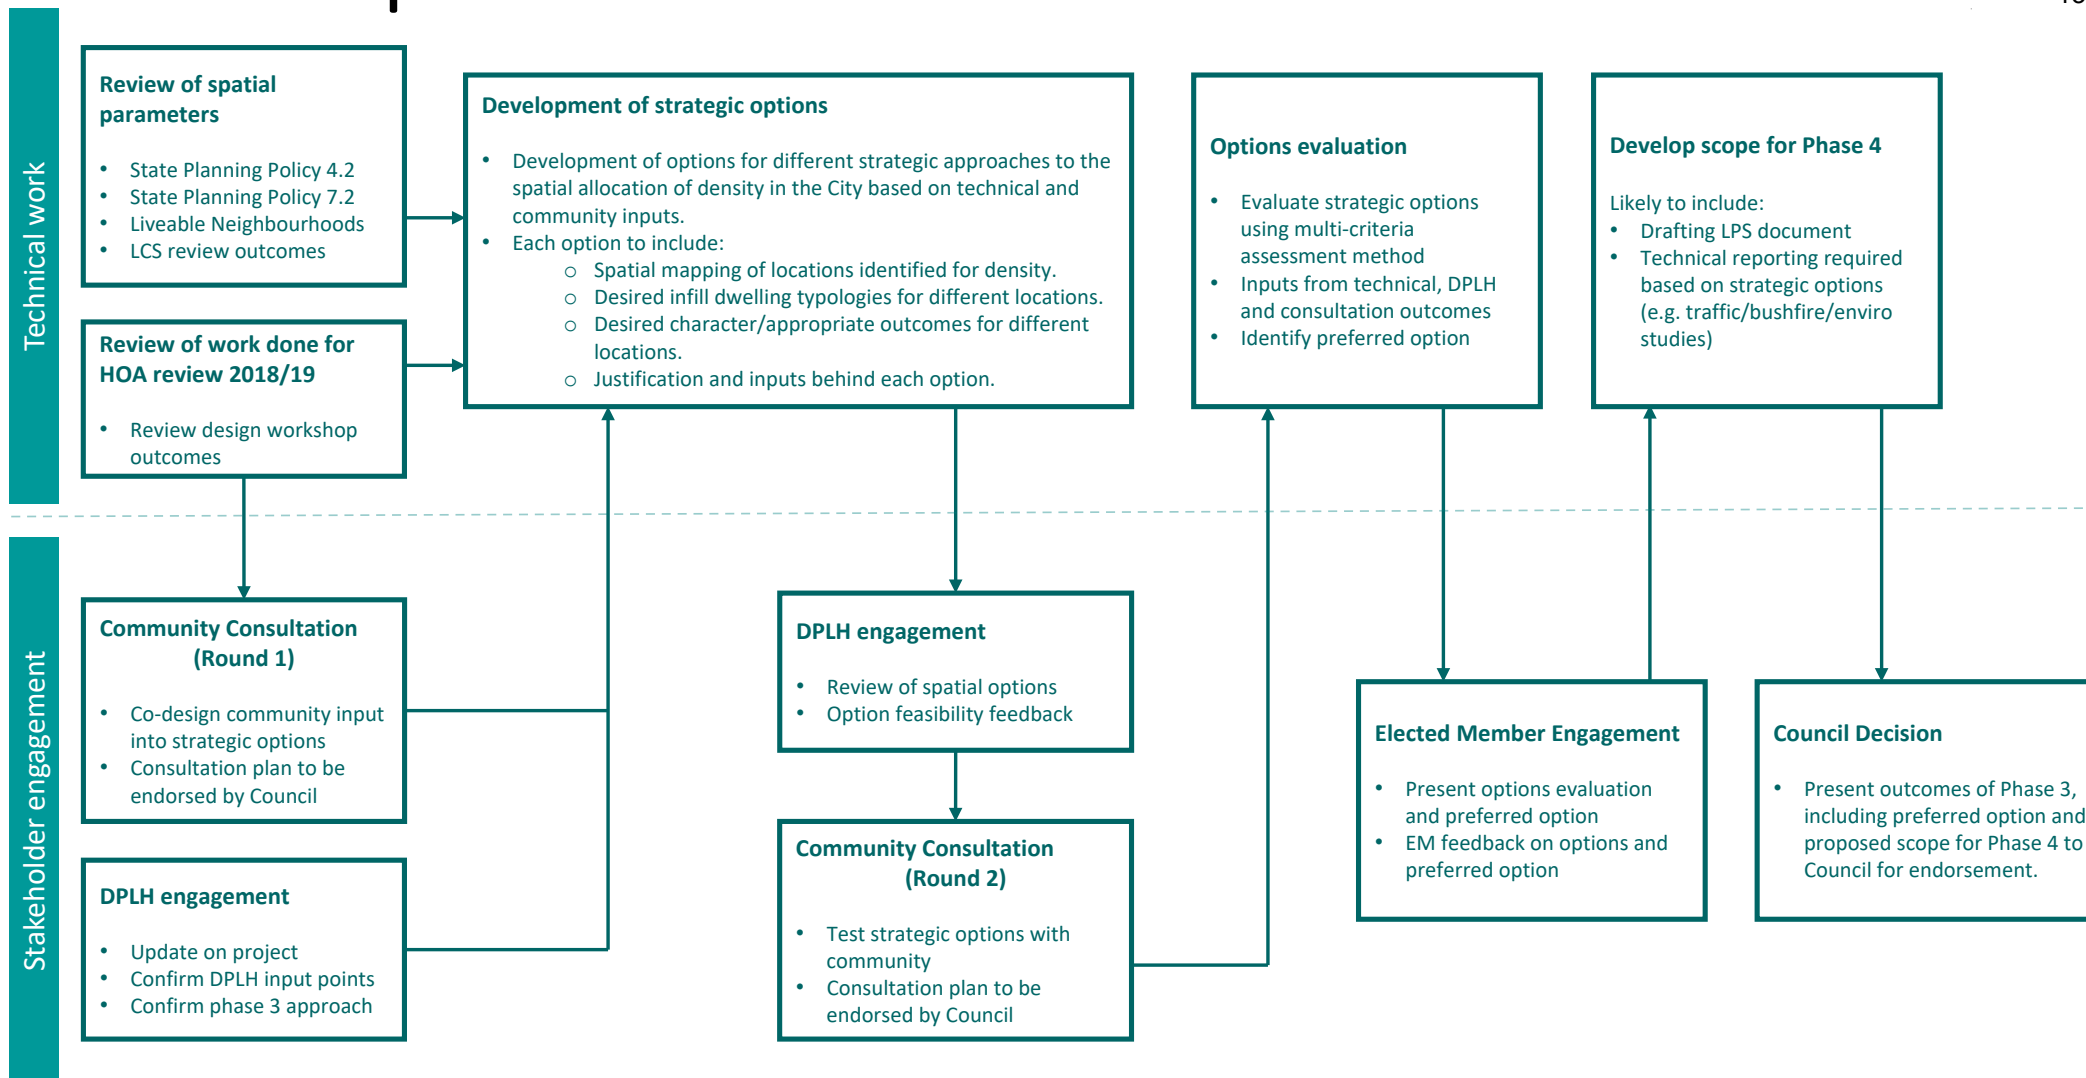

-
- **Future indicative service population area** – Up to 150,000 persons
 - **Typical transport connectivity and accessibility** – Focal point for passenger rail and/or high frequency bus network with routes to multiple destinations
 - **Desired Land Use** – All local, neighbourhood and district centre land uses. Secondary centres with access to a rail station may be suitable for office – large
 - **Typical Urban Form** - The centre core of a medium and high-density urban area is marked by mid to high-rise buildings with activated, pedestrian-friendly frontages and public spaces, while areas outside the core feature low to mid-rise buildings maintaining a pedestrian scale with attractive landscaping. New developments should contribute to a coherent and attractive street frontage in line with existing or planned setbacks.
 - **Average Residential Density** – 25+ Dwellings Per ha / 400 walkable catchment, 40+ Dwellings Per ha/800m – 1200m walkable catchment where there is an existing proposed train station within 400 metres
 - **Preferred residential dwelling type** – Medium to high-rise apartments/ multiple dwellings, Townhouses/grouped dwellings – 2+ storeys

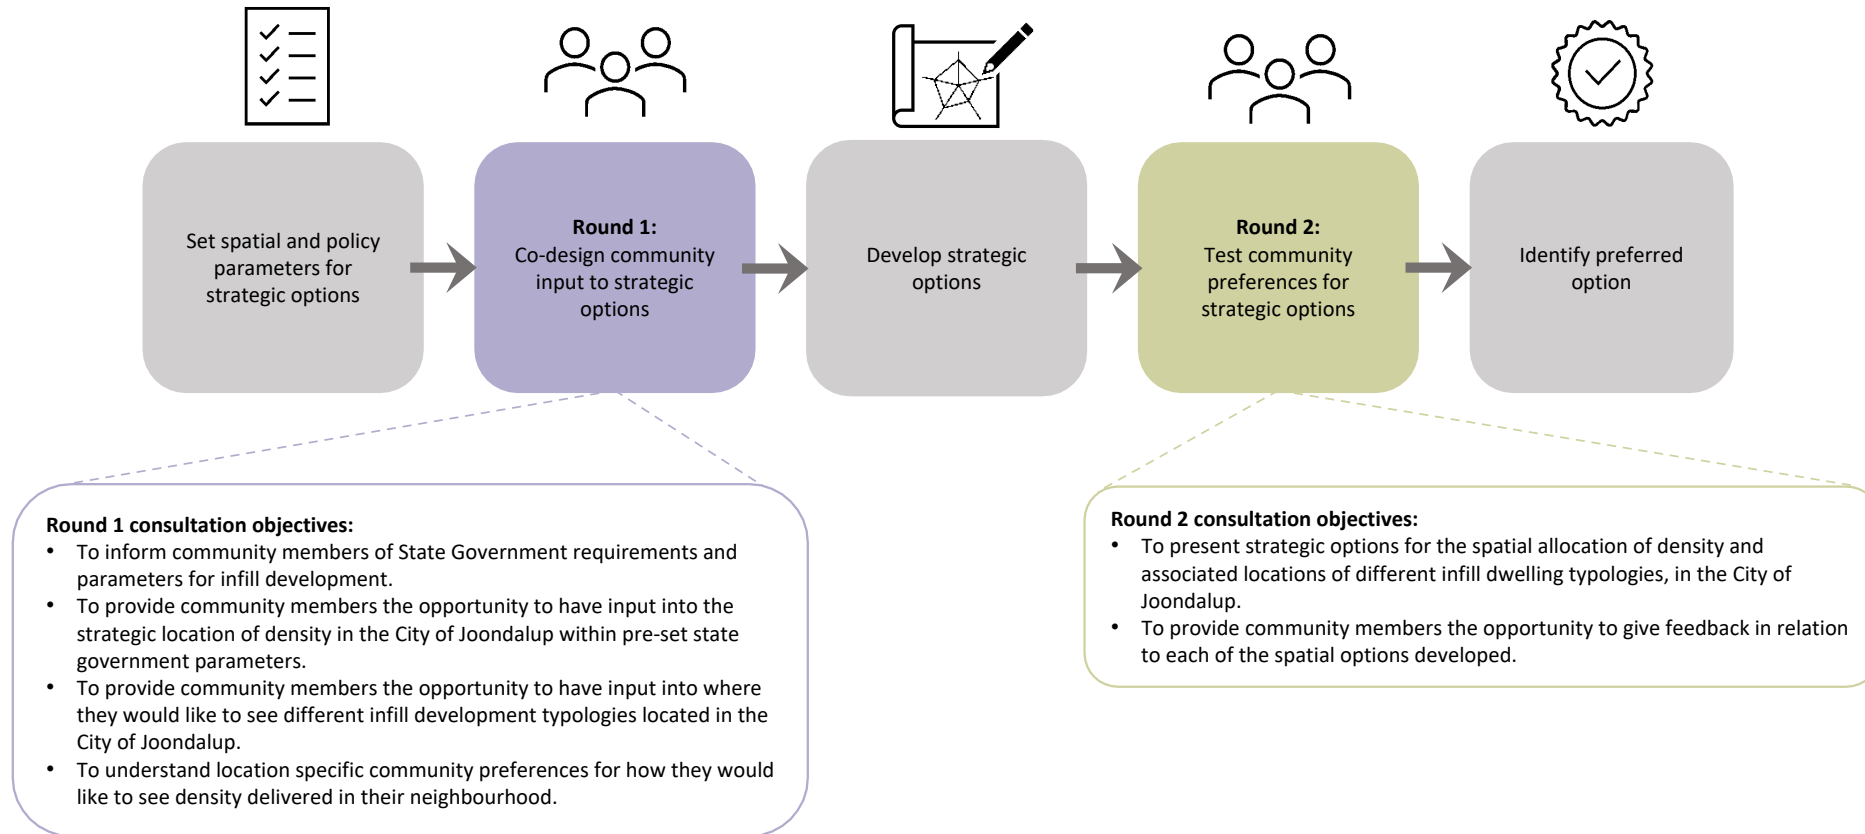

Local Planning Strategy Review - Project Approach

Phase 3 scope of work

Phase 3 community consultation approach

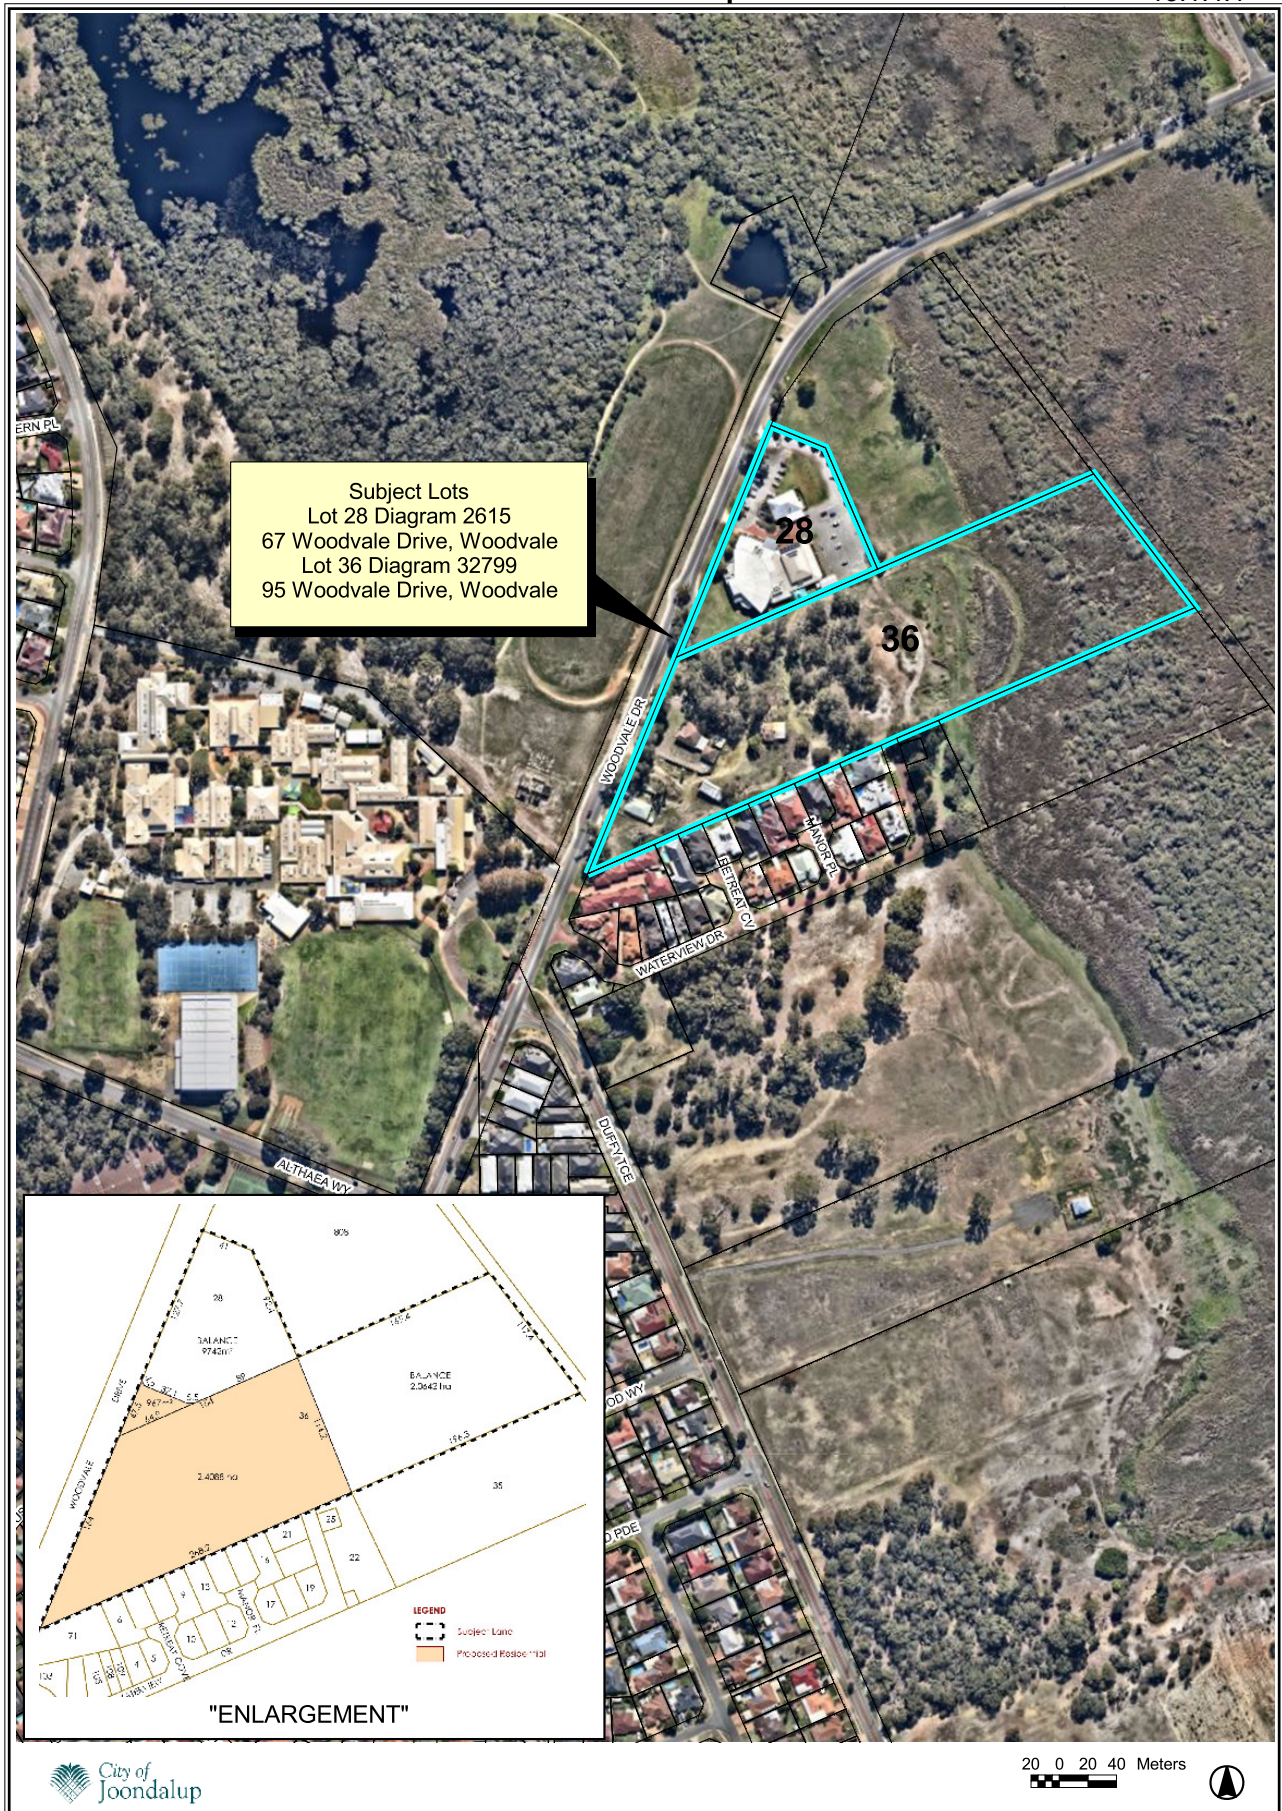

*individual community consultation plans for each round of consultation will be presented to council for endorsement prior to consultation taking place.

Phase 3 approximate timing

Phase 3 timing	2024										2025												2026			
	A	M	J	J	A	S	O	N	D	J	F	M	A	M	J	J	A	S	O	N	D	J	F	M	A	
Review of spatial and policy parameters for input into strategic options																										
Engage consultant and preparation of Phase 3 Consultation Plan																										
Phase 3 Consultation Plan Council endorsement (strategy, policy, OCM)																										
Round 1 community consultation takes place																										
Development of strategic options																										
Confirm strategic options with DPLH																										
Round 2 community consultation takes place																										
Multi-criteria analysis to identify preferred option																										
Phase 3 outcomes & Phase 4 scope to Council (strategy, policy, OCM)																										

Subject to consultant capacity/timeframes and 2025 and 2026 meeting dates and report deadlines. Consultation timing will need to have due regard to school holiday and caretaker periods.

RESOLUTION TO ADOPT AMENDMENT TO LOCAL
PLANNING SCHEME

CITY OF JOONDALUP LOCAL PLANNING SCHEME NO.3

AMENDMENT NO. ____

RESOLVED that the local government pursuant to section 72 of the *Planning and Development Act 2005*, amend the above Local Planning Scheme by:

- Rezoning a portion of Lot 28 (No. 67) and a portion of Lot 36 (No. 95) Woodvale Drive, Woodvale from 'Private Community Purposes' and 'Rural' to 'Residential' with a density coding of R30;
- Modifying the Scheme Map accordingly.

The Amendment is standard under the provisions of the *Planning and Development (Local Planning Schemes) Regulations 2015* for the following reason(s):

- an amendment to the scheme so that it is consistent with a region planning scheme that applies to the scheme area, other than an amendment that is a basic amendment.

Dated this _____ day of _____ 2023

(Chief Executive Officer)

PAGE LEFT BLANK

PLAN 1 SCHEME AMENDMENT MAP

1. INTRODUCTION

This amendment to the *City of Joondalup Local Planning Scheme No.3* proposes to rezone a portion of Lot 28 (No. 67) and a portion of Lot 36 (No. 95) Woodvale Drive, Woodvale (the subject "site" or "land") from 'Private Community Purposes' and 'Rural' to 'Residential' with a density coding of R30. This Scheme Amendment is intended to facilitate the preparation, assessment and ultimate determination of a Subdivision Application over the subject land to ensure consistency between the land use of the site and adjacent development.

Pursuant to the *Planning and Development Act 2005* the City is required to initiate an amendment to the *City of Joondalup Local Planning Scheme No.3* to rezone the land, in order to make the classification of the land under LPS3 consistent with the classification of the land under the Metropolitan Region Scheme (MRS).

This amendment follows MRS Amendment 1339/57 (North-East and North-West Districts Omnibus 2), which rezoned the site from 'Rural' to 'Urban' to facilitate the coordination of infill development over the site.

The following report provides an overview of the site characteristics, local context and provides the rational for the proposed Scheme Amendment.

1.1 SITE DETAILS

1.1.1 LEGAL DESCRIPTION

The subject land encompasses a total land area of 4.3648ha and abuts the east side of Woodvale Drive to the north of Waterview Drive.

The subject land is described as:

- Lot 28 on Diagram 2615, Certificate of Title Volume 1755 Folio 754;
- Lot 36 on Diagram 32799, Certificate of Title Volume 134 Folio 149A; and,
- Lot 36 on Diagram 32799, Certificate of Title Volume 1486 Folio 128.

Copies of the Certificates of Title can be found attached in **Appendix 1 – Certificates of Title**.

1.2 PROPONENT

This amendment has been prepared on behalf of the respective landowners, being various members of the Duffy family (Lot 36) and Woodvale Baptist Church (Lot 28).

1.2.1 LOCATION AND SITE PARTICULARS

The subject site is located in the suburb of Woodvale, approximately 19 kilometres north of the Perth Central Business District, and approximately 6 kilometres south of the Joondalup City Centre (refer **Figure 1 - Location Plan**).

The subject land is bound by residential development to the south, Woodvale Drive to the west, the Woodvale Baptist Church to the north, and Yellagonga Regional Park to the east.

The subject land comprises two (2) large residential dwellings and various outbuildings and structures on Lot 36. The subject land also includes a small portion of Lot 28 located behind (south of) the Woodvale Baptist Church.

1.3 SURROUNDING LAND USES AND DEVELOPMENT

The subject land is located directly opposite a large area of Public Open Space (POS) being Yellagonga Regional Park.

Waterview Drive is to the south of the site and comprises lots largely ranging from 450m² – 780m² in area, with a base coding of R20-R40. To the north of the site, is Woodvale Baptist Church, zoned Private Community Purposes. The Church and its associated improvements will remain on the balance portion of Lot 28. To the west of the site, is Woodvale Secondary College, and beyond that, west of Timberlane Drive, is further residential development that has a base coding of R20 (refer **Figure 2 - Aerial Photograph**).

Other surrounding land uses and facilities include:

- Timberlane Park and Hall (approximately 320m south-west of the site);
- Woodvale Boulevard Shopping Centre (approximately 1.09km south-west of the site).

PAGE LEFT BLANK

FIGURE 1 - LOCATION PLAN

PAGE LEFT BLANK

FIGURE 2 - AERIAL PHOTOGRAPH

2. PLANNING FRAMEWORK

2.1 PLANNING AND DEVELOPMENT ACT 2005

Section 124 of the *Planning and Development Act 2005* requires that the City resolve to amend its local planning scheme within 90 days of a region scheme amendment coming into effect, in order to make its local planning scheme consistent with the region scheme. As such, the proposed amendment is consistent with the requirements of the planning framework.

2.2 METROPOLITAN REGION SCHEME

The majority of the subject land is zoned 'Urban' under the *Metropolitan Region Scheme* (MRS). Part of Lot 36 is reserved as 'Parks and Recreation', and is mapped as Bush Forever Site 299, which contains a Conservation Category Wetland and is within the Yellagonga Regional Park.

As part of its submission on the North-East and North-West District Omnibus 2 MRS Amendment 1339/57, the City of Joondalup stated as follows:

"The City of Joondalup advises that Lots 28 & 36 Woodvale Drive are the last remaining Rural zoned properties within the City and that this designation is no longer appropriate in the context of surrounding residential land uses. The City has requested that the lots are rezoned to Urban to facilitate future development consistent with the urban nature of the locality. The proposal is located in a Bushfire Prone Area and the proponent will therefore be required to demonstrate compliance with the requirements of State Planning Policy 3.7 – Planning in Bushfire Prone Areas prior to finalisation."

MRS Amendment 1339/57 was finalised and the subject land zoned 'Urban' under the Metropolitan Region Scheme. Lot 28 was subsequently rezoned to 'Private Community Purposes' for the Woodvale Baptist Church, leaving Lot 36 as the only lot within the City zoned 'Rural' under Local Planning Scheme No. 3.

2.3 CITY OF JOONDALUP LOCAL PLANNING SCHEME NO.3

The western portion of Lot 36 is zoned 'Rural' under the *City of Joondalup Local Planning Scheme No.3* (LPS3), with the eastern portion reserved as 'Parks and Recreation.' That portion of the subject land within Lot 28 is zoned 'Private Community Purposes'.

2.3.1 PREVIOUS SCHEME AMENDMENT

In 2016 as part of Council's consideration of the draft *City of Joondalup Local Planning Scheme No.3*, the site was proposed to be rezoned from 'Rural' to 'Residential R25'. The site, however, was not able to be advertised and amended at the time given the inconsistency with the MRS. As such, at the City's Ordinary Meeting of Council on 16 February 2016 a motion was put and carried to –

'Requests the Western Australian Planning Commission to include Lot 36 (95) and Lot 28 (67) Woodvale Drive, Woodvale, in a future omnibus amendment to the Metropolitan Region Scheme to rezone these lots from 'Rural' to 'Urban'.

As described in 2.2 above, MRS Omnibus Amendment 1339/57 rezoned Lots 28 & 36 to 'Urban' under the Metropolitan Region Scheme.

2.4 LOCAL PLANNING POLICIES

2.4.1 CITY OF JOONDALUP LOCAL PLANNING STRATEGY

The Scheme Amendment is considered to be consistent with the City of Joondalup's Local Planning Strategy (2014). The Local Planning Strategy sets out various actions in Section 4.2.2 'Actions' related to housing, including implementing the recommendations of the Local Housing Strategy. Two of the Actions most relevant to the subject land include:

"As part of the District Planning Scheme review process, develop provisions for large opportunity sites which sets a minimum 'target' density in line with government policy. The requirements will apply to large opportunity sites across the whole City with the exception of the Joondalup City Centre."

"As part of a future omnibus amendment to the Metropolitan Region Scheme, consider rezoning the two rural lots to 'Urban'. Once this has occurred, rezone the two remaining rural lots under the District Planning Scheme No. 2 to a suitable zone such as 'Residential' to reflect the surrounding residential land uses."

The subject land was initially identified in the Local Housing Strategy, and subsequently in Section 4.12 of the Local Planning Strategy, which provides the following comment with regard to the site:

"There are two lots within the City which are zoned 'rural' under the Metropolitan Region Scheme and the District Planning Scheme No. 2. Both lots are located within the suburb of Woodvale near Ocean Reef Road. One of these lots is owned by the Woodvale Baptist Church and currently used as a place of worship, place of assembly and caretaker's dwelling."

"The other lot contains a horse track and associated buildings. The land surrounding these rural lots is zoned as residential and has been developed. Due to this, it is recommended that the rural lots be rezoned to reflect the surrounding residential uses."

"The rural zoning is no longer appropriate for these lots in the context of the surrounding residential land uses."

In this regard, the Amendment is not only considered to be consistent with the City's Local Planning Strategy, it proposes to implement its recommendations with regard to the subject land.

PAGE LEFT BLANK

FIGURE 3 - METROPOLITAN REGION SCHEME MAP

PAGE LEFT BLANK

FIGURE 4 - LOCAL PLANNING SCHEME No 3 MAP

3. AMENDMENT PROPOSAL

This Scheme Amendment proposes to rezone a portion of Lot 28 (No.67) and a portion of Lot 36 (No.95) Woodvale Drive, Woodvale from 'Rural' and 'Private Community Purposes' to 'Residential' with a density coding of R30 under *the City of Joondalup Local Planning Scheme No.3* (LPS3).

The Scheme Amendment Map is included herewith at **Plan 1**.

3.1 RATIONALE FOR AMENDMENT

The *Planning and Development Act 2005* requires the City to initiate an amendment to the *City of Joondalup Local Planning Scheme No.3* to rezone the land, in order to make the classification of the land under LPS3 consistent with the classification of the land under the MRS.

Lot 36 is now the last remaining 'Rural' zoned lot within Woodvale and this designation is no longer appropriate in the context of surrounding residential land uses, as confirmed in the City's own Local Planning Strategy.

The proposed density coding of R30 reflects orderly and proper planning given that it will facilitate additional residential development within an established residential area that can be adequately serviced by public transport, community facilities and public open space. The subject land is located adjacent to Yellagonga Regional Park, a Local Distributor Road (being Woodvale Drive), and Woodvale Secondary College. The site is also situated in close proximity to Wanneroo Road (a classified Primary Regional Road) and Ocean Reef Road (a classified Other Regional Road), both of which provide good regional access to and from the subject land.

This amendment proposes to incorporate a portion of Lot 28 to facilitate a more logical and coordinated approach to subdivision and development. The proposal will allow for that portion of Lot 28, surplus to the needs of the Woodvale Baptist Church, to be developed for residential purposes.

4. ENVIRONMENTAL CONSIDERATIONS

An 'Environmental Assessment Report' has been prepared by project environmental consultant PGV Environmental and is attached at **Appendix 2**.

The report was prepared to describe the environmental values of the site and to assess the potential environmental impacts of the proposed development. The Scope for the report included:

- Database searches;
- Analysis of physical characteristics;
- Description of historical, recent and present land uses;
- A Reconnaissance Flora and Vegetation Survey;
- A Basic Fauna Survey; and,
- A review of relevant policies and legislation

In summary, the Environmental Assessment Report found:

- The site is not registered as a contaminated site and the past and present land uses are not considered constraints to development;
- Surrounding land use does not pose a constraint to the proposed urban development;
- The geology and soils on the site do not pose a risk to development. Acid Sulphate Soils in the central section may need to be investigated when the extent of earthworks and servicing are known;
- The Urban zoned portion of the site contains some remnant native trees in a parkland cleared setting with no native understorey species;
- The absence of a native understorey means that no Threatened or Priority flora species is likely to occur on the site;
- The remnant trees are mostly Marri, with some Tuart and Jarrah. The vegetation in the Urban portion is rated as being in Completely Degraded condition;
- The vegetation does not meet the definition of any Threatened or Priority Ecological Communities;
- The native trees on the site provide 0.615ha of potential foraging habitat for Black Cockatoos although no evidence of foraging on site was observed. The site contains 20 Marri, Jarrah and Tuart trees that meet the definition of breeding habitat. No actual breeding occurs on the site as none of the trees has any hollows large enough for Black Cockatoos to breed in;

- The site contains a portion of Wallubuenup Swamp which is a Conservation Category wetland. PGV Environmental consider the boundary of the mapped wetland is reasonably accurate and does not recommend any changes;
- The interface between the wetland and the trees on the higher western portion of the site contains about 30m of chaotic landform with some small high points and some low-lying depressions that are wet in winter/spring;
- The undulating nature of the wetland interface means that in its current form a 50m wetland buffer is recommended between the wetland boundary and the proposed dwellings. The 50m will allow landscaping of the more uniform landform in the western part of the wetland buffer to be usable POS for the public;
- A Wetland Management Plan is recommended to be prepared as a condition of subdivision;
- Stormwater drainage infrastructure is not normally allowed to be located in the buffer of a CCW. Some overflow of larger events may be supported by the agencies; and,
- The site does not contain any Aboriginal Heritage Sites or sites of other heritage.

The Concept Plan prepared for the site (refer **Figure 5**) addresses a number of the elements outlined above, including:

- Maintaining the current Conservation Category Wetland (CCW) wetland boundary;
- Providing a 50m buffer to the CCW boundary;
- Providing additional Public Open Space (POS) outside the 50m buffer (which can then contain both useable space for public activities as well as drainage infrastructure); and,
- A hard-edge road interface to the POS/wetland land uses which will also link to existing development to the south of the site (via an extension of Waterview Drive).

PGV Environmental considers the proposed residential development of the 'Urban' portion of the subject land can be done without any significant impact on environmental matters.

PGV Environmental also recommends a Commonwealth EPBC Act referral to be undertaken in parallel with the scheme amendment process. Given the minor nature of proposed clearing and the lack of breeding hollows on site, the report considers the referral would highly likely not require a full assessment.

PAGE LEFT BLANK

FIGURE 5 – CONCEPT PLAN

5. TRANSPORT IMPACT ASSESSMENT

A Transport Impact Assessment (TIA) prepared by Stantec in accordance with the Western Australian Planning Commission (WAPC) *Transport Impact Assessment Guidelines Volume 2* is attached at **Appendix 3**.

The TIA referenced a Concept Plan which was prepared for inclusion in the TIA report at Figure 2-3 in order to provide some high-level commentary on potential traffic movement from the site. The Concept Plan is also attached herewith at **Figure 5**.

The TIA provides the following key conclusions:

- The site is expected to generate 28 trips during the AM peak hour and 38 trips during the PM peak hour. This low-level traffic generation will not have a detrimental impact on the safety or operation of Woodvale Drive or the surrounding road network.
- Analysis of the proposed intersections has been undertaken using SIDRA software and the result of analysis shows that the proposed intersections will operate satisfactorily.
- The site has access to public transport services with bus stops 'Woodvale Dr before Waterview Dr (Stop ID: 18499)', and 'Woodvale Dr after Waterview Dr (Stop ID: 18496)' being serviced by Bus Routes 466 and 467 (Whitfords Station to Joondalup Station). During both the AM and PM peaks the service frequencies vary between 15-30 minutes. Outside of the AM and PM peaks, the bus services run approximately every 30 minutes.

Overall, the TIA concluded that the traffic impacts associated with the proposed Scheme Amendment and future residential subdivision will be minimal on the internal and external transport network.

6. BUSHFIRE MANAGEMENT PLAN

A small portion of Lot 36 is within a designated bushfire prone area, triggering the application of *State Planning Policy 3.7: Planning in Bushfire Prone Areas* and appurtenant *Guidelines for Planning in Bushfire Prone Areas*.

A Bushfire Management Plan (BMP) has been prepared by Bushfire Prone Planning for the site and can be found at **Appendix 4**. The Bushfire Management Plan assessed the capacity of the proposed Scheme Amendment and future residential subdivision to implement and maintain the required 'acceptable' solutions or its capacity to satisfy the SPP 3.7 intent through the justified application of additional bushfire protection measures as supportable 'alternative' solutions.

The BMP sets out the following response to the bushfire protection criteria:

- Location

The land subject to the Scheme Amendment is within an area identified as moderate or low bushfire hazard level that will be subject to a BAL classification not higher than BAL-19 (the majority of lots are BAL-12.5) upon future subdivision and the completion of development.

This will be achieved through the application of appropriate building design, bushfire construction requirements and the ongoing maintenance of the Asset Protection Zone (APZ). Any future development will ensure buildings will not be impacted by consequential fire with no combustible materials used, stored or accumulated within the APZ.

- Siting and design

The final definition of APZs will be dealt with at a subsequent development stage (subdivision). Post-development – all remaining vegetation (if any) will be managed and maintained to a low threat state in perpetuity. Appropriate separation around future development may be required to be incorporated into design at future planning stages.

- Vehicular access

Perimeter roads will be implemented as part of the development, providing a suitable interface to the adjacent parkland areas and giving dual access to future lots. These will be further defined at the later Subdivision stage of development.

- Water

Hydrants are located on Woodvale Drive in front of Lot 36 and at 200m intervals along Woodvale Drive. Reticulated water for firefighting can be provided at the subdivision and/or development application stage.

The BMP concludes that the bushfire risk is acceptable and manageable, and therefore bushfire risk will not impede the Scheme Amendment and future development of the site.

7. SERVICING

A Servicing Report prepared by Development Engineering Consultants has been prepared to demonstrate that the site can be developed for residential and commercial purposes. A summary of the report is provided below.

Power

- Sufficient power supply exists in the area to supply the development. A high and low voltage aerial power line is located along the western verge of Woodvale Drive and the abutting urban development along Waterview Drive is serviced by underground power.

Water Supply

- At present there is a 150mm Water Corporation reticulation water main located along the eastern verge of Woodvale Drive abutting the site and extended to the Woodvale Baptist Church on the northern boundary of the site. A 100mm Water Corporation water main is located in Waterview Drive extending to the south-east corner of the site.
- These are sufficient to supply the subject land and will be linked as part of the development.

Gas

- ATCO Gas mains are installed in this area, with a 100mm medium pressure main located on the western verge of Woodvale Drive, and also an 80mm main is located in Waterview Drive to the end of the existing roadway at the south-east corner of the site.
- It is expected that reticulated gas services will be extended into this development by ATCO in the normal way, with trenching done by the developer.

Refer **Appendix 5** for complete report.

8. CONCLUSION

The rezoning of a portion of Lot 28 (No. 67) and a portion of Lot 36 (No. 95) Woodvale Drive, Woodvale from 'Private Community Purposes' and 'Rural' to 'Residential' with a density coding of R30 under LPS3, is considered appropriate given the existing urban context and local character. This proposed Scheme Amendment also ensures consistency with the 'Urban' zoning under the *Metropolitan Region Scheme*.

The Scheme Amendment provides an opportunity for infill development, and is also consistent with the City's planning framework; including its Local Planning Strategy.

The technical reports included in the Appendices herein also confirm the suitability of the subject land for the rezoning and future development, as proposed.

PROPOSED AMENDMENT NO 15
SCHEDULE OF SUBMISSIONS FOLLOWING ADVERTISING
LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
<p><u>Environmental impacts</u></p> <ol style="list-style-type: none"> 1. Negative impact on adjoining Yellagonga Regional Park. 2. Loss of mature trees from subject site and associated impact on local bird population (especially endangered black cockatoos). 3. Subject site should be set aside as Bush Forever/amalgamated into Yellagonga Regional Park. 4. The subject site is regularly used for grazing by kangaroos in the area. The proposed amendment will reduce kangaroo habitat. Will a kangaroo management plan be prepared? 5. Why is a formal assessment from EPA not required? 	<p>The proposed scheme amendment and indicative concept plans are consistent with the City's <i>Local Planning Strategy</i> objectives, specifically to;</p> <ul style="list-style-type: none"> • To protect and enhance the natural and built environment within the City, and • To ensure public open space is easily accessible and provides protection for vegetation and biodiversity, amenity, and quality recreational opportunities. <p>The concept plan has been developed consistent to the above Strategy objectives, prioritizing the retention of the eastern portion of the Lot 36 for the purposes of Parks and Recreation, which is a natural landform that contributes to Yellagonga Regional Reserve.</p> <p>A Bush Fire Management Plan and Environmental Impact Assessment has been provided and reviewed by the EPA prior to determining that the scheme amendment does not require a formal referral given the development does not result in any direct environmental impacts inclusive of suggested local fauna and flora habitat.</p> <p>Notwithstanding the aforementioned, the proposed development will be referred for review prior to commencement of works as per the <i>Environmental Protection and Biodiversity Conservation Act</i>, where the environmental matters will be assessed in greater detail. It is</p>	<ol style="list-style-type: none"> 1. The application was referred to the Environmental Protection Authority (EPA) which advised that the amendment was considered unlikely to have a significant impact on the environment and that a formal assessment under the <i>Environmental Protection Act 1986</i> was not required. To mitigate potential impacts on environmental values at future planning stages, the EPA recommended that the amendment be modified to incorporate environmental conditions for any future subdivision or development of the site. It is recommended that the amendment be modified to address the EPA advice. 2. Refer to 1 above. Due to the potential impact on black cockatoos, the applicant has referred the amendment to the Commonwealth Department of Climate Change, Energy, the Environment and Water under the <i>Environment Protection and Biodiversity Conservation Act 1999</i> (EPBC Act). If subsequent approval under the EPBC Act is required, it is the responsibility of the applicant to obtain this approval. 3. The eastern portion of Lot 36 is identified as Bush Forever and forms part of the Yellagonga Regional Park, reflected by the 'Parks and Recreation' reservation for this portion under the <i>Metropolitan Region Scheme</i> (MRS). The western portion of Lot 36 is zoned Urban under the MRS. The proposed rezoning of this portion to Residential under <i>Local Planning Scheme No. 3</i> is therefore considered appropriate. 4. While kangaroos may currently graze within the western portion of Lot 36, it is important to note that this area is privately owned and does not form part of Yellagonga Regional Park. The eastern portion of Lot

PROPOSED AMENDMENT NO 15
SCHEDULE OF SUBMISSIONS FOLLOWING ADVERTISING
LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
	<p>likely that a kangaroo management plan will be requested and provided at that point in time.</p> <p>City's adherence to pertinent environmental considerations. Section 4.6 of the strategy underscores the commitment to retaining, safeguarding, and enhancing significant natural vegetation within new developments. The proposed scheme amendment looks to retaining existing, mature trees on site to service the future residential lots where deemed appropriate and feasible.</p> <p>When a scheme amendment is endorsed a referral to the EPA is required, from there the EPA will determine whether a formal assessment is required or not. In this instance, after additional information being provided at the request of the EPA, the EPA have determined a formal assessment was not required given there is no direct environmental impact as a result of the development.</p>	<p>36 will remain as the 'Parks and Recreation' reservation under the MRS. The EPA's proposed modifications to the amendment (namely those relating to the identification of a wetland buffer and public open space areas which retain key environmental values) would provide separation between residential development on the subject site and the area reserved for 'Parks and Recreation'. Notwithstanding, the identification and relocation of any fauna onsite, including kangaroos, may be addressed through a recommendation for a fauna management plan as part of any future subdivision application received for the site.</p> <p>It is noted that the Western Grey kangaroo is not a species listed under the EPBC Act so it is unlikely that agency will provide any advice in relation to kangaroos.</p> <p>5. Refer to 1 above.</p>
<p><u>Traffic and road layout</u></p> <p>1. Existing road network is insufficient to accommodate medium density development.</p> <p>2. Proposal will exacerbate existing traffic congestion issues along Woodvale Drive, specifically during AM and PM peak times (including school pick up/drop off for Woodvale Secondary College).</p>	<p>Detailed traffic impact assessment reports have been conducted to ensure that the proposed development will not impede surrounding/existing transport infrastructure. Background growth scenarios are applied to the traffic modelling to account for incremental growth from other developments as well.</p> <p>Whilst it is expected to be an increase in traffic volumes (as with all developments), the potential traffic ramifications linked to the</p>	<p>1. The applicant has provided a Transport Impact Assessment (TIA) that considers the proposed rezoning in the context of 38 residential lots, with an indicative concept plan proposing two new intersections on Woodvale Drive. The TIA provides an assessment of peak hour traffic flows in the vicinity of the subject site, including school traffic, and indicates that such a proposal would result in minimal traffic impacts on the internal and external transport network.</p> <p>2. Refer to 1 above.</p>

PROPOSED AMENDMENT NO 15
SCHEDULE OF SUBMISSIONS FOLLOWING ADVERTISING
LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
<p>3. There are already long wait times to exit Waterview Drive onto Woodvale Drive during peak times.</p> <p>4. Increased risk of kangaroo/vehicle collisions.</p> <p>5. The traffic study provided with the application has not considered school drop off/pick up times or the maximum potential lot yield at R30.</p> <p>6. Do not support extension of Waterview Drive into the subject site and through to Woodvale Drive, as shown on the concept plan. This would become a busy thoroughfare during peak times, reducing amenity for the Sanctuary Estate, and creating a safety hazard for pedestrians and wildlife.</p> <p>7. Access from the amendment area road network to the adjacent church grounds should not be permitted.</p>	<p>proposed Scheme Amendment and forthcoming residential subdivision are anticipated to have a negligible effect on both the existing internal and external transport infrastructure networks, inclusive of the existing school traffic network.</p>	<p>3. Refer to 1 above.</p> <p>4. Refer to 1 above. It is also noted that signage is provided along Woodvale Drive to alert drivers to the presence of kangaroos in the area, and to remind drivers of the 50km/hr speed limit.</p> <p>5. Refer to 1 above. The TIA provided in support of the proposed amendment considers rezoning in the context of 38 residential lots. A further traffic study may be required at subdivision stage if the proposed lot yield is substantially greater than that considered by this TIA.</p> <p>6. The City has reviewed the TIA and noted some concerns with the alignment of the proposed intersections on Woodvale Drive as proposed in the concept plan, however, is satisfied that the alignment of these intersections can be suitably modified so as not to compromise future residential development at the site. The proposed concept plan also resolves an existing waste vehicle access issue at the adjoining southern residential area by proposing to continue Waterview Drive into the subject site, providing a connection for waste trucks back through to Woodvale Drive.</p> <p>City records indicate that the access road on the perimeter of The Sanctuary estate was required for a number of reasons, including to provide a connecting point to the land abutting the northern boundary. Notwithstanding, the suitability of internal road layouts and intersection details will be assessed in detail as part of the assessment of any future application for the subdivision of the site.</p> <p>7. Refer to 6 above.</p>

SCHEDULE OF SUBMISSIONS FOLLOWING ADVERTISING
LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
<p><u>Density code</u></p> <p>1. Opposed to R30 density:</p> <ul style="list-style-type: none"> o Allows for lot sizes and development outcomes which are incompatible with surrounding area. o Does not cater to likely demand (families). <p>2. R20 or R25 coding is more appropriate.</p>	<p>Rezoning to R30 density is proposed to facilitate orderly residential development, supported by existing infrastructure and proximity to amenities such as Yellagonga Regional Park, Woodvale Secondary College, and major regional roads.</p> <p>R30 zoning addresses housing shortages and promotes efficient land use that is complementary to the surrounding, existing residential lots. Modern families often seek compact, low-maintenance housing options, which R30 zoning accommodates. Embracing diverse housing options contributes to sustainable, inclusive communities.</p>	<p>1. Existing residential development directly adjoins the southern boundary of Lot 36 and consists of lots coded 'R20', 'R25' and 'R40'. The proposed density of R30 is considered appropriate in this context and will allow for a range of lot sizes to be provided adjoining an established residential area.</p> <p>2. Refer to 1 above.</p>
<p><u>Other</u></p> <p>1. The boundary fence between 'The Sanctuary' estate and subject site is currently damaged and will be further damaged by earthworks on the subject site.</p> <p>2. The house on the subject site should be heritage listed.</p> <p>3. There is bushfire risk from the adjoining bushland.</p> <p>4. Increased demand on public services (e.g. education and health).</p>	<p>1. The maintenance and minimization of damage during earthworks will be undertaken as necessary to uphold the structural integrity of the boundary fence.</p> <p>2. No existing heritage exists on the site, despite this the plan outlines the retainment of the existing homestead on site.</p> <p>3. See above response regarding bushfire management.</p> <p>4. The number of anticipated residents will not impede on current public services in the internal and surrounding area.</p> <p>5. Bore water/water connection is planned in conjunction with Dept. of Water and</p>	<p>1. Not a relevant planning consideration. Dividing fencing matters are to be resolved between affected property owners.</p> <p>2. The City is in the process of preparing its Local Heritage Survey, which identifies and records places that are, or may become, of cultural heritage significance to the City. The subject site has not been identified, either by the community or the appointed heritage consultant, as having heritage value as part of this process.</p> <p>3. A Bushfire Management Plan (BMP) has been prepared to support the proposed scheme amendment as the subject site partially falls within a bushfire prone area. Should the scheme amendment</p>

**PROPOSED AMENDMENT NO 15
SCHEDULE OF SUBMISSIONS FOLLOWING ADVERTISING
LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)**

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
<p>5. Bore water has been turned off in this area – how will new residential properties water their gardens?</p> <p>6. Development approval for the church building at Lot 28 (67) Woodvale Drive, Woodvale was conditional on the provision of onsite stormwater and overflow carparking. The design and construction of an alternative stormwater system, as well as the relocation of other services, car parking and fencing will be provided by the developer for Lot 36.</p> <p>7. The proposal will increase housing opportunity in the area.</p>	<p>Environmental Regulation at the subdivision stage, the water system will likely be reconnected during the construction stage to service the new lots, however it is noted that there is an opportunity the new lots will be serviced from the main water supply in lieu of a water bore also.</p> <p>6. No comment.</p> <p>7. No comment.</p>	<p>be approved, a BMP will need be submitted with any application for subdivision.</p> <p>4. State government service providers forward plan for future infrastructure provision as population densities increase within established urban areas as a result of infill development. Service provider bodies are generally guided by strategic planning documents and demand modelling as uptake of density occurs over time.</p> <p>5. Not a relevant planning consideration.</p> <p>6. Noted. The inclusion of a portion of Lot 28 within the proposed amendment will allow for an unutilised portion of land to assist in facilitating a better subdivision layout for the future development of the site. This portion of land was approved as an overflow parking area and 1:100-year flood retention zone. A report to Council on 13 May 2008 (CJ082-05/08 refers) identified that a car parking surplus exists at the site and aerial imagery confirms the area has never been used for the purposes of parking. The retention of stormwater onsite may be recommended as a condition as part of any future subdivision process.</p> <p>7. Noted.</p>
Agencies		
<p><u>Department of Water and Environmental Regulation</u></p> <p>No objections or comment.</p>	No comment.	Noted.
<u>Department of Biodiversity, Conservation and Attractions</u>	As per comments above.	1. Noted. The eastern portion of Lot 36 is part of Yellagonga Regional Park which is reflected by the

LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
<p>The following comment is provided in relation to issues to be addressed at future planning stages, should the amendment be approved:</p> <ol style="list-style-type: none"> Should subdivision be proposed, the eastern portion of Lot 36 that is reserved for 'Parks and Recreation' in the <i>Metropolitan Region Scheme</i> should be ceded to the State free of charge as a condition of subdivision. Revegetation of the 50 metre buffer to the Conservation Category Wetland may be required at a later stage of planning as part of a Wetland Management Plan, to protect the wetland from proposed land use change and impacts such as weed invasion. The species selected for revegetation should be based on the historical and surrounding vegetation rather than being selected to minimise bushfire risk. The provision of public open space outside of the wetland buffer, as indicated on the concept plan provided with the applicant's submission, is appropriate. There is likely to be a significant bushfire risk from the adjacent regional park. The Bushfire Management Plan will need to consider revegetation of the wetland buffer. Removal of kangaroo habitat for development purposes will displace the kangaroos into the adjoining regional park. 		<p>'Parks and Recreation' reservation under the <i>Metropolitan Region Scheme</i>. Consideration of the tenure arrangements for this portion of land, which is currently in private ownership, is the responsibility of the Western Australian Planning Commission (WAPC), and may be considered by the WAPC as part of any future subdivision process.</p> <ol style="list-style-type: none"> Noted. It is proposed that the amendment be modified to reflect advice received from the Environmental Protection Authority (EPA), which includes a requirement for a re-vegetation Management Plan (to address both the wetland buffer and 'Parks and Recreation reserve) to be endorsed by the City prior to any site works occurring. Noted. A Bushfire Management Plan (BMP) has been prepared to support the proposed scheme amendment as the subject site partially falls within a bushfire prone area. Should the scheme amendment be approved, a BMP will need be submitted with any application for subdivision. While kangaroos may currently graze within the western portion of Lot 36, it is important to note that this area is privately owned and does not form part of Yellagonga Regional Park. The eastern portion of Lot 36 will remain as the 'Parks and Recreation' reservation under the MRS. The EPA's proposed modifications to the amendment (namely those relating to the identification of a wetland buffer and public open space areas which retain key environmental values) would provide separation between residential development on the subject site and the area reserved for 'Parks and Recreation'.

**PROPOSED AMENDMENT NO 15
SCHEDULE OF SUBMISSIONS FOLLOWING ADVERTISING
LOT 36 (95) AND LOT 28 (67) WOODVALE DRIVE, WOODVALE
(Closed 28 March 2024)**

KEY THEMES/SUMMARY	APPLICANT RESPONSE TO SUBMISSIONS	ADMINISTRATION COMMENTS
6. The proposed amendment area contains habitat for threatened black cockatoo species. A referral under the EPBC Act should be undertaken by the proponent.		<p>Notwithstanding, the identification and relocation of any fauna onsite, including kangaroos, may be addressed through a recommendation for a fauna management plan as part of any future subdivision application received for the site.</p> <p>6. Due to the potential impact on black cockatoos, the applicant has referred the amendment to the Commonwealth Department of Climate Change, Energy, the Environment and Water under the <i>Environment Protection and Biodiversity Conservation Act 1999</i> (EPBC Act). If subsequent approval under the EPBC Act is required, it is the responsibility of the applicant to obtain this approval.</p>

1 INTRODUCTION

1.1 Background

Lot 36 and Pt Lot 28 Woodvale Drive, Woodvale (the site) are located in the City of Joondalup, approximately 18.4km north-north-east of the Perth Central Business District (Figure 1). The site is approximately 4.45ha in size (Figure 2) and is bound by Woodvale Drive to the west, developed land to the south, the Woodvale Baptist Church to the north and Yellagonga Regional Park to the east.

The site is proposed to be developed for residential purposes in accordance with its zoning in the Metropolitan Region Scheme.

PGV Environmental was commissioned by Riverswan Holdings Pty Ltd to prepare an Environmental Assessment Report to describe the environmental values of the site and to assess the potential environmental impacts of the proposed development.

1.2 Scope of Works

The Environmental Assessment includes a review of the environmental studies undertaken on the site and an assessment of the key environmental attributes of the site in the context of the proposed development. The Environmental Assessment includes the following:

- Database searches including:
 - Department of Water and Environmental Regulation Contaminated Sites and Water Information databases; and
 - Department of Planning, Lands and Heritage and National Heritage databases.
- Physical characteristics including a description of:
 - Landform;
 - Drainage and water bodies; and
 - Geological, hydrogeological and hydrological characteristics;
- Recent and present land use including:
 - Surrounding land uses;
 - Assessment of current and historical activities on the subject site and surrounding areas which have the potential to result in contamination issues at the site;
- Flora and vegetation description based on the results of a Reconnaissance Flora and Vegetation Survey;
- Fauna habitat description and a Basic Fauna Survey; and
- Implications, if any, under Western Australian policies and legislation such as the *Environmental Protection Act, 1986* and the Commonwealth *Environment Protection and Biodiversity Conservation Act, 1999*.

2 LEGISLATION, POLICY AND GUIDELINES

The environmental assessment of this site has taken into consideration the following legislation, policy and guidelines.

2.1 Commonwealth Legislation

The *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) is the Australian Government's central piece of environmental legislation. It provides a legal framework to protect and manage nationally and internationally important heritage places, ecological communities, flora and fauna that are defined in the Act as Matters of National Environmental Significance (MNES).

The Environmental Assessment identifies any MNES that may be impacted by development on the site.

2.2 State Legislation

2.2.1 Environmental Protection Act 1986

The *Environmental Protection Act 1986* (EP Act) is administered by the Department of Water and Environment Regulation (DWER). The Act provides for conservation, preservation, protection, enhancement and management of the environment and for matters incidental to or connected with it. The Act establishes head powers to provide mechanisms for the development of Environmental Protection Policies (EPP), the referral and assessment of proposals, the control of pollution and enforcement.

The Act also provides for an Environmental Protection Authority (EPA) that is a statutory authority and is the primary provider of independent environmental advice to Government (Environmental Protection Authority 2005). The EPA is assisted by the Office of the EPA (OEPA).

Under the EP Act, clearing of native vegetation requires a permit from DWER unless there is an exemption under the *Environmental Protection (Clearing of Native Vegetation) Regulations 2004*. Proposals that have approval by means of a subdivision are exempt from requiring a clearing permit to clear native vegetation if implementing the subdivision in accordance with the subdivision conditions requires the clearing of native vegetation.

2.2.2 Biodiversity Conservation Act 2016

The *Biodiversity Conservation Act 2016* (BC Act) protects all native species and threatened ecological communities. The BC Act recognises that activities involving the taking of flora or fauna (other than threatened species) and the disturbing of fauna (including threatened species) that are approved under the EP Act do not require further approval under the BC Act, if they are undertaken in accordance with any biodiversity conservation conditions that are applied to an authorisation. These activities include clearing of native vegetation done in accordance with an implementation decision under Part IV of the EP Act.

2.2.3 Aboriginal Heritage Act 1972

The *Aboriginal Heritage Act 1972* (AHA) protects all Aboriginal sites whether or not they are known and registered under the AHA.

If any artefacts or other heritage values are discovered during clearing or construction works they will be required to be managed according to the AHA.

2.3 State Policy

2.3.1 State Planning Policy No. 2.8 Bushland Policy for the Perth Metropolitan Region

SPP 2.8 in conjunction with Bush Forever (Government of Western Australia, 2000) seeks to ensure the protection of at least 10 per cent of the original extent of each vegetation complex within the Perth Metropolitan Region. SPP 2.8 was developed to ensure that bushland protection and management issues are appropriately addressed and integrated as a part of future land use. Bush Forever identified approximately 51,200 hectares of regionally significant vegetation for retention. The management of these areas include reservation and acquisition by the State government, negotiated planning solutions with owners who are seeking urban and/or industrial development and advice, assistance and incentive programs to support private conservation.

The eastern part of the site is within Bush Forever Site 299 'Yellagonga Regional Park, Wanneroo/Woodvale/Kingsley'.

2.3.2 State Planning Policy No. 2.9 Water Resources

SPP 2.9 aims to ensure the protection and appropriate management of water resources in line with state guidelines as included within the planning framework. The broad aims of this policy are to:

- Protect, conserve and enhance water resources;
- Assist in ensuring the availability of suitable water resources to maintain essential requirements for human and other biological life and to maintain or improve the quality and quantity of water resources; and
- Promote and assist in the management and sustainable use of water resources.

As a part of implementing this policy, the Better Urban Water Management framework was developed (WAPC, 2008). The framework provides detail on how water resources should be considered at each stage of planning by identifying the various actions and investigations required with regard to regional and local planning strategies, town planning schemes, structure plans, subdivisions, strata subdivision and development applications (WAPC, 2008).

2.3.3 Environmental Guidance for Planning and Development

The purpose of Environmental Protection Authority (EPA) Guidance Statement No. 33 *Environmental Guidance for Planning and Development* (EPA, 2008) is to outline the significance of environmental factors and to provide the key definitions associated with the environmental factors. Ensuring that environmental factors are considered in line with the EPA's principals and objectives and within the planning framework is what this EAR is primarily targeted at. In particular, EPA Guidance Statement No. 33 aims to:

- Provide an overview to environmental protection processes and information;
- Describe the referral and environmental impact assessment process under Part IV of the EP Act; and
- Provide the EPA's position and advice on a range of environmental factors, outlining how to protect, conserve and enhance the environmental values.

3 EXISTING ENVIRONMENT

3.1 Zoning

Most of the site is zoned 'Urban' under the Metropolitan Region Scheme (MRS) with the eastern end reserved as Parks & Recreation (National Map, 2023). The western part of Lot 36 is zoned Rural under the City of Joondalup Local Planning Scheme No. 3 and the eastern part is Parks & Recreation. Pt Lot 28 is zoned Private Community Purposes in LPS No. 3.

3.2 Land Use

3.2.1 Historic Land Use

Historical aerial photography shows that the site was partly cleared in 1953 (the oldest historical aerial photography available) (Plate 1) with a grove of trees remaining at the northwestern end. A house has been established on the site. A wetland is evident at the eastern end of the site.

Plate 1: Aerial Photograph from 1953 (Landgate, 2023)

The grove of trees remains in the photograph from 1965 (Plate 2). Otherwise the site and surrounding areas are cleared apart from the wetland.

Plate 2: Aerial Photograph from 1965 (Landgate, 2023)

Some thinning of the trees was undertaken between 1985 and 1989 (Plate 3).

Plate 3: Aerial Photograph from 1989 (Landgate, 2023)

A horse track was constructed between 2006 and 2008 (Plate 4). The eastern end of the track is within the wetland.

Plate 4: Aerial Photograph from 2008 (Landgate, 2023)

3.2.2 Current Land Use

The site contains two houses, one of which is occupied and some sheds.

The site is not listed as a contaminated site (DWER, 2023a).

3.2.3 Surrounding Land Use

The site has existing urban development to the south, Woodvale Drive and undeveloped grassland to the west, the Woodvale Baptist Church to the north and Yellagonga Regional Park, containing Wallubuenup Swamp to the east.

3.3 Topography

The site slopes very gently down from a high of 20m Australian Height Datum (AHD) at the western end to a low of around 18mAHD at the eastern end (Figure 2).

3.4 Geology and Soils

3.4.1 Geology

The site is mapped as part of the Spearwood System which has the highest relief of the dune systems on the Swan Coastal Plain (Bolland, 1998). The Spearwood system consists of slightly calcareous Aeolian sand remnant from leaching of the underlying Pleistocene Tamala limestone (Davidson, 1995).

3.4.2 Soils

The soil units located on the site is described as

- Spearwood Sand Phase (211Sp_Sp) which are undulating dunes with rocky crests on aeolian sand over limestone in the Swan Coastal Plain between Wanneroo and Moore River. These soils are brown deep sands and yellow deep sands (DPIRD, 2023). These soils are mapped on the western part of the site; and
- Spearwood Wet, Swamp Phase (211SpW_SWAMP) which are soils that occur with swamps (DPIRD, 2023). This soil phase is associated with the wetland in the eastern part of the site.

3.4.3 Land Capability

The Land Degradation Risk Categories of the Spearwood Sand Phase (DPIRD, 2023) are as follows:

- Water Erosion 3-10% of map unit has a high to extreme water erosion risk;
- Wind Erosion >70% of map unit has a high to extreme wind erosion risk;
- Waterlogging <3% of map unit has a moderate to very high waterlogging risk;
- Flooding <3% of the map unit has a moderate to high flood risk; and
- Salinity risk <3% of map unit has a moderate to high salinity risk or is presently saline.

The Land Degradation Risk Categories of the Spearwood Wet, Swamp Phase (DPIRD, 2023) are as follows:

- Water Erosion <3% of map unit has a high to extreme water erosion risk;
- Wind Erosion <3% of map unit has a high to extreme wind erosion risk;
- Waterlogging >70% of map unit has a moderate to very high waterlogging risk;
- Flooding <3% of the map unit has a moderate to high flood risk; and
- Salinity risk <3% of map unit has a moderate to high salinity risk or is presently saline.

3.4.4 Acid Sulphate Soils

The eastern part of the site, associated with Wallubuenup Swamp, is mapped as having a High to Moderate risk of Acid Sulphate Soils (ASS) (Plate 5). The remainder of the lot is mapped as a Low risk within 3m of the surface. Wetland soils are often associated with ASS.

Plate 5: Acid Sulphate Soil Risk Mapping (National Map, 2022)

3.5 Hydrology

Maximum groundwater is at approximately 18m AHD which is around 1m below the surface in the eastern part of the site in Wallubuenup Swamp and up to 2m below ground at the western end. Groundwater generally flows to the east (DWER, 2022).

The eastern end of the site is mapped as part of Wallubuenup Swamp which is a Conservation Category wetland with the Unique Feature Identifier (UFI) 15458. The wetland is classed as a Sumpland which is a seasonally inundated basin. The location of the wetland on the site is shown in Figure 3.

The alignment of the wetland boundary was assessed during a site inspection by PGV Environmental on 18 November 2022. The photograph shown in Plate 6 was taken from the boundary of the mapped wetland on the southern boundary of the lot and looking along the line of the mapped wetland towards the northern boundary. The boundary itself is mostly Kikuyu Grass. The wetland is in the right hand side of the photo and is mostly dense Typha Sedgeland on wet soil. The area to the left of the Kikuyu boundary strip is a chaotic mix of vegetation types with some Kikuyu on higher ground and some stands of Typha and Juncus in small depressions. Plate 9 shows the chaotic nature of the area just outside the wetland boundary.

The mapped boundary of the wetland aligns neatly with wetland vegetation on the lots to the north and south. PGV Environmental considers the mapped wetland boundary to be as accurate as necessary. While the area outside the wetland boundary has some aspects of being a wetland with the Typha and Juncus stands it has just as many dryland vegetation on raised grounds. This area should be treated as wetland buffer rather than an extension of the mapped wetland.

Plate 6: Wetland Boundary

3.6 Flora

A Flora and Vegetation survey of the site was undertaken by Dr Paul van der Moezel of PGV Environmental on 18 November 2022. The survey found that the western part of the site contained native trees in a parkland setting with no native understorey present. The wetland vegetation was not surveyed in detail as there are no development plans for the wetland.

Due to the Completely Degraded condition of the understorey, a Detailed Flora and Vegetation survey does not need to be undertaken in spring.

Two Declared Pest plants were recorded on the site:

- Arum Lily (*Zantedeschia aethiopica*); and
- One-Leafed Cape Tulip (*Moraea flaccida*).

3.7 Vegetation

3.7.1 Vegetation Complexes

Vegetation complexes are a very broad mapping unit based on landform and soils type (Heddlé *et al.*, 1980). The vegetation at the western end of the site is mapped as part of the Karrakatta – Central and South vegetation complex while the vegetation in the eastern two-thirds is mapped as the Herdsman Complex. Based on the site survey by PGV Environmental the boundary between the two complexes on the site is probably around 50m further east.

The Karrakatta Central and South vegetation complex is described as:

Predominantly open forest of *Eucalyptus gomphocephala* (Tuart) - *Eucalyptus marginata* (Jarrah) - *Corymbia calophylla* (Marri) and woodland of *Eucalyptus marginata* (Jarrah) - *Banksia* species. *Agonis flexuosa* (Peppermint) is co-dominant south of the Capel River (Heddlé *et al.*, 1980).

The Herdsman complex are described as:

Sedgeland and fringing woodland of *Eucalyptus rudis* (Flooded Gum) - *Melaleuca* species. (Heddlé *et al.*, 1980).

The Completely Degraded nature of the western part of the site means that the remaining trees are not example of the Karrakatta – Central and South vegetation complex. The wetland vegetation is considered to have conservation significance in terms of protecting good quality vegetation within the Herdsman vegetation complex.

3.7.2 Vegetation Types

Vegetation types are a finer level of vegetation description and mapping used for small scale sites, such as the survey area. Vegetation types are described based on the structure of the vegetation (eg. woodland, heath) and the dominant species in each structure.

The vegetation in the western dryland part of the site was mostly Marri trees (*Corymbia calophylla*) with some Tuart (*Eucalyptus gomphocephala*) and a few Jarrah (*Eucalyptus marginata*) trees (Figure 4). Plate 7 shows the completely cleared understorey under a stand of Marri trees. Common weed species included Annual Veldtgrass (*Ehrharta longiflora*), Lupins (*Lupinus cosentinii*), Pigface (*Carpobrotus edulis*), Castor Oil (*Ricinus communis*) and Fumitory (*Fumaria capreolata*).

Plate 7: Marri Trees in the Western Half of the Site

Two vegetation types occur in the mapped wetland area (Figure 4). At the very eastern end the vegetation is mostly a *Melaleuca raphiophylla* Tall Open Scrub over reeds. At the western end of the

wetland the vegetation is dense Bulrush (*Typha orientalis* Sedgeland) as shown in Plate 8. Plate 8 also shows the portion of the old horse track that consists mostly of Kikuyu Grass (*Cenchrus clandestinus*) and other rushes and sedges, but not dense Typha.

Plate 8: *Typha orientalis* at the western end of the wetland

The interface between the dryland and wetland areas is a transition zone between the wetland and dryland areas and contains a chaotic mix of vegetation types caused by changes in the natural landform over time (Plate 9). Low-lying parts of the interface contain some small Typha Sedgeland as well as areas of *Juncus acutus* Sedgeland. Higher hummocks, presumably not natural, contain Kikuyu, Couch Grass (*Cynodon dactylon*), Cape Tulip and Lupins.

Plate 9: Wetland Interface

3.7.3 Floristic Community Types

The dryland vegetation is too degraded to assign to a Floristic Community Type (FCT).

The wetland vegetation type was not included in the Gibson *et al.* (1994) analysis of FCTs or any later additions.

3.7.4 Vegetation Condition

The condition of the vegetation was assessed according to the system devised by Keighery and described in Bush Forever (Government of Western Australia, 2000) (Table 2).

Table 2: Vegetation Condition Rating Scale.

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: Government of Western Australia, 2000.

The condition of all the upland vegetation on the site is rated as Completely Degraded due to the absence of any native species in the understorey (Figure 5). The wetland interface is rated as Degraded-Good. The wetland vegetation is rated as Very Good. *Typha orientalis* is considered a native species, hence the high rating.

3.8 Flora and Vegetation Conservation Significance

3.8.1 Flora

Due to the Completely Degraded condition of the understorey there would be no Threatened or Priority plant species on the site.

3.8.2 Vegetation

The upland vegetation is too degraded to be any of the Threatened Ecological Communities (TECs) or Priority Ecological Communities (PECs) that are defined by the FCT level of vegetation description.

3.8.3 Tuart Woodland TEC

The site contains three Tuart trees, mixed in with the Marri trees (Figure 6). As a result, the Tuarts may be part of the Tuart Woodlands and Forests of the Swan Coastal Plain ecological community which was listed as a Critically Endangered Threatened Ecological Community under the Commonwealth EPBC Act on 4 July 2019.

A description of the Tuart Woodland TEC is available through the EPBC Act listing and more specifically the *Approved Conservation Advice (incorporating listing advice) for the Tuart (Eucalyptus gomphocephala) woodlands and forests of the Swan Coastal Plain ecological community* (DoEE, 2017) released by the Commonwealth Government.

The three Tuart trees on the site are close enough to each to be considered one 'patch' of Tuart Woodland in accordance with the listing advice. For a 'patch' to qualify as the Tuart Woodland TEC it must meet size and/or condition thresholds, as follows:

- If the patch is smaller than 0.5 ha it is **not** part of the nationally protected ecological community.
- If **the patch is at least 0.5 ha and up to 5 ha** in size, conduct on ground surveys (see Section 3.4.3) to determine which condition category applies. Patches in this size range are presumed to be part of the nationally protected ecological community unless surveys indicate they do not meet the minimum condition. The condition thresholds are outlined in Table 3.
- **All patches of 5 ha or greater** that meet the key diagnostic characteristics **are part of the nationally protected ecological community**. It is not necessary to conduct additional surveys to confirm that they meet biotic condition thresholds (Table 1) and that they are protected.

Table 3: Tuart TEC Condition Categories and Thresholds

Patch size	≥2 ha <5 ha	≥0.5 ha <2 ha
Biotic thresholds		
Very high condition ≥80 % of all understorey^ vegetation cover is native# Or At least 12 native understorey^ species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)	Medium sized patches with very high condition understorey. PART OF THE PROTECTED ECOLOGICAL COMMUNITY	Smaller patches with very high condition understorey. PART OF THE PROTECTED ECOLOGICAL COMMUNITY

Patch size	≥2 ha <5 ha	≥0.5 ha <2 ha
Biotic thresholds High condition ≥60 % of all understorey^ vegetation cover is native# Or At least 8 native understorey^ species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)	Medium sized patches with high condition understorey. PART OF THE PROTECTED ECOLOGICAL COMMUNITY	Smaller patches with high condition understorey. AND That either: have an important landscape role (≤100 m to native vegetation)* OR have a habitat role (≥2 very large trees per 0.5 ha)* OR show regeneration (≥15 seedlings and/or saplings per 0.5 ha)* PART OF THE PROTECTED ECOLOGICAL COMMUNITY
Moderate condition ≥50 % of all understorey^ vegetation cover is native# Or At least 4 native understorey^ species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)	Medium sized patches with moderate condition understorey. AND That either: have an important landscape role (≤100 m to native vegetation)* OR have a habitat role (≥2 very large trees per 0.5 ha)* OR show regeneration (≥15 seedlings and/or saplings per 0.5 ha)* PART OF THE PROTECTED ECOLOGICAL COMMUNITY	<u>NOT</u> PART OF THE PROTECTED ECOLOGICAL COMMUNITY (but may be a focus for local protection or restoration)
Poor Has minimal or no native cover and species richness. That is: <50 % of all understorey^ vegetation cover is native# And Less than 4 native understorey^ species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)	<u>NOT</u> PART OF THE PROTECTED ECOLOGICAL COMMUNITY (but may be a focus for local protection or restoration)	<u>NOT</u> PART OF THE PROTECTED ECOLOGICAL COMMUNITY (but may be a focus for local protection or restoration)

The size of the Tuart patch defined by the three trees on site is 0.68ha. The condition of the Tuart patch is Poor as there are no native understorey species. A Tuart patch in Poor condition and between 0.5 and 2ha does not meet the criteria to be included in the Tuart Woodland TEC.

3.9 Fauna

3.9.1 Fauna Habitat

There are two fauna habitats that occur on the site. The areas containing Marri, Tuart, Jarrah and Exotic Trees is described as Woodland habitat. The areas dominated by Kikuyu and Bulrush is a Sedgeland/grassland habitat.

Fauna habitat can be assessed using a number of factors including, the size of the habitat, the level of habitat connectivity, availability of specific resources (eg. tree hollows) and overall vegetation quality. The habitat was assessed according to the following categories:

High Quality Fauna Habitat – These areas closely approximate the vegetation mix and quality that would have been in the area prior to any disturbance. The habitat has connectivity with other habitats and is likely to contain the most natural vertebrate fauna assemblage.

Very Good Fauna Habitat - These areas show minimal signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) and generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be minimally affected by disturbance.

Good Fauna Habitat – These areas showed signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) but generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be affected by disturbance.

Disturbed Fauna Habitat – These areas showed signs of significant disturbance. Many of the trees, shrubs and undergrowth are cleared. These areas may be in the early succession and regeneration stages. Areas may show signs of significant grazing, contain weeds or have been damaged by vehicle or machinery. Habitats are fragmented or have limited connectivity with other fauna habitats. Fauna assemblages in these areas are likely to differ significantly from what might be expected in the area had the disturbance not occurred.

Highly Degraded Fauna Habitat – These areas often have a significant loss of vegetation, an abundance of weeds, and a large number of vehicle tracks or are completely cleared. Limited or no fauna habitat connectivity. Faunal assemblages in these areas are likely to be significantly different to what might have been in the area pre-disturbance. (Coffey Environments, 2009).

The fauna habitat on the site has connectivity to areas of bushland on adjoining properties, however the vegetation is in Completely Degraded condition. Therefore, the habitat on the Urban zoned portion of the site is rated as Disturbed Fauna Habitat.

The wetland area is rated as High Quality Fauna Habitat.

3.9.2 Database Search Results

A search of the Atlas of Living Australia (ALA, 2023) (Appendix 1) and Protected Matters Search Tool (DCCEEW, 2022) (Appendix 2) indicated 54 species have been recorded or may occur near the site, excluding species that rely on a marine environment and pelagic species. Table 3 lists the species identified in these databases.

The DBCA Threatened, Specially Protected and Priority Fauna database shows that there are no records of Conservation Significant species recorded on the site (FAUNA#7250, DBCA, 2022). The only species recorded nearby was Carnaby's Black Cockatoo which was recorded from Wallubuenup Swamp, north of Ocean Reef Road. None of the species identified in the Atlas of Living Australia were recorded on the site (ALA, 2023).

Table 3: List of Fauna Species Identified from Database Searches

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Bettongia penicillata ogilbyi</i> (<i>Bettongia penicillata</i>)	Woylie, Brush-tailed Bettong	Schedule 1 - CR	Endangered	The Woylie habitat types ranged from forest to grassland, coastal and inland. During the day the Woylie shelters under patches of dense undergrowth, logs and rock-cavities and occasionally in burrows.	Highly Unlikely – the site is too disturbed and records of the species are historical only
<i>Calidris ferruginea</i>	Curlew Sandpiper	Schedule 1 - CR	Critically Endangered	Curlew Sandpipers mainly occur on intertidal mudflats in sheltered coastal areas, such as estuaries, bays, inlets and lagoons, and also around non-tidal swamps, lakes and lagoons near the coast, and ponds in saltworks and sewage farms.	Highly Unlikely – not suitable habitat
<i>Hesperocolletes douglasi</i>	Douglas's Broad-headed Bee	Schedule 1 - CR	Critically Endangered	Douglas's Broad-headed Bee was recorded on Rottnest and rediscovered in Pinjar in Banskia Woodland with pollen from <i>Philotheca spicata</i> , <i>Patersonia occidentalis</i> , two species of <i>Stylidium</i> , a species of <i>Scaevola</i> and species from Fabaceae and Myrtaceae (DBCA, 2018).	Highly Unlikely – no habitat plants occur on the site
<i>Limosa lapponica menzbieri</i>	Bar-tailed Godwit (northern Siberian)	Schedule 1 - CR	Marine/ Migratory	The Bar-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It is found often around beds of seagrass and, sometimes, in nearby saltmarsh.	Highly Unlikely – not coastal habitat
<i>Numenius madagascariensis</i>	Eastern Curlew	Schedule 1 - CR	Critically Endangered	The Eastern Curlew is most commonly associated with sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass. Occasionally, the species occurs on ocean beaches (often near estuaries), and coral reefs, rock platforms, or rocky islets.	Highly Unlikely – not coastal habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Pseudocheirus occidentalis</i>	Western Ringtail Possum, Ngwayir	Schedule 1 - CR	Critically Endangered	The Western Ringtail Possum is a medium sized nocturnal marsupial. This species occurs in and near coastal Peppermint Tree (<i>Agonis flexuosa</i>) forest and Tuart (<i>Eucalyptus gomphocephala</i>) dominated forest with a Peppermint Tree understorey.	Highly Unlikely – not suitable habitat
<i>Botaurus poiciloptilus</i>	Australasian bittern	Schedule 2 - EN	Endangered	The Australasian Bittern occurs mainly in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands.	Unlikely – not typical habitat
<i>Calidris canutus</i>	Red Knot	Schedule 2 - EN	Marine/ Migratory	In Australasia the Red Knot mainly inhabit intertidal mudflats, sandflats and sandy beaches of sheltered coasts, in estuaries, bays, inlets, lagoons and harbours; sometimes on sandy ocean beaches or shallow pools on exposed wave-cut rock platforms or coral reefs.	Highly Unlikely – not beach habitat
<i>Calyptorhynchus latirostris</i>	Carnaby's Black Cockatoo	Schedule 2 - EN	Endangered	Carnaby's Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe and forages on the seeds of Banksia, Hakea, Eucalyptus, Grevillea, Pinus and Allocasuarina spp. It is nomadic often moving toward the coast after breeding. It breeds in tree hollows that are 2.5 - 12m above the ground mostly in smooth-barked trees (SEWPaC, 2012).	Possible – habitat occurs on the site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Rostratula australis</i> (<i>Rostratula benghalensis australis</i>)	Australian Painted Snipe	Schedule 2 - EN	Endangered Marine/ Migratory	The Australian Painted Snipe has been recorded at wetlands in all states of Australia but is most common in eastern Australia. It generally inhabits shallow terrestrial freshwater (occasionally brackish) wetlands, including temporary and permanent lakes, swamps and claypans. It also uses inundated or waterlogged grassland or saltmarsh, dams, rice crops, sewage farms and bore drains. Typical sites include a cover of vegetation, including grasses.	Unlikely due to surrounding disturbance
<i>Calyptorhynchus banksii naso</i>	Forest Red-tailed Black-Cockatoo	Schedule 3 - VU	Vulnerable	Forest Red-tailed Black Cockatoos frequent the humid to sub-humid south-west of Western Australia from Gingin in the north, to Albany in the south and west to Cape Leeuwin and Bunbury (SEWPaC, 2012). It nests in tree hollows with a depth of 1-5m, that are predominately Marri (<i>Corymbia calophylla</i>), Jarrah (<i>Eucalyptus marginata</i>) and Karri (<i>Eucalyptus diversicolor</i>) and it feeds primarily on the seeds of Marri.	Possible – habitat occurs on the site
<i>Dasyurus geoffroii</i>	Chuditch, Western Quoll	Schedule 3 - VU	Vulnerable	The Chuditch have been known to occupy a wide range of habitats including woodlands, dry sclerophyll forests, riparian vegetation, beaches and deserts. They are opportunistic feeders, and forage on the ground at night, feeding on invertebrates, small mammals, birds and reptiles.	Highly Unlikely – has not been recorded from the area and the site is too disturbed
<i>Leipoa ocellata</i>	Mallee Fowl	Schedule 3 - VU	Vulnerable	Mallee fowl have been found in mallee regions of southern Australia from approximately the 26th parallel of latitude southwards in mallee bushland.	No – not mallee habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Macroderma gigas</i>	Ghost Bat	Schedule 3 - VU	Vulnerable	Ghost bats occur in a wide range of habitats from rainforest, monsoon and vine scrub, to open woodlands in arid areas. These habitats are used for foraging, while roost habitat is more specific. Favoured roosting sites of the ghost bat are undisturbed caves or mineshafts which have several openings (DEHP, 2015).	No – no cave habitat
<i>Sternula nereis nereis</i> (<i>Sterna nereis nereis</i>)	Australian Fairy Tern	Schedule 3 - VU	Vulnerable	The Fairy Tern (Australian) nests on sheltered sandy beaches, spits and banks above the high tide line and below vegetation.	Highly Unlikely – not beach habitat
<i>Charadrius leschenaultii</i>	Greater Sand Plover	Schedule 3 - VU Schedule 5 - IA	Marine/ Migratory	In Australasia, the Greater Sand Plover is almost entirely coastal, inhabiting littoral and estuarine habitats. They mainly occur on sheltered sandy, shelly or muddy beaches with large intertidal mudflats or sandbanks, as well as sandy estuarine lagoons.	Highly Unlikely – not coastal habitat
<i>Actitis hypoleucos</i>	Common Sandpiper	Schedule 5 - IA	Marine/ Migratory	The Common Sandpiper is mostly found around muddy margins or rocky shores. Generally the species forages in shallow water and on bare soft mud at the edges of wetlands.	Possible – habitat may occur on the site
<i>Apus pacificus</i>	Fork-tailed Swift	Schedule 5 - IA	Marine/Mig ratory	The Fork-tailed Swift is almost exclusively aerial and is not known to breed in Australia. They are seen in inland plains but sometimes above foothills or in coastal areas. They often occur over cliffs and beaches and also over islands and sometimes well out to sea. They also occur over settled areas, including towns, urban areas and cities. <i>Apus pacificus</i> subsp. <i>pacificus</i> is the only subspecies to migrate to Australia.	Highly Unlikely – may fly over the site but is unlikely to land
<i>Calidris acuminata</i>	Sharp-tailed Sandpiper	Schedule 5 - IA	Marine/ Migratory	The Sharp-tailed Sandpiper prefers muddy edges of shallow fresh or brackish wetlands, with inundated or emergent sedges, grass, saltmarsh or other low vegetation.	Possible – habitat may occur on the site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Calidris melanotos</i>	Pectoral Sandpiper	Schedule 5 - IA	Marine/ Migratory	The Pectoral Sandpiper prefers shallow fresh to saline wetlands and is found at coastal lagoons, estuaries, bays, swamps, lakes, inundated grasslands, saltmarshes, river pools, creeks, floodplains and artificial wetlands.	Possible – habitat may occur on the site
<i>Calidris ruficollis</i>	Red-necked Stint	Schedule 5 - IA	Marine/ Migratory	The Red-necked Stint is mostly found in coastal areas, including in sheltered inlets, bays, lagoons and estuaries with intertidal mudflats, often near spits, islets and banks and, sometimes, on protected sandy or coralline shores.	Highly Unlikely – not coastal habitat
<i>Calidris subminuta</i>	Long-toed Stint	Schedule 5 - IA	Marine/ Migratory	The Long-toed Stint prefers shallow freshwater or brackish wetlands including lakes, swamps, river floodplains, streams, lagoons and sewage ponds. The species is also fond of areas of muddy shoreline, growths of short grass, weeds, sedges, low or floating aquatic vegetation, reeds, rushes and occasionally stunted samphire.	Possible – habitat may occur on the site
<i>Limosa limosa</i>	Black-tailed Godwit	Schedule 5 - IA	Migratory/ Marine	The Black-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It is found often around beds of seagrass and, sometimes, in nearby saltmarsh.	Highly Unlikely – not coastal habitat
<i>Motacilla cinerea</i>	Grey Wagtail	Schedule 5 - IA	Migratory/ Marine	The Grey Wagtail is mostly recorded in coastal areas in Western Australia (ALA, 2015) however is widespread. There is non-breeding habitat only in Australia and the species has a strong association with water, particularly rocky substrates along water courses but also lakes and marshes.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Pandion cristatus</i> (<i>Pandion haliaetus</i>)	Osprey	Schedule 5 - IA	Marine/ Migratory	Ospreys occur in littoral and coastal habitats and terrestrial wetlands of tropical and temperate Australia and offshore islands. They feed on fish, especially mullet where available, and rarely take molluscs, crustaceans, insects, reptiles, birds and mammals.	Highly Unlikely – not coastal habitat
<i>Plegadis falcinellus</i>	Glossy Ibis	Schedule 5 - IA	Marine/Mig ratory	The Glossy Ibis is the smallest ibis known in Australia. This species preferred habitat for foraging and breeding are fresh water marshes at the edges of lakes and rivers, lagoons, flood-plains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation but do not breed in South-west Western Australia.	Possible – habitat may occur on the site
<i>Pluvialis fulva</i>	Pacific Golden Plover	Schedule 5 - IA	Marine/ Migratory	Pacific Golden Plovers usually occur on beaches, mudflats and sandflats (sometimes in vegetation such as mangroves, low saltmarsh such as <i>Sarcocornia</i> , or beds of seagrass) in sheltered areas including harbours, estuaries and lagoons, and also in evaporation ponds in salt works.	Highly Unlikely – not suitable habitat
<i>Pluvialis squatarola</i>	Grey Plover	Schedule 5 - IA	Marine/ Migratory	Grey Plovers occur almost entirely in coastal areas, where they usually inhabit sheltered embayments, estuaries and lagoons with mudflats and sandflats, and occasionally on rocky coasts with wave-cut platforms or reef-flats, or on reefs within muddy lagoons.	Highly Unlikely – not coastal habitat
<i>Sterna dougallii</i>	Roseate Tern	Schedule 5 - IA	Marine/ Migratory	The Roseate Tern is a migratory coastal seabird that feeds by plunge diving. This species breeds in sites surrounded by walls and rocks or in the shelter of vegetation (in temperate regions) (Birdlife International, 2014).	Highly Unlikely – not coastal habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Tringa glareola</i>	Wood Sandpiper	Schedule 5 - IA	Marine/ Migratory	The Wood Sandpiper uses well-vegetated, shallow, freshwater wetlands, such as swamps, billabongs, lakes, pools and waterholes. They are typically associated with emergent, aquatic plants or grass, and dominated by taller fringing vegetation, such as dense stands of rushes or reeds, shrubs, or dead or live trees, especially Melaleuca and River Red Gums Eucalyptus camaldulensis and often with fallen timber.	Possible – habitat may occur on the site
<i>Tringa nebularia</i>	Common Greenshank	Schedule 5 - IA	Marine/ Migratory	The Common Greenshank is a wader and does not breed in Australia. This species can be found in many types of wetlands and has the widest distribution of any shorebird in Australia. This species typically feeds on molluscs, crustaceans, insects, and occasionally fish and frogs.	Possible – habitat may occur on the site
<i>Ardea alba</i>	Great Egret, White Egret		Marine	The Eastern Great Egret has been reported in a wide range of wetland habitats and usually frequents shallow waters. This species feeds on fish, insects, crustaceans, molluscs, frogs, lizards, snakes and small birds and mammals.	Possible – habitat may occur on the site
<i>Ardea (Bubulcus) ibis</i>	Cattle Egret		Marine	The Cattle Egret occurs in tropical and temperate grasslands, wooded lands and terrestrial wetlands with breeding in Western Australia recorded in the far north in Wyndham in colonies in wooded swamps such as mangrove forest. This species forages away from water on low lying grasslands, improved pastures and croplands generally in areas that have livestock eating insects, frog, lizards and small mammals.	Possible – habitat may occur on the site
<i>Egretta sacra</i>	Eastern Reef Egret, Eastern Reef Heron		Marine	The Eastern Reef Egret nests in trees in island woodlands, or on the ground under shrubs or rock ledges and feeds on small fish, crustaceans and insects (Birdlife Australia, 2014).	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Haliaeetus leucogaster</i>	White-bellied Sea-eagle		Marine	The White-bellied Sea-Eagle is found in coastal habitats with large areas of open water, especially those close to the sea-shore. This species feeds opportunistically on a variety of fish, birds, reptiles, mammals and crustaceans, and on carrion and offal.	Highly Unlikely – not coastal habitat
<i>Himantopus himantopus</i>	Black-winged Stilt		Marine	The Black-winged Stilt is found near coastal lagoons and shallow freshwater or brackish pools with extensive areas of mudflats, salt meadows, saltpans, coastal marshes and swamps (Birdlife International, 2014).	Highly Unlikely – not suitable habitat
<i>Merops ornatus</i>	Rainbow Bee-eater		Marine	Populations of the Rainbow Bee-eater that breed in northern Australia are considered to be resident, and in many northern localities the Rainbow Bee-eater is present throughout the year. The Rainbow Bee-eater nests in a burrow dug in the ground. It is found across the better-watered parts of WA including islands preferring lightly wooded, sandy country near water.	Possible –may intermittently occur on the site
<i>Rallus philippensis</i>	Buff banded rail		Marine	The Buff Banded Rail occupies a wide range of terrestrial wetlands, as well as coastal beaches, reef flats, sandbanks, and mangroves, where it forages on the ground, pecking and probing in mud to catch crustaceans, worms and other invertebrates, and rails on beaches may scavenge along the strandline (Birdlife Australia, 2017).	Possible – habitat may occur on the site
<i>Recurvirostra novaehollandiae</i>	Red-necked Avocet		Marine/ Migratory	The Red-necked Avocet occurs in wetland areas including bogs, marshes, swamps and Permanent Saline, Brackish or Alkaline Lakes (Birdlife International, 2014).	Possible – habitat may occur on the site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Idiosoma sigillatum</i>	Swan Coastal Plain shield-backed trapdoor spider	Priority 3		The Swan Coastal Plain Shield-backed Trapdoor Spider arranges fallen twigs from the sheoak tree around the rim of its burrow entrance, enabling it to feel the vibrations of unsuspecting prey that wander by (Curtin, 2018).	Highly Unlikely – not suitable habitat
<i>Hydromys chrysogaster</i>	Water-rat, Rakali	Priority 4		The Water Rat generally prefers wetland habitats characterised by dense, low-lying vegetation (0–30 cm from ground), low-density canopy cover and shallow, narrow water bodies (Speldewinde et al., 2013).	Highly Unlikely – not permanent water
<i>Isodon fusciventer</i>	Southern Brown Bandicoot, Quenda	Priority 4		Southern Brown Bandicoots are small grey marsupials that prefer dense scrub (up to one metre high). Their diet includes invertebrates (including earthworms, adult beetles and their larvae), underground fungi, subterranean plant material, and very occasionally, small vertebrates (DEC, 2012).	Possible – habitat may occur on the site
<i>Ixobrychus dubius</i>	Australian Little Bittern	Priority 4		The Australian Little Bittern is mainly found in freshwater wetlands, where they inhabit dense emergent vegetation of reeds and sedges, and inundated shrub thickets. They are also occasionally found in brackish and saline wetlands such as mangrove swamps, Juncus-dominated salt marsh and the wooded margins of coastal lagoons (Naturewatch NZ, 2014).	Possible – habitat may occur on the site
<i>Oxyura australis</i>	Blue-billed Duck	Priority 4		The Blue-billed Duck is found on terrestrial wetlands in temperate regions, that are freshwater to saline, and may be natural or artificial. It nests in rushes, sedges, Lignum Muehlenbeckia cunninghamii and paperbark Melaleuca (Birdlife International, 2015). The species is almost completely aquatic, and is seldom seen on land (Birds in Backyards, 2015).	No - no permanent open water on the site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Synemon gratiosa</i>	Graceful Sun-moth	Priority 4		The Graceful Sun-moth is a diurnal moth with dull coloured brown to black forewings and brightly coloured orange hind wings. The larvae burrow into the rhizomes of <i>Lomandra maritima</i> and <i>Lomandra hermaphrodita</i> exclusively and therefore require the presence of one or both of these species to be present in an area (Bishop et al., 2011).	No - no host plants occur on the site

Habitat from SPRAT (SEWPaC, 2015) unless otherwise stated

The Department of Biodiversity, Conservation and Attractions (DBCA) classifies fauna under four different Priority codes and rare and endangered fauna are classified into seven schedules of taxa. These are outlined in Appendix 3.

3.9.3 Conservation Significant Species

Habitat on the site was identified for two listed species of Black Cockatoos being:

- Carnaby's Black Cockatoo (*Calyptorhynchus (Zanda) latirostris*)
- Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso*)

A detailed assessment of the Black Cockatoo Habitat on the site is in the following section.

There were twelve migratory species identified that could potentially use the wetland portion of the site, listed below, however the use is likely to be infrequent and the site is not likely to provide significant habitat to any of these species particularly given the large area of lakes and swamps in the Yellagonga Regional Park:

- *Actitis hypoleucos* (Common Sandpiper);
- *Calidris acuminata* (Sharp-tailed Sandpiper);
- *Calidris melanotos* (Pectoral Sandpiper);
- *Calidris subminuta* (Long-toed Stint)
- *Plegadis falcinellus* (Glossy Ibis);
- *Tringa glareola* (Wood Sandpiper);
- *Tringa nebularia* (Common Greenshank);
- *Ardea alba* (Great Egret, White Egret);
- *Ardea (Bubulcus) ibis* (Cattle Egret);
- *Merops ornatus* (Rainbow Bee-eater);
- *Rallus philippensis* (Buff banded rail); and
- *Recurvirostra novaehollandiae* (Red-necked Avocet).

There were two Priority 4 species that may have habitat on the site, however these species are not likely to rely on the site for survival. These species were:

- *Isodon fusciventer* (Southern Brown Bandicoot, Quenda); and
- *Ixobrychus dubius* (Australian Little Bittern).

3.9.4 Black Cockatoo Habitat

Foraging

The site contains three tree species (Marri, Tuart and Jarrah) that are recognised as providing foraging habitat for foraging by Black Cockatoos. The total area of foraging habitat is 0.615 ha and is shown on Figure 6.

No evidence of Black Cockatoo foraging on trees on the site was observed. However, there was evidence of foraging by Carnaby's Black Cockatoo on a Marri tree in the adjoining Woodvale Road reserve.

Breeding

Black Cockatoos are known to breed in hollows of large eucalypts. The site is not known as a breeding site for Black Cockatoos (DoP, 2011; National Map, 2022). The nearest breeding site is approximately 2.71km to the west (National Map, 2022) (Appendix 2).

No evidence of breeding by Black Cockatoos on the site was observed. None of the trees had any hollows suitable for Black Cockatoos to breed in. There were 20 trees recorded that met the definition of potential breeding habitat due to their DBH being ≥ 500 mm (Figure 6, Appendix 4). The total consisted of 15 Marri trees, 3 Tuart trees, one Jarrah tree and a Standing Dead tree (Appendix 4).

Roosting

Black Cockatoos are known to roost overnight in tall trees including native and introduced eucalypts and pine trees generally in close proximity to a fresh water source. The study area contains tall Marri, Tuart and Jarrah trees, however no evidence of roosting was recorded during the survey.

3.9.5 Pest Fauna

There are several pest species that may be present on the site being:

- Red foxes;
- Feral cats;
- European Rabbits;
- House Mice; and
- Black Rats.

3.9.6 Ecological Linkages

The eastern part of the site forms part of the Wallubuenup Swamp which is a part of Bush Forever Site 299 within Yellagonga Regional Park.

3.10 Heritage

There are no Aboriginal Heritage Sites or Places mapped on the site (DPLH, 2023; Appendix 5). Heritage sites can also be listed under the following lists/registers:

- World Heritage Sites;
- National Heritage Sites;
- Commonwealth Heritage Sites;
- Sites on the register of the National Estate;
- Sites on the Western Australian Heritage Council Register; and
- Sites listed in the City of Swan Municipal Heritage Inventory List.

There are no listed Heritage Sites or Interim Heritage Sites on the site (National Map, 2023; Heritage Council of Western Australia, 2023; DCCEEW, 2023).

4 ENVIRONMENTAL IMPACT ASSESSMENT

4.1 Proposed Development

The site is proposed to be subdivided for residential purposes. A Subdivision Concept Plan has not yet been prepared but will be informed by the results of this EAR.

4.2 Land Use

The previous and current land uses are not considered to be a constraint to development of the site.

4.3 Surrounding Land Use

The land to the south and west of the site is developed for urban purposes and to the north is a church. These land uses do not impede development of the site. The eastern part of the site is within Yellagonga Regional Park and reserved as Parks & Recreation and will not be able to be developed.

4.4 Topography

There are no significant topographic features on the site that would be a constraint to development.

4.5 Geology and Soils

The Spearwood geological unit is not constrained for development. The soils on the western part of the site have a high risk of being susceptible to wind erosion and therefore dust controls will be required during construction. The eastern part has a risk of waterlogging and water erosion however this can be managed with appropriate stormwater controls.

Geotechnical investigations will need to be carried out to investigate any engineering constraints of the soils.

The ASS Risk on the development site is mapped as being High to Moderate (<3m from the surface) in the eastern part of the site associated with the wetland soils. Development in close proximity to the High to Moderate risk area may need to be investigated once the level of soil disturbance is known.

ASS Investigation and, if required, Management Plans should be prepared once the detailed design of soil disturbance on the site is finalised. This should be undertaken in accordance with the *Acid Sulphate Soils Guideline Series: Identification and Investigation of Acid Sulphate Soils and Acidic Landscapes* (DEC, 2009b) and *Treatment and Management of Soils and Water in Acid Sulphate Soil Landscapes* (DEC, 2011).

The risk of ASS can be managed in accordance with standard practices so the presence of ASS should not be an impediment to the proposed development of the site.

4.6 Hydrology

The Urban zoned part of the site has sandy soil which would allow for the treatment of stormwater drainage by infiltration. The treatment of stormwater will need to be undertaken in accordance with *Better Urban Water Management* (WAPC, 2008).

4.7 Wetlands

4.7.1 Wetland Boundary

PGV Environmental assessed the alignment of the mapped wetland boundary as being reasonably accurate and does not recommend any changes in the alignment.

4.7.2 Wetland Buffer

The usual setback distance for development from a Conservation Category wetland is 50m (EPA, 2008). A standard 50m buffer, if applied, is shown on Figure 3. As described in Section 3.7.2 the area just outside the wetland boundary is a transition zone between the wetland and the dryland areas and contains a mix of vegetation types associated with small-scale topographical changes (Plate 9). Low-lying parts in the buffer are wet in winter/spring and contain some Typha Sedgeland as well as *Juncus acutus* Sedgeland. The drier hummocks contain weeds, predominantly Kikuyu, Couch Grass, Cape Tulip and Lupins.

Plate 9: Wetland Interface

The eastern two-thirds of the buffer takes up about 30m of the 40m buffer and would not be usable by the public if retained in its current form in Public Open Space due to the irregular surface levels and the areas of wet depressions in winter/spring. The western third of the wetland buffer is higher and therefore drier and mostly has a regular surface, albeit slightly sloping down to the east (Plate 10). This area could be landscaped with grass and other amenities for public use and possibly planted with trees in a similar way that has occurred for the wetland buffer on the development to the south of the site.

Plate 10: Western Side of the Wetland Buffer

Based on the current soil and topographical conditions of the buffer area, and the City of Joondalup's likely requirement for the buffer area to have some form of public amenity, PGV Environmental does not recommend a reduction of the 50m setback from the wetland boundary.

A Wetland Management Plan is recommended to be prepared as a condition of subdivision. The Wetland Management Plan should outline the treatment of the buffer, public use of the buffer, fencing and paths.

Stormwater drainage infrastructure is not normally allowed to be located in the buffer of a CCW. Some overflow of larger events may be supported by the agencies.

Any rehabilitation proposed for the buffer will need to consider the implications on Bushfire Attack Levels (BALs) and the requirements for setbacks to dwellings due to BALs.

4.8 Flora and Vegetation

The native vegetation is Completely Degraded and there are no Threatened or Priority Flora species on the site. The native vegetation on the site is not considered to be an important remnant of a vegetation complex and is too degraded to be a TEC or PEC.

The vegetation outside of the wetland area is not considered a constraint to development.

4.9 Fauna

The fauna habitat values on the Urban portion of the site have been significantly impacted by past clearing leading to a Highly Degraded Fauna Habitat rating.

The high quality fauna habitat is associated with the wetland which will be retained in the development.

The proposed development is likely to result in the clearing of all trees on the site. The trees provide foraging habitat for Carnaby's and Forest Red-tailed Black Cockatoos as well as 20 potential breeding habitat trees. Any clearing that would have a significant impact on Black Cockatoos is required to be referred under the Commonwealth EPBC Act. A significant impact is defined in broad terms by the *EPBC Act Significant Impact Guidelines 1.1* and more specifically for Black Cockatoos the *Referral Guideline for 3 WA Threatened Black Cockatoo Species* (DAWE, 2022).

According to the Referral Guidelines the clearing of more than 1ha of quality foraging habitat could lead to a significant impact and is likely to require a Referral under the EPBC Act. The amount of foraging habitat on the site is 0.615ha which is less than 1ha, therefore referral based on foraging habitat is not required.

According to the Referral Guidelines the clearing of *any* potential nesting trees is highly likely to require a Referral under the EPBC Act. The site contains 20 potential breeding habitat trees, most, if not all, of which would be cleared for an urban development. Therefore, a Referral under the EPBC Act is recommended. Based on previous EPBC Act Referral of similar amount of habitat clearing, PGV Environmental considers the result of a Referral would highly likely not require a full assessment, however each proposal is considered on its own merits.

4.10 Heritage

There are no Aboriginal Heritage sites or sites of other heritage values on the site. Heritage, therefore is not an impediment to development.

5 SUMMARY AND CONCLUSION

5.1 Summary

The Environmental Assessment of Lot 36 and Pt Lot 28 Woodvale Drive, Woodvale found the following:

- The western portion of the site is zoned for Urban development in the MRS and the eastern portion is reserved Parks and Recreation and part of Bush Forever Site 299 within the Yellagonga Regional Park;
- The site is not registered as a contaminated site and the past and present land use are not considered constraints to development;
- Surrounding land use does not pose a constraint to the proposed urban development;
- The geology and soils on the site do not pose a risk to development. Acid Sulphate Soils in the central section may need to be investigated when the extent of earthworks and servicing are known;
- The Urban zoned portion of the site contains some remnant native trees in a parkland cleared setting with no native understorey species;
- The absence of a native understorey means that no Threatened or Priority flora species is likely to occur on the site;
- The remnant trees are mostly Marri, with some Tuart and Jarrah. The vegetation in the Urban portion is rated as being in Completely Degraded condition;
- The vegetation does not meet the definition of any Threatened or Priority Ecological Communities;
- The native trees on the site provide 0.615ha of potential foraging habitat for Black Cockatoos although no evidence of foraging on site was observed. The site contains 20 Marri, Jarrah and Tuart trees that meet the definition of breeding habitat. No actual breeding occurs on the site as none of the trees has any hollows large enough for Black Cockatoos to breed in;
- The site contains a portion of Wallubuenup Swamp which is a Conservation Category wetland. PGV Environmental consider the boundary of the mapped wetland is reasonably accurate and does not recommend any changes;
- The interface between the wetland and the trees on the higher western portion of the site contains about 30m of chaotic landform with some small high points and some low-lying depressions that are wet in winter/spring;
- The undulating nature of the wetland interface means that in its current form a 50m wetland buffer is recommended between the wetland boundary and the proposed dwellings. The 50m will allow landscaping of the more uniform landform in the western part of the wetland buffer to be usable POS for the public;
- A Wetland Management Plan is recommended to be prepared as a condition of subdivision;
- Stormwater drainage infrastructure is not normally allowed to be located in the buffer of a CCW. Some overflow of larger events may be supported by the agencies;
- The site does not contain any Aboriginal Heritage Sites or sites of other heritage.

5.2 Conclusion

The rezoning of the Rural portion of the land in the City of Joondalup's Local Planning Strategy will need to be referred to the EPA under Section 48A of the *Environmental Protection Act 1956*. PGV Environmental considers the proposed development of the western portion of the site can be done without any significant impact on environmental matters. Therefore, the EPA should not require the TPS Amendment to be fully assessed.

The clearing of up to 20 potential Black Cockatoo breeding habitat trees should be referred under the Commonwealth EPBC Act. PGV Environmental considers the result of a Referral would highly likely not require a full assessment.

the Environment and Water**

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 15-Mar-2023

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	2
Listed Threatened Species:	30
Listed Migratory Species:	17

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	36
Commonwealth Heritage Places:	None
Listed Marine Species:	25
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	6
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	20
Key Ecological Features (Marine):	None
Biologically Important Areas:	1
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Listed Threatened Ecological Communities

[Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area	In feature area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area	In feature area

Listed Threatened Species

[Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Leipoa ocellata</u> Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<u>Limosa lapponica menzbieri</u> Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Critically Endangered	Species or species habitat likely to occur within area	In buffer area only
<u>Numenius madagascariensis</u> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
<u>Pachyptila turtur subantarctica</u> Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
<u>Rostratula australis</u> Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area	In feature area
<u>Sternula nereis nereis</u> Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In feature area
<u>Zanda latirostris listed as Calyptorhynchus latirostris</u> Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Species or species habitat known to occur within area	In feature area
INSECT			
<u>Hesperocolletes douglasi</u> Douglas' Broad-headed Bee, Rottnest Bee [66734]	Critically Endangered	Species or species habitat may occur within area	In feature area
MAMMAL			
<u>Bettongia penicillata ogilbyi</u> Woylie [66844]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Dasyurus geoffroii</u> Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<u>Macroderma gigas</u> Ghost Bat [174]	Vulnerable	Species or species habitat may occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Pseudocheirus occidentalis</u> Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Species or species habitat likely to occur within area	In buffer area only
PLANT			
<u>Andersonia gracilis</u> Slender Andersonia [14470]	Endangered	Species or species habitat may occur within area	In feature area
<u>Anigozanthos viridis subsp. terraspectans</u> Dwarf Green Kangaroo Paw [3435]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Banksia mimica</u> Summer Honeypot [82765]	Endangered	Species or species habitat may occur within area	In feature area
<u>Caladenia huegelii</u> King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Diuris micrantha</u> Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<u>Diuris purdiei</u> Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat may occur within area	In feature area
<u>Drakaea elastica</u> Glossy-leafed Hammer Orchid, Glossy-leafed Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area	In feature area
<u>Drakaea micrantha</u> Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat may occur within area	In feature area
<u>Eleocharis keigheryi</u> Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Eucalyptus argutifolia</u> Yanchep Mallee, Wabbling Hill Mallee [24263]	Vulnerable	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Macarthuria keigheryi Keighery's Macarthuria [64930]	Endangered	Species or species habitat may occur within area	In feature area
Marianthus paralius [83925]	Endangered	Species or species habitat known to occur within area	In buffer area only
SHARK			
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In feature area
Listed Migratory Species		[Resource Information]	
Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area
Sterna dougallii Roseate Tern [817]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Migratory Marine Species			
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In feature area
Migratory Terrestrial Species			
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area	In feature area
Migratory Wetlands Species			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area	In feature area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area	In buffer area only
Calidris subminuta Long-toed Stint [861]		Species or species habitat known to occur within area	In buffer area only
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Tringa glareola Wood Sandpiper [829]		Species or species habitat known to occur within area	In buffer area only
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area	In feature area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

APPENDIX 3

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018*.

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of ‘Specially Protected Fauna’ listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be “*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be “*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be “*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of $\leq 100\text{ha}$).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤ 10 occurrences or a total area of ≤ 200 ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

No Registered Aboriginal Sites in Custom search area - Polygon - 115.801698894543°E, 31.7913767196311°S (GDA94) : 115.802380175633°E, 31.7900225070023°S (GDA94) : 115.802380175633°E, 31.7900133876581°S (GDA94) : 115.805539817853°E, 31.7889053806424°S (GDA94) : 115.806027979893°E, 31.7897580456551°S (GDA94) : 115.801698894543°E, 31.7913767196311°S (GDA94)

Disclaimer

The *Aboriginal Heritage Act 1972* preserves all Aboriginal sites in Western Australia whether or not they are registered. Aboriginal sites exist that are not recorded on the Register of Aboriginal Sites, and some registered sites may no longer exist.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you email the details to the Department at AboriginalHeritage@dplh.wa.gov.au and we will make every effort to rectify it as soon as possible.

South West Settlement ILUA Disclaimer

Your heritage enquiry is on land **within or adjacent to** the following Indigenous Land Use Agreement(s): Whadjuk People Indigenous Land Use Agreement.

On 8 June 2015, six identical Indigenous Land Use Agreements (ILUAs) were executed across the South West by the Western Australian Government and, respectively, the Yued, Whadjuk People, Gnaala Karla Booja, Ballardong People, South West Boojarah #2 and Wagyl Kaip & Southern Noongar groups, and the South West Aboriginal Land and Sea Council (SWALSC).

The ILUAs bind the parties (including 'the State', which encompasses all State Government Departments and certain State Government agencies) to enter into a Noongar Standard Heritage Agreement (NSHA) when conducting Aboriginal Heritage Surveys in the ILUA areas, unless they have an existing heritage agreement. It is also intended that other State agencies and instrumentalities enter into the NSHA when conducting Aboriginal Heritage Surveys in the ILUA areas. It is recommended a NSHA is entered into, and an 'Activity Notice' issued under the NSHA, if there is a risk that an activity will 'impact' (i.e. by excavating, damaging, destroying or altering in any way) an Aboriginal heritage site. The Aboriginal Heritage Due Diligence Guidelines, which are referenced by the NSHA, provide guidance on how to assess the potential risk to Aboriginal heritage.

Likewise, from 8 June 2015 the Department of Mines, Industry Regulation and Safety (DMIRS) in granting Mineral, Petroleum and related Access Authority tenures within the South West Settlement ILUA areas, will place a condition on these tenures requiring a heritage agreement or a NSHA before any rights can be exercised.

If you are a State Government Department, Agency or Instrumentality, or have a heritage condition placed on your mineral or petroleum title by DMIRS, you should seek advice as to the requirement to use the NSHA for your proposed activity. The full ILUA documents, maps of the ILUA areas and the NSHA template can be found at <https://www.wa.gov.au/organisation/departments-of-the-premier-and-cabinet/south-west-native-title-settlement>.

Further advice can also be sought from the Department of Planning, Lands and Heritage at AboriginalHeritage@dplh.wa.gov.au.

OFFICIAL

Title:	City of Joondalup Local Planning Scheme 3 Amendment 15		
Location:	Portions of Lots 28 and 36 Woodvale Drive, Woodvale		
Description:	The amendment proposes to rezone portions of Lots 28 and 36 Woodvale Drive, Woodvale from 'Rural' and 'Private Community Purposes' to 'Residential' (R30). The proposed amendment is to facilitate future residential development consistent with the City of Joondalup's Local Planning Strategy.		
Ref ID:	APP-0000483		
Date Received:	23/08/2023	Date Sufficient Information Received:	18/01/2024
Responsible Authority:	City of Joondalup, PO Box 21, JOONDALUP WA 6919		
Contact:	Emma Craddock		
Preliminary Environmental Factors:	Flora and Vegetation, Terrestrial Fauna, Inland Waters		
Potential Significant Effects:	Implementation of the scheme amendment may result in the clearing of native vegetation and potential habitat for threatened species of black cockatoo, modification of the local hydrological regime, and reduced water quality discharging to a Conservation Category Wetland (CCW).		
Protection:	Future development of the amendment area should provide for retention of potential black cockatoo habitat trees. The City of Joondalup has also proposed additional scheme text that will assist in mitigating and managing potential impacts to threatened fauna species and the CCW from future residential development. The Environmental Protection Authority (EPA) advice is provided, recommending further actions to protect and restore environmental values, and manage and mitigate potential environmental impacts.		
Determination:	Referral Examined, Preliminary Investigations and Inquiries Conducted. Scheme Amendment Not to be Assessed under Part IV of the EP Act. Advice Given. (Not Appealable).		

The EPA has carried out some investigations and inquiries before deciding not to assess this scheme. In deciding not to formally assess schemes, the EPA has determined that no further assessment is required by the EPA.

This Determination is not appealable.

Chair's Initials: 

31 January 2024

OFFICIAL

**ADVICE UNDER SECTION 48A(1)(a)
ENVIRONMENTAL PROTECTION ACT 1986**

City of Joondalup Local Planning Scheme 3 Amendment 15

Location: Lots 28 and 36 Woodvale Drive, Woodvale

Determination: Scheme Not Assessed – Advice Given (not appealable)

Determination Published: 5 February 2024

Summary

The amendment proposes to rezone portions of Lots 28 and 36 Woodvale Drive, Woodvale from 'Rural' and 'Private Community Purposes' to 'Residential' and to introduce provisions at Table 6 of the Scheme. The proposed amendment is to facilitate future residential development consistent with the City of Joondalup's Local Planning Strategy.

The Environmental Protection Authority (EPA) has considered the scheme amendment in accordance with the requirements of the *Environmental Protection Act 1986* (EP Act). The EPA considers that the scheme amendment is unlikely to have a significant effect on the environment and does not warrant formal assessment under Part IV of the EP Act. The EPA has based its decision on the original referral documentation and additional information provided by the City of Joondalup (the City) to this amendment. Having considered this matter, the following advice is provided.

Environmental Factors

Having regard to the EPA's (2021) *Statement of Environmental Principles, Factors, Objectives and Aims of Environmental Impact Assessment*, the EPA has identified the following preliminary environmental factors relevant to this scheme amendment:

- Flora and Vegetation
- Terrestrial Fauna
- Inland Waters

Advice and Recommendations regarding the Environmental Factors

The EPA considers that the portion of Lot 28 within the amendment area, is completely void of native vegetation and development is unlikely to cause significant environmental impact. EPA advice is not required to assist in the mitigation of potential impacts at this location. As such, the advice provided below pertains to the western portion of Lot 36 subject of the proposed amendment (hereafter referred to as the amendment area).

Flora and Vegetation and Terrestrial Fauna

The amendment area consists largely of mature scattered trees with mostly cleared understorey. The provided Environmental Assessment Report (EAR) states that potential habitat (foraging/roosting and future breeding) for threatened species of black cockatoo is located within the amendment area. A geographic information systems search indicates that the nearest recorded black cockatoo roost site is approximately 2.5 kilometres (km) to the west. The amendment area also abuts the mapped extent of Bush Forever Site No. 299 to the east, which includes a portion of the Yellagonga Regional Park.

OFFICIAL

The EPA considers that implementation of the amendment may result in the clearing of native vegetation and potential threatened fauna habitat to facilitate subsequent residential development. The EPA notes that the City has proposed scheme text for insertion at Table 6 of Local Planning Scheme 3 (LPS 3) to facilitate the mitigation of potential impacts to black cockatoo habitat values at future planning stages. The EPA supports the inclusion of the proposed scheme text, with additional modifications as written below, and recommends that designation of future 'Public Open Space' (POS) areas prioritise the retention of remnant habitat for threatened fauna species within the amendment area and reflect the EPA's (2021) [Guidance for planning and development – protection of naturally vegetated areas in urban and peri-urban areas](#).

Proposed scheme text to be considered by Council for inclusion at Table 6 of LPS 3:

No. 5 - Lot 28 (No. 67) and 36 (No. 95) Woodvale Drive, Woodvale

- 1. Any application for subdivision or development of the site shall include the following:*
 - a. Identification of potential threatened fauna habitat trees within the site proposed for retention.*
 - b. 'Public Open Space' areas identified with an objective of retaining key environmental values.*
 - c. Management plans which are to be endorsed by the City of Joondalup, with or without conditions, prior to any site works, and thereafter implemented:*
 - i. Urban Water Management Plan demonstrating on-site retention and treatment of stormwater.*
 - ii. Wetland Management Plan, including wetland buffer assessment.*
 - iii. Re-vegetation Management Plan including proposed planting of native vegetation that may provide future habitat for threatened fauna species, within the wetland buffer and 'Parks and Recreation' reserve.*

The EPA also notes part 3 of the Council's resolution which requests revegetation works within the eastern portion of Lot 36 zoned for 'Parks and Recreation' reserve under the Metropolitan Region Scheme (MRS), should future development result in complete removal of the remnant trees from the amendment area. The EPA considers that the scope of the revegetation works could be expanded to maximise mitigation of potential impacts, through requirements for additional revegetation within the proposed amendment area in future POS areas.

Inland Waters

As aforementioned, the proposed amendment area abuts the Yellagonga Regional Park, which contains Wallubuenup Swamp – a mapped Conservation Category Wetland (CCW) (UFI: 15458). The EAR noted that groundwater and surface water flows at the amendment area are generally easterly, towards the CCW.

The EPA considers that implementation of the scheme amendment may result in degradation of the CCW and contribute to a modified hydrological regime. The EPA supports the management of potential impacts to inland water values through the mechanisms described by the proposed scheme text (above). The EPA considers that the proposed text is consistent with its [previous public advice](#) provided to the City's LPS 3, which included recommendations for:

- provision of a buffer to the CCW
- inclusion of provisions in LPS 3 to guide future planning processes to minimise impacts to the CCW and Bush Forever site

OFFICIAL

- consultation with relevant government and technical agencies prior to the finalisation of structure planning and subdivision.

The EPA also recommends that potential impacts to the CCW and local hydrological regime could be further reduced by:

- locating future stormwater drainage infrastructure outside the mapped CCW and buffer
- utilising locally endemic wetland species for any revegetation works undertaken within the eastern portion of Lot 36 at the wetland interface. Revegetation of the wetland interface may also provide for improved environmental outcomes through the biofiltration of stormwater water discharging from the amendment area towards the CCW.

Conclusion

The EPA concludes the scheme amendment can be managed to be consistent with the EPA's environmental objectives for the above factors through the proposed scheme text. The EPA notes that further impacts may be mitigated through its further modified scheme text, future planning requirements, and other statutory processes. The EPA recommends its advice is implemented to further mitigate potential impacts to the above factors.

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

1.0 INTRODUCTION

1.1 BACKGROUND

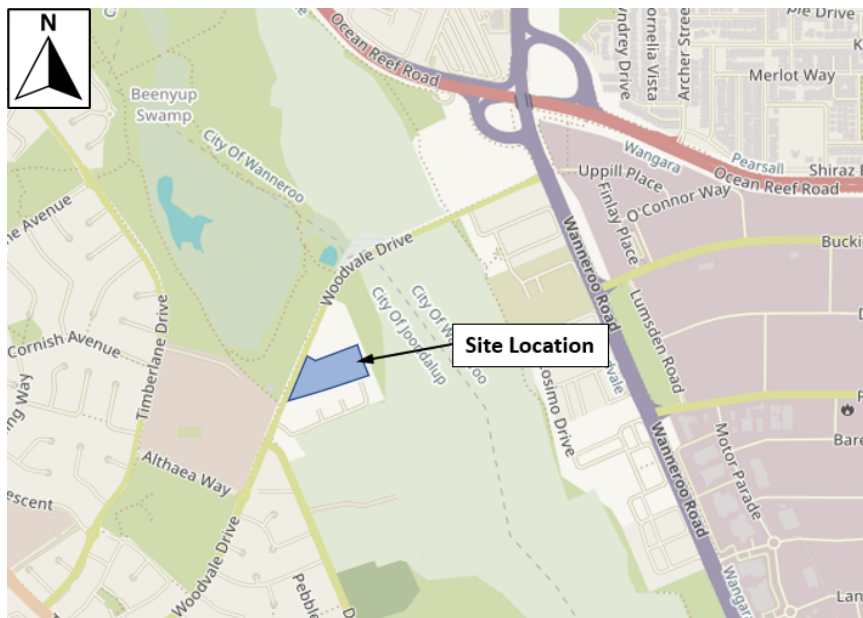

Stantec has been commissioned by Riverswan Holdings Pty Ltd("the Client") to prepare a Transport Impact Assessment (TIA) for the proposed scheme amendment located at Part Lot 28 & Lot 36 Woodvale Drive in the City of Joondalup, WA (the "Site").

This TIA has been prepared in accordance with the Western Australian Planning Commission (WAPC) *Transport Impact Assessment Guidelines Volume 2 – Planning Schemes, Structure Plans, and Activity Centre*.

1.2 SITE LOCATION

The Site is located in the suburb of Woodvale as shown in **Figure 1-1** The Site is adjacent to Woodvale Drive.

Figure 1-1 Site Location

Source: Open Street Maps 2022

TRANSPORT IMPACT ASSESSMENT

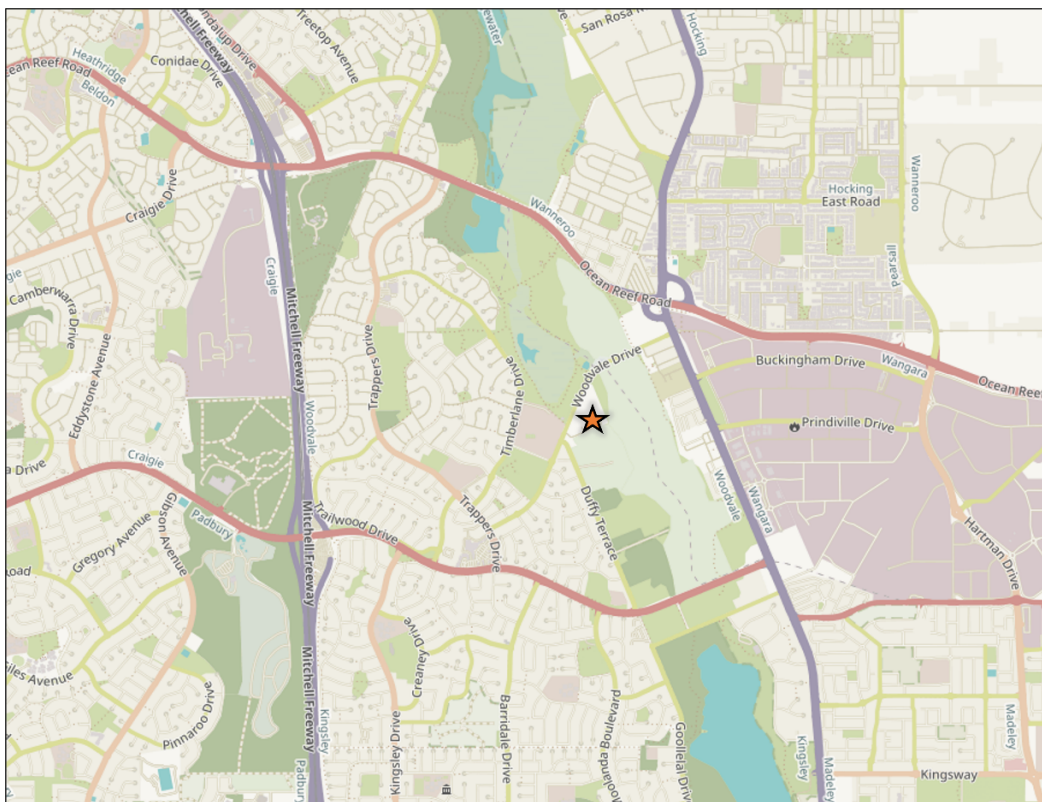

Lot 36 Woodvale Drive, Joondalup

2 PROPOSED SCHEME AMENDMENT

2.1 REGIONAL CONTEXT

The proposed development is located within the suburb of Woodvale, as shown in **Figure 2-1**.

Figure 2-1 Regional Context

Source: Open Street Maps 2023

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

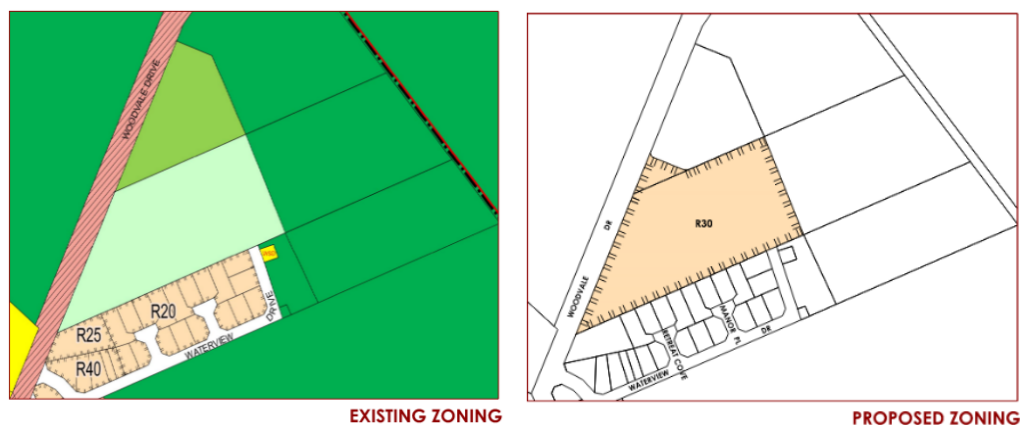

2.2 PROPOSED LAND USE

The Amendment to the City of Joondalup Local Planning Scheme No.3 proposes to rezone the site from 'Rural' and 'Private Community Purposes' to 'Residential' with a density coding of R30 as shown in **Figure 2-2**. A concept plan prepared for the Site consists of 38 individual residential dwelling units as shown in **Figure 2-3**. **Table 2-1** provides a summary of land uses within the proposed concept plan.

Table 2-1 Proposed Land Uses within LSP

Land Use	Total Number of Lots
Individual Residential Units	38

3 EXISTING SITUATION

3.1 EXISTING LAND USES

Pursuant to the provision of the City of Joondalup Local Planning Scheme No. 3 for suburb of Woodvale, the Site is currently zoned 'Rural' and 'Private Community Purposes' as shown in **Figure 3-1**. The site is surrounded by parks and recreation to the east, residential dwellings to the south, and the Woodvale Baptist Church to the north.

Figure 3-1 Woodvale Zoning Map

Source: City of Joondalup Scheme Map - Woodvale

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

3.2 EXISTING ROAD NETWORK

Road classifications are defined in the Main Roads Functional Hierarchy as follows:

- > **Primary Distributors (light blue):** Form the regional and inter-regional grid of MRWA traffic routes and carry large volumes of fast-moving traffic. Some are strategic freight routes, and all are National or State Roads WA.
- > **Regional Distributors (red):** Roads that are not Primary Distributors, but which link significant destinations and are designed for efficient movement of people and goods within and beyond regional areas. They are managed by Local Government.
- > **District Distributor A (green):** These carry traffic between industrial, commercial and residential areas and connect to Primary Distributors. These are likely to be truck routes and provide only limited access to adjoining properties. They are managed by Local Government.
- > **Distributor B (dark blue):** Perform a similar function to District Distributor A but with reduced capacity due to flow restrictions from access to and roadside parking alongside adjoining property. These are often older roads with traffic demand more than that originally intended. District Distributor A and B roads run between land-use cells and not through them, forming a grid that would ideally be around 1.5 kilometres apart. They are managed by Local Government.
- > **Local Distributors (orange):** Carry traffic within a cell and link District Distributors at the boundary to access roads. The route of the Local Distributor discourages through traffic so that the cell formed by the grid of District Distributors only carries traffic belonging to or serving the area. These roads should accommodate buses but discourage trucks. They are managed by Local Government.
- > **Access Roads (grey):** Provide access to abutting properties with amenity, safety and aesthetic aspects having priority over the vehicle movement function. These roads are bicycle and pedestrian friendly. They are managed by Local Government.

The site is accessed by Woodvale Drive to the west. Woodvale Drive connects to Trappers Drive to the south and Wanneroo Road to the north. The surrounding road network is further described in **Table 3-1** and shows the hierarchy as per the Main Roads WA Road Information Mapping System, whilst **Figure 3-2** shows the road hierarchy.

Table 3-1 Road Network Classification

Road Names	Road Hierarchy			Road Network		
	Road Hierarchy	Jurisdiction	No. of Lanes	No. of Footpaths	Width (m)	Speed Limit (km/h)
Woodvale Drive	Access Road	Local Government	2	1	8.4	50
Trappers Drive	Local Distributor	Local Government	1-2	2	10	50
Wanneroo Road	Primary Distributor	Main Roads WA	4	1-2	8	70

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

Figure 3-2 Road Hierarchy Map

Source: Main Roads WA Road Information Mapping System

3.3 EXISTING TRAFFIC VOLUMES

Existing weekday traffic volumes were obtained from the Main Roads WA Trafficmap in the vicinity of the Site. These traffic volumes are summarised in **Table 3-2**.

Table 3-2 Existing Weekdays Traffic Volume

Road Name	Year	Daily (vpd)	AM Peak Hour (07:45 – 08:45) (vph)	PM Peak Hour (15:45 – 16:45) (vph)	Heavy Vehicle %
Woodvale Drive	2022	7,575	788	630	2%

Source: Main Roads WA Trafficmap

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

3.4 EXISTING PUBLIC PEDESTRIAN/CYCLIST NETWORK

A footpath with a width of approximately 2.7m is located on the western side of Woodvale Drive. There are no dedicated cycling facilities within the Site itself.

3.5 EXISTING PUBLIC TRANSPORT NETWORK

Bus stops for Transperth service 467 (Whitfords Station to Joondalup Station) is located in close proximity to the Site. During both the AM and PM peaks the service frequencies vary between 15-30 minutes. Outside of the AM and PM peaks, the bus services run approximately every 30 minutes.

3.6 CRASH ASSESSMENT

A crash assessment within the proximity of the subject site has been completed. The assessment covers all the recorded accidents in between 1 January 2017 and 31 December 2021 for the section shown in **Figure 3-3**. The midblock crash data is summarised in **Table 3-3**, while the crash data for the intersection of Woodvale Drive / Duffy Terrace is summarised in **Table 3-4**. The crash data indicates only 1 midblock crash has occurred on this section of Woodvale Drive within the past 5 years, which only resulted in minor property damage. As such, no systemic crash risks are considered to exist along this section of Woodvale Drive.

Lot 36 Woodvale Drive, Joondalup

4 PROPOSED INTERNAL TRANSPORT NETWORK

4.1 INTERNAL ROAD NETWORK / ACCESS

The proposed internal road network and access locations are shown in **Figure 4-1**.

Figure 4-1 Site Access

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

5 INTEGRATION WITH SURROUNDING AREA

5.1 SURROUNDING ATTRACTORS AND GENERATORS

The area surrounding the proposed development is primarily residential or park and recreational. Woodvale Secondary College is located almost immediately opposite the Site, while the Woodvale Baptist church is located directly north of the Site. The Site location and surrounding attractors / generators are shown in **Figure 5-1**.

Figure 5-1 Surrounding Attractors and Generators

5.2 ACCESSIBILITY TO SURROUNDING AREA

Woodvale Secondary College and the Woodvale Baptist Church are located within short walking distances of the Site, while access to bus service 467 is also located within short walking distance.

The 2 proposed accesses to Woodvale Drive will provide good vehicular access to the Site.

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

6 ANALYSIS OF TRANSPORT NETWORK

6.1 DEVELOPMENT TRAFFIC GENERATION

Trip generation rates were sourced from the Trip Generation Manual 10th Edition from the Institute of Transportation Engineers ITE based on the land uses proposed for the Scheme Amendment. **Table 6-1** below shows the trip rates for the proposed land use. **Table 6-2** shows the directional distribution and

Table 6-3 shows the resultant trip generation.

As mentioned in the previous section, 38 individual residential units are proposed, and no future expansion is proposed on the land parcel. Trip generation for the proposed development is summarised below:

Table 6-1 Trip Generation Rate

Land Use	Source	AM Peak Rate	PM Peak Rate	Daily Rate
Residential	ITE 210	0.74 per dwelling	0.99 per dwelling	9.44 per dwelling

Table 6-2 Trip Directional Distribution

Land Use	AM Peak		PM Peak		Daily	
	In	Out	In	Out	In	Out
Residential	25%	75%	63%	37%	50%	50%

Table 6-3 Estimated Trip Generation

Land Use	Yield	AM Peak			PM Peak			Daily		
		Total	In	Out	Total	In	Out	Total	In	Out
Residential	38 dwellings	28	7	21	38	24	14	359	179	179

6.2 TRIP DISTRIBUTION

Figure 6-1 shows the assumed trip distribution for the proposed development. The majority of traffic (60%) is assumed to go to/from the north via Wanneroo Road, with the remaining 40% assumed to go to/from the south via Trappers Drive.

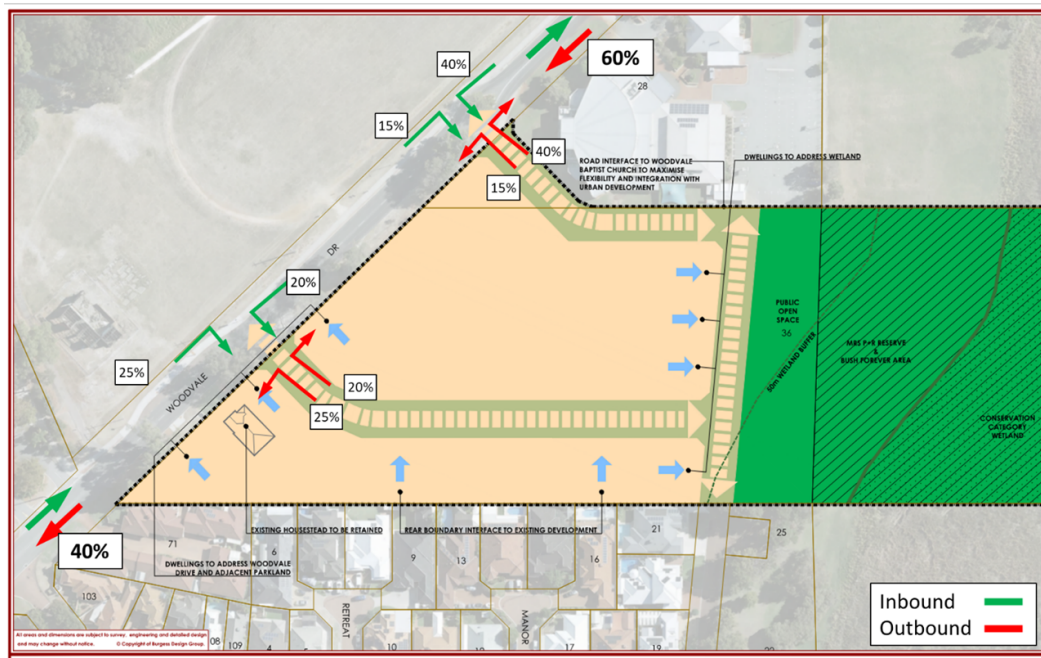

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

It was also assumed that the majority of traffic going to/from the north would utilise the northern access, while traffic going to/from the south would utilise the southern traffic. The overall assumed trip distribution assumptions are shown in **Figure 6-1**.

Figure 6-1 Trip Distribution

6.3 BACKGROUND TRAFFIC

Background traffic data for the year 2022 was sourced from available traffic data via the Main Roads WA Trafficmap. The assumed opening year of the project is 2025. An annual growth rate of 3.0% was applied to the background (non-development) traffic volumes on Woodvale Drive for the purpose of this assessment.

TRANSPORT IMPACT ASSESSMENT

Lot 36 Woodvale Drive, Joondalup

6.4 KEY INTERSECTION ANALYSIS

6.4.1 SIDRA Results Definition

The proposed intersections at Woodvale Drive were analysed using SIDRA analysis program. This program calculates the performance of intersections based on input parameters, including geometry and traffic volumes. As an output SIDRA provides values for the Degree of Saturation (DOS), queue lengths, delays, level of service, and 95th Percentile Queue. These parameters are defined as follows:

- > Degree of Saturation (DOS) is the ratio of the arrival traffic flow to the capacity of the approach during the same period. The theoretical intersection capacity is exceeded for an unsignalized intersection where $DOS > 0.80$.
- > 95% Queue is the statistical estimate of the queue length up to or below which 95% of all observed queues would be expected.
- > Average Delay is the average of all travel time delays for vehicles through the intersection. An unsignalized intersection can be operating at capacity where the average delay exceeds 55 seconds for any movement; and
- > Level of Service (LOS) is the qualitative measure describing operational conditions within a traffic stream and the perception by motorists and/or passengers. The different levels of service can generally be described as shown in **Table 6-4**.

Table 6-4 Level of Service (LoS) Performance Criteria

LOS	Description	Signalised Intersection	Unsignalized Intersection
A	Free-flow operations (best condition)	≤10 sec	≤10 sec
B	Reasonable free-flow operations	10-20 sec	10-15 sec
C	At or near free-flow operations	20-35 sec	15-25 sec
D	Decreasing free-flow levels	35-55 sec	25-35 sec
E	Operations at capacity	55-80 sec	35-50 sec
F	A breakdown in vehicular flow (worst condition)	≥80 sec	≥50 sec

The detailed SIDRA outputs are provided in **Appendix B**.

6.4.2 Peak Hour Traffic Flows

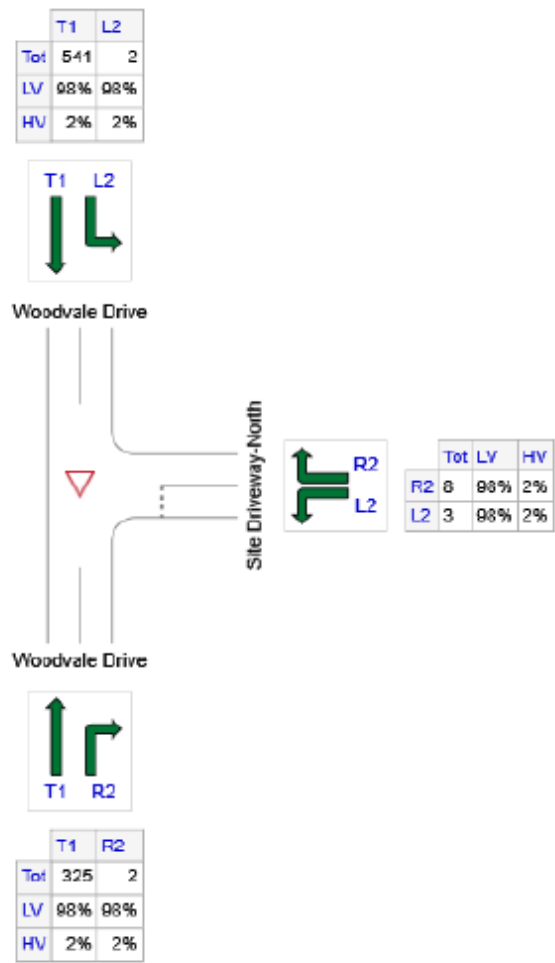

Figure 6-2 to Figure 6-5 show the full-build year peak hour traffic flows for both accesses to the development.

6.4.3 Woodvale Drive and Project Accesses

The SIDRA layouts of Woodvale Drive / Northern Access and Woodvale Drive/Southern Access are shown in

Figure 6-6 and **Figure 6-7**. The analysis results for the intersections are presented in **Table 6-5** and **Table 6-6**.

The results show that the proposed intersections of the Woodvale Drive and project accesses would operate satisfactorily for the assessed scenarios.

7 SUMMARY

This assessment has been prepared in accordance with the *WAPC Transport Assessment Guidelines for Developments: Volume 2 – Planning Schemes, Structure Plans, and Activity Centre*.

The following conclusions have been made regarding the proposed development:

- > The concept plan proposes 38 individual residential dwelling units.
- > The Site is proposed to be accessed via two new intersections on Woodvale Drive.
- > The Site is expected to generate 28 trips during the AM peak hour and 38 trips during the PM peak hour.
- > Analysis of the proposed intersections has been undertaken using SIDRA software and the result of analysis shows that the proposed intersections will operate satisfactorily.
- > Overall, the traffic impacts associated with the proposed development will be minimal on the internal and external transport network.

About this document

Planning reform

Western Australia is experiencing a shifting planning and development landscape, influenced by new disruptive technologies, changes to our economy, and a diverse population with different needs and expectations. A streamlined, contemporary and fit-for-purpose planning system that meets the varying needs of our vast State is critical for the delivery of quality housing for connected, vibrant and affordable communities, both now and in the future.

The *Action Plan for Planning Reform* elevates the requirement for well-designed residential development across the State and the review and update of *Residential Design Codes Volume 1* (R-Codes Volume 1) supports this goal.

About good design

Good design is not a subjective idea; it can be defined and measured. Notions of design quality extend beyond taste, style and appearance to encompass functionality, sustainability, response to context, structural integrity, flexibility in use, and cost efficiency, both during construction and over the life of the building. Most importantly, good design outcomes improve the urban environment, benefit local communities and leave a positive legacy for future generations.¹

Good design endeavours to reconcile multiple concurrent and often competing objectives and outcomes that vary according to the circumstances of each site and project. A rigorous, considered and contextual design process should prioritise these competing objectives to develop a cohesive, site-responsive design. Undertaking this process typically creates better performing buildings and better outcomes for community.

¹ State Planning Policy 7.0 *Design of the Built Environment* (SPP 7.0)

Outcomes-based planning

The R-Codes strongly advocate contextual and site-specific development solutions. To facilitate good design outcomes, the R-Codes Volume 1 provides two pathways for development assessment and determination.

Applications for development approval need to demonstrate that the proposal achieves the objectives of the R-Codes Volume 1 and the requirements of each design element through either of the following pathways:

1. Deemed-to-comply – deemed-to-comply provisions provide a straightforward means for the development proposal to demonstrate that it satisfies the objectives and design principles of the R-Codes. They outline the expected development standards that should be met through this pathway.

2. Design principle – the design principles pathway offers an alternative merit-based approach when one or more of the deemed-to-comply provisions are not satisfied. This allows for innovative design responses that may be more context and site responsive. Where a deemed-to-comply provision is not met, the proponent should provide sufficient justification to demonstrate how they have met or exceeded the requirements of the relevant design principle(s) when this pathway is pursued.

To foster good design outcomes, proponents are encouraged to access available opportunities for independent design review consistent with State Planning Policy 7.0 – *Design of the Built Environment* (SPP 7.0) and the *Design Review Guide*. This can be particularly helpful for more complex applications and applications pursuing a merit-based, design principle approvals pathway, where the requirements of the code can be met in a variety of ways.

The *Residential Design Codes Volume 1 Explanatory Guidelines* (Explanatory Guidelines) have also been provided to explain and assist the interpretation and application of the R-Codes, providing additional guidance to applicants, designers, decision-makers and the community.

Who is this design code for?

The R-Codes provide planning and design provisions for residential development across Western Australia. These provisions have been provided to assist in the following ways:

- Guide developers, urban planners, urban designers, architects, landscape architects, builders and other professionals when designing housing developments and preparing an application for development approval.
- Assist decision-makers and planning professionals in local and State government with assessment of development proposals and in implementing strategic planning in the form of local policy and design guidance.
- Support communities by raising awareness of the principles of good design and by promoting quality housing designs that will make a positive contribution to local neighbourhoods.

R-Codes structure

The R-Codes consist of two volumes.

About this document (cont.)

Document structure

There are four parts to the R-Codes Volume 1 (this document).

PART A – OPERATION OF CODE

Part A establishes the purpose, application and operation of the R-Codes Volume 1 and consists of the following sections:

Section 1.0 Preliminary

Contains the administrative provisions and statutory framework, including the citation, general objectives of the code, and its application in relation to residential development.

Section 2.0 Development application and decision-making process

Outlines the requirements for applications and the process for assessment and determination of development proposals. This section also explains when consultation with neighbours may be required and the applicable process.

Section 3.0 Local planning framework

Explains how the provisions of the code interact with local planning frameworks. This includes which local planning instruments can modify R-Code provisions to achieve context and site-responsive development outcomes.

Section 4.0 Special transitional arrangements (Part C only)

Explains the transitional arrangements applicable for certain single house development applications and for local planning frameworks in relation to Part C.

Part B

Part B applies to all single houses R40 and below, grouped dwellings R25 and below, and multiple dwellings in areas coded R10–R25.

The provisions for Part B and related figures, tables and diagrams, are captured in five sections:

5.1 Context

5.2 Streetscape

5.3 Site planning and design

5.4 Building design

5.5 Special purpose dwellings

Objectives are included at the beginning of each of these sections to guide development proposals and assessment. These five sections are further divided into design elements that include the design principle and deemed-to-comply pathways.

PART C

Part C applies to all single houses R50 and above, grouped dwellings in areas coded R30 and above, and multiple dwellings in areas coded R30 to R60.

The provisions and related figures, tables and diagrams, are captured in three sections:

1.0 The Garden

2.0 The Building

3.0 Neighbourliness

Objectives are included at the beginning of each of these sections to guide development proposals and assessment. These three sections are further divided into design elements that include the design principle and deemed-to-comply pathways.

The fourth and fifth temporary sections provides substituted deemed-to-comply provisions for certain single house development applications in relation to design elements in The Garden, The Building and Neighbourliness.

PART D – LAND

Part D applies to single houses and grouped dwellings (all density codings), and multiple dwellings in areas coded R10 to R60.

This part sets out the site area requirements and dwelling yield for development in Part B and Part C and includes objectives to guide subdivision proposals and assessment, along with design principle and deemed-to-comply pathways.

APPENDICES

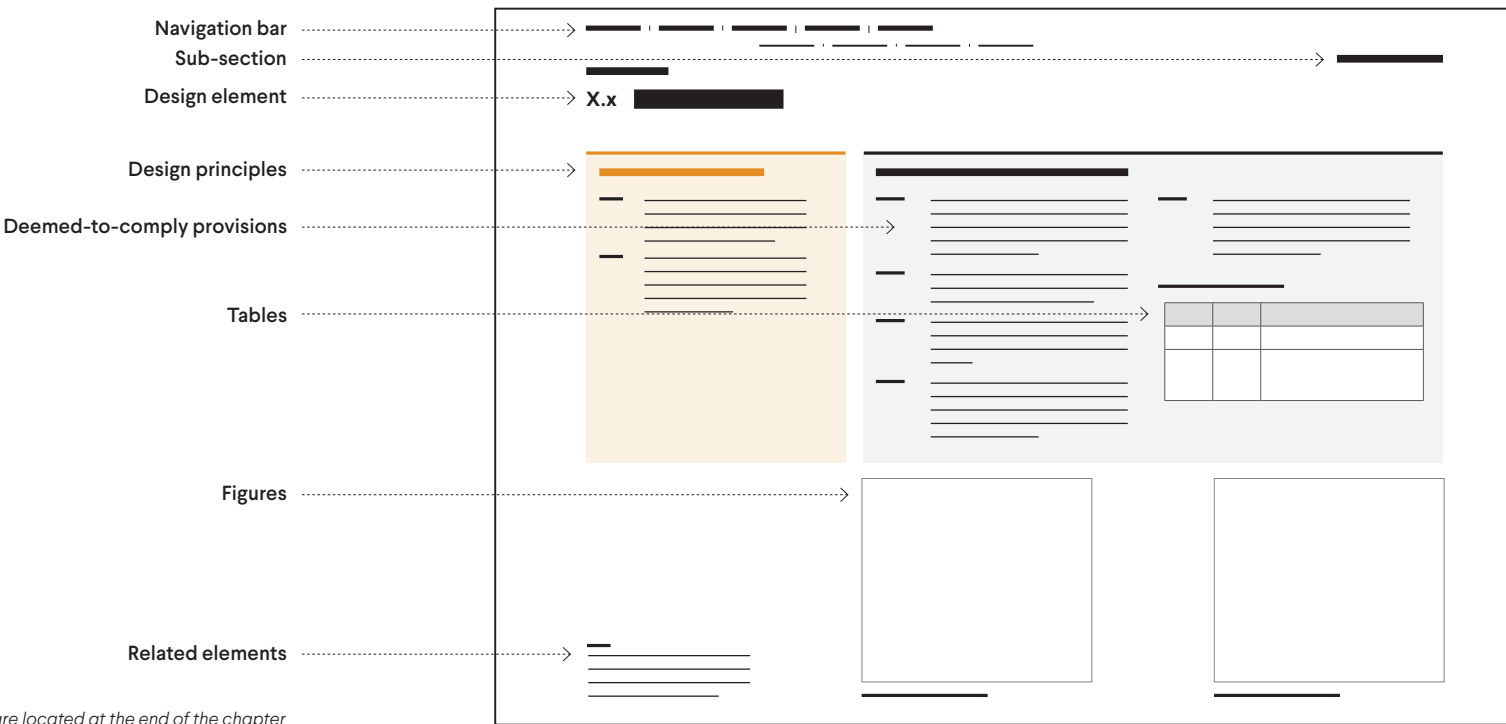

The appendices, which form part of the statutory provisions of the R-Codes Volume 1, consists of definitions, context and site analysis and application requirements.

About this document (cont.)

Graphic layout

Throughout this document, words written in bold print have a corresponding definition listed in *A1 Definitions*.

The R-Codes Volume 1 applies a two-column format. The left-hand column provides the element **design principles**. The right-hand column provides the **deemed-to-comply** provisions.

Notes

- Figures in Part B are located at the end of the chapter
- Related elements are only applicable to Part C

1.0 Preliminary

1.1 Citation

This Planning Code is made under Part 3A of the *Planning and Development Act 2005* and is cited as Residential Design Codes Volume 1 (R-Codes Volume 1).

1.2 Purpose of the R-Codes

The purpose of the R-Codes is to provide a comprehensive basis for the guidance and control of **residential development** throughout Western Australia.

1.3 General objectives of the R-Codes

The general objectives of the R-Codes are:

Residential development objectives

- to facilitate quality **residential development** that provides occupants with high **amenity** and liveable housing for an enhanced quality of life;
- to promote a range of housing types that provide residents with choice, including affordable options;
- to encourage housing that responds to local context and contributes to the desired **streetscape**, precinct and neighbourhood character;
- to facilitate residential development that is environmentally, economically and socially **sustainable**; and
- to encourage house designs that are respectful and responsive to local heritage and cultural values.

Planning, governance and development process objectives

- to facilitate **residential development** that is appropriately designed for the intended residential purpose, land tenure, density, place context and **scheme** objectives;
- to encourage residential design that is responsive to the **development site**, inclusive of its location, size geometry and features;
- to allow variety and diversity as appropriate where it can be demonstrated this better reflects the context or scheme objectives;
- to allow for appropriate modifications to, and augmentation of R-Codes provisions through **local planning frameworks**;
- to provide certainty in timely assessment and determination of proposals; and
- to provide an assessment framework that supports consistent application of standards and decision-making between jurisdictions.

In assessing and determining proposals for **residential development**, the **decision-maker** shall have regard to the above general objectives, and any relevant objectives of the relevant **scheme**.

1.4 Application of the R-Codes

The R-Codes applies to all **residential development** throughout Western Australia.

The R-Codes are divided into two volumes (refer **Table 1.4a**). R-Codes Volume 1 applies to all **single house** and **grouped dwelling** developments; and **multiple dwelling** development in areas coded R10-R60. R-Codes Volume 2 applies to multiple dwelling (apartment) developments in areas coded R80 and above and R-AC. Any **dwellings** in a **mixed use** development are considered to be multiple dwellings and the relevant volume applies.

Table 1.4a Application of the R-Codes development standards

Residential Design Codes		Single Houses	Grouped Dwellings	Multiple Dwellings (including dwelling components of mixed use developments)
Volume 1	Part B	R40 and below	R25 and below	R10 to R25
	Part C	R50 and above; R100-SL; R-AC	R30 and above; R100-SL; R-AC	R30 to R60
Volume 2		NA	NA	R80 and above; R-AC

1.0 Preliminary (cont.)

R-Codes Volume 1 is comprised of four parts.

Part A outlines the application and decision-making processes for **residential development** and the modifications that can be made to the provisions of the R-Codes through **local planning frameworks**.

Part B includes provisions applicable to **single houses** in areas coded R40 and below, **grouped dwellings** and **multiple dwellings** (including the dwelling component of **mixed use development**) in areas coded R25 and below.

Part C includes provisions applicable to **single houses** in areas coded R50 and above, R100-SL and R-AC, **grouped dwellings** in areas coded R30 and above, R100-SL and R-AC; and **multiple dwellings** (including the dwelling component of **mixed use development**) in areas coded R30 to R60 inclusive.

Part D provides the site area requirements for all **residential development**.

1.5 Explanatory Guidelines

The Western Australian Planning Commission (**WAPC**) may prepare more detailed Explanatory Guidelines on the matters addressed in the R-Codes Volume 1, in consultation with local government and relevant stakeholders, to meet the objectives of the R-Codes Volume 1 and, if prepared, these should be considered in the determination of proposals.

The Explanatory Guidelines, which may be amended from time to time, provide design and assessment guidance to assist interpretation and assessment of proposals against the **design principles** and **deemed-to-comply** provisions of the R-Codes Volume 1 as well as guidance for preparing **local planning frameworks**.

2.0 Development application and decision-making process

2.1 R-Codes development application process

The following information provides a summary of when a **development** application is required. It is recommended proponents of developments consult with the relevant **decision-maker** to establish the application and procedural requirements that apply to the specific development proposal in the applicable jurisdiction.

The R-Codes Volume 1 approval process is illustrated in the process flowchart of **Figure 2.1**. This process flowchart has been designed as a guide for all **decision-makers**, developers and proponents using R-Codes Volume 1.

2.1.1 When a development application is required

A **development** application¹ is required where required under a **scheme**.

Schedule 2 of the *Planning and Development (Local Planning Schemes) Regulations 2015* (the Regulations) exempts certain works from requiring a **development** application and development approval (refer cl. 61, part 7 of Schedule 2).

Where a **development** application is required, the application shall be lodged with the relevant **decision-maker** for assessment and determination.

¹ Refer cl. 60 and 61 of part 7 in Schedule 2 of the Regulations.

Notes

¹ A scheme may require development approval for a single house irrespective of the requirements of the R-Codes Volume 1.

This flowchart does not illustrate the determination review process possible via the State Administrative Tribunal.

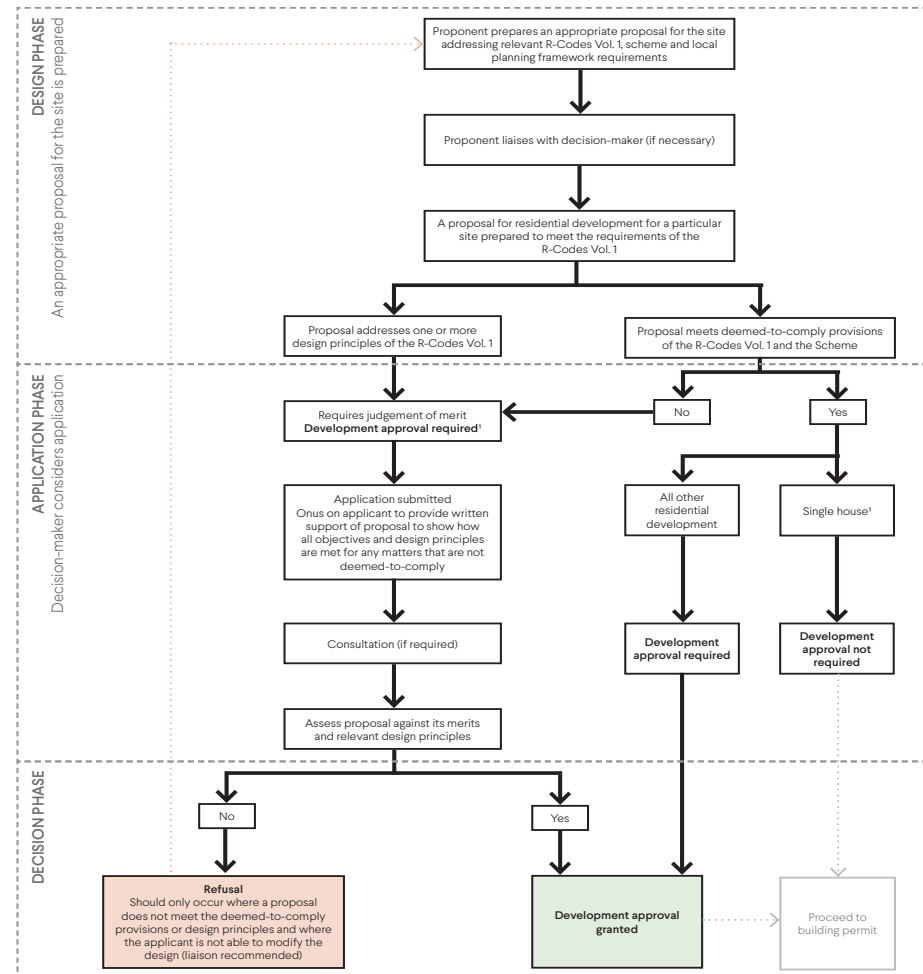

Figure 2.1 R-Codes Volume 1 approval process

2.0 Development application and decision-making process (cont.)

2.1.2 Design development process and design review

Prior to lodging the **development** application with the **decision-maker**, it is recommended proponents undertake a thorough design development process to progress the best and most appropriate design response for the **site**.

A thorough design development process should entail the following:

1. Context and site analysis

Context and site analysis early in the design process to understand the existing and intended character of the locality and the opportunities and constraints presented by the **site** (refer A2 *Context and site analysis* for considerations that may be relevant at this stage).

2. Concept design

Concept design consisting of preliminary designs and sketches that address **development** opportunities and constraints, and explore different development options for the **site** in accordance with the R-Codes and **local planning framework**.

3. Pre-lodgement engagement

Pre-lodgement engagement with the **decision-maker** (where this service is available) to resolve design issues and use feedback to improve and advance the **development** proposal.

4. Design review

Where available, design review in addition to pre-lodgement engagement to obtain independent, expert advice on the design quality of the proposed **development**. Design review is particularly relevant to larger scale, complex and innovative design proposals proposing a **design principle** pathway. Refer to *Design Review Guide* for further details.

2.1.3 Development application requirements

All applications for **development** approval must provide the information required by the relevant **scheme** and as deemed to be necessary by the **decision-maker** to assess and determine the application (refer A3 *Application documentation* for a list of items that may be required by decision-makers). The decision-maker may refuse to accept an application where the information provided is incomplete.

Deemed-to-comply provisions prescribe the development standards that an application must satisfy in order to meet the objectives of the R-Codes and the requirements of each design element. Alternatively, proponents may lodge for a **design principle(s)** assessment against one or multiple design elements.

The application must detail in writing where the proposed **development** departs from a **deemed-to-comply** provision and give justification of how the proposal satisfies the corresponding **design principle** and any relevant objectives and requirements of the **local planning framework**. Local neighbourhood character or **site** conditions may be relevant in justifying why it may not be possible or desirable to satisfy a deemed-to-comply provision and how a proposal satisfies the corresponding design principle.

2.2 Assessment and determination process under the R-Codes

2.2.1 Assessment

In considering an application, a **decision-maker** shall have regard to matters specified under cl. 67, part 9 in Schedule 2 of the Regulations.

The **decision-maker** shall not vary the minimum or average **site area per dwelling** requirements set out in **Table D** except as provided for in the R-Codes Volume 1 or the **scheme**.

2.2.2 Judging merit of proposal

Where an application does not meet a **deemed-to-comply** provision(s) of the R-Codes Volume 1 and addresses a **design principle(s)**, the **decision-maker** is required to exercise judgement and undertake a merit-based assessment to determine the proposal.

Judgement of merit is exercised by the **decision-maker** only for the specific element of a proposal that does not satisfy the relevant **deemed-to-comply** provision. Where the decision-maker is satisfied the **design principle** is met for that specific element, the corresponding deemed-to-comply provision(s) should not be applied.

The Explanatory Guidelines may assist when undertaking a merit-based assessment against the **design principles** of the R-Codes Volume 1.

Where design review is available¹, the recommendations and advice may inform the judgement of merit and exercise of discretion.

¹Refer to *Design Review Guide*

In making a determination on the suitability of an application, the **decision-maker** shall exercise judgement having regard to:

- any relevant purpose, objectives and provisions of the **scheme**;
- any relevant objectives and provisions of the R-Codes;
- the R-Codes Explanatory Guidelines;
- a provision of a properly adopted **local planning instrument** consistent with the R-Codes; and
- orderly and proper planning.

The **decision-maker** shall not refuse to grant approval to an application where the application satisfies the **deemed-to-comply** provisions of the R-Codes Volume 1 and any relevant provision of the **scheme** and **local planning framework**.

Where an application does not satisfy a **deemed-to-comply** provision and is not consistent with the objectives, intent, and corresponding **design principle** of the R-Codes and any relevant provision of the **scheme** and **local planning framework**, the application should be refused by the **decision-maker**.

2.0 Development application and decision-making process (cont.)

2.3 Consultation

2.3.1 Consultation not required

Where a **development** proposal is **deemed-to-comply** in accordance with the R Codes Volume 1, it will not require advertising to adjoining owners and occupiers.

2.3.2 Consultation required due to potential impact

Where an application is made for **development** approval which presents:

- i. a proposal against one or more **design principles** of the R-Codes Volume 1; and
- ii. there is the potential for the **amenity** of an adjacent property or the **street** to be impacted;

then there may be grounds for the **decision-maker** to notify affected owners and occupiers of the proposal.

2.3.3 Consultation required by local planning framework

Where the **decision-maker** is to judge the merits of a **development** application as part of a **design principle** pathway assessment and:

- i. the merits of the proposal are a matter of technical opinion; and
- ii. the decision-maker is satisfied that in its opinion the proposed development will not result in a significant impact on the **amenity** of the **adjoining property** or the **street**;

it is only necessary to seek comment from adjoining owners and occupiers where specifically required by the **scheme** or a relevant **local planning policy**.

2.3.4 Consultation approach

If in the opinion of the **decision-maker**, adjoining owners and occupiers are likely to be adversely impacted by the proposed **development** (in accordance with **2.3.2** and **2.3.3**), the opportunity to view and comment on the proposal should be provided.

The owners and occupiers of properties likely to be adversely impacted, as identified by the **decision-maker**, shall be notified in accordance with the requirements of cl. 64, part 8 in Schedule 2 of the Regulations and invited to comment on that part of the proposed **development** that does not meet the **deemed-to-comply** provisions of the R-Codes Volume 1.

As a minimum, notified owners and occupiers should be provided with information on:

- i. how to view details of the proposal;
- ii. the **site** and general nature of the proposal; and
- iii. reference to the **design principles** that the proposal is addressing and the supporting justification provided by the proponent.

The **decision-maker**, upon receipt of comments from owners and occupiers of affected properties, should undertake a considered analysis of comments, balanced with technical expertise when exercising its judgement to determine the proposal.

Where no response is received within the time specified from the date of notification, the **decision-maker** may proceed to determine the proposal on its merits and issue its decision.

A summary of all comments received during the consultation period shall be provided to the proponent on request and, if so requested, a period of not more than 10 days, or a longer period as agreed by the **decision-maker**, should be allowed within which the proponent may submit a response to the comments prior to the decision-maker considering the proposal. Submitters may elect to have their name and other personal details redacted from any submission provided to the proponent or published in any other form.

In making a determination, the **decision-maker** shall consider any comments made during the consultation period and the proponent's response to the comments made on the proposal (if any). The decision-maker should advise submitters of its decision.

2.3.5 Consultation undertaken by proponent

For proposals requiring consultation with two or less adjoining landowners, where consultation has been carried out satisfactorily (in the opinion of the **decision-maker**) by the proponent, and comments are provided which accompany the proposal, the decision-maker may consider and determine the proposal without further consultation.

The **decision-maker** shall be satisfied that the information provided and comments tendered are accurate and verified subject to the consultation of the application information and proof of posting by registered post provided to the decision-maker.

2.3.5 Amended plans

Where a proposed **development** has previously been advertised and amended plans are received post-advertising, the amended plans may be the subject of further consultation (in accordance with the process outlined in section **2.3.4**) where, in the opinion of the **decision-maker**, the proposed development may have an adverse impact on the **amenity** of an adjacent property or the **streetscape**.

Where, in the opinion of the **decision-maker**, amended plans reduce the impact of a proposed **development** and/or where they address comments received from submitters, re-advertising is not required.

Notes:

1. *The same consultation procedures outlined in section **2.3.4** should be applied where amended plans are submitted prior to a **decision-maker** determining a proposed **development** that propose a material change to a development which would warrant consultation under section **2.3.2**.*

2. ***Decision-makers** may have consultation requirements under their **local planning framework** that are additional or different to those described above. It is recommended that discussions undertaken at pre-lodgement stage confirm the consultation requirements.*

3.0 Local planning framework

3.1 Function of local planning frameworks

Local planning frameworks may amend, replace and/or augment the **deemed-to-comply** provisions of the R-Codes Volume 1. Decision-makers are encouraged to:

- i. maximise consistency of local planning frameworks with the R-Codes; and
- ii. consider the need for settings that respond to a specific issue related to a locality or region, where this is consistent with the element objectives and **design principles** of the R-Codes.

When preparing and determining local planning frameworks, proponents and decision-makers are to ensure that modifications to the R-Codes are:

- i. warranted due to a specific need identified by the **decision-maker** related to that particular locality or region;
- ii. consistent with the relevant provisions of SPP 7.0 *Design of the Built Environment*;
- iii. consistent with the general objectives of the R-Codes Volume 1, as well as the section objectives and the **design principles** of Part B and C (as applicable);
- iv. able to be properly implemented and audited by the decision-maker as part of the ongoing **building** approval process; and
- v. consistent with orderly and proper planning.

Local planning framework instruments that may amend, replace and/or augment provisions of the R-Codes include **schemes, local planning policies, precinct structure plans** and **local development plans**. The provisions of the R-Codes that may be amended, replaced and/or augmented by each type of local planning instrument are identified in section 3.2.

The Explanatory Guidelines provide further detail for additional considerations when modifying **deemed-to-comply** provisions of the R-Codes through a **local planning framework**.

3.2 Ability of local planning frameworks to modify R-Codes

3.2.1 Schemes

Schemes may include clauses that amend, replace, augment and/or exclude any provision of the R-Codes as provided for in the Regulations.

3.2.2 Precinct structure plans

A **precinct structure plan** may amend, replace and/or augment any **deemed-to-comply** provision of the R-Codes, and provide additional requirements relating to **residential development** in order to achieve the objectives and outcomes of State Planning Policy 7.2 *Precinct Design* (SPP 7.2).

3.0 Local planning framework (cont.)

3.2.3 Local planning policies

The R-Codes recognises that there are variations across the State in terms of **local character**, community requirements, climate and the environment. **Local planning policies** may be used to facilitate contextually appropriate design within a local government area.

A local government may adopt a **local planning policy** that amends, replaces and/or augments a **deemed-to-comply** provision of the R-Codes Volume 1 in accordance with **3.2.3a** and **3.2.3b**, subject to satisfying the criteria of **3.1(i)-(v)**.

3.2.3a Modification of the R-Codes through a local planning policy without WAPC approval

i. The following provisions of the R-Codes Volume 1 may be modified without WAPC approval:		ii. In addition to (i), the following provisions of the R-Codes Volume 1 may be modified by local governments located outside of the Perth and Peel regions without WAPC approval:	
Part B	Part C	Part B	Part C
5.1.2 Street setbacks – all clauses	1.2 Trees and landscaping – C1.2.5	5.3.2 Landscaping – C2.2	1.2 Trees and landscaping – all clauses
5.1.3 Lot boundary setbacks – C3.2-3.3	1.4 Water management and conservation – all clauses		2.1 Size and layout of dwellings – C2.1.9
5.1.6 Building height – all clauses	2.1 Size and layout of dwellings – C2.1.8		2.6 Outbuildings – all clauses
5.2.1 Setback of garages and carports – all clauses	2.4 Waste management – all clauses		
5.2.2 Garage width – all clauses	2.5 Utilities – all clauses		
5.2.3 Street surveillance – all clauses	3.3 Street setbacks – all clauses		
5.2.4 Street walls and fences – all clauses	3.4 Lot boundary setbacks – C3.4.4 and C3.4.5		
5.2.5 Sight lines – all clauses	3.5 Site works and retaining walls – all clauses		
5.2.6 Appearance of retained dwelling – all clauses	3.6 Streetscape – all clauses		
5.3.5 Vehicular access – C5.1	3.7 Access – C3.7.1 and C3.7.2		
5.3.7 Site works – all clauses	3.8 Retaining existing dwellings – all clauses		
5.4.3 Outbuildings – all clauses			
5.4.4 External fixtures, utilities and facilities – all clauses			
5.5.2 Aged and dependent persons' dwellings – all clauses			
5.5.3 Single bedroom dwellings – all clauses			

3.2.3b Modification of the R-Codes through a local planning policy with WAPC approval

Notwithstanding clause **3.2.3a**, the local government may, with the approval of the **WAPC**, modify any other **deemed-to-comply** provision of the R-Codes Volume 1.

3.2.3c Local housing objectives

A local government may augment the **design principles** of the R-Codes Volume 1 by providing local housing objectives to guide judgements about the merits of proposals for any aspect of **residential development** covered by this volume that does not meet the requirements, or is not provided for, under the R-Codes Volume 1. Local housing objectives must be consistent with the general objectives of the R-Codes Volume 1.

3.0 Local planning framework (cont.)

3.2.4 Local development plans

Local development plans guide and coordinate **development** outcomes that are appropriate to **site** context and identified development opportunities and constraints. As an instrument to principally coordinate development within a defined area, local development plans should not be used for the sole purpose of amending or replacing a **deemed-to-comply** provision(s) of the R-Codes.

A local government may adopt a **local development plan** that amends, replaces and/or augments a **deemed-to-comply** provision of the R-Codes Volume 1 in accordance with **3.2.4a** and **3.2.4b**, subject to satisfying the criteria of **3.1(i)-(v)**.

3.2.4a Modification of the R-Codes through a local development plan without WAPC approval

i. The following provisions of the R-Codes Volume 1 may be modified without WAPC approval:		ii. In addition to (i), the following provisions of the R-Codes Volume 1 may be modified by local governments located outside of Perth and Peel regions without WAPC approval:	
Part B	Part C	Part B	Part C
5.1.2 Street setbacks – all clauses	1.4 Water management and conservation – all clauses	<i>No additional</i>	2.1 Size and layout of dwellings – C2.1.9
5.1.3 Lot boundary setbacks – all clauses	2.1 Size and layout of dwellings – C2.1.8		
5.1.6 Building height – all clauses	2.4 Waste management – all clauses		
5.2.1 Setback of garages and carports – all clauses	2.5 Utilities – all clauses		
5.2.2 Garage width – all clauses	3.3 Street setbacks – all clauses		
5.2.3 Street surveillance – all clauses	3.4 Lot boundary setbacks – All clauses		
5.2.4 Street walls and fences – all clauses	3.5 Site works and retaining walls – all clauses		
5.2.5 Sight lines – all clauses	3.6 Streetscape – C3.6.1, C3.6.2, C3.6.3, C3.6.4, C3.6.6, C3.6.7, C3.6.8, C3.6.9		
5.2.6 Appearance of retained dwelling – all clauses	3.7 Access – C3.7.1 and C3.7.2		
5.3.5 Vehicular access – C5.1	3.9 Solar access for adjoining sites – all clauses		
5.3.7 Site works – all clauses	3.10 Visual privacy – all clauses		
5.4.3 Outbuildings – all clauses			
5.4.4 External fixtures, utilities and facilities – all clauses			
5.5.2 Aged and dependent persons' dwellings – all clauses			
5.5.3 Single bedroom dwellings – all clauses			

3.2.4b Modification of the R-Codes through a local development plan with WAPC approval

Notwithstanding clause **3.2.4a**, the local government may, with the approval of the **WAPC**, modify any other **deemed-to-comply** provision of the R-Codes Volume 1.

4.0 Special transitional arrangements (Part C only)

This section will cease to have effect from 10 April 2026, being 24 months after the gazettal date of the R-Codes Volume 1.

Certain **residential developments** and certain local planning instruments are subject to a special transition period and special transitional provisions for a duration of 24 months following the gazettal date of the R-Codes Volume 1.

4.1 Special transitional provisions for certain developments (Part C only)

These special transitional **deemed-to-comply** requirements will cease to have effect beyond the conclusion of the special transition period.

4.1.1 Structure plan and local development plan areas

For a **single house development** proposed on a **lot** that is subject to a **structure plan** (now referred to as a **standard structure plan**) and/or **local development plan** approved prior to the gazettal date of the R-Codes Volume 1, some **deemed-to-comply** provisions in Part C, Sections 1, 2 and 3 of the R-Codes Volume 1 are substituted with the special transitional deemed-to-comply provisions in Part C, Section 4 or are not required to be met, in accordance with **Table 4.1a**, for a period of 24 months following the gazettal date of the R-Codes Volume 1. All other design elements remain applicable.

4.1.2 Single houses and grouped dwellings

For **single house** and **grouped dwelling development** subject to Part C, Element 3.1 – *Site cover* is substituted with the special transitional **deemed-to-comply** provisions in Part C, Section 5 in accordance with **Table 4.1b**, for a period of 24 months following the gazettal date of the R-Codes Volume 1. All other design elements remain applicable.

Table 4.1a Special transitional provisions for single house development subject to a structure plan and/or local development plan only

Design Element	Standard deemed-to-comply requirement (Part C, Sections 1,2,3)	Special transitional deemed-to-comply requirement (Part C, Section 4)
1.1 Private open space	C1.1.1	C4.1.1
1.2 Trees and landscaping	C1.2.1	Not required to be met
	C1.2.2	C4.2.1
	C1.2.4	
	C1.2.6	Not applicable
2.1 Size and layout of dwellings	C2.1.1	Not required to be met
	C2.1.2	C4.3.1
	C2.1.4	Not required to be met
	C2.1.5	Not required to be met
	C2.1.9	Not required to be met
	C2.1.10	Not applicable
2.2 Solar access and ventilation	C2.2.1-C2.2.4	Not required to be met
3.1 Site cover	C3.1.1	Not required to be met, where the local planning framework includes a requirement for open space. Otherwise as per 5.1.1
3.6 Streetscape	C3.6.3	Not required to be met

Table 4.1b Special transitional provisions for single house and grouped dwelling development in Part C

Design Element	Standard deemed-to-comply requirement (Part C, Sections 1,2,3)	Special transitional deemed-to-comply requirement (Part C, Section 5)
3.1 Site cover	C3.1.1	C5.1.1

4.0 Special transitional arrangements (Part C only) (cont.)

4.2 Local planning framework transitional arrangements

Local planning instruments (or portions of) that apply to Part C **residential development**, are subject to a special transitional arrangement. Note that this will also affect any local planning instruments created under the previous R-Codes Volume 2 (2019) that applied to apartments in R40-R60 areas.

Local planning instruments (or portions of) that apply to Part B **residential development**, are not impacted.

Local planning instruments (or portions of) that apply to development subject to the R-Codes Volume 2 are not impacted.

4.2.1 Special transition period for existing local planning policies

4.2.1a Existing local planning policies

A properly adopted **local planning policy** that was operational prior to gazettal of the R-Codes Volume 1 will continue to have the effect of amending, replacing and/or augmenting the **deemed-to-comply** provisions of the R-Codes Volume 1 until the conclusion of the special transition period being 24 months from the gazettal date of the R-Codes Volume 1. At the conclusion of the special transition period, the deemed-to-comply provisions of the R-Codes Volume 1 will prevail.

4.2.1b Continuation of existing local planning policies (beyond the conclusion of the special transition period)

Where it is intended that the provisions of a properly adopted **local planning policy** continue to have the effect of amending, replacing and/or augmenting the **deemed-to-comply** provisions of the R-Codes Volume 1 beyond the conclusion of the special transition period (24 months), the local government will need to make necessary modifications to the local planning policy before adopting it and where required (as set out in Section 3.2.3), obtaining **WAPC** approval.

Prior to adoption, the local government should also review the **local planning policy** in the context of the revised policy outcomes envisaged by the review of the R-Codes as articulated through the objectives and **design principles** and consider whether the local planning policy is still required or can be revoked.

Where an amended or new **local planning policy** modifies a **deemed-to-comply** provision that is already substituted or not required to be met in accordance with Part A, section 4.1, the R-Codes Volume 1 deemed-to-comply provisions in Part C, section 4 will prevail for an application entitled to the special transitional provision.

4.2.2 Transitional arrangements for existing structure plans, activity centre plans and local development plans

4.2.2a Transitional arrangements for structure plans

A properly adopted **structure plan** approved by the **WAPC** that amends, replaces and/or augments a **deemed-to-comply** provision of the R-Codes Volume 1, continues to have the effect of amending, replacing and/or augmenting the deemed-to-comply provisions of the R-Codes Volume 1 until the expiration of the approval period for that structure plan.

4.2.2b Transitional arrangements for precinct structure/activity centre plans

A properly adopted **activity centre** plan approved by the **WAPC** prior to the gazettal date of the R-Codes Volume 1 and that amends, replaces and/or augments a **deemed-to-comply** provision of the R-Codes Volume 1, continues to have the effect of amending, replacing and/or augmenting the deemed-to-comply provisions of the R-Codes Volume 1 until the expiration of the approval period for that structure plan.

4.2.2c Transitional arrangements for local development plans

A properly adopted **local development plan** that came into effect prior to the gazettal date of the R-Codes Volume 1 and that amends, replaces or augments a **deemed-to-comply** provision of the R-Codes Volume 1, continues to have the effect of amending, replacing and/or augmenting the deemed-to-comply provisions of the R-Codes Volume 1 until the expiration of the approval period for that local development plan.

4.2.2d Transitional arrangements for open space requirements for Part C

Notwithstanding 4.2.2a-c, where a **structure plan**, **activity centre** plan or **local development plan** approved prior to the gazettal of the R-Codes Volume 1 amends, replaces and/or augments a **deemed-to-comply** provision for **open space** relating to design element 5.1.4 of the previous version of the R-Codes Volume 1 (gazetted 2 July 2021), that provision within that instrument will continue to have effect for **single houses** and **grouped dwellings** until the conclusion of the special transition period. Following the conclusion of the special transition period, the R-Codes Volume 1, Part C, design element 3.1 *Site Cover* will prevail to the extent of any inconsistency.

During the special transition period, where a **development** does not meet the **deemed-to-comply** provision for **open space** under the relevant instrument, the **decision-maker** should have due regard to the **design principles** for Part C, Section 5.1 – *Open Space – special transitional provisions*.

PART B

5.1	CONTEXT	13
5.2	STREETSCAPE	20
5.3	SITE PLANNING AND DESIGN	25
5.4	BUILDING DESIGN	34
5.5	SPECIAL PURPOSE DWELLINGS	39
	TABLES	45
	FIGURES	48

5.1 CONTEXT

OBJECTIVES

- A** To ensure **residential development** meets community expectations regarding appearance, use and density.
- B** To ensure designs respond to the natural and built features of the local context and, in the case of precincts undergoing transition, the desired future character as stated in the **local planning framework**.
- C** To ensure adequate provision of **sunlight** and **natural ventilation** for **buildings** and to limit the impacts of building bulk, overlooking, and overshadowing on **adjoining properties**.
- D** To ensure **open space** (private and communal) is provided on **site** that:
- is **landscaped** to enhance **streetscapes**;
 - complements nearby **buildings**; and
 - provides privacy, **sunlight** and recreational opportunities.
- E** To ensure that design and **development** is appropriately scaled, particularly in respect to bulk and height, and is sympathetic to the scale of the **street** and surrounding **buildings**, or in precincts undergoing transition, development achieves the desired future character identified in **local planning framework**.

5.1.2 Street setback
5.1.3 Lot boundary setbacks
5.1.4 Open space

5.1.5 Communal open space
5.1.6 Building height

5.1.1 Site Area

Clause 5.1.1 Site Area deleted and replaced by Part D, 1.1 Site Area by amendment dated 10 April 2024.

5.1.2 Street setback

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P2.1 Buildings set back from **street boundaries** an appropriate distance to ensure they:

- contribute to, and are consistent with, an established **streetscape**;
- provide adequate privacy and **open space** for **dwellings**;
- accommodate **site** planning requirements such as parking, **landscape** and **utilities**; and
- allow safety clearances for easements for essential service corridors.

P2.2 Buildings mass and form that:

- uses design features to affect the size and scale of the building;
- uses appropriate **minor projections** that do not detract from the character of the **streetscape**;
- minimises the proportion of the façade at ground level taken up by building services, vehicle entries and parking supply, blank walls, servicing infrastructure access and meters and the like; and
- positively contributes to the prevailing or future **development** context and streetscape as outlined in the **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C2.1 Buildings, excluding **carports, porches, balconies, verandahs**, or equivalent, set back from the **primary street boundary**:

- i. in accordance with **Table B**;
- ii. corresponding to the average of the **setback** of existing **dwellings** on each adjacent property fronting the same **street**;
- iii. reduced by up to 50 per cent provided that the area of any building, including a **garage** encroaching into the setback area, is compensated for by at least an equal area of **open space** that is located between the **street setback line** and a line drawn parallel to it at twice the setback distance (refer **Figure 2a** and **2c**);
- iv. in the case of areas coded R15 or higher, the **street setback** may be reduced to 2.5m, or 1.5m to a **porch, balcony, verandah** or the equivalent (refer **Figure 2e**), where:
 - a **grouped dwelling** has its main frontage to a **secondary street**; or
 - a **single house** results from subdivision of an original corner lot and has its frontage to the original secondary street; or
 - a single house or grouped dwelling (where that grouped dwelling is not adjacent to the **primary street**), has its main frontage to a **communal street, right-of-way** or shared pedestrian or vehicle access way (**Figure 2d**); and
- v. to provide for registered easements for essential services.

C2.2 Buildings set back from the **secondary street boundary** in accordance with **Table B**.

C2.3 Buildings set back from the corner truncation boundary in accordance with the **secondary street setback** in **Table B**.

C2.4 A **porch, verandah, unenclosed balcony** or the equivalent may (subject to the **NCC**) project forward of the **primary street setback line** to a maximum of half the required primary street setback without applying the compensating area of clause 5.2.1 **C2.1(iii)** (Refer **Figure 2e**).

5.1.3 Lot boundary setbacks

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.1** Buildings set back from **lot boundaries** or adjacent buildings on the same lot so as to:
- reduce impacts of building bulk on **adjoining properties**;
 - provide adequate **sunlight** and **ventilation** to the building and **open spaces** on the **site** and adjoining properties; and
 - minimise the extent of overlooking and resultant loss of privacy on adjoining properties.
- P3.2** Buildings built up to **boundaries** (other than the **street boundary**) where this:
- makes more effective use of space for enhanced privacy for the occupant/s or **outdoor living areas**;
 - does not compromise the **design principle** contained in clause 5.1.3 **P3.1**;
 - does not have any adverse impact on the **amenity** of the **adjoining property**;
 - ensures **sunlight** to **major openings** to **habitable rooms** and **outdoor living areas** for adjoining properties is not restricted; and
 - positively contributes to the prevailing or future **development** context and **streetscape** as outlined in the **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.1** Buildings which are set back in accordance with the following provisions, subject to any additional measures in other elements of the R-Codes:
- i. buildings set back from **lot boundaries** in accordance with **Table B** and **Tables 2a** and **2b** (refer to **Figure Series 3** and **4**);
 - ii. for **carports**, **patios**, **verandahs** or equivalent structures, the lot boundary **setbacks** in **Table B** and **Tables 2a** and **2b** may be reduced to nil to the posts where the structure*:
 - is not more than 10m in length and 2.7m in height;
 - is located behind the **primary street setback**; and
 - has eaves, gutters and roofs set back at least 450mm from the lot boundary;
 - iii. **unenclosed** areas accessible for use as **outdoor living areas**, elevated 0.5m or more above **natural ground level**, set back in accordance with **Table 2b** as though they have a **wall** height of 2.4m above the floor level;
 - iv. separate **single house**, **grouped** or **multiple dwelling buildings** on the same **lot**, or facing portions of the same multiple dwelling building, set back from each other as though there were a lot boundary between them;
 - v. **minor projections** such as a chimney, eaves overhang, or other architectural feature, not projecting more than 0.75m into a setback area; and
 - vi. the stated setback distances may be reduced by half the width of an adjoining **right-of-way**, **pedestrian access way**, **communal street** or **battleaxe lot** access leg, to a maximum reduction of 2m (refer to **Figure 4f**).

*Note: Pillars and posts with a horizontal dimension of 450mm by 450mm, or less, do not constitute a **boundary wall**.*

*Note: *There are separate building code requirements which may also apply.*

5.1.3 Lot boundary setbacks (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.2 Boundary walls may be built behind the **street setback** (specified in **Table B** and in accordance with clauses **5.1.2** and **5.2.1**), within the following limits and subject to the overshadowing provisions of clause **5.4.2** and **Figure Series 11**:

- i. where the **wall** abuts an existing or simultaneously constructed boundary wall of equal or greater dimension; or
- ii. in areas coded R20 and R25, walls not higher than 3.5m, up to a maximum length of the greater of 9m or one-third the length of the balance of the **site** boundary behind the front setback, to up to two site boundaries; or
- iii. in areas coded R30 to R40, walls not higher than 3.5m for two-thirds the length of the balance of the site boundary behind the front setback, to up to two site boundaries; or
- iv. where both the subject site and the affected adjoining site are created in a plan of subdivision submitted concurrently for the proposed **development**, and the boundary walls are interfacing and of equal dimension.

(Refer **Figure Series 5**)

C3.3 Where the subject **site** and an affected adjoining site are subject to a different density code, in accordance with clause 5.1.3 **C3.2**, the length and height of the **boundary wall** on the boundary between them is determined by reference to the lower density code.

C3.4 Where **boundary walls** and retaining walls are proposed concurrently and the boundary wall is located immediately above the retaining wall:

- i. clause 5.3.7 does not apply; and
- ii. the **boundary wall height** is to include the height of the retaining wall for the purpose of clause 5.1.3 **C3.2**, with the exception of a retaining wall approved through a plan of subdivision.

*Note: Retaining walls do not constitute **boundary walls** for the purpose of this clause. **Setbacks** for retaining walls are to be calculated in accordance with clause 5.3.7.*

5.1.4 Open space

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P4 Development incorporates suitable **open space** for its context to:

- reflect the existing and/or desired **streetscape** character or as outlined under the **local planning framework**;
- provide access to **sunlight** for the **dwelling**;
- reduce **building** bulk on the **site**, consistent with the expectations of the applicable density code and/or as outlined in the local planning framework;
- provide an attractive setting for the buildings, **landscape**, vegetation and streetscape;
- provide opportunities for residents to use space external to the dwelling for outdoor pursuits and access within/around the site; and
- provide space for **utilities** and essential facilities.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C4 **Open space** provided in accordance with **Table B** (refer **Figure Series 6**). The site of the **grouped dwelling**, for the purpose of calculating the open space requirement, shall include the area allocated for the exclusive use of that **dwelling** and the proportionate share of any associated **common property**.

5.1.5 Communal open space

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P5.1 **Communal open space** associated with **grouped dwellings** is provided for residents' exclusive use.

P5.2 The location and function of **communal open space** provides privacy to users and surrounding dwellings.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C5 Where **communal open space** is provided as **common property** in a **grouped dwelling development**, the **open space** required for any grouped dwelling having legal and direct physical access to that open space may be reduced by up to 20 per cent of the required open space area provided that:

- i. the aggregate of deducted area does not exceed the area of communal open space; and
- ii. the **outdoor living area** for any **dwelling** is not reduced in area.

5.1.6 Building height

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P6** Building height that creates no adverse impact on the **amenity** of **adjoining properties** or the **streetscape**, including road reserves and public open space reserves; and where appropriate maintains:
- adequate access to **sunlight** into **buildings** and appurtenant **open spaces**;
 - adequate **daylight** to **major openings** into **habitable rooms**; and
 - access to views of significance.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C6** Buildings which comply with **Table 3** for category B area buildings, except where stated otherwise in the **scheme**, the relevant **local planning policy**, **structure plan** or **local development plan** (refer **Figure Series 7**).

5.2 STREETSCAPE

OBJECTIVES

- A** To contribute towards the character of **streetscapes** including their views and vistas and provides security for occupants and passers-by, a **landscape** to ensure adequate shade, privacy and **open space** for occupants, and an attractive setting for the collection of **buildings**.

5.2.1 Setback of carports and garages
5.2.2 Garage width
5.2.3 Street surveillance

5.2.4 Street walls and fences
5.2.5 Sightlines
5.2.6 Appearance of retained dwelling

5.2.1 Setback of carports and garages

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P1.1** Carports and garages set back to maintain clear sightlines along the **street**, to not obstruct views of **dwellings** from the street and vice versa, and designed to contribute positively to **streetscapes** and to the appearance of dwellings.
- P1.2** Garages and/or carports set back to ensure any vehicle parking on a **driveway** does not impede on any existing or planned adjoining pedestrian, cycle or dual-use path.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C1.1** Garages set back 4.5m from the **primary street** except that the setback may be reduced:
- in accordance with **Figure 8b** where the garage adjoins a **dwelling** provided the garage is at least 0.5m behind the dwelling alignment (excluding any **porch**, **verandah** or **balcony**); or
 - to 3m where the garage allows vehicles to be parked parallel to the **street**. The **wall** parallel to the street must include openings.
- C1.2** Carports set back in accordance with the **primary street setback** requirements of clause 5.1.2 **C2.1(i)**, except that the setback may be reduced by up to 50 per cent of the minimum setback stated in **Table B** where:
- the width of the carport does not exceed 60 per cent of the **frontage**;
 - the construction allows an unobstructed view between the **dwelling** and the **street**, **right-of-way** or equivalent; and
 - the carport roof pitch, colours and materials are compatible with the dwelling.
- (Refer to **Figure 8a**)
- C1.3** Garages and carports built up to the boundary abutting a **communal street** or **right-of-way** which is not the **primary** or **secondary street boundary** for the **dwelling**, with manoeuvring space of at least 6m, located immediately in front of the opening to the garage or carport and permanently available.
- C1.4** Garages and carports set back 1.5m from a **secondary street**.

5.2.2 Garage width

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2** Visual connectivity between the **dwelling** and the **streetscape** should be maintained and the effect of the **garage** door on the streetscape should be minimised whereby the streetscape is not dominated by garage doors.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2** A **garage** door and its supporting structures (or a **garage wall** where a garage is aligned parallel to the **street**) facing the **primary street** is not to occupy more than 50 per cent of the **frontage** at the **setback line** as viewed from the street (refer **Figure 8c**). This may be increased up to 60 per cent where an upper floor or **balcony** extends for more than half the width of the garage and its supporting structures (or a garage wall where a garage is aligned parallel to the street) and the entrance to the **dwelling** is clearly visible from the primary street.

5.2.3 Street surveillance

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3** **Buildings** designed to provide for **passive surveillance** between individual **dwellings** and the **street** and between common areas and the street, which minimise opportunities for concealment and entrapment.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.1** The **street** elevation(s) of the **dwelling** to address the street with clearly definable entry points visible and accessed from the street.
- C3.2** At least one **major opening** from a **habitable room** of the **dwelling** faces the **street** and the pedestrian or vehicular approach to the dwelling.
- C3.3** For **battleaxe lots** or sites with internal **driveway** access, at least one **major opening** from a **habitable room** of the **dwelling** faces the approach to the dwelling.

5.2.4 Street walls and fences

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P4** Front fences are low or restricted in height to permit **passive surveillance** (as per clause 5.2.3) and enhance **streetscape** (as per clause 5.1.2), with appropriate consideration to the need:
- for attenuation of traffic impacts where the **street** is designated as a primary or district distributor or integrator arterial; and
 - for necessary privacy or noise **screening** for **outdoor living areas** where the street is designated as a primary or district distributor or integrator arterial.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C4.1** Front fences within the **primary street setback area** that are **visually permeable** above 1.2m of **natural ground level**, measured from the primary street side of the front fence (refer **Figure 12**).
- C4.2** Solid pillars that form part of front fences not more than 1.8m above **natural ground level** provided the horizontal dimension of the pillars is not greater than 400mm by 400mm and pillars are separated by **visually permeable** fencing in line with **C4.1** (refer **Figure 12**).

5.2.5 Sightlines

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P5** Unobstructed **sightlines** provided at vehicle access points to ensure safety and visibility along vehicle access ways, **streets, rights-of-way, communal streets, crossovers**, and footpaths.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C5** **Walls, fences** and other structures truncated or reduced to no higher than 0.75m within 1.5m of where walls, fences, or other structures adjoin:
- i. a **driveway** that intersects a **street, right-of-way** or **communal street**;
 - ii. a right-of-way or communal street that intersects a public street; and
 - iii. two streets that intersect. (refer **Figure 9a**).

5.2.6 Appearance of retained dwelling

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P6 Dwellings retained as part of a **grouped** or **multiple dwelling development**, dwelling extension or redevelopment are to:

- enhance the **streetscape** appearance of the existing dwelling(s) retained; or
- complement established or future built form in the locality as specified within the relevant **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C6 Where an existing **dwelling** is retained as part of a **grouped dwelling development**, the appearance of the retained dwelling is upgraded externally to an equivalent maintenance standard of the new (or the rest of) the development.

5.3 SITE PLANNING AND DESIGN

OBJECTIVES

- A** **Landscape** design should optimise function, useability, privacy, social opportunity, equitable access, respect neighbours' **amenity** and provide for practical establishment and maintenance.
- B** To ensure access to housing provides for security, safety, **amenity** and legibility to on-site car parking areas and footpaths for residents and visitors.
- C** To ensure each **development** makes a contribution to a **streetscape** by respecting the natural topography for each **site**, **adjoining properties** and the **amenity** of the locality.
- D** To reduce the economic, environmental and social impacts associated with site works to facilitate housing **development** (e.g. via soil disturbance, groundwater impact and water use for dust suppression).

5.3.1 Outdoor living areas

5.3.2 Landscaping

5.3.3 Parking

5.3.4 Design of car parking spaces

5.3.5 Vehicular access

5.3.6 Pedestrian access

5.3.7 Siteworks

5.3.9 Stormwater management

5.3.1 Outdoor living areas

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P1.1** A consolidated **outdoor living area** is provided to each **single house** and **grouped dwelling** which provides space for entertaining, leisure and connection to the outdoors that is:
- of sufficient size and dimension to be functional and usable;
 - capable of use in conjunction with a **primary living space** of the **dwelling**;
 - sufficient in uncovered area to allow for **winter solar gain** and **natural ventilation** into the dwelling;
 - sufficient in uncovered area to provide for **landscaping**, including the planting of a tree(s); and
 - optimises use of the northern aspect of the **site**.
- P1.2** **Multiple dwellings** to be designed to have direct access to a **balcony**, **courtyard** or equivalent **outdoor living area** that:
- i. is of sufficient size to be used by the intended number of **dwelling** occupants;
 - ii. is sited, oriented and designed for occupant **amenity**, including consideration of **solar access** and **natural ventilation** appropriate to the climatic region; and
 - iii. is capable of being used in conjunction with the **primary living space**.
- P1.3** Where provided within the **street setback area**, the **outdoor living area** to a **single house** or **grouped dwelling**:
- achieves the **design principles** of clause 5.3.1 **P1.1**
 - is designed to facilitate **street** surveillance between the **dwelling** and the street; and
 - minimises the use of visually impermeable or solid front fences above 1.2m in height.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C1.1** An **outdoor living area** to be provided:
- i. in accordance with **Table B**;
 - ii. behind the **street setback area**;
 - iii. directly accessible from the **primary living space** of the **dwelling**;
 - iv. with a minimum length and width dimension of 4m; and
 - v. with at least two-thirds of the required area without permanent roof cover.
- (Refer **Figure 13**).
- C1.2** Each **multiple dwelling** is provided with at least one **balcony** or the equivalent, opening directly from the **primary living space** and with a minimum area of 10m² and minimum dimension of 2.4m.

*Note: Minimum dimension refers to the minimum length and width of all areas that contribute to the **outdoor living area** or **balcony** (or equivalent) space.*

5.3.2 Landscaping

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P2 Landscaping of open spaces that:

- contribute to the appearance and **amenity** of the **development** for the residents;
- contribute to the **streetscape**;
- enhance security and safety for residents;
- contribute to positive local microclimates, including provision of shade and **solar access** as appropriate; and
- retains existing trees and/or provides new trees to maintain and enhance the tree canopy and local **sense of place**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C2.1 Landscaping of grouped and multiple dwelling common property and communal open spaces in accordance with the following:

- the **street setback area** developed without car parking, except for visitors' bays;
- pedestrian access providing wheelchair accessibility connecting entries to all ground floor **buildings** with the public footpath and car parking areas;
- one tree to provide shade for every four uncovered car parking spaces (in addition to the trees required in **C2.2**), with the total number of trees to be rounded up to the nearest whole number;
- lighting to pathways, and communal open space and car parking areas;
- bin storage areas conveniently located and **screened** from view;
- trees which are greater than 3m in height shall be retained, in communal open space which is provided for the **development**;
- adequate **sightlines** for pedestrians and vehicles;
- clear line of sight between areas designated as communal open space and at least two **habitable room** windows; and
- clothes drying areas which are secure and screened from view.

C2.2 Landscaping of single houses, grouped dwellings and multiple dwellings to include the following:

- the minimum number of trees and associated planting areas in the table below; and
- landscaping of the **street setback area**, with not more than 50 per cent of this area to consist of **impervious surfaces**.

Dwelling type		Minimum tree requirement	Minimum tree planting area
Single house and grouped dwelling (per tree area)		1 tree	2x2m
Multiple dwelling (trees per site)	Less than 700m ²	2 trees	
	700-1000m ²	3 trees	
	Greater than 1000m ²	4 trees	

Note:

*i. The minimum tree planting area is to be provided for each tree and shown on the **site** plan that is submitted with the application*

ii. The tree planting area is to be free of impervious surfaces and roof cover.

5.3.3 Parking

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.1** Adequate car parking is to be provided on **site** in accordance with projected need related to:
- the type, number and size of **dwellings**;
 - the availability of on-**street** and other off-street parking; and
 - the proximity of the proposed **development** to public transport and other facilities.
- P3.2** Consideration may be given to a reduction in the minimum number of on-**site** car parking spaces for **grouped** and **multiple dwellings** provided:
- available **street** parking in the vicinity is controlled by the local government; and
 - the **decision-maker** is of the opinion that a sufficient equivalent number of on-street spaces are available near the **development**.
- P3.3** Some or all of the required car parking spaces located off **site**, provided that these spaces will meet the following:
- the off-site car parking area is sufficiently close to the **development** and convenient for use by residents and/or visitors;
 - any increase in the number of **dwellings** or possible **plot ratio** being matched by a corresponding increase in the aggregate number of car parking spaces;
 - permanent legal right of access being established for all users and occupiers of dwellings for which the respective car parking space is to be provided; and
 - where off-site car parking is shared with other uses, the total aggregate parking requirement for all such uses, as required by the R-Codes and the **scheme** being provided. The number of required spaces may only be reduced by up to 15 per cent where the non-residential parking occurs substantially between 9am and 5pm on weekdays.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.1** The following minimum number of on-**site** car parking spaces is to be provided for each **single house, grouped dwelling** and **special purpose dwelling** comprising the following number of bedrooms:

Type of dwelling	Car parking spaces	
	Location A	Location B
1 bedroom	1	1
2+ bedroom dwelling	1	2
Aged persons' dwelling, accessible dwelling or small dwelling	1	1
Ancillary dwelling	Nil	1

Location A - includes all land located within:

- 800m **walkable catchment** of a train station on a **high frequency** rail route
- 250m walkable catchment of a transit stop:
 - on a high frequency transit route; or
 - that has multiple transit routes, that when combined stop every 15 minutes during weekday peak periods (7am – 9am and 5pm – 7pm).

Location B - includes all land that is not within Location A.

- C3.2** On-**site** visitors' car parking spaces for **grouped** and **multiple dwelling developments** provided at a rate of one space for each four **dwellings**, or part thereof in excess of four dwellings, served by a common access.

Dwellings	Visitor bays
0-4	Nil
5-8	1
9-12	2
13-16	3
17+	1 additional bay for every 4 dwellings or part thereof

- C3.3** The minimum number of on-**site** car parking spaces is provided for each **multiple dwelling** as follows:

Plot ratio area and type of multiple dwelling	Car parking spaces	
	Location A	Location B
Less than 110m ² and/or 1 or 2 bedrooms	1	1.25
110m ² or greater and or 3 or more bedrooms	1.25	1.5
Visitors car parking spaces (per dwelling)	0.25	0.25

For Location A and Location B guidance, refer to clause 5.3.3 C3.1.

5.3.4 Design of car parking spaces

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P4** Car, cycle and other parking facilities are to be designed and located on **site** to be conveniently accessed, secure, consistent with the **streetscape** and appropriately manage **stormwater** to protect the environment.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C4.1** Car parking spaces and manoeuvring areas designed and provided in accordance with AS2890.1.
- C4.2** Visitor car parking spaces:
- marked and clearly signposted as dedicated for visitor use only, and located close to, or visible from, the point of entry to the **development** and outside any security barrier; and
 - provide an **accessible** path of travel for people with disabilities.
- C4.3** Car parking areas comprising six or more spaces provided with **landscaping** between each six consecutive external car parking spaces to include shade trees.

5.3.5 Vehicular access

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P5.1 Vehicular access provided for each **development site** to provide:

- vehicle access safety;
- reduced impact of access points on the **streetscape**;
- legible access;
- pedestrian safety;
- minimal **crossovers**; and
- high quality **landscaping** features.

P5.2 **Development** with potential to be subdivided to create 20 or more **green title lots, strata lots or survey strata lots** provides legible internal and external connections to the surrounding road network, accommodates traffic movement and volume, visitor parking, pedestrian access, **street** shade trees, **utility** services and access for waste collection and emergency service vehicles.

AS2890.1 - Prohibited locations of access driveways

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C5.1 Access to on-site car parking spaces to be provided:

- where available, from a **communal street** or **right-of-way** available for lawful use to access the relevant site and which is adequately paved and drained from the property boundary to a constructed **street**; or
- from a **secondary street** where no right-of-way or communal street exists; or
- from the **primary street frontage** where no secondary street, right-of way, or communal street exists.

C5.2 Driveways to **primary** or **secondary street** provided as follows:

- driveways serving four **dwellings** or less not narrower than 3m at the **street boundary**;
- no driveway wider than 6m at the street boundary and driveways in aggregate no greater than 9m for any one property.

C5.3 Driveways shall be:

- no closer than 0.5m from a side **lot boundary** or **street** pole;
- no closer than 6m to a street corner as required under AS2890.1;
- aligned at right angles to the street alignment;
- located so as to avoid street trees, or, where this is unavoidable, the street trees replaced at the applicant's expense or replanting arrangements to be approved by the **decision-maker**; and
- adequately paved and drained.

C5.4 Driveways designed for two way access to allow for vehicles to enter the **street** in forward gear where:

- the driveway serves five or more **dwellings**;
- the distance from an on-site car parking space to the street is 15m or more; or
- the street to which it connects is designated as a primary distributor or integrator arterial road.

C5.5 Driveways for **multiple** and **grouped dwellings** where the number of **dwellings** is five or more, shall be:

- a minimum width of 4m; and
- designed to allow vehicles to pass in opposite directions at one or more points.

C5.6 Driveways designed for **multiple** and **grouped dwellings** may be reduced to no less than 3m where it is necessary to retain an existing **dwelling** and a passing bay or similar is provided.

C5.7 Where any proposed **development** has potential to be subdivided to create 20 or more **green title lots, strata lots or survey strata lots**, with each of these lots obtaining **driveway** access from a **communal street**, a minimum total width of 12 metres is required for the communal street which includes a paved vehicular carriageway with a minimum width of 5.5 metres and a pedestrian path as required by clause 5.3.6.

Notes

- 1 Access to domestic driveways are excluded from the prohibition in respect of the kerb section marked Y-Y (see clause 3.2.3(a))
- 2 The points marked X₁ and X are respectively at the median end on a divided road and at the intersection of the main road centre-line and the extensions of the side road property lines shown as dotted lines, on an undivided road. On a divided road, dimension Y-Y extends to point Y₁.

5.3.6 Pedestrian access

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P6** Legible, safe, and direct access for pedestrians to move between communal car parking areas or public **streets** and individual **dwellings**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C6.1** Where a group of 10 or more **dwellings** is served by a **communal street**, between a public **street** or a communal car parking area and individual dwellings; a minimum 1.2m wide pedestrian path, separate from the vehicular access, is provided and designed according to AS1428.1.
- C6.2** Where a **communal street** serves more than two **dwellings** and is shared by pedestrians and vehicles, the configuration of the pedestrian and vehicular routes is to provide clear **sightlines**, adequate lighting and paving surfaces to slow traffic to ensure pedestrian safety.
- C6.3** A **communal street** or pedestrian path is to be no closer than 2.5m to any **wall** with a **major opening** unless privacy **screening** is provided to the communal street or pedestrian path.
- C6.4** For **multiple dwellings** with only stair access, staircases are designed to access no more than two **dwellings** per floor level and the stairs, landings and **porches** are to be protected from the weather.
- C6.5** Pedestrian paths provided as required by clause 5.3.2 **C2(ii)**.

5.3.7 Site works

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P7.1** Development that considers and responds to the natural features of the **site** and requires minimal excavation/fill.
- P7.2** Where excavation/fill is necessary, all finished levels respecting the **natural ground level** at the **lot boundary** of the **site** and as viewed from the **street**.
- P7.3** Retaining **walls** that result in land which can be effectively used for the benefit of residents and do not detrimentally affect **adjoining properties** and are designed, engineered and **landscaped** having due regard to clause 5.4.1.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C7.1** Retaining **walls**, fill and excavation between the **street boundary** and the **street setback**, not more than 0.5m above or below the **natural ground level**, except where necessary to provide for pedestrian, **universal** and/or vehicle **access**, drainage works or natural light to a **dwelling**.
- C7.2** Retaining **walls**, fill and excavation within the **site** and behind the required **street setback** to comply with **Table 4**.

Table 4 Setback of site works and retaining walls

Height of site works and/or retaining walls	Required minimum setback
0.5m or less	0m
1m	1m
1.5m	1.5m
2m	2m
2.5m	2.5m
3m	3m

Notes:

- i. Take the nearest higher value for all height and length calculations.
- ii. Measurement of the height of **site** works or retaining **walls** for the purpose of calculating **Table 4** setback is to be taken from the **natural ground level** at the **lot boundary** adjacent to that point of the site works or retaining wall.
- iii. Visual privacy provisions under clause 5.4.1 and overshadowing provisions under clause 5.4.2 apply.
- iv. Where a **boundary wall** incorporates a retaining **wall** directly beneath the boundary wall, the retaining wall does not require assessment under clause 5.3.7 and is to be included in the **wall height** for the purpose of clause 5.1.3.
- C7.3** Subject to subclause **C7.2** above, all excavation or filling behind a **street setback line** and within 1m of a **lot boundary**, not more than 0.5m above the **natural ground level** at the lot boundary except where otherwise stated in the **scheme**, **local planning policy**, **structure plan** or **local development plan**.

Clause 5.3.8 Retaining walls deleted by amendment dated 2/7/2021

5.3.9 Stormwater management

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P9.1** Stormwater is managed on **site** wherever possible either by containment or infiltration, as permitted by the soil and other site conditions and which reduce the export of nutrients and sediments from the site into waterways or otherwise appropriately managed prior to off-site discharge.
- P9.2** Encourage the recovery and reuse of **stormwater** for non-potable water applications using integrated design and fit-for-purpose water applications.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C9** All water draining from roofs, **driveways, communal streets** and other impermeable surfaces shall be directed to garden areas, sumps or rainwater tanks within the **development site** where climatic and soil conditions allow for the effective retention of **stormwater on site**.

5.4 BUILDING DESIGN

OBJECTIVES

- A** To design **buildings** and **landscape** to minimise adverse impact on the privacy of **adjoining dwellings** and **private open space**.
- B** To optimise comfortable living, access to sunlight and solar energy to facilitate sustainable housing **development** with particular regard for place and local conditions.
- C** To maintain the **amenity** of **streetscapes** and views along the street by ensuring that associated **outbuildings** and other fixtures attached to **buildings** do not detract from the **streetscape** and are not visually intrusive to neighbouring properties or adjoining public spaces.

5.4.1 Visual Privacy
5.4.2 Solar access for adjoining sites
5.4.3 Outbuildings
5.4.4 External fixtures, utilities and facilities

5.4.1 Visual privacy

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P1.1** Minimal direct overlooking of **active habitable spaces** and **outdoor living areas** of adjacent **dwellings** achieved through:
- **building** layout and location;
 - design of **major openings**;
 - **landscape screening** of outdoor active habitable spaces; and/or
 - location of screening devices.
- P1.2** Maximum visual privacy to side and rear boundaries through measures such as:
- offsetting the location of ground and first floor windows so that viewing is oblique rather than direct;
 - **building** to the boundary where appropriate;
 - setting back the first floor from the side boundary;
 - providing higher or opaque and fixed windows; and/or
 - **screen** devices (including **landscaping**, fencing, obscure glazing, timber screens, external blinds, window hoods and shutters).

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C1.1** **Major openings** and outdoor **active habitable spaces**, which have a floor level of more than 0.5m above **natural ground level** and overlook any part of any other residential property behind its **street setback line** are:
- set back, in direct line of sight within the **cone of vision**, from the **lot boundary**, a minimum distance as prescribed in the table below (refer **Figure Series 10**):

Types of habitable rooms / active habitable spaces	Location	
	Setback for area coded R50 or lower	Setback for areas coded higher than R50
Major openings to bedrooms and studies	4.5m	3m
Major openings to habitable rooms other than bedrooms and studies	6m	4.5m
Outdoor active habitable spaces (with a floor level more than 0.5m above natural ground level)	7.5m	6m

or;

- are provided with permanent **screening** to restrict views within the cone of vision from any major opening or an outdoor active habitable space.

- C1.2** **Screening** devices such as obscure glazing, timber screens, external blinds, window hoods and shutters are to be at least 1.6m in height, at least 75 per cent obscure, permanently fixed, made of durable material and restrict view in the direction of overlooking into any **adjoining property**.

Note:

*i. Where the subject **site** and an affected adjoining site are subject to a different R-Code the **setback** distance is determined by reference to the lower density code.*

*ii. Line of sight **setback** distances shall be measured by application of the **cone of vision** set out in **Figure Series 10**.*

*iii. Line of sight **setback** distances include the width of any adjoining **right-of-way**, **communal street** or **battleaxe leg** or the like.*

*iv. These provisions apply to adjoining **sites** only where that land is zoned to allow for **residential development**.*

5.4.2 Solar access for adjoining sites

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.1** Effective **solar access** for the proposed **development** and protection of the solar access.
- P2.2** **Development** designed to protect **solar access** for neighbouring properties taking account the potential to overshadow existing:
- outdoor living areas;
 - north facing **major openings** to **habitable rooms**, within 15 degrees of north in each direction; or
 - roof mounted **solar collectors**.

DEEMED-TO-COMPLY

*Development satisfies the following **deemed-to-comply** requirements (C)*

- C2.1** Notwithstanding the **lot boundary setbacks** in clause 5.1.3, **development** in **climate zones** 4, 5 and 6 of the State shall be so designed that its shadow cast at midday, 21 June, onto any other **adjoining property** does not exceed the following limits:
- on adjoining properties coded R25 and lower – 25 per cent of the **site area**;
 - on adjoining properties coded R30 to R40 inclusive – 35 per cent of the site area;
 - on adjoining properties coded higher than R40 – 50 per cent of the site area.

*Note: With regard to clause 5.4.2 **C2.1**:*

- o *dividing fences of up to 2.0 metres in height do not contribute to overshadowing calculations; and*
- o ***site area** refers to the surface of the adjoining **lot** and is measured without regard to any **building** on it but taking into account its **natural ground level**.*

- C2.2** Where a **development site** shares its southern boundary with a **lot**, and that lot is bound to the north by another lot(s), the limit of shading for the development site set out in clause 5.4.2 **C2.1** shall be reduced proportionate to the percentage of the affected property's northern boundary that the development site abuts (refer to **Figure 11b**).

5.4.3 Outbuildings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3** Outbuildings that do not detract from the streetscape or the visual amenity of residents or neighbouring properties.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3** Outbuildings associated with a dwelling site address either:
- i. the standards for small outbuildings (A. Small outbuilding); or
 - ii. the standards for large and multiple outbuildings (B. Large and multiple outbuildings).

A. Small outbuilding	<ul style="list-style-type: none">i. no more than one outbuilding per dwelling site;ii. has no more than two boundary walls;iii. does not exceed 10m² in areaiv. does not exceed a wall height of 2.7m;v. not located within the primary or secondary street setback area; andvi. does not reduce open space and outdoor living area requirements in Table B.
-----------------------------	---

OR

B. Large and multiple outbuildings	<ul style="list-style-type: none">i. individually or collectively does not exceed 60m² in area or 10 percent in aggregate of the site area, whichever is the lesser;ii. set back in accordance with Table 2a;iii. does not exceed a wall height of 2.4m;iv. does not exceed a ridge height of 4.2m;v. not located within the primary or secondary street setback area; andvi. does not reduce the open space and outdoor living area requirements in Table B.
---	---

Notes:

- i. An outbuilding wall that meets (ii) for small outbuildings does not contribute to the number or dimension of boundary walls under clause 5.1.3.
- ii. An existing outbuilding that meets the development standards for small outbuildings does not need to be set back in accordance with Table 2a for additional outbuildings that are proposed under B. Large and multiple outbuildings.
- iii. There are separate building code requirements that may also apply.

5.4.4 External fixtures, utilities and facilities

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P4.1** Solar collectors, aerials, antennas, satellite dishes, pipes and **utilities** integrated into the design of the **building** to not be visually obtrusive when viewed from the **street** and to protect the visual **amenity** of surrounding properties.
- P4.2** External location of storeroom, rubbish collection/bin areas, and clothes drying areas where these are:
- convenient for residents;
 - rubbish collection areas which can be accessed by service vehicles;
 - **screened** from view; and
 - able to be secured and managed.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C4.1** Solar collectors installed on the roof or other parts of **buildings**.
- C4.2** Television aerials of the standard type, essential plumbing vent pipes above the roof line and external roof water down pipes.
- C4.3** Other **utilities** provided they are:
- i. not visible from the **primary street**;
 - ii. are designed to integrate with the **building**; or
 - iii. are located so as not to be visually obtrusive.
- C4.4** Antennas, satellite dishes and the like not visible from any **primary** and **secondary street**.
- C4.5** An **enclosed**, lockable **storage** area, constructed in a design and material matching the **dwelling** where visible from the **street**, accessible from outside the dwelling, with a minimum dimension of 1.5m when provided external to a **garage** and 1m when provided within a garage and an internal area of at least 4m², for each **grouped dwelling**.
- C4.6** Where rubbish bins are not collected from the **street** immediately adjoining a **dwelling**, there shall be provision of a communal pick-up area or areas which are:
- i. conveniently located for rubbish and recycling pick-up;
 - ii. accessible to residents;
 - iii. adequate in area to store all rubbish bins; and
 - iv. fully **screened** from view from the **primary** or **secondary street**.
- C4.7** Clothes-drying areas **screened** from view from the **primary** and **secondary street**.

5.5 SPECIAL PURPOSE DWELLING

OBJECTIVES

- A** To ensure residential **development** is provided to accommodate people with or without special needs.
- B** To provide ancillary accommodation which is independent or semi-independent to residents of the **single house**.
- C** To ensure that **dwelling**s for aged persons and people with special needs can be provided within residential areas.
- D** To provide opportunities for affordable housing.

5.5.1 Ancillary dwellings

5.5.2 Aged and dependent persons' dwellings

5.5.3 Single bedroom dwellings

5.5.4 Accessible dwellings

5.5.5 Small dwellings

5.5.1 Ancillary dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P1.1** Ancillary dwelling is of a small scale and designed to support people living independently or semi-dependently to the residents of the **single house** or **grouped dwelling**, sharing some site facilities and services.
- P1.2** Ancillary dwellings to positively contribute to its setting, including the existing **single house** or **grouped dwelling** and, where visible from the **street** or **adjoining properties**, to the **amenity** of the **streetscape** and context.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C1** Ancillary dwelling associated with a **single house** or **grouped dwelling** and on the same **site** where:
- i. **C1i** deleted by amendment dated 10 April 2024;
 - ii. there is a maximum **internal floor area** of 70m²;
 - iii. parking is provided in accordance with clause 5.3.3 **C3.1**;
 - iv. ancillary dwelling is located behind the **street setback line**;
 - v. **C1v** deleted by amendment dated 10 April 2024;
 - vi. ancillary dwelling does not preclude the single house or grouped dwelling from meeting the required minimum **open space** and **outdoor living area**; and
 - vii. ancillary dwelling complies with all other R-Code provisions, only as they apply to single houses and grouped dwellings, with the exception of clauses:
 - a. Part D, 1.1 *Site area*;
 - b. 5.2.3 *Street surveillance* (except where located on a lot with **secondary street** or **right-of-way** access); and
 - c. 5.3.1 *Outdoor living areas*.

5.5.2 Aged and dependent persons' dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2** Aged or dependent persons' dwellings for the housing of aged or dependent persons designed to meet the needs of aged or dependent persons; and
- reduces car dependence, i.e. is located in close proximity to public transport and services;
 - has due regard to the topography of the locality in which the **site** is located in respect to access and mobility;
 - has due regard to the availability of community facilities including parks and open space;
 - does not impinge upon neighbour **amenity**; and
 - responds to a demand for aged or dependent persons' accommodation in the locality which is recognised in the **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2.1** Aged or dependent persons' dwellings for the housing of aged or dependent persons shall comply with the following:
- a maximum **internal floor area** of:
 - in the case of **single houses** or **grouped dwellings** – 100m²; or
 - in the case of **multiple dwellings** – 80m²;
 - a minimum number of five **dwellings** within any single **development**;
 - visitors car parking spaces at the rate of one per four dwellings, with a minimum of one space;
 - the first visitors car space being a wheelchair accessible car parking space and a minimum width of 3.8m in accordance with AS4299, clause 3.7.1;
 - an **outdoor living area** in accordance with the requirements of clause 5.3.1 but reducing the area required by **Table B** by one-third; and
 - comply with all other provisions of **Table B** and **Part B** as relevant.
- C2.2** All ground floor units, with a preference for all **dwellings**, to incorporate, as a minimum, the following:
- an **continuous path of travel** from the **street frontage**, car parking area or drop-off point in accordance with the requirements of AS4299 clause 3.3.2; and
 - level entry to the front entry door with preferably all external doors having level entries (diagrams, Figure C1 of AS4299).
- C2.3** All **dwellings** to incorporate, as a minimum, the following:
- all external and internal doors to provide a minimum 820mm clear opening. (AS4299 clause 4.3.3);
 - internal corridors to be a minimum 1,000mm wide, width to be increased to a minimum of 1,200mm in corridors with openings on side **walls**;
 - a visitable toilet (AS4299, clause 1.4.12), preferably located within a bathroom; and
 - toilet and toilet approach doors shall have a minimum 250mm nib wall on the door handle side of the door and provision for the installation of grab rails in accordance with AS4299, clause 4.4.4 (h).
- C2.4** At least one occupant is a disabled or physically **dependent person** or **aged person**, or is the surviving spouse of such a person, and the owner of the land, as a condition of **development** approval, lodging a section 70A notification on the certificate of title binding the owner, their heirs and successors in title requiring that this occupancy restriction be maintained.

5.5.3 Single bedroom dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3** Alternative and affordable housing options for singles or couples where it can be demonstrated that the **development**:
- reduces car dependence, i.e. is located in close proximity to public transport and convenience shopping;
 - does not impinge upon neighbour **amenity**; and
 - responds to a demand for single bedroom accommodation in the locality which is recognised in the **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3** **Single bedroom dwellings** shall comply with the following:
- a maximum **internal floor area** of 70m²;
 - open space** and **landscaping** in accordance with the requirements of clause 5.1.4 and 5.3.2;
 - parking provided in accordance with clause 5.3.3 **C3.1** and **C3.2**;
 - an **outdoor living area** in accordance with the requirements of clause 5.3.1 but reducing the area required by **Table B** by one-third; and
 - comply with all other elements of **Table B** and Part B as relevant.

5.5.4 Accessible dwellings (only applies to R30 and R40)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P4** Accessible dwellings provide housing options for people with disabilities and/or limited or reduced mobility, facilitate ageing in place, and are designed in accordance with the **universal design** requirements:
- of the Livable Housing Design Guidelines;
 - of the Australian Building Codes Board Livable Housing Design Standard (2022);
 - of AS4299; and/or
 - to suit the specific needs of the occupant.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C4** Accessible dwellings that seek to apply the gold level **universal design site** area variation as per Part D, **C1.1.6** shall;
- be designed and constructed in accordance with the gold level universal design requirements of **A4 Universal design requirements**, or are certified Livable Housing Australia to a minimum gold level of performance; and
 - have a maximum internal floor area of 110m².

Note: All other provisions of the R-Codes still apply.

5.5.5 Small dwellings *(only applies to R30 and R40)*

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P5.1** The design of **small dwellings** ensures adequate indoor and outdoor **amenity** for occupants.
- P5.2** Alternative and affordable housing options are provided for small households where it can be demonstrated that the **development**:
- is located in an area that has good access to public transport, public open space, local retailing, and other community infrastructure;
 - responds to a demand for **small dwellings** in the locality which may be recognised in the **local planning framework**;
 - provides an adequate mix of **dwelling** sizes; and
 - is consistent with the existing and/or future intended **streetscape** and **local character**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Small Dwellings – Part D, C1.1.6 applies and provides a site area concession

- C5** **Small dwellings** subject to the site area concession of Part D, **C1.1.6** shall comply with the following:
- a maximum **internal floor area** of 70m²;
 - parking provided in accordance with the table in 5.3.3 *Parking* **C3.1**; and
 - all other provisions of the R-Codes.

TABLES

Table B Primary controls for all single house(s) in areas coded R40 and below, grouped dwellings in areas coded R25 and below; and multiple dwellings in areas coded R10 to R25

Columns 3-5 deleted and replaced by **PART D, Table D** by Amendment dated 10 April 2024.

1 R-Code	2 Dwelling Type	6 Open Space		7 Minimum Setbacks (m)		
		Min total (% of site)	Min outdoor living (m ²)	Primary Street	Secondary Street ●	Other / rear
R2	Single house or grouped dwelling	80	-	20	10	10
R2.5	Single house or grouped dwelling	80	-	15	7.5	7.5
R5	Single house or grouped dwelling	70	-	12	6	*6
R10	Single house or grouped dwelling	60	-	7.5	3	*6
	Multiple dwelling	60	-	7.5	3	*6
R12.5	Single house or grouped dwelling	55	-	7.5	2	*6
	Multiple dwelling	55	-	7.5	2	*6
R15	Single house or grouped dwelling	50	-	6	1.5	*6
	Multiple dwelling	50	-	6	1.5	*
R17.5	Single house or grouped dwelling	50	36	6	1.5	*
	Multiple dwelling	50	-	6	1.5	*
R20	Single house or grouped dwelling	50	30	6	1.5	*
	Multiple dwelling	50	-	6	1.5	*
R25	Single house or grouped dwelling	50	30	6	1.5	*
	Multiple dwelling	50	-	6	1.5	*
R30	Single house	45	24	4	1.5	*
R35	Single house	45	24	4	1.5	*
R40	Single house	45	20	4	1	*

Legend

●	Secondary street: includes communal street, private street, right-of-way as street
-	Indicated not applicable
*	See Tables 2a and 2b and clause 5.1.3

Table 2a Boundary setbacks – walls with no major openings

Wall height (m)	Wall Length													Over 25
	9 or less	10	11	12	13	14	15	16	17	18	19	20	25

9.5	4.6	4.8	5.0	5.2	5.4	5.7	5.8	6.0	6.2	6.4	6.6	6.9	8.0	8.7
10.0	4.8	5.0	5.2	5.4	5.7	6.0	6.1	6.3	6.5	6.7	6.9	7.2	8.2	9.0

Take the nearest higher value for all intermediate **height** and length values.

Table 3 Maximum building heights

Building category	Maximum height of wall (m)	Maximum total building height (m)	
		Gable, skillion and concealed roof	Hipped and pitched roof
Category A	3.5	5	7
Category B	7	8	10
Category C	9	10	12

i. Category B will apply unless a **scheme**, the **relevant local planning policy, structure plan** or **local development plan** requires the application of category A (generally single level **development**) or category C (development on three levels) or an alternative standard.

FIGURES

Figure Series 2 - Street setbacks

Intent

The purpose of Figure Series 2 is to illustrate how to determine **street setbacks** for the purposes of clause 5.1.2.

Development within the **street setback** is to be designed to limit the visual intrusion into views from neighbouring **dwelling**s into the **street** and from along the street.

- A1 Area of building forward of primary street setback
- A2 Compensating open space behind primary street setback
- A3 The carport in S1 does not need to be compensated for in S2
- S1 Primary street setback distance (Table B)
- S2 Distance behind the primary street setback, equal to S1
- S3 Side boundary setback (Table 2a and 2b)
- S4 Maximum reduced primary street setback (half of S1)

Figure 2a - Measuring primary street setbacks (clause 5.1.2 C2.1 (iii))

Figure 2b - Measuring minor projections into primary street setback (clause 5.1.2 C2.4)

Figure 2b - Measuring minor projections into primary street setback (clause 5.1.2 C2.4) (deleted by amendment dated 2/7/2021)

Figure Series 2 - Street setbacks (cont.)

Garage setback
may be reduced in
accordance with
5.2.1 C1.1 (i and ii)

- A1 Area of building forward of primary street setback
- A2 Compensating open space behind primary street setback
- A3 The carport in S1 does not need to be compensated for in S2
- S1 Primary street setback distance (Table B)
- S2 Distance behind the primary street setback, equal to S1
- S3 Side boundary setback (Table 2a and 2b)
- S4 Maximum reduced primary street setback (half of S1)

Figure 2c - Measuring street setback for garages
(clause 5.1.2 and 5.2.1)

Front door (main frontage)

Figure 2d - Measuring communal street setbacks
(clause 5.1.2 C2.1 (iv))

Figure Series 2 - Street setbacks (cont.)

S1 **Primary street setback** distance (Table B)

S4 Maximum reduced **primary street setback** (half of S1)

Note: a **porch, balcony, verandah** or equivalent is not subject to the compensating area requirement stated in 5.1.2 C2.1 (iii).

Figure 2e - Measuring minor projections into primary street setback (clause 5.1.2 C2.4)

Figure Series 3 - Wall height for lot boundary setbacks

Intent

The purpose of Figure Series 3 is to illustrate the correct method for measuring the **height** of various **walls** and **buildings** for the purposes of clause 5.1.3 C3.1(i).

Figure 3a - Cross section, flat site

Figure 3b - Cross section, sloping site

Figure 3c - Cross section, flat site

Notes

H = The height of the **wall** for the measurement of **setbacks** is measured from the **natural ground level** at the **lot boundary** adjacent to the wall at the highest point of the **building** vertically above that point where the wall touches the underside of the eave/gutter (**Figures 3a-3g**).

Where the **lot boundary** adjacent to the **wall** is lower than **natural ground level** at the base of the wall, the greater height is used (**3b, 3d** and **3f**).

Where the **lot boundary** adjacent to the **wall** is higher than the **natural ground level** at the base of the **wall**, the lesser height is used (**Figure 3e**).

Figure 3d - Cross section, sloped site

Figure 3e - Cross section, sloped site

Figure 3f - Cross section, alternate levels with existing retaining wall

Figure 3g - Skillion roof

Notes

H = The **height of the wall** for the measurement of **setbacks** is measured from the **natural ground level** at the **lot boundary** adjacent to the wall to the highest point of the **building** vertically above that point where the wall touches the underside of the eave/gutter (**Figures 3a-g**)

Where the **lot boundary** adjacent to the **wall** is lower than the **natural ground level** at the base of the wall, the greater **height** is used (**Figures 3b, 3d and 3f**)

Where the **lot boundary** adjacent to the **wall** is higher than the **natural ground level** at the base of the wall the lesser **height** is used (**Figure 3e**)

Figure Series 4 - Wall length for lot boundary setbacks

Intent

The purpose of Figure Series 4 is to illustrate the method for measuring the appropriate **setback** for a length of **wall** adjacent to a **lot boundary** for the purposes of clause 5.1.3 C3.1.

Figure 4a - Articulated walls with major openings (where wall height exceeds 3.5m)

Figure 4b - Portions of wall without major openings

Figure 4c - Wall with multiple articulations

Notes

For the purposes of calculating **setback**, the length of **wall** means the total horizontal dimension of the side of the **building** nearest the **lot boundary**. Setbacks shall be determined in accordance with the following and with reference to **Tables 2a and 2b**, subject to the privacy requirements of clauses 5.4.1:

- 4a Where A is more than 3m, B shall be treated as a separate **wall**, providing that the length C shall be the basis for determining the **setback** of the rest of the side of the building.
- 4b Where the side of a **building** includes one portion of a **wall** without a **major opening** (such as E), the **setback** shall be determined independently providing the setback of the rest of that side of the building (D) is determined on the basis of the total length C.
- 4c Where the side of the **building** includes two or more portions of a **wall** without a **major opening** (such as E) their **setbacks** shall be determined independently of each other provided they are separated from one another by a distance (D) of more than 4m (in the case of **wall heights** of 6m or less) and an additional 1m for every 3m increase in height.

The **setback** of D shall be determined on the basis of the total length (C).

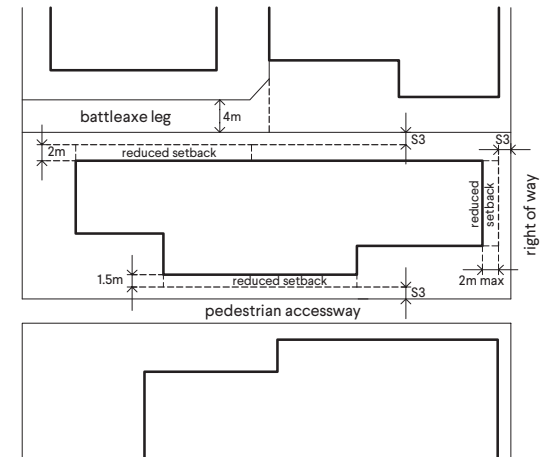

Notes

- L1 Length of **walls** on the ground floor is determined as per **Figures 4a-c**.
Length of **walls** with **major openings** on upper floors is determined as the lesser of the actual length of wall or from a point 2m beyond each major opening.
Length for **walls** without **major openings** on upper floors is determined as per **Figures 4a-c**.

Figure 4d - Measurement of length of upper floor walls for calculating setbacks

Figure 4e - Boundary setbacks for walls greater than Table 2a and 2b

Figure 4e – Boundary setbacks for walls greater than Table 2a and 2b (deleted by amendment dated 2/7/2021)

Notes

- S3 Side **boundary setbacks** (Tables 2a and 2b)
Setbacks can be reduced by half the width of adjoining **battlexe lot legs**, **pedestrian access ways** or **rights-of-way** to a maximum of 2m.

Figure 4f - Reduced boundary setbacks
(clause 5.1.3 C3.1 (i) and (vi))

Figure Series 5 - Lot boundary walls

Intent

The purpose of Figure Series 5 is to illustrate the correct method for measuring the height of various **walls** for the purposes of clause 5.1.3 of clause 5.1.3 C3.1.

Notes

The height of a **lot boundary wall** shall be measured to the point immediately above the **natural ground level** below.

- 5a Where the **boundary wall** is not consistent in **height** for its length, or comprises a pitch, the height shall be measured as the midpoint between the lowest point immediately above the **natural ground level** below and the highest point immediately above the natural ground level below.

Figure 5a - Elevation - flat site

Notes

The height shall be the **height** of the **wall** at its highest point above the **natural ground level**.

Figure 5b - Elevation - sloped site

Notes

Where the boundary is sloped and the **boundary wall** is not consistent in height for its length, or comprises a pitch, the **height** shall be the average of H1, H2, and H3, where H2 is the maximum height above **natural ground level**, and H1 and H3 are the height above natural ground level at each end of the wall.

Figure 5c - Elevation - sloped site

Figure Series 6 - Open space

Intent

The purpose of Figure Series 6 is to illustrate the appropriate design and functionality of portions of the **site** which may be used for **open space**.

Notes

- S3 Side boundary (Tables 2a and 2b)
 - A Uncovered **open space**
 - B **Unenclosed**, covered **outdoor living area**
(to a maximum 10 per cent **site area** or 50m², whichever is lesser)
 - C Side **setback** area
 - D Undercovered **driveway** or uncovered car parking spaces
- OPEN SPACE = A+B+C+D**

Figure 6a - Measuring open space (clause 5.1.4 C4)

Figure Series 7 - Building height

Intent

The purpose of Figure Series 6 is to show how to measure **building height** for the purposes of clause 5.1.6.

Notes

The **height** of a **building** is taken as the highest point at any part of the **development** immediately above **natural ground level**.

Where **natural ground level** varies across the site, **deemed natural ground level** is to be used.

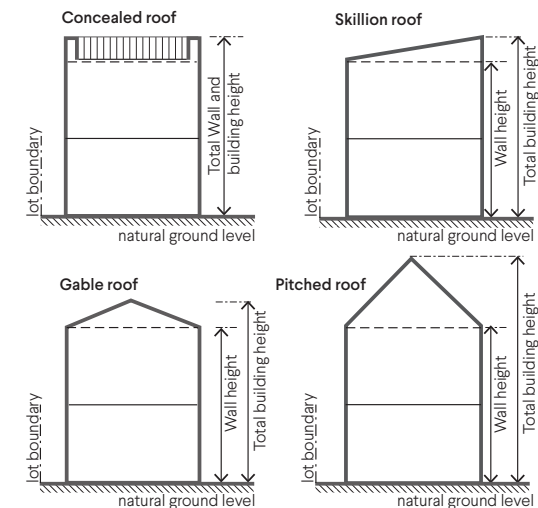

Figure 7a - Measuring building height

Figure 7b - Deemed natural ground level

Two storey example for wall and building height

Figure 7c - Building height calculations (clause 5.1.6)

Figure Series 8 - Garages and carports

Intent

The purpose of Figure Series 8 is to illustrate the determination of **primary street setbacks** and the measurement of width for **garages** and **carports** for the purposes of clauses 5.2.1 and 5.2.2.

Notes

- S1 **Primary street setback** distance (Table B)
- S3 Side boundary **setback** (Tables 2a and 2b)
- S4 Maximum reduced **setback** (half S1)
- L2 Maximum 50 per cent of **frontage**

Figure 8a - Carport setbacks (clause 5.2.1 C1.2)

Notes

- S2 Distance behind **primary street setback** equal to S1.
- S6 The area of the **garage** forward of the **primary street setback** is to be compensated by **open space** behind the setback in accordance with clause 5.1.2 C2.1 and Figure 2a.

Figure 8b - Garage setbacks (clause 5.2.1 C1.1)

Figure 8c - Garage doors (clause 5.2.2 C2)

Figure Series 9 - Sight lines

Intent

The purpose of Figure Series 8 is to illustrate areas to be kept clear for the purposes of clause 5.2.5 C5.

Figure 10c - Locations of truncations or reduced fence height

Figure Series 10 - Privacy

Intent

The purpose of Figure Series 8 is to illustrate areas to be kept clear for the purposes of clause 5.2.5 C5.

Figure 10c - Establishing the horizontal component of cone of vision

Figure 10b - Measurement of minimum privacy separation distances

Figure 10c - Measuring privacy setbacks using the cone of vision

Notes

Hatching over adjoining **outdoor living area** requires **screening** for compliance as shown.

Figure Series 11 - Overshadowing

Intent

The purpose of Figure Series 11 is to illustrate the correct way of measuring overshadowing for the purposes of clause 5.4.2.

Figure 11a - Calculation of overshadowing
(clause 5.4.2 C2.1)

Figure 11b - Proportionate limits from shared northern boundaries (clause 5.4.2 C2.2)

Figure Series 12 - Fences

Figure 12 - Measuring visually permeable fences above 1.2m (clause 5.2.4)

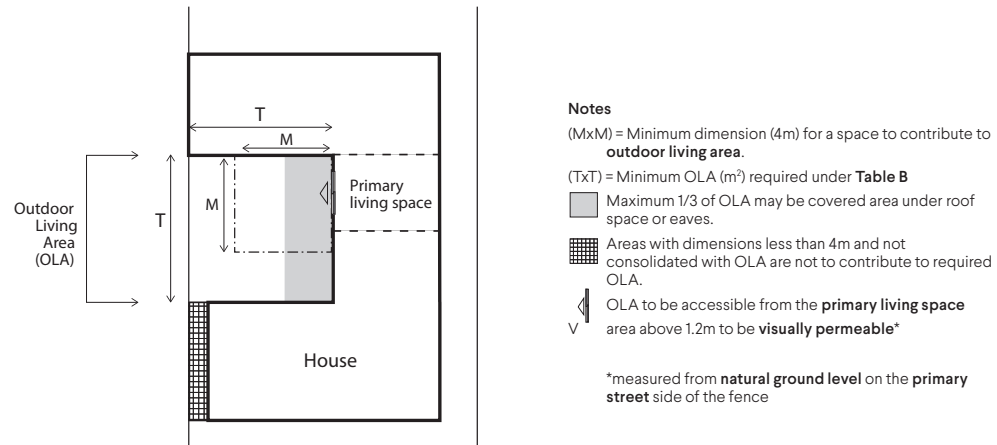

Figure 13 - Dimensions and calculations for outdoor living areas (clause 5.3.1 C1.1)

PART C

1.0	THE GARDEN	66
2.0	THE BUILDING	74
3.0	NEIGHBOURLINESS	90
4.0	SPECIAL TRANSITIONAL PROVISIONS	113
5.0	SPECIAL TRANSITIONAL PROVISIONS	117
	TABLE C PRIMARY CONTROLS	119

1.0 THE GARDEN

OBJECTIVES

- 1A** To ensure **dwelling**s are provided with functional outdoor **amenity** and outlook.
- 1B** To support tree retention and re-establishment of the urban tree canopy with the aim of reducing the impact of heat island effect.
- 1C** To enable **solar access** and **natural ventilation** to the **dwelling** through the provision of **open space**.
- 1D** To ensure that **landscape** design responds to the key natural features and landscape character of the location.
- 1E** To effectively manage **stormwater**, reducing potential for flooding and to reduce the impact of urban **development** on natural water systems and ecosystem health.

1.1 Private Open Space

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P1.1.1 Dwellings are designed to have direct access to **private open space** which provides for entertaining, leisure and connection to the outdoors that is:

- of sufficient size and dimension to be functional and usable for the intended number of **dwelling** occupants;
- is sited, oriented and designed for occupant **amenity**, including consideration of **solar access** and **natural ventilation** appropriate to the climatic region; and
- capable of use in conjunction with a **primary living space** of the dwelling.

P1.1.2 **Private open space** allows for sufficient uncovered area to:

- permit winter sun and **natural ventilation** into the **dwelling**; and
- provide for **soft landscaping**, including the planting of a tree(s) and **deep soil area**.

P1.1.3 **Balconies** balance the need for outlook, **solar access** and **natural ventilation** with:

- visual privacy considerations;
- acoustic and noise impacts; and
- local climatic considerations such as high winds.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Primary garden area – single houses and grouped dwellings only.

C1.1.1 For **single houses** and **grouped dwellings**, a single consolidated **primary garden area** provided behind the **primary street setback**, in accordance with **Table 1.1a**.

Table 1.1a Primary garden area requirements

Site area (m ²)	Minimum primary garden area (m ² per dwelling)	Maximum permanent roof cover ¹	Minimum dimension ²
Greater than 220	40	One-third of the primary garden area provided	3m
191-220	35		
161-190	30		
131-160	25	0m ² (open to the sky)	
100-130	20		

Site area rounded up to the nearest whole number.

¹ Permanent roof cover excludes **minor projections** (eaves).

² Minimum dimension refers to the minimum length and width of the **primary garden area**. Refer to **Figure 1.1a** for dimensions and calculations of primary garden areas.

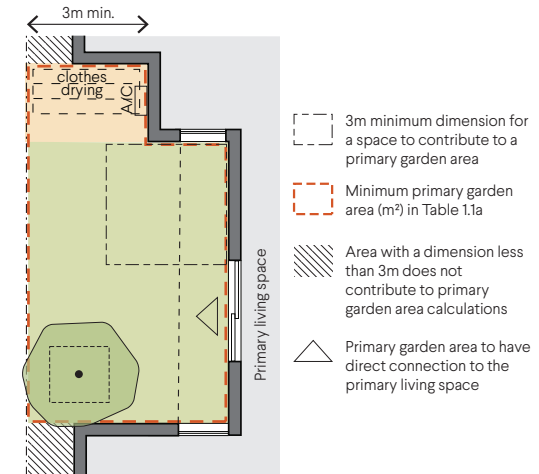

Figure 1.1a Primary garden area minimum dimensions

Related elements

- 1.2 Trees and landscaping
- 1.3 Communal open space
- 2.2 Solar access and natural ventilation
- 3.1 Site cover

1.1 Private Open Space (cont.)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P1.1.4** Increasing the area of **communal open space** commensurate with a decrease in **private open space** may be appropriate where there is an explicit intent to facilitate communal living and it can be demonstrated that the communal open space:
- is of high **amenity** and provided with quality **landscaping**;
 - is easily accessible and equitable for all **dwellings** within the **development**; and
 - meets the needs of the occupants and provides opportunities for social interaction.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C1.1.2** Notwithstanding **C1.1.1**, for **grouped dwellings** with a **site area** of 161m² or greater, the required **primary garden area** in accordance with **Table 1.1a** may be reduced by 10m², where a secondary ground level **private open space** is provided with:
- a minimum area of 10m² and minimum dimension of 3m (refer **Figure 1.1b**);
 - uncovered and open to the sky (excluding **minor projections**); and
 - an additional small tree provided in addition to the minimum tree requirements of **Table 1.2a**.

Private open space and balconies

- C1.1.3** **Multiple dwellings** to provide a minimum of one **private open space** area provided for the exclusive use of each multiple dwelling in accordance with **Table 1.1b**.

- C1.1.4** **Balconies** are to be unscreened for at least 25% of the total perimeter of the balcony (refer **Figure 1.1c**).

Note: Provisions of element 3.10 Visual Privacy apply.

Table 1.1b Private open space requirements

Dwelling size	Minimum private open space area (per dwelling)	Minimum private open space dimension
Studio / 1 bedroom	8m ²	2m
2 bedrooms	10m ²	2.4m
3 or more bedrooms	12m ²	2.4m
Ground floor dwelling	15m ²	3m

*When calculating the extent of **private open space** for **multiple dwellings**, exclude **service areas** such as bin storage, clothes drying, air conditioning units and the like.*

Figure 1.1b Secondary private open space minimum dimensions (grouped dwellings)

Note:

Boundary perimeter length = A + B + C + D

Minimum 25% of balcony perimeter to be unscreened

Total balcony perimeter to include sides that abut building walls

Figure 1.1c Extent of screening to private open space

1.2 Trees and Landscaping

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P1.2.1 Site planning allows for:

- site responsive and sustainable landscape design; and
- the retention of existing trees on the subject site and adjoining properties.

P1.2.2 Provision of trees and high quality landscaping:

- enhances the built form, streetscape and pedestrian amenity, as viewed from the street;
- provides shade and amenity for communal streets and parking areas; and
- contributes to the visual appeal, comfort and amenity of the development, in particular private open space and communal open space and outlook from habitable rooms.

P1.2.3 Development provides sufficient deep soil area to sustain healthy tree and plant growth, providing for an increase in urban tree canopy over time, and assist in managing the quantity and quality of stormwater.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Landscaping

C1.2.1 Development to provide a minimum 15% soft landscaping per site with a minimum dimension of 1m (refer Figure 1.2a).

C1.2.2 The primary street setback area is to provide a minimum 30% soft landscaping (Figure 1.2b).

C1.2.3 The communal street (including any adjoining setbacks) and communal open space is landscaped and provided with adequate lighting to pathways and vehicle access areas.

Tree Canopy

C1.2.4 A minimum number of trees to be planted in accordance with Tables 1.2a and provided with the required deep soil area per tree in accordance with Table 1.2b.

C1.2.5 For grouped and multiple dwellings, uncovered at-grade car parking to include shade trees planted at a minimum ratio of one small tree for every four car spaces, with the total required number of trees to be rounded up to the nearest whole number.

Note: These trees are in addition to the trees required in accordance with C1.2.4.

Figure 1.2a Soft landscaping minimum requirement per site

Related elements

- 1.1 Private open space
- 1.3 Communal open space
- 2.3 Parking
- 3.3 Street setbacks
- 3.6 Streetscape

1.2 Trees and Landscaping (cont.)

Figure 1.2b Soft landscaping requirement for street setback area

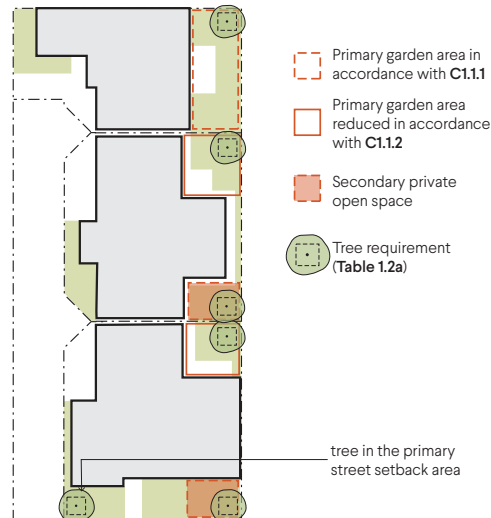

Figure 1.2c Tree planting requirements

DEEMED-TO-COMPLY

Development satisfies the following *deemed-to-comply* requirements (C)

C1.2.6 For single houses and grouped dwellings, the **soft landscaping** requirement of C1.2.1 may be reduced to 10% where a **significant existing tree** is retained on site.

Note: The reduction of soft landscaping only applies to the site on which the tree is retained. A retained tree replaces a tree requirement in Table 1.2a on a like-for-like basis.

C1.2.7 Where a **significant existing tree** is retained on site, a tree protection zone is to be provided in accordance with AS4970.

Landscaping plan

C1.2.8 For multiple dwellings, or five or more grouped dwellings, provide a landscaping plan in accordance with Appendix A3.

Table 1.2a Minimum tree requirements

Dwelling Type	Minimum tree requirements	
Single house (per dwelling)	1 small tree	Where the primary street setback is 1.5m or greater: - frontages less than 20m: 1 small tree in the primary street setback area; or - frontages 20m or greater: 1 small tree in the primary street setback area per 10m frontage ¹ .
Grouped dwellings (per dwelling)	1 small tree OR 2 small trees where primary garden area is reduced in accordance with C1.1.2	
Multiple dwellings (per lot)	Sites less than 700m ²	1 medium tree and 2 small trees
	Sites of 700-1000m ²	2 medium trees <u>or</u> 1 large tree and 1 small tree
	Sites greater than 1000m ²	2 medium trees <u>or</u> 1 large tree and 1 small tree PLUS 1 medium tree per 400m ² in excess of 1000m ² or part thereof

Trees required within the street setback area are in addition to trees required per dwelling and where providing a secondary private open space.

¹Frontage to be rounded down to the nearest 10m.

Tree requirements exclude ancillary dwellings.

Refer to Figure 1.2c for grouped dwelling tree requirements.

1.2 Trees and Landscaping (cont.)

Figure 1.2d Deep soil area requirements by tree size

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Table 1.2b Tree size and deep soil area

Tree size	Tree specifications			
	Canopy diameter at maturity	Tree height at maturity	Minimum deep soil area	Minimum deep soil area dimension
Small	2-6m	3-8m	9m²	1.5m
Medium	6-9m	8-12m	36m²	3m
Large	> 9m	>12m	64m²	6m

Refer to **Figure 1.2d** for the provision of **deep soil area** for tree requirements.

1.3 Communal open space

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P1.3.1 Communal open space provides:

- good quality **landscaping**, trees and **deep soil areas**;
- safe, accessible and high **amenity** spaces for social interaction;
- adequate space for its intended use and function, proportionate to the number of **dwellings** and number of occupants the dwellings are designed to accommodate; and
- adequate measures to mitigate against adverse amenity impacts including visual, noise and odour.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Communal open space - multiple dwellings only

C1.3.1 Communal open space is provided for multiple dwelling development in accordance with Table 1.3a and the following:

- located in **common property** and behind the **primary street setback line**;
- to be **universally accessible** to all occupants of the development; and
- exclusive to the residential component of **mixed use development**.

C1.3.2 Communal open space is separated or **screened** from potential sources of noise and odour, such as bins, vents, air conditioning units, and vehicle circulation areas.

C1.3.3 Communal open space is designed and oriented to minimise the impacts of noise, odour, lightspill and overlooking on the **habitable rooms** and **private open spaces** within the **site** and of **adjoining properties**.

Table 1.3a Provision of communal open space

Development size	Minimum communal open space requirement	Minimum accessible/hard landscape area (included in overall requirement)	Minimum communal open space dimension	Maximum covered roof area
Up to 10 dwellings	No requirement			
More than 10 dwellings	6m ² per dwelling up to maximum 300m ²	2m ² per dwelling up to 100m ²	4m	25% of each communal open space area
<i>Communal open spaces can be co-located with deep soil areas, soft landscaping area and/or co-indoor communal spaces</i>				

Related elements

- 1.1 Private open space
- 1.2 Trees and landscaping
- 3.10 Visual privacy

1.4 Water management and conservation

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P1.4.1** Flooding risk is reduced to limit the impact of **major rainfall events**.
- P1.4.2** **Stormwater** is managed on **site** wherever possible either by containment or infiltration, as permitted by the soil and other site conditions, or otherwise appropriately treated to reduce the export of nutrients, sediments and other pollutants, prior to off site discharge.
- P1.4.3** **Development** incorporates water sensitive urban design mechanisms, including water conservation approaches and **site** appropriate **stormwater** collection, retention, treatment and reuse.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C1.4.1** **Stormwater** runoff draining from roofs, **driveways**, **communal streets** and other **impervious surfaces** generated by a **small rainfall event** to be retained on **site**, with run-off directed to garden areas, rainwater tanks and infiltration cells (e.g. soakwells), appropriate to climatic, local soil and groundwater conditions.
- C1.4.2** Notwithstanding **C1.4.1**, **stormwater** may be directed to a district or local **stormwater** drainage system where required by the **decision-maker** due to climatic, local soil or groundwater conditions.

Related elements

- 1.2 Trees and landscaping

2.0 THE BUILDING

OBJECTIVES

- 2A** To promote the **development** of a range of housing options to suit the needs of the community.
- 2B** To optimise comfortable living, **natural ventilation** and **winter solar gain** to facilitate **sustainable** housing with particular regard for place and local climatic conditions.
- 2C** To ensure **dwellings** have adequately sized rooms and functional **storage** space.
- 2D** To support provision of well-considered and designed car parking that is appropriate to the location and that minimises the impact on the **development** and **streetscape**.
- 2E** To ensure ancillary structures and **service areas** are appropriately designed, located and integrated into the **development**.

INDOOR AMENITY

- 2.1 Size and layout of dwellings
- 2.2 Solar access and natural ventilation

FUNCTION

- 2.3 Parking
- 2.4 Waste management
- 2.5 Utilities
- 2.6 Outbuildings

HOUSING DIVERSITY

- 2.7 Universal design
- 2.8 Ancillary dwellings
- 2.9 Small dwellings
- 2.10 Housing on lots less than 100m²

Indoor amenity

2.1 Size and layout of dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P2.1.1 Dwellings have a primary living space that:

- is proportionate to the type and size of the dwelling and intended number of occupants;
- has a physical and visual relationship with the **primary garden area, private open space** and/or public open space; and
- incorporates environmental design principles, including passive solar design and appropriate **daylighting** and shading, appropriate for the climate.

P2.1.2 Ceiling heights and room dimensions provide for well-proportioned spaces that facilitate good **natural ventilation** and **daylighting**.

P2.1.3 The size and layout of dwellings:

- is functional with the ability to flexibly accommodate furniture;
- is appropriate to the intended number of occupants; and
- ensures functional, high **amenity** spaces.

P2.1.4 Development provides a mix of dwelling types, sizes and configurations that cater for diverse household types and changing community demographics, appropriate to the existing and/or future context of the locality.

Related elements

- 1.1 Private Open Space
- 2.2 Solar access and natural ventilation
- 3.4 Lot boundary setbacks

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Primary living space

C2.1.1 Each dwelling is to have one room that is the designated **primary living space**, and for **multiple dwellings** in areas coded R30 to R60, this primary living space can accommodate a dimension of at least 3.8m x 3.8m¹ (refer Figure 2.1a).

¹Exclusive of built-in cabinetry along walls.

C2.1.2 For single house and grouped dwellings:

- where the **primary living space** is provided on the ground floor, it is to have direct physical and visual access to the **primary garden area**; or
- where the primary living space is provided on an upper floor, it is to have direct physical and visual access to a **private open space** (such as a **balcony** or rooftop **terrace**) in accordance with Table 1.1b.

C2.1.3 For **multiple dwellings**, the **primary living space** is to have direct physical and visual access to **private open space** in accordance with Table 1.1b.

C2.1.4 For **multiple dwellings**, the maximum depth¹ of a **single aspect primary living space** shall be a maximum three times (3x) the ceiling height (refer Figure 2.1b).

¹Exclusive of built-in cabinetry along walls.

Note: Additional living spaces (such as a second lounge room) are not subject to the requirements of C2.1.1 – C2.1.4

Figure 2.1a Calculating primary living space minimum dimensions

Figure 2.1b Single aspect primary living space depth and ceiling height

Indoor amenity

2.1 Size and layout of dwellings (cont.)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.1.5** Each **dwelling** provides adequate, conveniently located **storage** for large items that are:
- proportionate to the size of the dwelling and intended number of occupants; and
 - integrated into the design of the **building** and/or **screened** from view to ensure that it is not visually intrusive when viewed from the **street**.
- P2.1.6** The siting and layout of **dwellings** minimizes potential impacts on **amenity** and provide appropriate visual and acoustic privacy to **habitable rooms** by:
- locating, orienting or setting back habitable rooms;
 - providing adequate landscape **screening** as a buffer; and/or
 - providing acoustic treatments to reduce noise transfer.

Figure 2.1c Calculating bedroom minimum dimensions

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Habitable rooms

- C2.1.5** For **multiple dwellings**, bedrooms have a minimum **internal floor area** of 9m² and can accommodate a minimum dimension of 2.7m x 2.7m (refer **Figure 2.1c**).

Minimum area is inclusive of built-in robes and cabinetry, however the minimum dimension excludes built-in robes and cabinetry.

- C2.1.6** Measured from the finished floor level to the ceiling level, minimum ceiling heights for **multiple dwellings** are:

- 2.65m for **habitable rooms**; and
- 2.4m for **non-habitable rooms**.

All other ceilings meet the requirements of the **NCC**.

Dwelling size and mix

- C2.1.7** **Multiple dwellings** are to provide minimum **internal floor areas** in accordance with **Table 2.1a**.

*Note: No dwelling size requirements apply to **single houses** and **grouped dwellings**.*

- C2.1.8** Where more than 10 **multiple dwellings** are proposed, no more than 80 per cent of **dwellings** have the same number of bedrooms.

Table 2.1a Minimum dwelling size requirements for multiple dwellings

Dwelling Size	Minimum internal floor area
Studio	37m²
1 bed	47m²
2 bed x 1 bath	67m²
2 bed x 2 bath	72m²
3 bed x 1 bath	90m²
3 bed x 2 bath	95m²

An additional 3m² shall be provided for designs that include an additional separate toilet, and 5m² for designs that include an additional bathroom.

*Minimum **internal floor area** excludes storerooms where they are accessed external to the **dwelling**.*

Indoor amenity

2.1 Size and layout of dwellings (cont.)

Figure 2.1d Minimum storage dimensions with adjacent circulation space

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Storage

C2.1.9 Each dwelling has exclusive use of a dedicated, weatherproof **storage** area in accordance with **Table 2.1b**, that is located behind the **primary street setback** and accessible via an opening that does not open inwards.

C2.1.10 Notwithstanding **C2.1.9**, minimum **storage** area dimension can be reduced to 1m where:

- it can be demonstrated that an adjacent circulation space achieves 0.9m clearance;
- the door or opening is located on the greater dimension and is openable for a minimum 80 per cent of the length; and
- the minimum storage area is still achieved (refer **Figure 2.1d**).

Managing impacts on amenity

C2.1.11 Major openings to ground floor **multiple dwellings** facing directly onto car parking areas and/or non-residential components of a **mixed use development** are set back a minimum 3m and are designed to ensure visual privacy and manage noise intrusion and light spill.

C2.1.12 For **multiple dwellings**, potential noise sources such as **garage** doors, **service areas**, active **communal open space**, communal waste **storage** areas and non-residential components of a **mixed use development** are not located within;

- 1m to the external wall of **habitable rooms**; and
- 3m of a window to a bedroom.

Table 2.1b Storage requirements

Dwelling Size	Minimum storage area	Minimum storage area dimension	Minimum storage area height
Studio / 1 bedroom dwelling	3m ²	1.5m ¹	2.1m
2 bedroom dwelling	4m ²		
3+ bed bedroom dwelling	Single houses and grouped dwellings: 4m ² Multiple dwellings: 5m ²		

Minimum dimension refers to the minimum length and width of the storage area.

*Storage can be co-located within a **garage** or **carport** but must provide a dedicated area.*

*Dimensions and areas are exclusive of services, plant, **utilities**, bin storage, bicycle parking and fixtures and facilities.*

*¹Minimum dimension can be reduced in accordance with **C2.1.10***

Indoor amenity

2.2 Solar access and natural ventilation

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.2.1** In climate zones 4, 5 and 6 the development is sited, oriented and designed to optimise winter solar gain whilst limiting summer sunlight into:
- the primary living space and habitable rooms; and
 - private open spaces, including the primary garden area;
- while balancing site constraints, outlook and views of significance.
- P2.2.2** Windows to habitable rooms are designed and positioned to optimize daylight, natural ventilation and outlook, while maintaining a reasonable level of visual privacy.
- P2.2.3** Dwellings optimize natural ventilation to habitable rooms (and bathrooms where possible) that is responsive to site and local climatic conditions.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Windows and openings

- C2.2.1** Every habitable room has a minimum of one openable external window:
- visible from all parts of the room;
 - with an aggregate glazed area not less than 10 per cent of the habitable room internal floor area; and
 - comprising a minimum of 50 per cent of transparent glazing.
- Note: 3.10 Visual privacy provisions may still apply.*
- C2.2.2** Where a courtyard is the only source of daylight to a habitable room, the courtyard must be uncovered and open to the sky¹ with a:
- minimum area of 4m² (refer Figure 2.2a); and
 - for multiple dwellings a minimum dimension of 0.5 times the wall height.

¹ Excludes minor projections

- C2.2.3** Bathrooms located on external walls (excluding boundary walls) must have a minimum of one openable window for natural ventilation.

Figure 2.2a Courtyard minimum dimensions (multiple dwellings)

Related elements

- 1.1 Private Open Space
- 2.1 Size and layout of dwellings
- 3.2 Building height
- 3.4 Lot boundary setbacks
- 3.10 Visual privacy

Indoor amenity

2.2 Solar access and natural ventilation (cont.)

Figure 2.2b Orientation of major opening to the primary living space

Figure 2.2c Minimum dimension of an uncovered open area

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Orientation of major openings

*Note: No orientation requirements apply to **primary living areas** located in **climate zones 1 and 3**.*

C2.2.4 For **single houses** and **grouped dwellings** in **climate zones 4, 5 and 6**, a **major opening** to the **primary living space** is oriented between north-west and east in accordance with **Figure 2.2b**, with an adjoining uncovered open area with:

- a minimum dimension 3m x 3m¹ in accordance with **Figure 2.2c**; and
- the exception of shading devices up to 2m depth.

¹The centre line of the minimum 3m x 3m area must be contained within the glazed area of the major opening (**Figure 2.2d**).

C2.2.5 For **multiple dwellings** in **climate zones 4, 5 and 6**:

- a minimum of 70 per cent of **dwellings** have a **primary living space** that achieves at least 2 hours direct **sunlight** between 9am and 3pm on 21 June; and
- a maximum of 15 per cent of dwellings in a **building** receiving no direct sunlight to the **primary living space** between 9am and 3pm on 21 June.

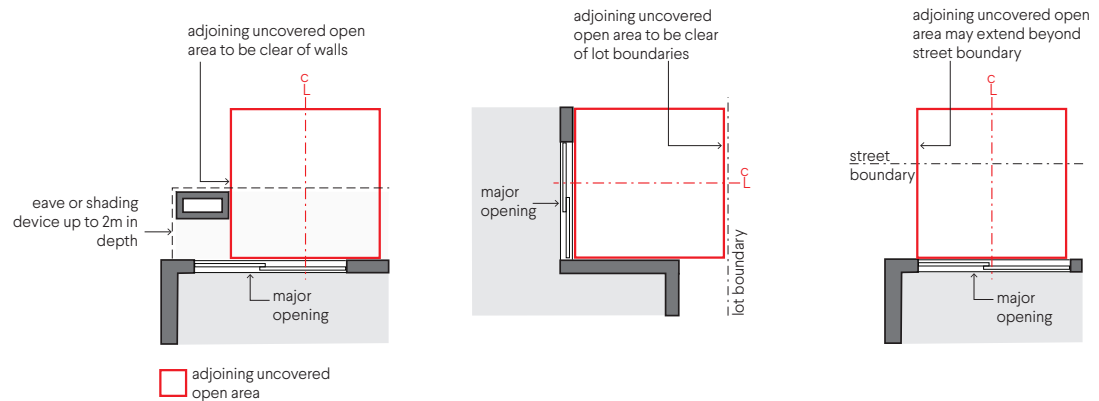

Figure 2.2d Adjoining uncovered open areas

2.3 Parking

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.3.1** Siting and the extent of parking does not dominate the **development** or **streetscape** and responds to the context and **local character** by:
- supporting the efficient use of the **site**; and
 - minimising the extent of paving for parking and vehicle access.
- P2.3.2** Adequate parking is provided for various modes of transport, including bicycles, motorcycles, scooters and cars, that has regard to the following considerations:
- the proximity of the proposed **development** to public transport, **activity centres**, areas of **amenity** and other facilities;
 - the type, size and number of **dwellings**; and
 - the availability of on-**street** and other off-street parking.
- P2.3.3** Parking spaces are designed for flexibility and adaptability having regard for:
- the needs of occupants, including consideration of **universally accessible** parking spaces; and
 - the ability to use the space for alternative purposes.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Occupant parking

- C2.3.1** Occupant car parking is provided on **site** and in accordance with **Table 2.3a**.
- C2.3.2** Motorcycle/scooter parking for **multiple dwellings** is provided on site in accordance with **Table 2.3a**.
- C2.3.3** Car spaces and manoeuvring areas designed and provided in accordance with AS2890.1.

Visitor parking

- C2.3.4** Visitor car parking for **grouped** and **multiple dwellings** is provided on **site** and in accordance with **Table 2.3a**.
- C2.3.5** Visitor car parking spaces to be:
- marked and clearly signposted as dedicated for visitor use only;
 - located on **common property**; and
 - connected to **building** entries via a **continuous path of travel**.

Related elements

- 3.3 Street setbacks
- 3.6 Streetscape
- 3.7 Access

2.3 Parking (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Table 2.3a Car parking requirements

Occupant car parking	Location A	Minimum parking space(s) (per dwelling)	Maximum garage and carport parking (per dwelling)
	Ancillary dwelling	0	1
	Studio and 1 bedroom dwelling	0	1
	2 bedroom dwelling	0	2
	3+ bedroom dwelling	1	2
	Location B	Minimum parking space(s) (per dwelling)	Maximum garage and carport parking (per dwelling)
	Ancillary dwelling	0	1
	Studio and 1 bedroom dwelling	1	1
	2 bedroom dwelling	1	2
	3+ bedroom dwelling	1	2
Visitor carparking	Number of dwellings	Minimum Parking	
	0-4 dwellings	No visitor car parking required	
	5-8 dwellings	1	
	9-12 dwellings	2	
	13 or more dwellings	3, plus 1 additional space per four dwellings or part thereof	
Motorcycle /scooter parking (multiple dwellings only)	0-19 dwellings	No motorcycle/scooter parking required	
	20 or more dwellings	One motorcycle/scooter space for every 10 car parking spaces	
Minimum parking applies to all types of parking on site including (but not limited to) garages, carports , uncovered spaces, undercroft and basement parking.			
Maximum carparking applies to garages and carports . Additional parking may be provided as uncovered spaces, undercroft or basement parking.			
LOCATION A – includes all land located within:			
<ul style="list-style-type: none">- 800m walkable catchment of a train station on a high-frequency rail route;- 250m walkable catchment of a transit stop:<ul style="list-style-type: none">o on a high-frequency transit route; oro that has multiple transit routes, that when combined stop every 15 minutes during weekday peak periods (7am –9am and 5pm – 7pm); or- the defined boundaries of an activity centre.			
LOCATION B – includes all land that is not within Location A.			

2.3 Parking (cont.)

Figure 2.3a Bicycle parking

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Bicycle parking

C2.3.6 Bicycle parking is provided on **site** and in accordance with **Table 2.3b** and **Figure 2.3a**.

Table 2.3b Minimum bicycle parking requirements

		Minimum number of bicycle spaces		
		Single houses	Grouped dwellings	Multiple dwellings
Occupant bicycle parking		No minimum requirement		0.5 x the total number of dwellings
Visitor bicycle parking	0-9 dwellings	No visitor bicycle parking required		
	10 or more dwellings	No visitor bicycle parking required		0.1 x the total number of dwellings

Where the bicycle parking calculation results in a fraction of a space, the requirement is to be rounded up to the nearest whole number.

2.4 Waste Management

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.4.1** Sufficient space for waste storage is provided that:
- i. is convenient for residents;
 - ii. has collection areas which can be accessed by service vehicles; and
 - iii. can be secured and managed where required.
- P2.4.2** Waste management facilities are located and **screened** to minimise negative impacts on the **streetscape**, communal areas, **building entries**, **major openings**, and the local **amenity**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2.4.1** A dedicated and accessible space is provided to accommodate the required number and type of waste storage bins for the **development**, in line with requirements of the local government and separate from any waste storage areas associated with the non-residential component of a **mixed use development**.
- C2.4.2** Where **multiple dwellings**, or five or more **grouped dwellings** are proposed, a waste management plan to the satisfaction of the **decision-maker**, is to be provided.
- C2.4.3** Waste storage bins are **screened** from view from communal areas, the **street**, public open space, and other areas accessible to the public.
- C2.4.4** Where a communal waste storage area is provided, it is to be separated or **screened** from **major openings**, **primary garden areas** and **communal open space** to avoid the adverse impact of potential sources of noise and odour.

Related elements

- 2.1 Size and layout of dwellings
- 3.6 Streetscape

2.5 Utilities

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.5.1** The **site** is serviced with **utilities** that that are fit for purpose and meet current performance and access requirements of service providers, addressing access, maintenance and safety considerations.
- P2.5.2** **Utilities** balance operational requirements with the need to minimise:
- i. visual, noise, heat and air quality impacts on **habitable rooms** and **private open space** both on the **development site** and **adjoining properties**; and
 - ii. the visual impact on the **streetscape**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2.5.1** **Service utilities** are designed and located such that they:
- i. are accessible and can be safely maintained;
 - ii. maintain clear **sightlines** for vehicle access; and
 - iii. integrated into the design of the **development** and/or **screened** from view of the street.

*Note: Where required by the **NCC**, fire service infrastructure is located to be visible, and with unobstructed access for its required use during an emergency.*

- C2.5.2** **Functional utilities** (with the exception of **solar collectors** and electric vehicle charging):

- i. are located behind the **primary street setback** and not visible from the **primary street**;
- ii. are designed to integrate with the **development**; and
- iii. are located and/or **screened** so that they are not visually obtrusive and minimise the impact of noise sources to **habitable rooms** and **private open space** both on the **development site** and **adjoining properties**.

- C2.5.3** Where provided, **solar collectors** are located on the roof or other parts of buildings, and prioritise functional performance.

Related elements

- 1.1 Private open space
- 3.3 Street setbacks
- 3.6 Streetscape

2.6 Outbuildings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.6.1** Outbuildings do not negatively impact the amenity for residents of the development, adjoining properties or the streetscape.
- P2.6.2** Siting and size of outbuildings does not compromise the ability to provide adequate primary garden area, soft landscaping, trees and deep soil areas.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2.6.1** Any outbuilding:
- individually or collectively does not exceed 60m² per site;
 - is not located within the primary or secondary street setback area;
 - does not exceed a wall height of 3m;
 - does not exceed a ridge height of 4.2m;
 - is set back or built up to lot boundaries in accordance with C3.4.1, C3.4.4 or C3.4.5;
 - does not exceed the maximum allowable site cover in accordance with C3.1.1;
 - does not reduce the minimum primary garden area required in accordance with C1.1.1;
 - does not reduce the minimum soft landscaping required in accordance with C1.2.1; and
 - does not reduce the minimum tree requirement and associated deep soil area in accordance with C1.2.4.
- C2.6.2** Notwithstanding C2.6.1(iii), where an outbuilding is designed to be compatible with the colour and materials of the dwelling on the same site, the wall height may be increased to 3.5m.
- Outbuildings will need to comply with the NCC requirements, including but not limited to fire separation.*

Related elements

- 1.1 Private open space
- 1.2 Trees and landscaping
- 3.1 Site cover
- 3.4 Lot boundary setbacks

Housing diversity

2.7 Universal design

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.7.1** Development provides **accessible housing** or **adaptable dwellings** that are proportionate in number to the size of the development and intended occupancy.
- P2.7.2** **Accessible housing** and **adaptable dwellings** provide housing options for people with disabilities and/or limited or reduced mobility, facilitate ageing in place, and are designed in accordance with the **universal design** requirements:
- of the *Livable Housing Design Guidelines*;
 - of the *Australian Building Codes Board Livable Housing Design Standard (2022)*;
 - of AS4299; and/or
 - to suit the specific needs of the occupant.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2.7.1** Where 10 or more **grouped** or **multiple dwellings** are proposed, a minimum 20 per cent¹ of all dwellings are:
- designed and constructed to a minimum silver level **universal design** in accordance with **A4 Universal design requirements**, or
 - certified Livable Housing Australia to a minimum silver level of performance.

*Note: No universal design requirements apply for **single houses** or **grouped** and **multiple dwellings** development with less than 10 dwellings.*

All other provisions of the R-Codes still apply.

¹Where calculations result in a fraction of a **dwelling**, the requirement is to be rounded up to the nearest whole number.

- C2.7.2** **Accessible dwellings** that seek to apply the gold level **universal design** site area variation as per Part D, **C1.1.6** or **C1.1.7** shall;

- be designed and constructed in accordance with the gold level universal design requirements of **A4 Universal design requirements**, or are certified Livable Housing Australia to a minimum gold level of performance; and
- have a maximum **internal floor area** of:
 - in the case of **single houses** and **grouped dwellings** – 110m²; or
 - in the case of **multiple dwellings** – 90m².

Note: All other provisions of the R-Codes still apply.

Related elements

- Part D – 1.1 Site area
- 2.1 Size and layout of dwellings

Housing diversity

2.8 Ancillary dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P2.8.1 The size of an **ancillary dwelling** allows for adequate internal **amenity** whilst remaining incidental to the primary **dwelling**.

P2.8.2 **Ancillary dwellings** allow for diversity of housing without having an adverse impact on the **amenity** of:

- i. **adjoining properties;**
- ii. **streetscape and local character;** and
- iii. the primary **dwelling**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C2.8.1 An **ancillary dwelling** in accordance with **Table 2.8a**, provided that it:

- i. does not preclude the primary **dwelling** from meeting the maximum **site cover** and the minimum required **private open space, soft landscaping, trees and deep soil area**; and
- ii. complies with the following design elements as relevant:
 - 2.2 Solar access and natural ventilation
 - 2.3 Parking
 - 2.5 Utilities
 - 3.1 Site cover
 - 3.2 Building height
 - 3.3 Street setbacks
 - 3.4 Lot boundary setbacks
 - 3.5 Site works and retaining walls
 - 3.6 Streetscape
 - 3.7 Access
 - 3.9 Solar access for adjoining sites
 - 3.10 Visual privacy

Table 2.8a Ancillary dwelling requirements

Dwelling type		Ancillary dwelling type	Maximum ancillary dwellings	Maximum internal floor area
Single house and grouped dwellings		All types of ancillary dwellings	1 per site	70m ²
Multiple dwellings	1-19 dwellings	Dual key dwelling only	1 per development	70m ²
	20 or more dwellings		2 per development and 1 per additional 10 dwellings ¹	70m ²
¹ Rounded down to the nearest 10 dwellings				

*Note: The above provisions relate to the **ancillary dwelling** portion of the **development**, with the exception of 3.1 Site cover, 3.4 Lot boundary setbacks and 3.9 Solar access for adjoining sites which would need to be assessed in combination with the primary **dwelling**. The primary dwelling would still need to comply with all relevant provisions of the R-Codes.*

Related elements

- 1.1 Private open space
- 1.2 Trees and landscaping
- 3.1 Site cover

Housing diversity

2.9 Small dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.9.1** The design of **small dwellings** ensures adequate indoor and outdoor **amenity** for occupants.
- P2.9.2** Alternative and affordable housing options are provided for small households where it can be demonstrated that the **development**:
- is located in an area that has good access to public transport, public open space, local retailing, and other community infrastructure;
 - responds to a demand for **small dwellings** in the locality which may be recognised in the **local planning framework**;
 - provides an adequate mix of **dwelling sizes**; and
 - is consistent with the existing and/or future intended **streetscape** and **local character**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Small Dwellings – Part D, C1.1.6 and C1.1.7 applies and provides a site area concession

- C2.9.1** **Small dwellings** subject to the site area concession of Part D, **C1.1.6** or **C1.1.7** shall comply with the following:
- for **single houses** and **grouped dwellings**, a maximum **internal dwelling floor area** of 70m², or for **multiple dwellings** a maximum internal floor area of 60m²;
 - parking provided in accordance with **Table 2.3a**; and
 - all other provisions of the R-Codes.

Related elements

- Part D – 1.1 Site area
- 2.1 Size and layout of dwellings

2.10 Housing on lots less than 100m²

Housing on lots less than 100m² – applies to single houses and grouped dwellings in areas coded R100-SL only.

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P2.10.1** Housing on **lots** less than 100m² are integrated with the **streetscape** and surrounding **development** and does not form the predominant housing type in a **street**.
- P2.10.2** Housing on **lots** less than 100m² are designed to a high standard to contribute to the desired **streetscape** character and do not adversely impact the **amenity** of **adjoining properties**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C2.10.1** **Single houses** and **grouped dwellings** in areas coded R100-SL are to comply with the following:
- dwellings to front a **primary street**, **secondary street**, or public **right-of-way**; and
 - all provisions of the R-Codes to apply, subject to the modifications in **Table 2.10a**.

Related elements

- Part D – 1.1 Site area

Housing diversity

2.10 Housing on lots less than 100m² (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Table 2.10a Modified provisions for housing on lots less than 100m²

R-Code Element (Part C)	Clauses	Modified provision
1.1 Private open space	C1.1.1	Dwellings to provide: <ul style="list-style-type: none"> - a single consolidated uncovered primary garden area with a minimum area of 15m² and a minimum dimension of 3m; OR - one private open space (such as a balcony or roof terrace) in accordance with Table 1.1b.
1.2 Trees and landscaping	C1.2.1 C1.2.2 C1.2.4	Landscaping <ul style="list-style-type: none"> - minimum of 10% of the site to be provided as soft landscaping, with a minimum dimension of 1m; and - no minimum landscaping of the street setback area. Trees <ul style="list-style-type: none"> - no minimum tree requirements
2.1 Size and layout	C2.1.6	Measured from the finished floor level to the ceiling level, minimum ceiling heights for dwellings are: <ul style="list-style-type: none"> - 2.65m for habitable rooms; and - 2.4m for non-habitable rooms. All other ceilings meet the requirements of the NCC .
3.1 Site cover	C3.1.1	Maximum site cover of 85%
3.2 Building height	C3.2.1	Minimum two storey building height . Maximum four storey building height in accordance with Table 3.2a .
3.3 Street setbacks	C3.3.1	Primary or secondary street <ul style="list-style-type: none"> - 1m primary and secondary street setback Right-of-way <ul style="list-style-type: none"> - 0.5m setback to adjoining right-of-way; and - nil street setback for upper floors
3.4 Lot boundary setbacks ¹	C3.4.4	Boundary walls permitted: <ul style="list-style-type: none"> - behind the street setback; and - to a maximum boundary wall height of 13m.
3.6 Streetscape	C3.6.7	Street fences to not exceed 900mm in height.
3.9 Solar access for adjoining sites ¹	All	No overshadowing requirements apply.
3.10 Visual privacy ¹	All	No visual privacy requirements apply.

¹Where **development** abuts an **adjoining property** not coded R100-SL, the modified provisions of **Table 2.10a** do not apply.

3.0 NEIGHBOURLINESS

OBJECTIVES

- 3A** To deliver **amenity** and liveability for residents of new **development** and **adjoining properties**, with regard to **sunlight, solar access, natural ventilation** and visual privacy.
- 3B** To ensure that **development** is appropriately scaled, particularly in respect to **building** bulk and height, and is sympathetic to the scale of the **street** and surrounding buildings, or for precincts undergoing a transition, the desired future character of the area as identified in the **local planning framework**.
- 3C** To contribute to place responsive, attractive **streetscapes**.
- 3D** To ensure that safe, legible access is provided to **dwellings** for pedestrians, bicycle riders and vehicles.

Built form and character

3.1 Site cover

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.1.1** The **site cover** of the **development** is suitable for its context to:
- achieve appropriate **building** bulk on the **site**, consistent with the intent of the applicable density code and/or as outlined in the **local planning framework**;
 - ensure sufficient outdoor space for **landscaping** including trees and **deep soil areas**;
 - ensure adequate **solar access** and **natural ventilation** into the **dwelling**;
 - provide opportunities for residents to use space external to the dwelling for outdoor pursuits and access within and around the **site**;
 - provide space for **utilities** and essential facilities; and
 - be compatible with the existing and/or desired **streetscape** and **local character**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.1.1** **Development** on each **site** does not exceed the maximum **site cover** percentages of **Table 3.1a**.

Table 3.1a Maximum site cover requirements

R30	R35	R40	R50	R60	R80
60%	60%	65%	65%	70%	70%

*R80 Code standards apply to **single houses** and **grouped dwellings** in areas coded R100, R160 and R-AC.*

Related elements

- 1.1 Private open space
- 1.2 Trees and landscaping
- 2.2 Solar access and natural ventilation

Built form and character

3.2 Building height

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P3.2.1 Building height, bulk and scale is appropriate for the existing and/or desired future **streetscape** and **local character** of the area and nearby development.

P3.2.2 Building height is considerate of the impact on the **amenity** of **adjoining properties** or the **streetscape**, including road reserves and public open space reserves, and where appropriate maintains:

- adequate **solar access** into indoor and outdoor **active habitable space** and **solar collectors**; and
- access to views of significance.

Notes

The height of a building is taken as the highest point at any part of the development immediately above natural ground level.
Where natural ground level varies across the site, deemed natural ground level is to be used.

Figure 3.2a Measuring building height and natural ground level

Related elements

- 3.4 Lot boundary setbacks
- 3.6 Streetscape
- 3.9 Solar access for adjoining sites

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.2.1 Building height complies with **Table 3.2a**.

Table 3.2a Maximum building heights

R-Coding	Maximum number of storeys	Concealed or skillion roof	Pitched, hipped or gabled roof	
		Maximum building height	Maximum height of wall	Maximum total building height
R30 - 40	2	8m	7m	10m
R50 - 60	3	11m	10m	13m
R80	4	14m	13m	16m

R80 Code standards apply to **single houses, grouped dwellings** in areas coded R100, R160 and R-AC

Refer **Figure 3.2a** for **building height** and **natural ground level** measurement guidance.

Refer **Figure 3.2b** for **wall height** and **total building height** guidance.

This table provides a maximum **building height** only and **development** will need to consider other elements such as 3.9 Solar access for adjoining sites.

Where roof top **terraces** are proposed, the concealed or skillion roof controls apply.

Figure 3.2b Measurement of total building height

3.3 Street setbacks

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P3.3.1 Buildings are set back from **street boundaries** an appropriate distance to ensure they:

- are consistent with the existing or future **streetscape** and **local character**;
- provide sufficient space for tree planting and other **landscaping**, as well as community interaction;
- provide adequate privacy to the **dwellings**;
- accommodate **site** planning requirements such as parking and **utilities**; and
- allow safety clearances for easements for essential service corridors and **sightlines**.

P3.3.2 Buildings mass and form that:

- uses design features to affect the size and scale of the building;
- provide the opportunity for building articulation, such as well-defined entries, varying **setbacks** across the **building width**, **verandahs**, **porches** and **balconies**;
- uses appropriate minor projections that do not detract from the character of the **streetscape**;
- minimises the proportion of the **façade** at ground level taken up by building services, vehicle entries, parking supply, blank walls, servicing infrastructure access, meters and the like; and
- positively contributes to the prevailing or future **development** context and streetscape as outlined in the **local planning framework**.

Related elements

- 1.2 Trees and landscaping
- 2.3 Parking
- 3.4 Lot boundary setbacks
- 3.6 Streetscape

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Setback of buildings

C3.3.1 Buildings are set back from the **street boundary** in accordance with **Table 3.3a**.

Minor projections, such as chimneys, eaves, window hoods and other architectural features, are acceptable provided they do not project more than 0.75m into the **street setback**.

*Note: Minor projections will need to comply with the **NCC** requirements.*

C3.3.2 Notwithstanding **C3.3.1**, the following reductions are permitted:

- in areas coded R30, R35 and R40, the **primary street setback line** may be reduced by up to 1m for a total of 30 per cent of the **frontage** width (refer **Figure 3.3a**); and/or
- for a **porch**, **verandah**, **unenclosed balcony** or equivalent the primary street setback may be reduced up to half the required primary street setback as specified in **Table 3.3a**, up to the full **building width** (refer **Figure 3.3b**).

C3.3.3 Buildings set back from a corner lot truncation boundary in accordance with the **secondary street setback line** in **Table 3.3a**.

Table 3.3a Minimum setback of buildings from the street

Street type	R30	R35	R40	R50	R60	R80
Primary street	4m	4m	3m	2m	2m	2m
Secondary street	1.5m	1.5m	1m	1m	1m	1m
Adjoining communal street	0.5m					
Adjoining laneway or right-of way where it is the primary street to the dwelling ¹	2m					
Adjoining laneway or right-of way	0.5m					
<i>R80 Code standards apply to single houses and grouped dwellings in areas coded R100, R160 and RAC.</i>						
<i>Where road widening is required, street setbacks are to be calculated from the adjusted street boundary.</i>						
¹ Does not apply to ancillary dwellings .						

Built form and character

3.3 Street setbacks (cont.)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P3.3.3 Garages and/or carports are set back to:

- contribute positively to the **streetscape** and appearance of **dwelling**s;
- maintain clear **sightlines** along the street, to not obstruct views of dwellings from the **street** and vice versa; and
- ensure vehicle parking on a **driveway** only occurs where space permits and does not impede on any existing or planned adjoining pedestrian, cycle, or dual-use path.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Setback of garages and carports

C3.3.4 Garages are set back from the **primary street boundary** in accordance with **Table 3.3b**.

Table 3.3b Setback of garages from the primary street

R-Coding	Primary street setback
R30-R35	Minimum 5.0m ¹ (Refer Figure 3.3c)
R40 and above	In accordance with Table 3.3a

¹ The **garage** setback from the **primary street** may be reduced to 4.5m where an existing or planned footpath, shared path or road alignment is located more than 1m from the **street boundary**.

C3.3.5 Carports are set back from the **primary street boundary** in accordance with **Table 3.3a**. This setback may be reduced by up to 50 per cent where:

- the carport is set back from the lot boundary in accordance with **C3.4.3**;
- the carport width does not exceed the requirement of **C3.6.6**;
- the carport is free of walls (excluding pillar and posts with a horizontal dimension of 450mm by 450mm or less) for all portions that project forward of the **primary street setback line**; and
- the construction allows an unobstructed view between the **dwelling** and the **street, right-of-way** or equivalent.

C3.3.6 Garages and carports are set back from a **secondary street, right-of way** and **communal street** in accordance with **Table 3.3a**.

Figure 3.3a Reduction in primary street setback for R30, R35 and R40 coded lots

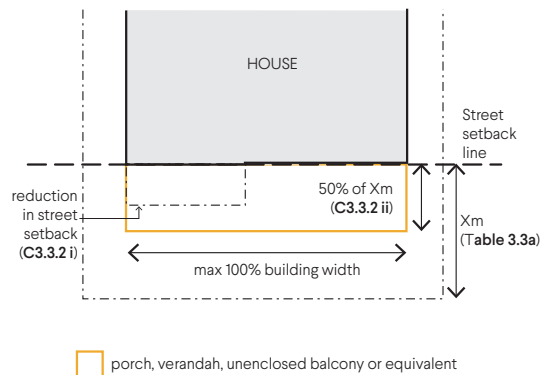

Figure 3.3b Reduction in primary street setback for porch, verandah and unenclosed balcony

Figure 3.3c Setback of garage from the primary street

Built form and character

3.4 Lot boundary setbacks

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.4.1** Lot boundary setbacks reinforce the location's streetscape character and are consistent with the existing or desired built form local character.
- P3.4.2** The setback of development from lot boundaries provides a transition between sites with different land uses or intensity of development.
- P3.4.3** Buildings are set back from lot boundaries or adjacent buildings on the same lot to:
- provide adequate solar access and natural ventilation to the building and open spaces on the site and adjoining properties; and
 - address the potential for overlooking and resultant loss of privacy on adjoining properties.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Lot boundary setbacks

C3.4.1 Buildings are set back from lot boundaries in accordance with Table 3.4a. Refer Figure 3.4a, b and c.

Minor projections, such as chimneys, eaves, window hoods and other architectural features, are acceptable provided they do not project more than 0.75m into the lot boundary setback.

Note: Minor projections will need to comply with the NCC requirements.

Table 3.4a Lot boundary setbacks

Wall height ¹	Minimum lot boundary setback
Up to 3.5m	1m
3.6 – 7m	1.5m
7.1 – 10m	3m
10.1m and above	3m

¹Rounded to the nearest 0.1m

Figure 3.4c Measuring wall height to a gable

Figure 3.4a Measuring wall height for lot boundary setbacks

Built form and character

3.4 Lot boundary setbacks (cont.)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P3.4.4 Buildings are built up to lot boundaries where this:

- makes more effective use of space for **primary garden areas** and/or **private open space**;
- maintains adequate **solar access** to **major openings** and private open space of **adjoining properties**; and
- contributes positively to the prevailing or future **development** context and **streetscape** as outlined in the **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.4.2 The second **storey** of **walls** shall be set back in accordance with **Table 3.4a** for a maximum wall length of 14m (including any **balconies**). For a portion of wall exceeding 14m in length:

- the wall is to be set back 3m from the **lot boundary** for the remainder of its length; or
- contain a minimum 3m x 3m separation measured from the lot boundary (Refer **Figure 3.4d**).

*Note: This applies only to two **storey walls** as three and four storey walls are already required to be set back 3m.*

C3.4.3 **Carports, patios, verandahs** or equivalent structures are permitted to be built up to the **lot boundary** where the:

- structures are less than 10m in length;
- structures do not exceed an equivalent **wall height** of 3m (measured to the top of pillar and/or post, refer **Figure 3.4e**);
- structures do not exceed a ridge height of 4.2m; and
- pillar and posts on the boundary are of a horizontal dimension of 450mm by 450mm or less.

*Note: **Carports, patios, verandahs** or equivalent structures will need to comply with the **NCC** requirements, including but not limited to fire separation and non-combustible materials.*

*Pillars or posts located on the **boundary** with a horizontal dimension of 450mm or less are to be excluded from the calculations of boundary **wall** length.*

Figure 3.4d Setbacks for two storey walls

Figure 3.4e Measuring equivalent wall height for carports, patios, verandahs or equivalent structures

Boundary walls

C3.4.4 **Boundary walls** may be built in accordance with **Table 3.4b** provided:

- boundary walls are located behind the **street setback**;
- overshadowing does not exceed the limits of **C3.9.1**, **C3.9.2** and **C3.9.3**; and
- they are finished to an equivalent standard to the rest of the development, to the satisfaction of the **decision-maker**.

C3.4.5 Where the **boundary wall** abuts an existing or simultaneously constructed wall of similar or greater dimension, that boundary wall may exceed the requirements of **C3.4.4** up to the extent of **height** and **length** of the existing boundary wall.

Built form and character

3.4 Lot boundary setbacks (cont.)

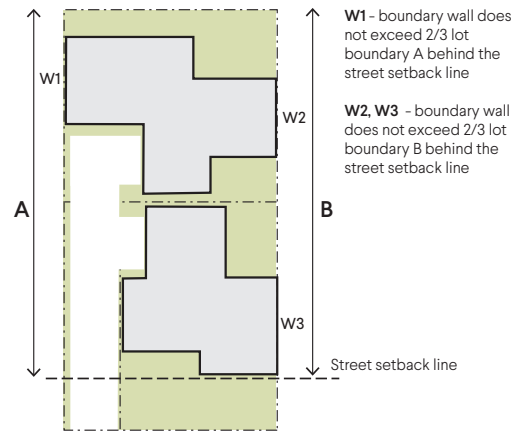

Figure 3.4f Single storey boundary walls- two lot boundaries

Figure 3.4g Boundary walls – all lot boundaries

DEEMED-TO-COMPLY

Development satisfies the following *deemed-to-comply* requirements (C)

Table 3.4b Lot boundary setbacks

R-Coding	Maximum boundary wall height	Maximum boundary wall length	Related figure
R30 – R35	3.5m	Maximum two-thirds the length of the lot boundary the wall abuts, measured from behind the street setback line . Applicable up to two lot boundaries.	Figure 3.4f
R40	3.5m	Maximum two-thirds the length of the lot boundary the wall abuts, measured from behind the street setback line . Applicable to all lot boundaries.	Figure 3.4g
R50 – R80	Where frontage is 8.5m or less	7m	Maximum 14m length, at which point the wall is to be set back a minimum of 3m measured from the lot boundary for a minimum length of 3m. Applicable to all lot boundaries.
	Where frontage is greater than 8.5m	7m	Maximum 14m length, at which point the wall is to be set back a minimum of 3m measured from the lot boundary for a minimum length of 3m, with a cumulative maximum of two-thirds the length of the lot boundary the wall abuts measured from behind the street setback line . Applicable to all lot boundaries.

R80 Code standards apply to **single houses** and **grouped dwellings** in areas coded R100, R160 and R-AC.

Where the subject **site** is adjacent to a site with a lower density code, the maximum **wall** length and **height** of the **boundary wall** between them is determined by the lower density code.

Where a **boundary wall** incorporates a retaining **wall** directly beneath the boundary wall, the retaining wall does not require assessment under clause C3.5.2 and is to be included in the **wall height** for the purpose of clause C3.4.4 (refer Figure 3.4i).

Figure 3.4h Two storey boundary wall setbacks

Built form and character

3.4 Lot boundary setbacks (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Grouped and multiple dwellings on the same lot

C3.4.6 For grouped dwellings on the same lot, the lot boundary provisions of C3.4.1 to C3.4.5 are to apply to internal site boundaries as if they were lot boundaries (refer Figure 3.4j).

C3.4.7 For multiple dwellings, buildings on the same lot or facing portions of the same building are to be set back from each other as though there is a lot boundary between them (refer Figure 3.4k).

Note: Visual privacy setbacks may also apply.

Figure 3.4i Total boundary wall height with retaining wall below

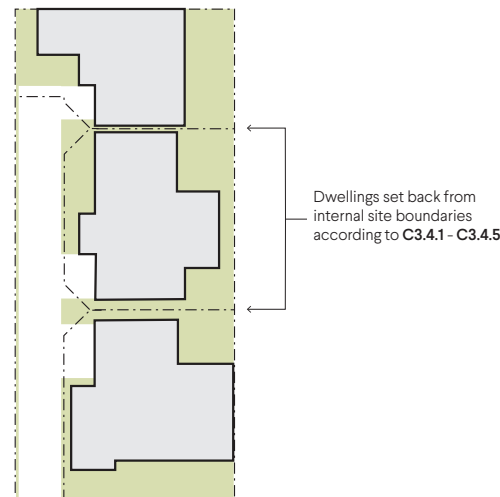

Figure 3.4j Setbacks to internal lot boundaries

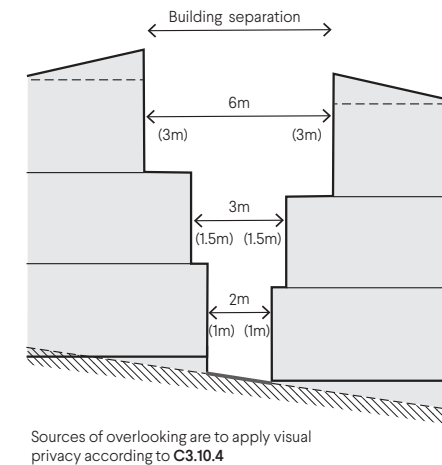

Figure 3.4k Building separation for multiple dwellings

Built form and character

3.5 Site works and retaining walls

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.5.1** Development that considers and responds to the natural features of the **site** and requires minimal excavation/fill.
- P3.5.2** Where excavation/fill is necessary, all finished levels respect the **natural ground level** at the **lot boundary** of the **site** and as viewed from the **street**.
- P3.5.3** Retaining **walls** that result in land which can be effectively used for the benefit of residents, do not detrimentally affect the **amenity** of **adjoining properties** in the opinion of the **decision-maker**, and are designed, engineered and **landscaped** having due regard to the provisions of element 3.10 *Visual privacy*.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.5.1** Retaining **walls**, fill and excavation forward of the **street setback line**, not more than 0.5m above or below the **natural ground level**, except where necessary to provide for pedestrian **universal access** and/or vehicle access, drainage works, or natural light to a **dwelling**.
- C3.5.2** Retaining **walls** and fill within the **site** and behind the **street setback** to comply with **Table 3.5a**.
- C3.5.3** Excavation within the **site** is permitted behind the **street setback line** and may be constructed up to the **lot boundary**.

Note: NCC and engineering requirements may apply.

Table 3.5a Setback of retaining walls and fill

Height of retaining walls and fill ¹ <i>As measured from natural ground level</i>	Setback required
1m or less	0m
1.5m	1.5m
2m	2m
2.5m	2.5m
3m +	3m

¹ Take the nearest higher value for all **height** calculations.

Measurement of the **height** of **site** works or retaining **walls** for the purpose of calculating **Table 3.5a setback** is to be taken from the **natural ground level** at the **lot boundary** adjacent to that point of the site works or retaining wall.

The relevant provisions of 3.9 Solar access for adjoining sites and 3.10 Visual privacy apply.

Related elements

- 3.2 Building height
- 3.4 Lot boundary setbacks
- 3.9 Solar access for adjoining sites
- 3.10 Visual privacy

Built form and character

3.6 Streetscape

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.6.1** The design of **dwelling façades, street walls** and fences in the **street setback area** contributes positively to **streetscape, context and local character**.
- P3.6.2** The **building design** addresses **street frontages** and provides opportunity for **passive surveillance** and social interaction.
- P3.6.3** **Dwelling and building entries** are:
- accessible and protected from the weather;
 - well-lit for safety and **amenity**, without opportunity for concealment, and designed to enable **passive surveillance** of the entry from within the lot.
- P3.6.4** Visual connectivity between the **dwelling** and the **streetscape** should be maintained and the effect of the **garage** on the streetscape should be minimised whereby the streetscape is not dominated by garages.
- P3.6.5** The height of **street walls** and fences allows for **passive surveillance** of the street from the **development** whilst balancing the need for privacy of **private open space** and the impact of traffic noise, where located on a primary distributor, district distributor or integrator arterial road.

Related elements

- 2.3 Parking
- 3.3 Street setbacks
- 3.7 Access

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Addressing the street

- C3.6.1** **Single houses and grouped dwellings** to address the **street** (including a **communal street** or **right-of-way** where this is the primary **frontage**) in accordance with the following:
- the primary entrance to each **dwelling** must be readily identifiable from the street; and
 - provide at least one **major opening** on the dwelling frontage with an outlook to the street.
- C3.6.2** For **multiple dwellings**, upper level **balconies** and/or windows overlook the **street** and public domain areas.
- C3.6.3** For **single houses and grouped dwellings**, front doors to be protected from the weather (for example by a **porch, verandah, building over** or similar), with a minimum dimension of 1.2m (refer **Figure 3.6a**).

Note: Minimum dimension refers to the minimum length and width.

- C3.6.4** Ground floor **multiple dwellings** fronting the **street** are provided with separate pedestrian access from the street.

- C3.6.5** A **garage door** and its supporting structures (or a **garage wall** where a garage is aligned parallel to the **street**) facing the **primary street** is not to occupy more than 50 per cent of the **frontage** at the **setback line** as viewed from the street.

This may be increased up to 60 per cent where an upper floor or **balcony** extends for more than half the width of the garage and its supporting structures (or a garage wall where a garage is aligned parallel to the street) and the entrance to the **dwelling** is clearly visible from the primary street (refer **Figure 3.6b**).

- C3.6.6** **Carports** and supporting structure shall not exceed 60 per cent of the frontage where projected forward of the **primary street setback line** in accordance with **C3.3.5**.

Figure 3.6a Covered primary dwelling entrance

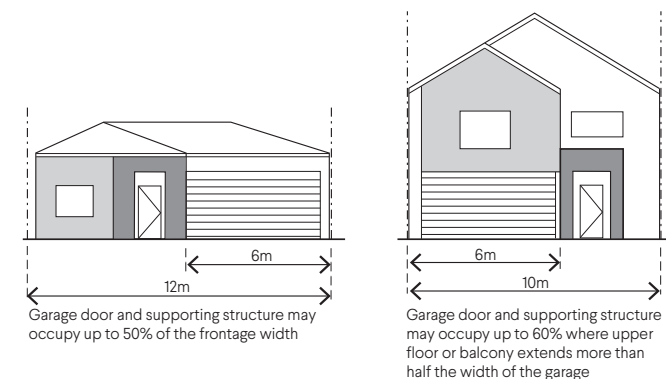

Figure 3.6b Maximum garage width calculation

Built form and character

3.6 Streetscape (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Street walls and fences

C3.6.7 When provided, fences or walls within the **primary street setback area** are to be:

- a maximum height of 1.8m; and
- visually permeable** above 1.2m (refer **Figure 3.6c**);

measured from **natural ground level** on the primary street side of the fence or wall.

C3.6.8 Solid pillars that form part of front fences or walls are not more than 1.8m above **natural ground level**, provided the horizontal dimension of the pillars is not greater than 450mm by 450mm and pillars are separated by **visually permeable** fencing in line with **C3.6.7** (Refer **Figure 3.6c**).

C3.6.9 For sites on **street corners**, street fences or walls within the **secondary street setback area** are to be designed in accordance with **C3.6.7** and **C3.6.8** for a minimum 50 per cent of the **street boundary** behind the **primary street setback** (refer **Figure 3.6d**).

Figure 3.6c Visually permeable fencing above 1.2m

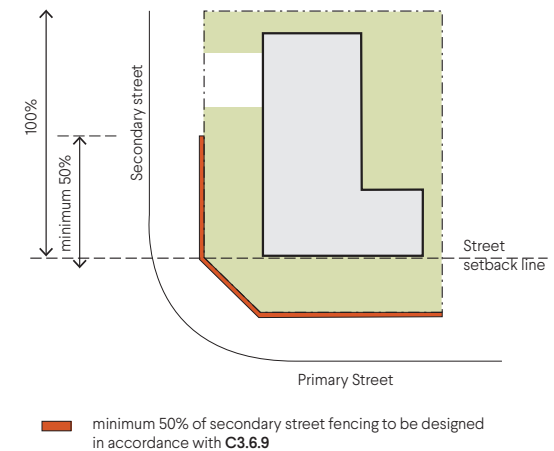

Figure 3.6d Corner lot fence requirements

Built form and character

3.7 Access

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P3.7.1 Access for each **development site** is to:

- balance pedestrian and cyclist safety while providing safe vehicle access;
- minimise the extent of **impervious surfaces**;
- provide legible access; and
- include high quality **landscaping** features.

P3.7.2 Vehicle access is designed and located to:

- minimise the number and width of vehicle access points and the impact on the **streetscape**;
- provide access to the street with the lowest volume of traffic; and
- accommodate sloping sites and retaining **walls**.

P3.7.3 The width of the **communal street** or **battleaxe leg** may be reduced where it is necessary to retain an existing **dwelling** provided:

- safe vehicle access, setbacks or clearances and **sightlines** are achieved; and
- it is only reduced for the portion required to retain the dwelling.

Related elements

- 1.2 Trees and landscaping
- 2.3 Parking

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Vehicle access

C3.7.1 Vehicle access to on **site** car parking spaces to be provided via the lowest available **street** in the hierarchy, as follows:

- where available, from a **right-of-way** or **communal street** available for lawful use to access the relevant site and which is trafficable and drained from the property boundary to a constructed **street**; or
- from the **secondary street** or **primary street** where no **right-of-way** or **communal street** exists.

C3.7.2 Vehicle access points are limited to one per **lot** (refer **Figure 3.7a**) except where:

- an existing **dwelling** is being retained that has an established access point that is not able to serve the other dwellings;
- dwellings front the **street** and access is not available from a **communal street** or rear **right-of-way**, whereby a maximum of one vehicle access point is permitted per dwelling; or
- the lot **frontage** exceeds 40m, two vehicle access points are permitted.

Driveways

C3.7.3 Driveways must be:

- a minimum 3m wide;
- a maximum 6m wide at the **street boundary**;
- set back 0.3m from a side **lot boundary** or **street pole**;
- set back 6m to a street corner (refer **Figure 3.7b**);
- aligned at right angles to the road carriageway; and
- adequately trafficable and drained.

C3.7.4 Driveways designed to allow vehicles to exit to the **street** in forward gear where the driveway:

- serves five or more **dwellings**;
- the distance from an on **site** car parking space to the **street boundary** is 30m or more; or
- the street to which it connects is a designated primary distributor or integrator arterial.

Figure 3.7a One vehicle access point per lot

Figure 3.7b Driveways set back from street corner

Built form and character

3.7 Access (cont.)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.7.4** Unobstructed **sightlines** provided at vehicle access points to ensure safety and visibility along vehicle access ways, **streets, rights-of-way, communal streets, crossovers**, and footpaths.
- P3.7.5** Legible, safe, and direct access for residents and their visitors to move between communal car parking areas or public **streets** and individual **dwellings**.
- P3.7.6** **Development** with potential to be subdivided to create 20 or more **green title lots, strata lots** or **survey-strata lots** provides legible internal connections and access to **streets** and be designed to accommodate traffic movement and volume, visitor parking, pedestrian access, street shade trees, utility services and access for waste collection and emergency service vehicles.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.7.5** **Driveways** designed to allow vehicles to pass in opposite directions where it serves five or more **dwellings**. Passing points are to be provided at least every 30m with driveways to be minimum 5.5m wide for a minimum 6.3m length (excluding manoeuvring tapers) (refer **Figure 3.7c**).
- C3.7.6** For **grouped** and **multiple dwellings** located on a designated primary distributor or integrator arterial road, driveways to allow for two vehicles to enter and exit simultaneously in forward gear. **Driveways** must be minimum 5.5m wide for a minimum 6.3m length (excluding manoeuvring tapers) from the **street boundary** (refer **Figure 3.7d**).

Sightlines

- C3.7.7** **Walls, fences** and other structures truncated or reduced to no higher than 0.75m within 1.5m of where walls, fences, or other structures adjoin:
- a **driveway** that intersects a **street, right-of-way** or **communal street**;
 - a right-of-way or communal street that intersects a public street; and
 - two streets that intersect (refer **Figure 3.7e**).

Manoeuvring tapers excluded from minimum length and width dimension

Figure 3.7c Vehicle passing points

Figure 3.7d Vehicle passing point at lot access point

Built form and character

3.7 Access (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Pedestrian access

C3.7.8 For **grouped** and **multiple dwellings**, a legible, well-defined, **continuous path of travel** is provided from the public footpath and car parking areas to **building** access areas such as lift lobbies, stairs, accessways and individual **dwelling** entries. For **mixed use development**, residential building access areas such as lift lobbies, stairs, accessways and individual dwelling entries are separate from non-residential tenancy access.

C3.7.9 For **multiple dwellings** and 10 or more **grouped dwellings** that are served by a **communal street**, a pedestrian path is provided as follows:

- minimum 1m wide, clear of any **utilities** or **minor projections**;
- clearly delineated or separate from the vehicular access; and
- continuous path of travel** from the **street boundary** to ground floor dwelling or **building** entries.

C3.7.10 Where a **pedestrian access leg** is required to provide access from a **dwelling site** to a public **street**, it is to:

- be a minimum width of 1.5m; and
- provide a **continuous path of travel** with a minimum width of 1m, clear of any **utilities** or **minor projections**.

The pedestrian access leg may be reduced to 1m where required to retain an existing dwelling.

Figure 3.7e Truncation locations or reduced fence height

Built form and character

3.7 Access (cont.)

Figure 3.7f Communal street width

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Communal street and battleaxe legs

C3.7.11 A communal street or battleaxe leg is to be a minimum width of 3.6m, inclusive of a minimum:

- i. 3m wide driveway in accordance with C3.7.3; and
- ii. 0.3m setback either side of the driveway (refer Figure 3.7f).

C3.7.12 A communal street or battleaxe leg, including any adjoining setbacks, is provided with adequate lighting and be landscaped in accordance with C1.2.3.

C3.7.13 Notwithstanding C3.7.11, where a proposed development has the potential to be subdivided to create 20 or more green title lots, strata lots or survey-strata lots, with each lot obtaining driveway access from a communal street, the communal street shall be a minimum 12m wide, which shall include:

- i. a paved vehicular carriageway with a minimum width of 5.5m;
- ii. a 1.2m wide universally accessible pedestrian path;
- iii. soft landscaping of a minimum width 2.5m, with small trees planted at a ratio of one tree per dwelling; and
- iv. lighting as required by the decision-maker.

3.8 Retaining existing dwellings

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.8.1** Retained **dwellings**, dwelling extension or redevelopment are to:
- i. enhance the **streetscape** appearance of the existing dwelling(s) retained; or
 - ii. complement established or future built form in the locality as specified within the relevant **local planning framework**.
- P3.8.2** Retained **dwellings** provide adequate outdoor and indoor **amenity** for residents.

DEEMED-TO COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C3.8.1** Where a **dwelling** is retained as part of a **development**:
- i. the appearance of the retained dwelling is upgraded externally to an equivalent maintenance standard of the new (or the rest of) the development; and
 - ii. the retained dwelling it is to comply with the following provisions of the R-Codes Part C:
 - 1.1 Private open space – **C1.1.1, C1.1.2**
 - 1.2 Trees and landscaping – **C1.2.1, C1.2.2, C1.2.3, and C1.2.4**
 - 1.4 Water management and conservation – **C1.4.1 and C1.4.2**
 - 2.3 Parking – **C2.3.1** (minimums only) and **C2.3.3**
 - 2.4 Waste management – **C2.4.1 and C2.4.3**
 - 2.5 Utilities – **C2.5.1, C2.5.2 and C2.5.3**
 - 2.6 Outbuildings – **C2.6.1 and C2.6.2**
 - 3.4 Lot boundary setbacks – **C3.4.1, C3.4.3, C3.4.4, C3.4.5, C3.4.6** (*applicable only to newly created lot or site boundaries*)

Related elements

- 1.1 Private open space
- 1.2 Trees and landscaping
- 1.4 Water management and conservation
- 2.3 Parking
- 2.4 Waste management
- 2.5 Utilities
- 2.6 Outbuildings
- 3.4 Lot boundary setbacks

3.9 Solar access for adjoining sites

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P3.9.1 Development is designed to protect solar access for neighbouring sites taking into account the potential to overshadow:

- major openings to primary living spaces, in particular those oriented between north west, north and east;
- private open space and communal open space; and
- roof mounted solar collectors.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.9.1 In climate zones 4, 5, and 6, development is designed that its shadow cast at midday, 21 June (refer Figure 3.9a) onto any other adjoining property and/or diagonally adjacent lot (refer Figure 3.9b) does not exceed the limits set out in Table 3.9a.

Table 3.9a Maximum overshadowing

Adjoining property R-Coding	Maximum overshadowing	
	Adjoining property (percentage of dwelling site area) ¹	Diagonally adjacent lots (percentage of dwelling site area) ¹
R25 and lower	25%	12.5%
R30 – R40	35%	17.5%
R50 or higher	50%	25%

For the purpose of calculating overshadowing, **site area** refers to the area of the ground surface and is measured without regard to any **building** on it, but taking into account its **natural ground levels**.

Dividing fences up to 2m in height do not contribute to overshadowing calculations.

¹Where proposed **development** adjoins a **grouped dwelling development**, the maximum overshadowing requirement is to be applied for each grouped dwelling **site area** and excludes portions of **common property** (refer Figure 3.9.c)

Related elements

- 3.1 Site cover
- 3.2 Building height
- 3.4 Lot boundary setbacks

Lot A can cast shadow over a maximum 35% of Site B site area
Lot A can cast shadow over a maximum 35% of Site C site area
Lot A can cast shadow over a maximum 35% of Site D site area

Figure 3.9c Proportionate limits from shared southern boundary for grouped dwellings

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.9.2 Notwithstanding C3.9.1, in climate zones 4, 5, and 6, where the adjoining property is:

- coded R40 or greater; and
- has a lot frontage 7.5m or less (excluding battleaxe lots);

development is designed so that its shadow cast at midday, 21 June onto any other adjoining property does not exceed the limits set out in Table 3.9b.

C3.9.3 Where an adjoining property shares a northern lot boundary with more than one lot including the development site, the limit of shading at C3.9.1 shall be cumulative and proportional to the length of the shared boundary/ies of the development site (refer Figure 3.9e).

Note: C3.9.3 does not apply to diagonally adjacent lots.

Table 3.9b Maximum overshadowing for narrow lots

Adjoining property R-Coding	Maximum overshadowing	
	Overshadowing of the front half of the site	Overshadowing of the rear half of the site
R40	No maximum overshadowing	35%
R50 - R60		50%

Refer to Figure 3.9d for calculation of overshadowing of narrow lots.

Figure 3.9d Proportionate limits from shared southern boundary for narrow lots

Lot A can cast shadow over a maximum 15% of Lot D site area
Lot B can cast shadow over a maximum 5% of Lot D site area
Lot C can cast shadow over a maximum 5% of Lot D site area

Figure 3.9e Proportionate and cumulative limits for shared southern boundary

3.10 Visual privacy

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P3.10.1** Direct overlooking of **major openings** and **active habitable spaces** of adjacent **dwellings** and **adjoining properties** minimised through:
- building** siting, layout and design;
 - design and location of **major openings**;
 - landscape screening** of outdoor active habitable spaces; and/or
 - design and location of screening devices.
- P3.10.2** Adequate visual privacy achieved through appropriate interfaces between **dwellings** and **adjoining properties** including measures such as:
- offsetting the location of ground and first floor windows so that viewing is oblique rather than direct;
 - building boundary walls** where appropriate;
 - setting back the upper **storeys** from the **lot boundary**;
 - providing higher or lower windows, or windows with obscure glazing; and/or
 - screening** (including **landscaping**, fencing, timber screens, external blinds, window hoods and shutters).
- P3.10.3** Visual privacy strategies maintain **amenity** of **habitable rooms** and **active habitable space** with regard to **solar access**, **natural ventilation** and external outlook both within the **development** and for **adjoining properties**.

Related elements

- 2.2 Solar access and natural ventilation
- 3.4 Lot boundary setbacks

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

For development adjoining an existing dwelling

- C3.10.1** All **sources of overlooking** are oriented, offset or setback in accordance with **Table 3.10a** so that the **cone of vision** (refer **Figure 3.10a**) does not capture **major openings** and/or **active habitable spaces** on an **adjoining property** (refer **Figure 3.10b**).

Table 3.10a Cone of vision radius

Type of habitable room/ active habitable space (with a floor level of more than 0.5m above natural ground level)	Cone of vision radius	
	Areas coded R50 or lower	Areas coded higher than R50
Major opening from bedroom and study	4.5m	3m
Major opening from habitable room other than bedroom and study	6m	4.5m
Outdoor active habitable space	7.5m	6m

Figure 3.10a Establishing a cone of vision beyond lot boundary

Figure 3.10b Cone of vision does not capture major openings on adjoining property

3.10 Visual privacy (cont.)

Figure 3.10c Vertical visual privacy design solutions to limit line of sight to adjoining property

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.10.2 Notwithstanding C3.10.1, where the **cone of vision** captures a **major opening** or an **active habitable space** of an existing dwelling behind the **street setback** on an **adjoining property**, the **source of overlooking** is designed to limit or interrupt the line of sight into the major opening or active habitable space of the adjoining property through one or more of the following:

- incorporate a permanent, fixed vertical or horizontal **building** element such as a planter box, fin or window hood (refer **Figure 3.10c**, **Figure 3.10d**);
- have permanent, obscure glazing in any part of the window below 1.6m above floor level (refer **Figure 3.10e**); or
- have permanent screening that is a minimum 75 per cent obscure to any part of the window or active habitable space below 1.6m above floor level (refer **Figure 3.10f**).

*Note: **Cone of vision** radius includes the width of any adjoining **right-of-way**, **communal street** or **battleaxe leg** or the like.*

C3.10.3 Notwithstanding C3.10.2, a **major opening** to a bedroom or study may be offset a minimum of 1.5m from a parallel major opening on an **adjoining property**, measured from the edge of one major opening to another (refer **Figure 3.10g**).

*Note: Offsetting a **major opening** provides an oblique view between facing major openings, however may not satisfy potential overlooking on other floor levels of the **adjoining property** (such as an **active habitable space** or a **major opening** on a lower floor level).*

C3.10.4 Sources of overlooking for grouped or multiple dwellings on the same lot are to apply C3.10.1, C3.10.2 and C3.10.3.

For development adjoining a vacant or unknown site

C3.10.5 Where an **adjoining property** is vacant residential zoned land, or when the location of a **major opening** or an **active habitable space** is unknown, all **sources of overlooking** are oriented, offset or set back in accordance with **Table 3.10a** so that the **cone of vision** does not extend beyond the **lot boundaries** (refer **Figure 3.10h**).

C3.10.6 Notwithstanding C3.10.5 where the **cone of vision** extends beyond a **lot boundary** behind the **street setback** on an **adjoining property**, the **source of overlooking** is designed to restrict the view in the direction of the adjoining property through one or more of the following:

- incorporate a permanent, fixed vertical or horizontal **building** element such as a fin or window hood (refer **Figure 3.10i**);
- have permanent, obscure glazing in any part of the window below 1.6m above floor level (refer **Figure 3.10e**); or
- have permanent screening that is a minimum 75 per cent obscure to any part of the window or active habitable below 1.6m above floor level (refer **Figure 3.10f**).

4.0 SPECIAL TRANSITIONAL PROVISIONS

Applicable only for certain single house developments, subject to the criteria in Part A, section 4.1.1.

This section will cease to have effect from 10 April 2026, being 24 months after the gazettal date of the R-Codes Volume 1.

4.1 Private open space - Special transitional provision

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

As per 1.1 Private open space

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C4.1.1 For single houses, a single consolidated **primary garden area** is provided behind the **primary street setback** in accordance with **Table 4.1**. Notwithstanding, a **balcony** or rooftop **terrace** may be provided in lieu of a primary garden area on the ground floor provided it meets the requirements in **Table 4.1**.

Table 4.1

R-Coding	Minimum primary garden area (m ² per dwelling)	Minimum dimension	Maximum permanent roof cover
R50 and higher	16m ²	4m	One-third of the minimum primary garden area provided

4.2 Landscaping - Special transitional provision

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

As per 1.2 Trees and landscaping

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C4.2.1 Landscaping of single houses to include the following:

- 1 small tree (in accordance with **Table 1.2b**) except that the **deep soil area** may be reduced to 4m²; and
- a minimum 30 per cent of the **street setback area** as **soft landscaping** and planted with 1 small tree if this area is at least 4m².

4.3 Size and layout of dwellings - Special transitional provision

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

As per 2.1 Size and layout of dwellings

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C4.3.1 For single houses:

- i. where the **primary garden area** is provided on the ground floor, it is to have direct physical and visual access to the **primary living space**; or
- ii. where a **balcony** or rooftop **terrace** is provided in lieu of a ground floor primary garden area, it is to have direct physical and visual access to the primary living space.

No minimum primary living space dimension applies.

*No minimum **habitable room dimensions** apply.*

*No **storage** requirements apply.*

4.4 Solar access and ventilation - Special transitional provision

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

Not applicable

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

No requirements apply

4.5 Site cover - Special transitional provision

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

As per 5.1 Open Space - special transitional provision

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

No requirement applies where the local planning framework contains an open space requirement. Otherwise as per C5.1.1.

4.6 Streetscape - Special transitional provision

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

Not applicable

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C3.6.3 does not apply

5.0 SPECIAL TRANSITIONAL PROVISIONS

Applicable only for certain other developments subject to the criteria in Part A, section 4.1.2.

This section will cease to have effect from 10 April 2026, being 24 months after the gazettal date of the R-Codes Volume 1.

5.1 Open Space - Special transitional provision

Only replaces C3.1.1 for single houses and grouped dwelling development.

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

- P5.1.1** Development incorporates suitable **open space** for its context to:
- i. reflect the existing and/or desired **streetscape** character or as outlined under the **local planning framework**;
 - ii. provide access to **sunlight** for the **dwelling**;
 - iii. reduce **building** bulk on the **site**, consistent with the expectations of the applicable density code and/or as outlined in the local planning framework;
 - iv. provide an attractive setting for the buildings, **landscape**, vegetation and streetscape;
 - v. provide opportunities for residents to use space external to the dwelling for outdoor pursuits and access within/around the site, and
 - vi. provide space for **utilities** and essential facilities.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

- C5.1.1** **Open space** provided in accordance with **Table 5.1a**. The **site** of the **grouped dwelling**, for the purpose of calculating the open space requirement, shall include the area allocated for the exclusive use of that **dwelling** and the proportionate share of any associated **common property**.

Table 5.1a Open space requirements

R30	R35	R40	R50	R60	R80
45%	45%	45%	40%	40%	30%

R80 Code standards apply to single houses and grouped dwellings in areas coded R100, R160 and R-AC.

Table C Primary controls

<i>This table provides a summary of deemed-to-comply primary controls for all development in Part C.</i> <i>Refer to each element for application and further information.</i>		R30	R35	R40	R50	R60	R80 <i>(for multiple dwellings refer R-Codes Vol. 2.)</i>	R100-SL ²
Soft landscaping (% of site area) 1.2 Trees and landscaping		15%						10%
Maximum site cover (% of site area) 3.1 Site cover		60%		65%		70%		85%
Maximum building height 3.2 Building height	Maximum storeys	2	2	2	3	3	4	4
	Max wall/roof height – skillion	8m	8m	8m	11m	11m	14m	14m
	Max wall height – pitched/hipped	7m	7m	7m	10m	10m	13m	13m
	Max roof height – pitched/hipped	10m	10m	10m	13m	13m	16m	16m
Minimum street setback 3.3 Street setbacks	Primary street	4m	4m	3m	2m	2m	2m	1m
	Secondary street	1.5m	1.5m	1m	1m	1m	1m	1m
	Communal Street	0.5m						NA
	Adjoining laneway or right-of-way where it is the primary street to the dwelling	2m						NA
	Adjoining laneway or right-of-way	0.5m						0.5m/nil
Minimum lot boundary setbacks ¹ 3.4 Lot boundary setbacks	Up to 3.5m (1 st storey)	1m						1m
	3.6m -7m (2 nd storey)	1.5m						1.5m
	7.1m -10m (3 rd storey)	3m						3m
	10.1m and above (4 th storey)	3m						3m
Maximum boundary wall height 3.4 Lot boundary setbacks		3.5m (1 storey)			7m (2 storey)			13m (4 storey)
Notes: Primary controls of Table C apply, except where modified by the local planning framework , in which case development complies with the controls set out in the applicable local planning instrument. R80 Code standards apply to single houses, grouped dwellings in areas coded R100, R160 and R-AC. ¹ Boundary walls permitted in accordance with C3.4.4 - C3.4.5 . ² Subject to C2.10.1 .								

PART D

Land

1.0	LAND	121
	TABLE D	125

1.0 LAND

OBJECTIVES

- 1A** To provide for a consistent and coordinated approach to residential built form and **development**.
- 1B** To ensure that **residential development** meets community expectations in regard to appearance, use and density.
- 1C** To promote a range of **lot** sizes to support housing diversity and a variety of built form typologies.

1.1 Site area

1.1 Site area

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P1.1.1 Development of the type and density indicated by the density code designated in the **scheme**.

P1.1.2 The **WAPC**, in consultation with the local government, may approve the creation of a **green title lot, survey-strata lot or strata lot** of a lesser minimum and/or average **site area** than that specified in **Table D** provided that the proposed variation would be no more than five per cent less in area than that specified in **Table D** and will:

- facilitate the protection of an environmental or heritage feature;
- facilitate the retention of a significant element that contributes toward an existing **streetscape** worthy of retention;
- facilitate the **development** of lots with separate and sufficient **frontage** to more than one public **street**;
- overcome a special or unusual limitation on the development of the land imposed by its size, shape or other feature;
- allow land to be developed with housing of the same type and form as land in the vicinity and which would not otherwise be able to be developed; or
- achieve specific objectives of the **local planning framework**.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Minimum and average site area

C1.1.1 Development which complies with the **dwelling** type and **site area** requirements set out in **Table D** and the following provisions.

Calculation of minimum site area

C1.1.2 The minimum **site area** set out in **Table D** is calculated as follows:

- in the case of a **single house**, the area of a **green title lot or survey-strata lot**; or
- in the case of a **grouped dwelling**, the area of land occupied by the **dwelling** itself, together with all other areas whether contiguous or not, designated for the exclusive use of the occupants of that dwelling.

Truncation area may be included refer **C1.1.3i**

Figure 1.1a Site area truncations

Related elements

PART B:

- 5.5.2 Aged and dependent person's dwellings
- 5.5.3 Single bedroom dwellings
- 5.5.4 Accessible dwellings
- 5.5.5 Small dwellings

PART C:

- 2.7 Universal design
- 2.9 Small dwellings
- 2.10 Housing on lots less than 100m²

1.1 Site area (cont.)

DESIGN PRINCIPLES

Development demonstrates compliance with the following design principles (P)

P1.1.3 The WAPC, in consultation with the local government, may approve the creation of a **survey-strata lot** or **strata lot** for an existing authorised **grouped dwelling** or **multiple dwelling development** of a lesser minimum and average **site area** than that specified in **Table D**, where, in the opinion of the WAPC or the local government, the development on the resulting survey-strata or strata lots is consistent with the objectives of the relevant design elements of the R-Codes, and the orderly and proper planning of the locality.

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

C1.1.3 The following adjustments shall apply for the purposes of assessing compliance of a proposed **development** with the minimum and average **site areas** of **Table D**:

- in the case of a **lot** with a corner truncation to a public **street**, up to a maximum of 20m² of that truncation shall be added to the area of the adjoining lot, **survey-strata lot** or **strata lot** as the case may be (refer **Figure 1.1a**);
- in areas coded R40 and below; in the case of a rear battleaxe site, the site area is inclusive of the access leg provided that the area of the access leg contributes no more than 20 per cent of the site area as required by **Table D** (refer **Figure 1.1b**);
- where the **battleaxe lot** (excluding the access leg) adjoins or abuts a **right-of-way** or reserve for open space, pedestrian access, school site or equivalent, half the width of the right-of-way or reserve (up to a maximum depth of 2m) may be added to the site area (refer **Figure 1.1b** and **1.1c**); or
- in areas coded R50 and above; in the case of a battleaxe lot, the vehicle and/or **pedestrian access leg** and associated truncations shall be excluded from the calculation of minimum site area to achieve an **effective lot area** consistent with the minimum site area required in **Table D** (refer **Figure 1.1c**).

R25 site area requirements
(min 300m² avg 350m², battleaxe 425m²)

Figure 1.1b Calculating minimum and average site area for areas coded R40 and below

R50 site area requirements
(min 160m² avg 180m², battleaxe 160m²)

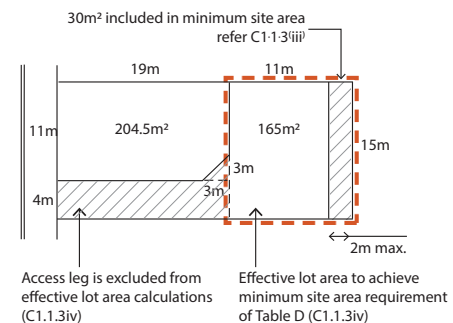

Figure 1.1c Effective lot area for areas coded R50 and above

1.1 Site area (cont.)

DEEMED-TO-COMPLY

Development satisfies the following deemed-to-comply requirements (C)

Site area variations

Site area variations are subject to C1.1.3

C1.1.4 The following variations to the minimum and average **site area** set out in **Table D** may be made:

- i. in the case of a **single house, grouped dwelling** or **multiple dwelling**; the area of a **lot, survey-strata lot** or **strata lot** approved by the **WAPC**; or
- ii. the area of any existing lot, survey-strata lot or strata lot with permanent legal access to a public road, notwithstanding that it is less than that required in **Table D**.

C1.1.5 In areas coded R25 and below; for an **aged or dependent persons' dwelling** (in accordance with Part B, **5.5.2 C2.1-C2.4**) or a **single bedroom dwelling** (in accordance with Part B, **5.5.3 C3**) that is the subject of a proposed **development**, the minimum and average **site area** of **Table D** may be reduced by up to one third.

C1.1.6 In areas coded R30 to R40; for an **accessible dwelling** designed to gold level **universal design** (in accordance with Part B, **5.5.4 C4** or Part C, **C2.7.2**), or a **small dwelling** (in accordance with Part B, **5.5.5 C5** or Part C, **C2.9.1**) that is the subject of a **development** proposal, the minimum and average **site area** of **Table D** may be reduced by up to 35 per cent, provided that:

- i. for **single houses** and **grouped dwellings**, no **site** is less than 100m²; and
- ii. for development or subdivision of 4 or more **dwellings** or sites, the site area reduction is limited to a maximum 50 per cent of the total number of dwellings or sites.

C1.1.7 In areas coded R50 and above; for an **accessible dwelling** designed to gold level **universal design** (in accordance with Part C, **C2.7.2**), or a **small dwelling** (in accordance with Part C, **C2.9.1**) that is the subject of a **development** proposal, the minimum and average **site area** of **Table D** may be reduced by up to 35 per cent, provided that:

- i. for **single houses** and **grouped dwellings**, no **site** is less than 100m²; and
- ii. the site area reduction is limited for small dwellings to a maximum 50 per cent of the total number of **dwellings** or sites.

C1.1.8 For **multiple dwellings** in areas coded R30 to R60; where a **significant existing tree** is retained on a **site** that is subject to a **development** proposal, the average **site area** of **Table D** may be reduced by 10 per cent. This reduction is limited to **dwellings** not already subject to a reduced average site area under **C1.1.6** or **C1.1.7**.

APPENDICES

A1	DEFINITIONS	128
A2	CONTEXT AND SITE ANALYSIS	135
A3	APPLICATION DOCUMENTATION	136
A4	UNIVERSAL DESIGN REQUIREMENTS	139

A1 Definitions

ACCESSIBLE HOUSING / DWELLINGS – dwellings having features already in place to enable use by people with a disability.

ACTIVE HABITABLE SPACE – any:

- habitable room with a internal floor area greater than 10m²; and
- balcony, courtyard, patio, verandah or other forms of private open space.

ACTIVITY CENTRE – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

ADAPTABLE HOUSING / DWELLINGS – dwellings designed and built to accommodate future changes to suit occupants with mobility impairment or life cycle needs.

ADJOINING PROPERTY – any lot:

- on which any dwelling for which provision is made in the R-Codes may be constructed under the scheme; and
- which shares a boundary or portion of a boundary with a lot on which there is a proposed residential development site or is separated from that lot by a right-of-way, vehicle access way, pedestrian access way, access leg of a battleaxe lot or the equivalent not more than 6m in width.

AGED PERSON – a person who is aged 55 years or over.

AHD – Australian Height Datum, the official national vertical datum for Australia.

AMENITY – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015* and includes the 'liveability', comfort or quality of a place which makes it pleasant and agreeable to be in for individuals and the community. Amenity is important in the public, communal and private domains and includes the enjoyment of sunlight, outlook, privacy and quiet. It also includes protection from pollution and odours.

ANCILLARY DWELLING – self-contained dwelling on the same site as a dwelling which may be attached to, integrated with or detached from the dwelling.

AT-GRADE – located at same height as ground level.

BALCONY – a balustraded platform on the outside of a dwelling with access from an upper internal room.

BASEMENT – a building floor level in which 50 per cent or more of its volume is below natural ground level.

BATTLEAXE LOT – a single house lot that has a frontage for purposes of servicing and access to a public road only through a strip of connecting land containing a pedestrian access leg and/ or vehicular access way that is part of the lot. The term excludes a site that has vehicle access from a private or communal street or right-of-way connected to a public road.

BOUNDARY WALL – a wall, on or less than 600mm from any lot boundary (green title or survey-strata lot), other than a street boundary.

BUILDING – any structure whether fixed or moveable, temporary or permanent, placed or erected on land, and the term includes dwellings and structures appurtenant to dwellings such as carports, garages, verandahs, patios, outbuildings and retaining walls, but excludes boundary fences, pergolas and swimming pools.

BUILDING WIDTH – the width of the building as viewed from the primary street.

CARPORT – An unenclosed structure designed to accommodate one or more motor vehicles and being without a door.

CLIMATE ZONE – as defined by the NCC. Western Australia is divided into five climate zones based on humidity and temperature, ranging from temperate in the southwest to hot/arid in the interior to hot/humid in the north. Refer *Climate Zones Map*.

COMMON PROPERTY – has the meaning given by section 10 of the *Strata Titles Act 1985*.

COMMUNAL OPEN SPACE – outdoor areas within the lot and either at ground level or on structure that is accessible to and shared by occupants of the dwellings for communal recreational use. It does not include driveways or car parking areas.

COMMUNAL STREET – common property or private street providing joint access to two or more dwellings in a residential development and may include vehicle and pedestrian access, and landscaping.

CONE OF VISION – the limits of outlook from any given viewpoint for the purposes of assessing the extent of overlooking from that point, measured by applying a viewing cut off angle not less than 45 degrees horizontally and extending 90 degrees down to the ground.

CONTINUOUS PATH OF TRAVEL – an uninterrupted route to or within premises or buildings and providing access to all services and facilities (AS1428.1). It should not incorporate any step, stairway, turnstile, revolving door, escalator, hazard or other impediment which would prevent it from being safely negotiated by people with disability.

COURTYARD – open space at ground level or on a structure that is open to the sky and and bound by the building on three or more sides.

CROSSOVER – the vehicle access point (or driveway) running from the property boundary to the edge of the road.

DAYLIGHT – consists of both skylight (diffuse light from the sky) and sunlight (direct beam radiation from the sun). Daylight changes with the time of day, season and weather conditions.

DECISION-MAKER – that body, organisation or authorised person legally vested with the power to make decisions, pursuant to relevant legislation, in respect of residential development in accordance with the R-Codes.

DEEMED-TO-COMPLY – a proposal, or a component of a proposal, that complies with the deemed-to-comply provisions of the R-Codes, or an adopted local planning policy.

DEEP SOIL AREA – soft landscape area on lot with no impeding building structure or feature above or below, which supports growth of small to large canopy trees and meets a stated minimum dimension. Used primarily for landscaping and open to the sky, deep soil areas exclude basement car parks, services, swimming pools, tennis courts and impervious surfaces including car parks, driveways and roof areas.

A1 Definitions (cont.)

DEPENDANT PERSON – a person with a recognised form of disability requiring special accommodation for independent living or special care.

DESIGN PRINCIPLES – specific design objectives for each element of R-Codes Volume 1 are to be met by all **residential development** subject to Volume 1 and are to be used in the preparation, submission and assessment for proposals for the purpose of determining their compliance with R-Codes Volume 1. A proposal is required to demonstrate compliance with design principles where it does not satisfy corresponding **deemed-to-comply** provisions.

DEVELOPMENT – as defined under the *Planning and Development Act 2005*.

DEVELOPMENT SITE – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

DRIVEWAY – the portion of the paved vehicle access way between a car parking area and the property boundary, excluding any associated **landscaping** or pedestrian path on either side.

DUAL KEY DWELLING – a form of **ancillary dwelling** with a common internal corridor and lockable doors to sections within the **dwelling** so that it is able to be separated into two independent units.

DWELLING – a **building** or portion of a building being used, adapted, or designed or intended to be used for the purpose of human habitation on a permanent basis by a single person, a single family, or no more than six persons who do not comprise a single family.

DWELLING ALIGNMENT – means the vertical external face of any **building** comprising solid building material, but excludes any projections such as **balconies**, eaves, **porches** and **verandahs**.

EFFECTIVE LOT AREA – that part of the **lot** that is capable of **development** and excludes any vehicle or **pedestrian access legs** and associated truncations.

ENCLOSED – an area bound on three or more sides by a permanent **wall** and covered in an **impervious material**.

EXTERNAL FIXTURES – refer **utilities**.

FAÇADE – the external face of a **building**, generally the principal face, facing a public **street** or space.

FREEHOLD SCHEME – has the meaning given by section 8(2) of the *Strata Titles Act 1985*.

FRONTAGE – the width of a **lot** at the **primary street setback line**, provided that in the case of **battleaxe** or other irregularly shaped lots, it shall be as determined by the **decision-maker**.

FUNCTIONAL UTILITIES – functional utilities associated with the **dwelling** to achieve efficient, comfortable and environmentally **sustainable** operating outcomes including, but not limited to air-conditioning, plant, clothes drying, hot water systems, antennas and satellite dishes, **solar collectors**, inverters and batteries, electric vehicle charging and rainwater tanks.

GARAGE – any roofed structure, other than a **carport**, designed to accommodate one or more motor vehicles.

GREEN TITLE LOT – a **lot** owned in fee simple issued with a certificate of title under the *Transfer of Land Act 1893*, other than a **strata lot** or a **survey-strata lot**.

GROUPED DWELLING – a **dwelling** that is one of a group of two or more dwellings on the same **lot** such that no dwelling is placed wholly or partly vertically above or below another, except where special conditions of **landscape** or topography dictate otherwise, and includes a dwelling in a **strata titles scheme** with **common property**.

HABITABLE ROOM/SPACE – as defined by the **NCC** for a room/space used for normal domestic activities that includes:

- a bedroom, living room, lounge room, music room, sitting room, television room, kitchen, scullery, dining room, sewing room, study, playroom, family room, sunroom, gymnasium, fully **enclosed** swimming pool or **patio**;
- but excludes:
 - a bathroom, laundry, water closet, pantry, walk-in wardrobe, corridor, hallway, lobby, photographic darkroom, clothes drying room, **verandah** and **unenclosed** swimming pool or patio and other spaces of a specialised nature occupied neither frequently nor for extended periods.

HEIGHT, BUILDING – this is the distance between the point where the base of the **wall** meets the **natural ground**

level and measured to the highest point of a wall or roof of a **building** vertically above that point excluding **minor projections**.

HEIGHT, WALL – this is the vertical distance between the point where the base of the **wall** meets the **natural ground level** at the boundary immediately adjacent to the wall and measured to the top of the wall or **parapet**.

HERITAGE AREA – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

HERITAGE-PROTECTED PLACE – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

HIGH-FREQUENCY ROUTE – a public transport route that runs a service at least every 15 minutes during weekday peak periods (7am to 9am and 5pm to 7pm).

IMPERVIOUS AREA/SURFACE/ MATERIAL – surfaces that do not permit the penetration of rainwater into the ground and instead generates **stormwater** run-off, typically to drainage systems.

INCIDENTAL DEVELOPMENT – **development** which is associated with or attached to a **dwelling** and incidental to its main residential functions.

INTERNAL FLOOR AREA – in relation to a room or **dwelling**, the internal area measured within the finished surfaces of the **walls**, and includes the area occupied by any cupboard or other built-in furniture, fixture or fitting but excludes any **garages**.

INTERNAL WALLS – those **walls** which are wholly included within the **dwelling** including walls that abut covered **outdoor living areas** but does not include walls which are common to two dwellings in **grouped** or **multiple dwelling developments**.

LANDSCAPE / LANDSCAPING / LANDSCAPED – land developed with garden beds, shrubs and trees, or by the planting of lawns, and includes such features as rockeries, ornamental ponds, swimming pools, barbecue areas or playgrounds and any other such area approved of by the **decision-maker** as landscaped area.

A1 Definitions (cont.)

LANEWAY – a narrow local **street** type without a verge located along the rear and/or side property boundary, typically used in more dense residential areas when smaller **lot** layouts justify rear **garaging**, and where alternative vehicle access is needed for lots fronting busy streets or parks.

LEASEHOLD SCHEME – has the meaning given by section 8(3) of the *Strata Titles Act 1985*.

LIGHTWELL – an opening to the sky, bound on four sides by **building** volume, with a height to width ratio of more than 2:1.

LOCAL CHARACTER / LOCAL IDENTITY – the natural, cultural and historic characteristics of an area that are intrinsic to the locality, and which the local community relate to or as defined in the **local planning framework**. See also **sense of place**.

LOCAL DEVELOPMENT PLAN – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

LOCAL PLANNING FRAMEWORK – comprises all strategic, statutory and policy planning documents which collectively outline the planning for an area and **development** requirements for **sites**, of the **decision-maker** and generally include a **scheme**, **local planning strategy** (including any housing component), **structure plans**, **local development plans** and **local planning policies**.

LOCAL PLANNING POLICY – any policy prepared by a local government in accordance with the procedures set out in the **local planning scheme**.

LOCAL PLANNING SCHEME – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

LOCAL PLANNING STRATEGY – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*; a document which supports the preparation and review of a **local planning scheme** in accordance with Part 3 of the *Planning and Development (Local Planning Schemes) Regulations 2015*.

LOFT – a room or space within the roof space of a **building**.

LOT – for **single houses**, a **lot** as defined under the *Planning and Development Act 2005*, as amended. For **multiple** or **grouped dwellings**, the **parent lot**.

LOT BOUNDARY – the boundary between a **lot** and any other parcel of land, excluding a **street boundary**.

LOT IN A STRATA SCHEME – has the meaning given by section 3 of the *Strata Titles Act 1985*.

LOT IN A SURVEY-STRATA SCHEME – has the meaning given by section 3 of the *Strata Titles Act 1985*.

MAJOR OPENING – a window, door or other opening in the exterior **wall** of a **habitable room** that provides external means of light or view for that room or space, but does not include an opening or openings that:

- in aggregate do not exceed 1m² in any such wall, (provided that adjoining or contiguous windows at the junction of two walls forming an internal angle of 90 degrees or less shall be aggregated); or
- are glazed in an obscure material and are not able to be opened; or
- have a sill height not less than 1.6m above floor level.

MAJOR RAINFALL EVENT – events greater than a **minor rainfall event** and up to and including the 1 per cent annual exceedance probability (AEP) event (refer Department of Water and Environmental Regulation).

MINOR PROJECTION –

- in relation to the height of a **building**: a chimney, vent pipe, aerial or other appurtenance of like scale;
- in relation to a **wall**: a rainwater pipe, vent pipe, eaves overhang, cornice or other moulding or decorative feature, provided that the projection does not exceed 0.75m measured horizontally.

MINOR RAINFALL EVENT – rainfall events greater than **small rainfall events** and less than **major rainfall events** (refer Department of Water and Environmental Regulation).

MIXED USE DEVELOPMENT – **buildings** that contain commercial and other non-residential uses in conjunction with residential **dwellings** in a **multiple dwelling** configuration.

MULTIPLE DWELLING – a **dwelling** in a group of more than one dwelling on a **lot** where any part of the **plot ratio area** of a dwelling is vertically above any part of the plot ratio area of any other but:

- does not include a **grouped dwelling**; and
- includes any dwellings above the ground floor in a **mixed use development**.

NATURAL GROUND LEVEL – the levels on a **site** which precede the proposed **development**, excluding any site works unless approved by the **decision-maker** or established as part of subdivision of the land preceding development.

NATURAL VENTILATION – the movement of a sufficient volume of fresh air through a **dwelling** to refresh indoor air.

NCC – National Construction Code, comprising the Building Code of Australia (BCA) and Plumbing Code of Australia (PCA).

NON-HABITABLE ROOM/SPACE – any room or space that is not defined as a **habitable room** or space in the **NCC**.

OPEN PLAN – **dwelling** layouts where spaces are not divided into discrete rooms but are open and connected to allow flexibility of use (typically living, dining, kitchen and study areas).

OPEN SPACE – generally that area of a **lot** not occupied by any **building** and includes:

- open areas of accessible and useable flat roofs and **outdoor living areas** above **natural ground level**;
- areas beneath eaves;
- **verandahs**, **patios** or other such roofed structures not more than 0.5m above natural ground level, **unenclosed** on at least two sides, and covering no more than 10 per cent of the **site area** or 50m² whichever is the lesser;
- unroofed open structures such as **pergolas**;
- uncovered **driveways** (including access aisles in car parking areas) and uncovered car parking spaces;

but excludes:

- non-accessible roofs, verandahs, **balconies** and outdoor living areas over 1m above natural ground level; and/or
- covered car parking spaces and covered walkways, areas for rubbish disposal, stores, **outbuildings** or plant rooms.

A1 Definitions (cont.)

OUTBUILDING – an **enclosed** non-habitable structure that is detached from any **dwelling** and may include a **detached garage**.

OUTDOOR LIVING AREA – the area external to a **single house, grouped** or **multiple dwelling** to be used in conjunction with that **dwelling** such that it is capable of active or passive use and is readily accessible from the dwelling.

PARAPET – the portion of a **wall** protruding above a roof or **terrace**. Often taken to refer to the decorative element which establishes the **street wall height** of heritage **buildings**.

PARENT LOT – relating to **multiple** or **grouped dwellings**, the **lot** inclusive of common areas to which the **strata titles scheme** relates.

PASSIVE SURVEILLANCE – actual and perceived monitoring of public spaces by people as they go about their daily activities. Commonly referred to as 'eyes on the **street**'.

PATIO – an **unenclosed** structure covered in an **impervious material** which may or may not be attached to a **dwelling**.

PEDESTRIAN ACCESS LEG – provides access from a public **street** to a **dwelling** where sole vehicular access is via a rear **right-of-way**. It can be in the form of a portion of the rear **lot** or as **common property** in the case of a **strata title scheme**.

PERGOLA – an open-framed structure covered in a water **permeable material** or operable louvred roofing, which may or may not be attached to a **dwelling**.

PERMEABLE SURFACE/ PAVEMENT/ MATERIAL – surfaces that permits the penetration of rainwater.

PLOT RATIO – the ratio of the gross **plot ratio area** of **buildings** on a **development site** to the area of land in the **site** boundaries.

PLOT RATIO AREA – the gross total area of all floors of **buildings** on a **development site**, including the area of any internal and external **walls** but not including:

- the areas of any lift shafts;
- stairs or stair landings common to two or more **dwellings**;
- machinery, air conditioning and equipment rooms;
- space that is wholly below **natural ground level**;
- area used exclusively for the parking of wheeled vehicles at or below natural ground level;
- storerooms;
- lobbies, bin storage areas, passageways to bin storage areas or amenities areas common to more than one dwelling; and
- **balconies, eaves, verandahs, courtyards** and roof **terraces**.

PORCH – a roofed open platform attached to the front of a **dwelling**.

PRECINCT STRUCTURE PLAN – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

PRIMARY GARDEN AREA – an external ground floor area for **single house** and **grouped dwellings** set aside on a **site** for the exclusive use of the occupants of the **dwelling** to which it abuts. It may include (but is not limited to) **landscaping, deep soil areas** and trees, paved areas and **patios** with a floor level not greater than 0.5m above **natural ground level**.

PRIMARY LIVING SPACE – the identified room(s) within a **dwelling** that is the focus of life and activity and usually the largest room. This area is connected with **private open space** and may include any of the following room types: living room, lounge room, family room, or an integrated open plan living area that has one of these room types together with a kitchen or dining area.

PRIMARY STREET – unless otherwise designated by the local government, the sole or principal public road that provides access to the major entry (front door) to the **dwelling** or **building**.

PRIVATE OPEN SPACE – outdoor space located at ground level or on a structure that is within private ownership and provided for the exclusive use of the occupants of the **dwelling** to which it abuts and excludes car parking spaces and access ways. It includes **primary garden areas, balconies, courtyards** and **terraces**.

RESIDENTIAL BUILDING – a **building** or portion of a building, together with rooms and **outbuildings** separate from such building but incidental thereto; such building being used or intended, adapted or designed to be used for the purpose of human habitation:

- temporarily by two or more persons; or
- permanently by seven or more persons, who do not comprise a single family, but does not include a hospital or sanatorium, a prison, a hotel, a motel or a residential school.

RESIDENTIAL DEVELOPMENT – **development** of permanent accommodation for people, and may include all **dwellings**, the residential component of **mixed use development**, and **residential buildings** proposing permanent accommodation.

RIGHT-OF-WAY – a strip of land such as a **laneway**, available either for use by the general public, or a restricted section of the community, and may be created by subdivision, specific transfer, or continued use over a period of years. They may be:

- private, where the land is created in a plan of subdivision and available to landowners that are legally entitled; or
- public, where the land has been vested in the Crown.

SCHEME – the **local planning scheme** that specifies zoning and **development** standards gazetted pursuant to the *Planning and Development Act 2005*.

SCHEME PLAN – has the meaning given by section 3 of the *Strata Titles Act 1985*, and for a **strata titles scheme** means the **strata plan** or **survey-strata plan** registered, or proposed to be registered, for the strata titles scheme as a scheme document.

A1 Definitions (cont.)

SCREENING/ SCREENED – permanently fixed external perforated panels or trellises composed of solid or obscured translucent panels.

SECONDARY STREET – in the case of a **site** that has access from more than one public road, a road that is not the **primary street**.

SENSE OF PLACE – the essential memorable and recognisable characteristics of an area.

SERVICE AREA – areas designated for **building** services installed to make the building functional, comfortable, efficient and safe.

SERVICE UTILITIES – supply and reticulation of essential services including, but not limited to power, water, gas, wastewater, fire services, letterboxes and telecommunications.

SETBACK – the horizontal distance between a **wall** at any point and an adjacent **lot boundary**, measured at right angles (90 degrees) to the boundary.

SIGHTLINES – lines of clear physically uninterrupted sight.

SIGNIFICANT EXISTING TREE – an existing tree that meets the following criteria:

- healthy specimens with ongoing viability; and
- species is not included on a State or local area weed register; and
- height of at least 4m; and/or
- trunk diameter of at least 160mm, measured 1m from the ground; and/or
- average canopy diameter of at least 4m; or
- as specified with the **local planning framework**.

SINGLE ASPECT – a **dwelling** or room with openings facing primarily in one direction from a single major external **wall**.

SINGLE BEDROOM DWELLING – a **dwelling** that contains a living room and no more than one other **habitable room** that is capable of use as a bedroom.

SINGLE HOUSE – a **dwelling** standing wholly on its own **green title** or **survey-strata lot**, together with any easement over adjoining land for support of a **wall** or for access or services and excludes dwellings on titles with areas held in **common property**.

SITE –

- In the case of a **single house**, the **green title** or **survey-strata lot** on which it stands.
- In the case of a **grouped dwelling**, the area occupied by the **dwelling** together with any area allocated (whether by way of **strata title scheme** or otherwise) for the exclusive use or benefit of that dwelling.
- In the case of a **multiple dwelling** or **apartment development**, the **lot** (or **parent lot** where the lot is subdivided under **strata scheme**) on which the dwellings stand.

SITE AREA – the area of land required for the construction of a **dwelling** to satisfy the requirements of the R-Codes.

SITE COVER – the area occupied by any **building**, including upper **storeys** or **balconies** projecting beyond the ground floor building alignment, or other structures roofed with **impervious material**, but excludes:

- uncovered **driveways** and parking spaces;
- eaves and **pergolas**; and
- a **basement** that is constructed wholly underground.

SITE RESPONSIVE – deriving from analysis of the physical characteristics of an area (such as landform, views, prevailing breezes, environmental features) and to manage constraints and opportunities to create optimum design outcomes.

SMALL DWELLING – a **single house** or **grouped dwelling** with an **internal floor area** no greater than 70m²; or a **multiple dwelling** with an internal floor area no greater than 60m².

SMALL RAINFALL EVENT – the first 15mm of a rainfall event (refer Department of Water and Environmental Regulation).

SOFT LANDSCAPE – any **landscaped** area with a minimum soil depth of 300mm that contains in-ground planting and excludes removable planter boxes/pots and **permeable paving areas**. Turf is included.

SOLAR ACCESS – is the ability of a **building** to continue to receive direct **sunlight** without obstruction from other buildings or impediments, not including trees.

SOLAR COLLECTORS – solar collecting components of the following: thermal heating systems, photovoltaic systems and skylights.

SOURCE OF OVERLOOKING – major openings and **active habitable space** with a floor level of more than 0.5m above **natural ground level**.

SPECIAL PURPOSE DWELLING – includes **ancillary dwelling**, **aged or dependent persons' dwelling**, **single bedroom dwelling**, **accessible dwelling** or a **small dwelling**.

STANDARD STRUCTURE PLAN – as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

STORAGE – dedicated, secured and conveniently located areas for the storage of large or bulky items, but excludes built-in furniture and internal storage located in areas such as kitchens, laundries, bathrooms and bedrooms.

STOREY – the portion of a **building** which is situated between the top of any floor and the top of the floor next above it and if there is no floor above it, that portion between the top of the floor and the ceiling above it but does not include:

- a **basement**;
- a space that contains only a lift shaft, stairway or meter room;
- roof top **terrace** with no permanent impervious roof structure;
- a mezzanine; or
- a **loft**.

Double height floors greater than 5m floor to ceiling are counted as two floors.

STORMWATER – urban surface water runoff from rainfall events, consisting of rainfall runoff and any material (soluble and insoluble) mobilised in its path of flow.

STRATA LOT – refer to definition for a **lot in a strata scheme**.

STRATA PLAN – has the meaning given by section 3 of the *Strata Titles Act 1985*.

A1 Definitions (cont.)

STRATA SCHEME - has the meaning given by section 3 of the *Strata Titles Act 1985* and may include **freehold** or **leasehold schemes**.

STRATA TITLES SCHEME - has the meaning given by section 3 of the *Strata Titles Act 1985*.

STREET - any public road, **communal street**, private street, **laneway**, **right-of-way** or other shared access way that provides the principal **frontage** to a **dwelling** but does not include an access leg to a single **battleaxe lot**.

STREET BOUNDARY - the boundary between the land comprising a **street** and the lands that abuts thereon.

STREETSCAPE - the visible components in a **street** between the facing **buildings**, including the form of the buildings, **garages**, **setbacks**, fencing, **driveways**, utilities, street surfaces, street trees and street furniture such as lighting, signs, barriers and bus shelters.

STREET SETBACK - the horizontal distance between the **street boundary** and a **building**, measured at right angles (90 degrees) to the street boundary.

STREET SETBACK AREA - the area between the **street boundary** and a **building** (excluding retaining walls) up to the **street setback line**.

STREET SETBACK LINE - the minimum distance between the **street boundary** and a **building** in accordance with **Part B, Table B** and **Part C, Table 3.3a**.

STRUCTURE PLAN - as defined under the *Planning and Development (Local Planning Schemes) Regulations 2015*.

STUDIO - a **dwelling** consisting of one **habitable room** that combines kitchen, living and sleeping space.

SUNLIGHT - direct beam radiation from the sun.

SURVEY-STRATA LOT - refer to definition for **lot in a survey-strata scheme**.

SURVEY-STRATA PLAN - has the meaning given by section 3 of the *Strata Titles Act 1985*.

SURVEY-STRATA SCHEME - has the meaning given by section 3 of the *Strata Titles Act 1985*, and may include **freehold** or **leasehold schemes**.

SUSTAINABILITY/SUSTAINABLE - meeting the needs of current and future generations through the integration of environmental protection, social advancement and economic prosperity.

TEN DESIGN PRINCIPLES - means the Design Principles as set out by State Planning Policy 7.0 *Design of the Built Environment*: Schedule 1.

TERRACE - an outdoor area, usually paved and unroofed, that is connected to a **dwelling** and accessible from at least one room. May be **at-grade** or on a structure such as a podium or a roof.

UNENCLOSED - an area bounded on no more than two sides by a permanent **wall** and covered in a water **impervious material**.

UNIVERSALLY ACCESSIBLE/ UNIVERSAL ACCESS - features to enable use and access by people with disability.

UNIVERSAL DESIGN - the design of products and environments that are inherently accessible to all, including for older people and people with disability.

UTILITIES - external fixtures, equipment, plant or other structures which are necessary for a **dwelling** to achieve efficient, comfortable and environmentally sustainable operating outcomes and includes **service** and **functional utilities** or other fixtures as necessary for the residential use of the **buildings** on **site**. It excludes essential plumbing vents above the roof line and external roof-water down pipes.

VERANDAH - a roofed open platform attached to a **dwelling**.

VISUALLY PERMEABLE - in reference to a **wall**, gate, door, screen or fence that the vertical surface, when viewed directly from the **street** or other public space, has:

- continuous vertical or horizontal gaps of 50mm or greater width occupying not less than one third of the total surface area;
- continuous vertical or horizontal gaps less than 50mm in width, occupying at least one half of the total surface area in aggregate; or
- a surface offering equal or lesser obstruction to view.

WALKABLE CATCHMENT - the actual area served within a walking distance along the **street/footpath** network measured from a public transport stop/station entrance.

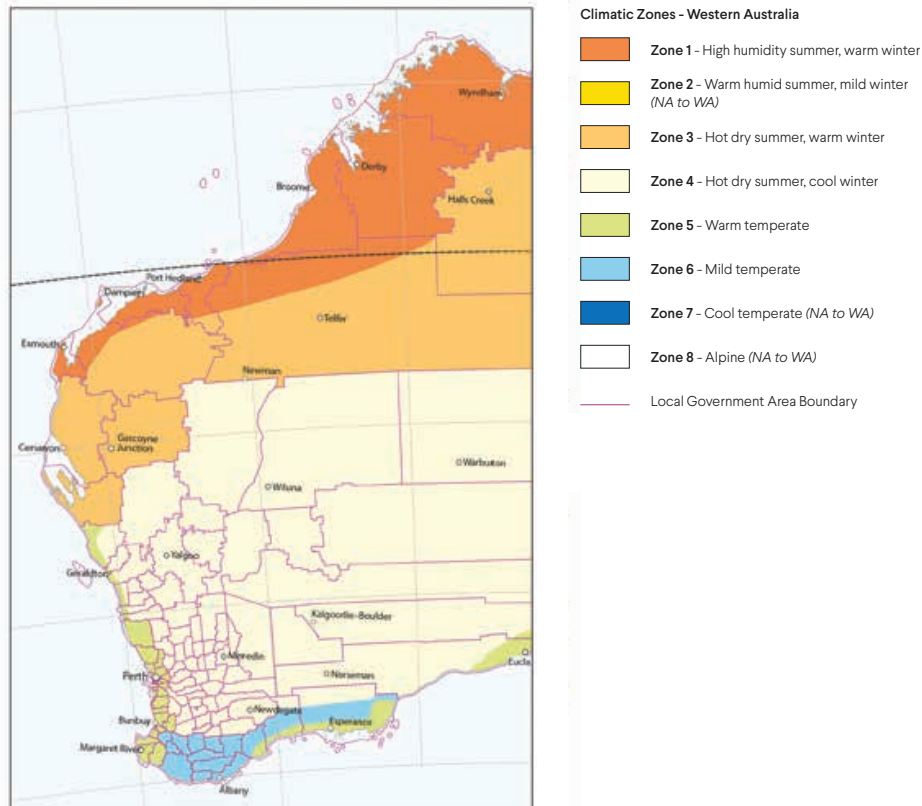

WALL - the vertical external face of a constructed **building** comprising solid building material and including enclosures to **verandahs** and **balconies**.

WAPC - Western Australian Planning Commission.

WINTER SOLAR GAIN - the heating of the **building** interior due to **sunlight** penetration through windows or heating of the building mass.

Figure A1.1 Climate Zones Map, extracted from Climatic Zone Map of Australia published by Australian Building Codes Board

A2 Context and site analysis

The list below outlines the recommended documentation to assist in the preparation of context and **site** analysis and design response. The level of detail provided in a context and site analysis should be appropriate to the scale and complexity of the proposed **development**.

Category	Materials
Neighbourhood context	<p>A plan or aerial photo showing the site in relation to neighbourhood context including the location of:</p> <ul style="list-style-type: none"> i. public open space and bushland, such as parks and sporting ovals ii. transport within a 5-10 minute walk. <p>Include walkable catchments from the site (show a 400m radius and 800m radius circle from the site)</p>
Street context	<p>Plan(s), photographs or other documentation of features of the street context, including properties adjoining the development site and on the other side of the street, to show:</p> <ul style="list-style-type: none"> i. surrounding built form patterns and typologies, including existing and proposed building envelopes and heights (storeys and metres), important datum lines of adjacent buildings, setbacks and subdivision pattern ii. patterns of building frontages, street setbacks and side setbacks iii. streetscape including land uses and planned development, staging or redevelopment outcomes iv. movement and access for vehicles (including service vehicles), pedestrians, bicycle riders and mobility scooters v. topography, landscape, open spaces and vegetation vi. significant views to and from the site vii. any sources of nuisance emissions in the vicinity of the site such as noise, light, and odour, that may have a bearing on the residential proposal, particularly vehicular traffic, train, aircraft and industrial noise viii. location of relevant heritage places or features, areas of environmental significance, and elements of cultural significance
Site context	<p>A site plan showing at scale the following features:</p> <ul style="list-style-type: none"> i. lot boundaries, site dimensions, site area, north point, street frontage, street name, lot number and address ii. climate zone, prevailing breezes, and shadows from natural or built features iii. geotechnical conditions including rock outcrops, watercourses iv. topography showing relative levels (Australian Height Datum) and contours at 0.5 metre intervals for the site and across site boundaries where level changes exist v. unique geological features, such as watercourses, bores and rock outcrops vi. location, type and size of significant existing trees and/or significant landscaping features on site and on adjoining streets and properties, including relative levels where relevant vii. location, use, dimensions, setback distances of existing buildings or built features (including outbuildings, retaining walls and other structures) on the site viii. locations and levels of existing buildings and structures on adjacent lots that might affect, or be affected by, the proposed development, including habitable room windows, solar collectors, and designated primary garden areas or private open space, walls and fences, parapets and ridge lines, and any other relevant features ix. pedestrian and vehicular access points, driveways and features such as crossovers, truncations, service poles, transit stops, fire hydrants and access restrictions (e.g. road islands adjacent to the site) x. location of services utilities and infrastructure, including water, gas, power, solar collectors, telecommunications, sewerage and drainage, and accompanying inspection points and easements
Design response	<p>Sketches, drawings or diagrams as needed, to demonstrate response to context and site.</p>

A3 Application documentation

The list below outlines the documentation recommended to be submitted for an application for **residential development** under R-Codes Volume 1. Proponents should also refer to application requirements that may be specific to a **decision-maker**. The recommended material is in addition to that required under cl. 63, part 8 in Schedule 2 of the Regulations. Some of the material will not be relevant for all applications and material should be prepared and submitted that is appropriate for **site** specific reasons such as scale, complexity or design approach. Early consultation should be undertaken with the decision-maker to confirm application documentation requirements. Where the application is for an addition or alteration to an existing **dwelling**, the material submitted should relate to the alteration or addition. Where a development application is not required, only the site context (from Appendix **A2**), site plan and the development drawings (Appendix **A3**) are required to demonstrate compliance with the deemed-to-comply provisions.

Application requirements legend

- ✓ Information necessary to inform assessment
- Information may be needed dependent on circumstances
- ✗ Information unlikely to be required

Category	Materials	Proposal Type			
		Part B <i>All residential development</i>	Part B & C <i>Addition or alteration to existing dwelling</i>	Part C <i>Single house or grouped dwelling (less than 10)</i>	Part C <i>Multiple dwelling or larger scale grouped dwellings (10 or more) or mixed proposals</i>
Development proposal summary	Summary table or document of key details of the development proposal, including the following: i. compliance of proposal with objective and relevant provisions of local planning framework for development site ii. proposed average and minimum site areas iii. number, height, mix, size and accessibility of dwellings iv. building height v. number of parking spaces for occupants, visitors, bicycles and motorcycle/scooters (where required by decision-maker)	✓	✗	✓	✓
Context and site analysis and design response	Documentation prepared during the project investigation phase. Refer <i>A2 Context and site analysis</i> .	✓	—	✓	✓
SPP 7.0 Design Principles statement	A statement of key points to document how the proposal satisfies the ten design principles of State Planning Policy 7.0 <i>Design of the Built Environment</i> .	✗	✗	✗	✓
R-Codes Volume 1 Design Principles	Justification for where an element design principle pathway is to apply, rather than the deemed-to-comply provision. This justification may refer to the findings from the context and site analysis, intent, SPP 7.0 ten design principles , and local planning framework and R Codes Volume 1 objectives as justification in support of the design principle pathway.	✓	✓	✓	✓

Development drawings	<p>Scale drawing (typically 1:100) showing:</p> <ul style="list-style-type: none"> i. all floor plans, including wall lengths, articulation and their distances from the boundaries of the site ii. internal floor plans and layouts for proposed dwellings/extensions – this includes window position, indicative furniture layouts, room areas and dimensions, room names iii. a solar diagram showing solar access for the primary living space iv. location and dimension of primary garden areas, deep soil areas, private open spaces v. location and dimension of service areas and storage areas, waste management areas and parking spaces vi. all elevations showing- natural ground levels with contours at maximum intervals of 0.5m, finished floor levels, wall heights and total building heights (AHD), areas (m²) of windows to habitable rooms, all privacy devices, utilities vii. proposed materials, colours and finishes of the exterior of the development, including façade, roof and dwelling entries viii. cross-sections through any proposed areas of excavation or fill with the relevant natural and proposed ground levels (AHD), contours at maximum intervals of 0.5m ix. ceiling heights for habitable rooms and non-habitable rooms (multiple dwellings only) x. site plans, floor plans and accompanying information to identify which dwellings are to meet the universal design standards and demonstrating compliance with the relevant provisions of accessible dwellings AS4299 and <i>Livable Housing Design Guidelines</i> 	✓	✓	✓	✓
Landscape plan (where required by the R-Codes)	<p>Scale drawing (typically 1:100) showing:</p> <ul style="list-style-type: none"> i. the development footprint and site boundary ii. street tree location iii. existing on site trees to be removed and trees to be retained, including trunk, canopy size and deep soil areas iv. position and size (canopy and height) of trees on adjoining properties v. position, species, and size of proposed trees to be planted on site including the size and dimensions of deep soil areas vi. position, type, and size of proposed soft landscaping, including groundcovers and shrubs and/or significant landscaping features vii. communal open spaces where provided viii. the position of built landscape elements, including fences, pathways, swimming pools and spas, pergolas, walls, retaining walls, planters and water features ix. type of permeable, semi-permeable and impervious surfaces including roof cover and ground surfaces x. stormwater management and irrigation concept design xi. site lighting 	✗	✗	✗	✓

A4 Universal design requirements

The checklist of **universal design** requirements below are adapted from the *Livable Housing Design Guidelines* and the *Australian Building Codes Board Livable Housing Design Standard 2022*. They are intended to ensure a minimum level of universal design at the development application stage, but do not guarantee universal design certification upon construction.

	Silver level requirements	Achieved? (Y/N)	Gold level requirements	Achieved? (Y/N)
1. Dwelling access	1a. Provide a continuous path of travel to a dwelling entrance door from: <ul style="list-style-type: none"> i. the street boundary; ii. a garage or carport for the exclusive use of the occupants of the dwelling; or iii. a car parking space within the lot for the exclusive use of the occupants of the dwelling. 		1a. As for silver.	
	1b. The continuous path of travel in 1a is provided a pathway with a minimum 1m width and has: <ul style="list-style-type: none"> i. no steps; ii. a crossfall of not more than 1:40; and iii. a maximum pathway slope of 1:14. 		1b. As for silver except, replace the minimum clear pathway width of 1000mm with 1100mm.	
	1c. Where an associated unenclosed car parking space for the dwelling is provided, at least one space must provide a continuous path of travel referred to in 1a and have a: <ul style="list-style-type: none"> i. minimum unobstructed dimension of 3200mm width and 5400mm length; and ii. gradient not more than 1:40, or 1:33 for bitumen. 		1c. As for silver except, insert the following additional requirements: <ul style="list-style-type: none"> i. a vertical clearance over the parking space of at least 2500mm; and ii. a covered parking space to ensure protection from the weather. 	
	1d. One step ramp may be incorporated at a dwelling entrance door and is to have a: <ul style="list-style-type: none"> i. height of not more than 190mm; ii. maximum gradient of 1:10; iii. minimum clear width of 1000mm; and iv. maximum length of 1900m. 		1d. As for silver.	
	1e. Where a ramp is provided in accordance with 1b or 1d , a level landing is to be provided with a minimum 1200mm length, (exclusive of the swing of the door or gate), to be provided at the head and foot of the ramp.		1e. As for silver.	

A4 Universal design requirements (cont.)

	Silver level requirements	Achieved? (Y/N)	Gold level requirements	Achieved? (Y/N)
2. Dwelling entrance	2a. The dwelling to provide an entrance door that is sheltered from the weather with a minimum clear opening width of 820mm with a: <ul style="list-style-type: none"> i. level threshold; ii. sill height of not more than 5mm if the lip is rounded or beveled; or iii. ramped threshold that does not exceed 56mm in height, with a maximum gradient of 1:8 and is at least as wide as the minimum clear opening width of the doorway it serves. 2a (ii-iii) not required to be shown at Planning Application stage.		2a. As for silver level except replace (i) with minimum clear door opening width of 850mm.	
	2b. An entrance door with a space at least 1200mm x 1200mm to the external side of the door that is: <ul style="list-style-type: none"> i. unobstructed (excluding a screen door); and ii. level, or with a gradient not more than 1:40 2b (ii) not required to be shown at Planning Application stage.		2b. As for silver level except replace with a level landing area of at least 1350mm x 1350mm.	
3. Internal doors and corridors	3a. Internal doorways to rooms on the entry level used for living, dining, bedroom, bathroom, kitchen, laundry and toileting purposes to provide a minimum clear opening width of 820mm and have a: <ul style="list-style-type: none"> i. level threshold; ii. sill height of not more than 5mm if the lip is rounded or beveled; or iii. ramped threshold that does not exceed 56mm in height, with a maximum gradient of 1:8 and is at least as wide as the minimum clear opening width of the doorway it serves. 3a (ii-iii) not required to be shown at Planning Application stage.		3a. As for the silver level except replace (i) with a minimum clear opening width of 850mm.	
	3b. Internal corridors/passageways to the doorways referred to in 3a to provide a minimum clear width of 1000mm.		3b. As for the silver level except replace with a minimum corridor/passageway width of 1200mm.	
4. Toilet	4a. Dwellings have a toilet on the ground (or entry) level that provides: <ul style="list-style-type: none"> i. a minimum clear width of 900mm between the opposite walls either side of the toilet pan (if located in a separate room); and ii. a minimum 1200mm circulation space from the front edge of the toilet pan to the swing arc of the door. iii. Where the toilet is provided in a bathroom, the centreline of the toilet pan is located between 450mm and 460mm from the finished surface of a wall or structure, or from any other fixed obstruction (such as a basin or vanity unit). 4a (ii) not required to be shown at Planning Application stage.		4a. As for silver level except, replace (i) with: <ul style="list-style-type: none"> i. with a minimum clear width of 1200mm between the walls of the bathroom if located in a separate room, or between amenities if located in a combined bathroom. 	

A4 Universal design requirements (cont.)

	Silver level requirements	Achieved? (Y/N)	Gold level requirements	Achieved? (Y/N)
5. Shower	<p>5a. At least one shower to have a hobless and step-free entry with a lip not more than 5mm in height. Refer AS3740-3.6 for hobless specifications. Note: waterproofing requirements of the NCC apply.</p> <p>5a not required to be shown at Planning Application stage.</p>		<p>5a. As for silver level except the hobless shower recess described in 5a to:</p> <ul style="list-style-type: none"> i. be located in a bathroom on the ground (or entry) level; ii. provide minimum dimensions of 900mm width and 900mm length; and iii. provide a clear space of at least 1200mm width and 1200mm length forward of the shower recess entry. 	
6. Reinforcement of bathroom & toilet walls	<p>6a. Walls to be reinforced to support the future installation of grab rails, if needed, and apply to walls adjacent to a:</p> <ul style="list-style-type: none"> i. shower subject to 5a; ii. bath (if provided) in the same bathroom as a shower subject to 5a; and iii. toilet pan subject to 4a. <p>Walls constructed of solid masonry, concrete, or another material capable of supporting grabrails may not require additional reinforcement.</p> <p>6a not required to be shown at Planning Application stage.</p>		<p>6a. As for silver.</p>	
7. Internal Stairways	<p>7a. No silver level requirement.</p>		<p>7a. Stairways in dwellings to be:</p> <ul style="list-style-type: none"> i. a minimum clear width of 1000mm; ii. straight in design; and iii. positioned adjoining a load bearing wall. <p>7a (iii) not required to be shown at Planning Application stage</p>	
8. Kitchen and laundry spaces	<p>8a. No silver level requirement.</p>		<p>8a. Kitchen and laundry spaces to be designed to support ease of movement and adaptation with:</p> <ul style="list-style-type: none"> i. at least 1200mm clearance in front of fixed benches and appliances (excluding handles). 	
9. Ground (or entry level) bedroom space	<p>9a. No silver level requirement.</p>		<p>9a. The dwelling is to provide a bedroom on the ground (or entry) level that:</p> <ul style="list-style-type: none"> i. is a minimum 10m² internal floor area; and ii. is a minimum dimension of 3m. <p>Note: minimum area and dimensions are exclusive of robes.</p>	

A4 Universal design requirements (cont.)

	Silver level requirements	Achieved? (Y/N)	Gold level requirements	Achieved? (Y/N)
10. Switches and powerpoints	10a. No silver level requirement.		10a. Light switches to be positioned in a consistent location: <ul style="list-style-type: none">i. between 900mm – 1100mm above the finished floor level; andii. horizontally aligned with the door handle at the entrance to a room. 10a not required to be shown at Planning Application stage.	
	10b. No silver level requirement.		10b. Powerpoints to be installed not lower than 300mm above the finished floor level.	
11. Door and tap hardware	11a. No silver level requirement.		11a. Doorways to include door hardware installed at between 900mm – 1100mm above the finished floor. 11a not required to be shown at Planning Application stage.

APPENDICES

G1 The R-Codes and Schemes.....	146
---------------------------------	-----

PART A

1.0	PURPOSE, FORMAT AND APPLICATION	2
2.0	DESIGN PROCESS	10
3.0	LOCAL PLANNING FRAMEWORK	15

1.0 Purpose, format and application

1.1 Purpose

The purpose of these guidelines is to explain and assist in the interpretation and application of the *Residential Design Codes Volume 1* (R-Codes Volume 1).

These guidelines have been prepared by the Western Australian Planning Commission (**WAPC**) to be read in conjunction with the R-Codes Volume 1 and provide advice and guidance to assist interpretation and assessment of **development** proposals against the **design principles** and **deemed-to-comply** provisions of the R-Codes Volume 1. These guidelines may be amended from time-to-time.

Throughout this document, **bolded** words have the corresponding definition listed in *Appendix 1* of the R-Codes Volume 1. Where a defined word occurs multiple times in a section, only the first occurrence is marked.

For the purpose of this document, the R-Codes refers to R-Codes Volume 1. Where referenced, R-Coding refers to the density code designated to residential zoned land in a **Scheme**.

1.2 Format

These guidelines are separated into the corresponding parts of the R-Codes Volume 1, with Parts A and D applying to all Volume 1 development and Part B and C applying to the relevant R-Codings as outlined in **Table 1.4a** of the R-Codes. The format of these guidelines is set out as follows:

PART A. PURPOSE, FORMAT AND APPLICATION

Identifies the purpose and intended audience for these guidelines and explains the relationship of the policy provisions within State Planning Policy 7.0 – *Design of the Built Environment* (SPP 7.0).

DESIGN PROCESS

Outlines a design process conducive to good **residential development** outcomes.

LOCAL PLANNING FRAMEWORK

Outlines the scope of modifying the R-Codes through **Local Planning Frameworks**, how this may be approved by the **decision-maker**, and where **WAPC** approval is required.

PART B. DESIGN AND ASSESSMENT GUIDANCE

Explains how the R-Codes Volume 1 are applied to Part B, which includes **single houses** in areas coded R40 and below, **grouped dwellings** and **multiple dwellings** in areas coded R25 and below. Part B provides guidance on the **deemed-to-comply** provisions of the R-Codes and the intent of the provisions which can be used in order to address a **design principle** pathway and when preparing **local planning frameworks**.

PART C. DESIGN AND ASSESSMENT GUIDANCE

Design guidance

Provides guidance for each design element in Part C, which includes **single houses** in areas coded R50 and above, R100 SL and R-AC, **grouped dwellings** in areas R30 and above, R100-SL and R-AC; and **multiple**

dwellings (including the **dwelling** component of **mixed use development**) in areas coded R30 to R60 inclusive. The design guidance assists designers and assessors understand potential design responses and solutions for meeting the requirements of the R-Codes. This section explains the intent underpinning the provisions and provides alternative approaches for meeting design requirements.

Assessment guidance

Provides advice for the technical interpretation of the **deemed-to-comply** provisions for each design element.

Design tips

Provides descriptions of potential design responses that may assist in addressing the requirements of the **design principle** pathway. These are examples and may not be appropriate for all **sites** and **development** contexts.

Local planning framework considerations

Provides additional guidance for the preparation of modifications to **deemed-to-comply** provisions through **local planning frameworks**.

Figures, tables and photos

Throughout the above sections, figures and tables are referenced, for example as **Figure/Table 1.1** when referring to the R-Codes Volume 1 and **Figure/Table G1.1** when referring to a figure or table provided in the Explanatory Guidelines.

Images are not referenced in the body text however are titled, for example, as **Photo G1.1**. These demonstrate good design outcomes intended by the R-Codes Volume 1, however may not necessarily illustrate a **deemed-to-comply** outcome.

1.0 Purpose, format and application (cont.)

PART D. DESIGN AND ASSESSMENT GUIDANCE FOR LAND

Provides guidance for each design element in Part D - land to assist applicants and assessors with the interpretation and assessment of the **deemed-to-comply** provisions and **design principles**.

1.3 Application

These guidelines have been created to provide a practical guide to support the R-Codes Volume 1. The guidelines do not provide quantitative measures in addition to the R-Codes. It is the 'how to' guide for the code that is intended to be used:

- By landowners, developers, professional town planners, urban designers, architects, landscape architects, builders and other professionals when designing housing **developments** and preparing an application for development approval.
- By **decision-makers** and town planning professionals in local and state government with assessment of development proposals and in advancing strategic planning in the form of **local planning frameworks** and design guidance.
- To support communities by raising awareness of the principles of good design and by promoting quality housing that will make a positive contribution to local neighbourhoods.

Development outcomes are **site** specific and often do not rely on a standard approach or measure. The guidelines seek to clarify the use of discretion by **decision-makers**, however, it is not possible to cover all scenarios and contexts.

1.4 State Planning Policy 7.0 and the R-Codes Volume 1

As Western Australia's cities, towns and suburbs grow, change and become more complex, the need to accommodate a greater diversity of housing types is amplified. Achieving better outcomes requires a considered approach to **residential development**, with increased attention to design quality.

SPP 7.0 includes **Ten Design Principles** to guide the design and assessment of built environment proposals through the Western Australian planning system. These principles inform the design, review and decision-making processes for all **development** under the R-Codes Volume 1, particularly where **local planning frameworks** seek to modify the **deemed-to-comply** provisions. The below table outlines how these Ten Design Principles apply to **residential development**.

1.0 Purpose, format and application (cont.)

Table G1.4a SPP 7.0 Ten Design Principles applied to the R-Codes Vol. 1

1	Context and character	Development responds to and enhances the distinctive characteristics of a local area, contributing to a sense of place. New development is integrated into its setting and is shown to respond positively to the intended future character of an area.
2	Landscape quality	Development incorporates landscape design that benefits resident and community wellbeing while contributing to neighbourhood character and the quality of our environment. Local environments are enhanced through landscape design that includes: <ul style="list-style-type: none"> – effective water management and WSUD measures; – appropriate vegetation and tree canopy enhancement; and – consideration of microclimate and urban heat island impact.
3	Built form and scale	Built form height and massing is compatible with the intended character of the area. Buildings are appropriately orientated, proportioned and articulated, mitigating negative impacts on neighbouring properties and contributing positively to the character and amenity of the public realm.
4	Functionality and build quality	Housing meets the needs and expectations of the occupant by providing spaces that are easy to use, in good relationship to each other and adaptable to the changing needs of occupants over time. Development is well-detailed, robust, and easy to maintain, with appropriate attention given to services, storage and waste management.
5	Sustainability	Well-designed houses deliver positive environmental, social and economic outcomes, including: <ul style="list-style-type: none"> – protection and enhancement of the urban tree canopy; – water-sensitive urban design; – passive environmental design and appropriate construction, materials and waste strategies that minimise resource consumption and life-cycle costs; – a diverse range of housing types commensurate with housing need; and – promotion of active and public transport modes.
6	Amenity	Housing provides indoor and outdoor spaces that are comfortable and enjoyable throughout all seasons and times of the day.
7	Legibility	Access to and within the development is easy to navigate, with clear connections and priority access for pedestrians and bicycle riders.
8	Safety	Development applies crime prevention through environmental design (CPTED) principles and incorporates appropriate safety measures.
9	Community	Development responds to community need with an appropriate mix of dwellings including affordable housing, flexible and adaptable housing, universally accessible housing, and housing conducive to social interaction.
10	Aesthetics	The scale, arrangement, articulation and material quality of development contributes to attractive and inviting communities with a coherent identity and cultural relevance.

1.0 Purpose, format and application (cont.)

This table shows the relationship between the **Ten Design Principles** of SPP 7.0 and the elements of Part C. It indicates where key linkages generally apply, though additional linkages may still apply beyond those indicated on this table, based on the individual nature of each proposal.

Note – a future update to Part B will seek to align provisions with the Ten Design Principles.

Table G1.4b SPP 7.0 Design Principles applied to Part C - medium density

1.5 Housing for diversity

The R-Codes Volume 1 provides **residential development** controls for **single houses** and **grouped dwellings** within all density codings and **multiple dwellings** in areas coded R60 and below.

A built form type refers to the **building** form rather than dwelling, tenure or R-Coding. For example, a detached house (on its own lot) a terrace house (attached on both sides with its own **frontage**) and a semi-detached house (attached on one side) are all defined as a **single house** under the R-Codes.

A range of design solutions are possible for a given **site** based on context, **frontage** width, orientation and size. Some sites work better with some **building** types. For example, narrow **lots** would suit **terraces**, large corner lots may work better with an apartment. Each project and **development site** should be analysed on its own individual merits to determine the most appropriate outcome with reference to the **design principles** in the R-Codes and any **local planning framework**.

Following is an example of the different built form types possible in the R-Codes.

Built form types:

Single houses and grouped dwellings

Single houses and **grouped dwellings** can be either detached or attached. Typically detached types should be located in a suburban residential character (up to R40) and attached dwellings in an urban residential character (up to R60) where there are higher densities.

They include the following built form types:

Detached

- single detached
- 'plexes (such as duplex, triplex, quadruplex)
- villas

Attached

- semi-detached
- **terrace** house
- row house

Apartments

Multiple dwellings can either be a smaller number of apartments aimed to fit into a suburban residential character or can be larger apartment **buildings** within an urban context. They include the following:

- apartment house
- low-rise apartment building

1.0 Purpose, format and application (cont.)

Detached built form type

Single detached

A single detached **dwelling** is a house on its own **lot** that is not attached to any other dwelling.

The single detached **dwelling** is the traditional housing model initially delivered as a single level house on a large suburban **lot** with a garden.

This type is most appropriate for:

- suburban greenfield **lots**
- suburban infill lots
- front and rear loaded lots
- wider lots

With the delivery of smaller **lot** sizes in urban infill and greenfield areas, there has been a shift towards single detached **dwelling**s designed over two levels to allow good orientation and enough area for a garden, particularly on narrower lots. For narrow lots, provision of **laneway** access for car parking consolidates the **building frontage**, minimises cars in the front of the lot, and contributes positively to the **streetscape**.

'Plexes (such as duplex, triplex, quadruplex)

Two, three or four **dwelling**s on one **lot**, that can be either side by side or behind one another (or oriented to different street **frontages** on a corner lot).

This built form type typically accommodates between two and four villas on a traditional **single house lot**. Generally, one **dwelling** has a **street frontage**, with the others accessed by a **communal street** or **driveway**.

These are usually delivered within a suburban context that is densifying, but where land values make more intensive **development** (apartments) less viable.

This type is most appropriate for:

- corner **lots** where the **dwelling**s can address both **street frontages**
- deep lots with a minimum frontage of 18m
- two **storey development** that provides for good orientation and adequate garden areas

Villas

Five or more **dwelling**s on one larger **lot**, typically delivered one behind another. The **driveway** / **communal street** is usually centralised.

This built form type is generally built on larger **lots** within a suburban context that is densifying, where land values constrain more intensive **development**.

This type is most appropriate for:

- amalgamated **sites** and corner **lots**
- wide and deep sites (min lot depth usually approx. 40m, and minimum **frontage** 25m, although wider frontages support efficient layout with shared central driveway)

1.0 Purpose, format and application (cont.)

Attached built form type

Semi-detached

A semi-detached **dwelling** is a house that shares one common **wall** with its neighbour, both fronting the **street** as half of a pair (not necessarily in the same style). Semi-detached dwellings could be both on a single **lot** (a dual occupancy arrangement) or on separate titles.

Sharing a common **wall** is an efficient use of space for narrower lots. **Setbacks** for light and ventilation can still be achieved on one side of the dwelling. Space available for gardens and **buildings** is increased when space for **driveways** is reduced through dual primary **frontages** (i.e. not one dwelling behind another) and **laneway** access.

This type is most appropriate for:

- established residential and mixed-use areas where more density can be achieved in a contextually appropriate manner
- mid-block subdivision
- wide, shallow **lots** (for future subdivision or dual occupancy) or pairs of narrower lots
- minimum lot width highly dependent on availability of **laneway** access

Terrace house

A **terrace** is a narrow, attached dwelling built to both side boundaries with a **primary street frontage**.

It can be either **grouped dwellings**, where there is common property for parking, or green titled where each dwelling and related parking is contained on its own **lot**. It is often delivered where parking is accessed from a rear **laneway** but, parking may also be accessed from the front.

Traditionally **terraces** are an urban/ inner city housing typology, however are now often delivered in high **amenity** greenfield areas such as adjacent to parkland.

This type is most appropriate for:

- new subdivisions where optimal **site** orientation and **laneway** access can be established
- mid-block subdivision on appropriately oriented **lots**
- wide shallow lots and amalgamated sites
- areas with higher density housing or transitional areas between higher and lower density

Row house

Row houses have a built form similar to the **terrace**, but without a direct **street frontage**. These are attached **group dwellings** with a frontage to a **communal street**.

The row house form is a less urban typology than **terraces**, suited to **sites** that might otherwise deliver 'plexes' or villas. Row houses are strata titled **development** (due to common access areas).

This type is most appropriate for:

- integrated **development**, with all **dwellings** constructed at the same time.
- minimum **lot** width of 17-20m to enable efficient **site** planning
- deep lots

1.0 Purpose, format and application (cont.)

Apartments

Apartment house

A multi-storey **building** that contains two to six **multiple dwellings** in various arrangements where at least one is above another. The building presents to the **street** like a **single house** and can have a common entry and circulation areas. It can include built forms known as manor house, duplex apartments (1 up 1 down) and maisonette apartments.

The apartment house is a historic built form typology with few contemporary examples. This built form type is suitable for a range of household types including a flexible model for intergenerational living, either connected or separate, depending on family needs. Apartment houses can also be sublet by owners for supplementary income and incorporated into mixed typology developments.

This type integrates well into established residential areas (including lower density areas); presenting to the **street** as a large family home.

This type is most appropriate for:

- corner **sites** or sites with rear **laneway** access to accommodate **garages** and car parking
- **lots** with a minimum 15m **frontage** to achieve **setbacks** and sufficient space for parking
- amalgamated lots
- in areas with medium to high density R-Codes
- areas of high **amenity**, with good access to public transport, shops, schools and jobs

Low-rise apartment building

A residential apartment **building** (**multiple dwellings**) that is not an apartment house where a **dwelling** is above another dwelling.

Low-rise apartment **buildings** (up to 4 **storeys**) can bring significant benefits to residential suburbs that are increasing in density, as they can provide a space efficient, more affordable but less imposing built form model than high rise apartments, while contributing to the housing diversity of the area.

Apartments are generally less expensive than other housing types and provide a good transitional built form type between lower and higher density residential areas.

This type is most appropriate for:

- on corner **sites** or sites with rear **laneway** access to accommodate **garages** and car parking
- amalgamated **lots**
- in areas with medium to high density R-Codes
- areas of high **amenity**, with good access to public transport, shops, schools and jobs
- areas that can accommodate additional carparking requirements of larger **dwelling** numbers

Apartment house

Low-rise apartment building

2.0 Design process

2.1 Delivering good design outcomes

The design process involves progressing a proposal from an idea to a resolved design. This includes developing a brief, identifying **site** opportunities and constraints, and working collaboratively within project teams and with **decision-makers** towards a common goal. A thorough and well-considered design process is key to delivering great design outcomes. A good design approach will help reconcile what may appear to be conflicting requirements into outcomes that will benefit occupants, neighbours and the quality of our environment.

A good resource for describing the typical stages of the design process is *Your Home: Australia's guide to environmentally sustainable homes* (Australian government), and can be found at: <https://www.yourhome.gov.au/you-begin/design-process>.

Outlined below is a recommended design process involving three key stages:

- Stage 1 - Project Definition
- Stage 2 - Project Investigation
- Stage 3 - Design Development

2.2 Design process stages

Stage 1 - Project definition

At the beginning of every **development** is an idea or concept. This idea, along with a list of intended functional outcomes, needs to be refined and developed into a project brief. The project brief is a written description of the objectives and requirements of a project. The brief needs to understand the zoning of the land (including applicable R-Coding), the requirements of the **local planning framework**, and the client's objectives. Preparing a project brief should be a collaboration between client and architect or **building** designer, and requires investigation, analysis and discussion to ensure that the client's requirements and the development opportunities and constraints presented by the **site** are well understood.

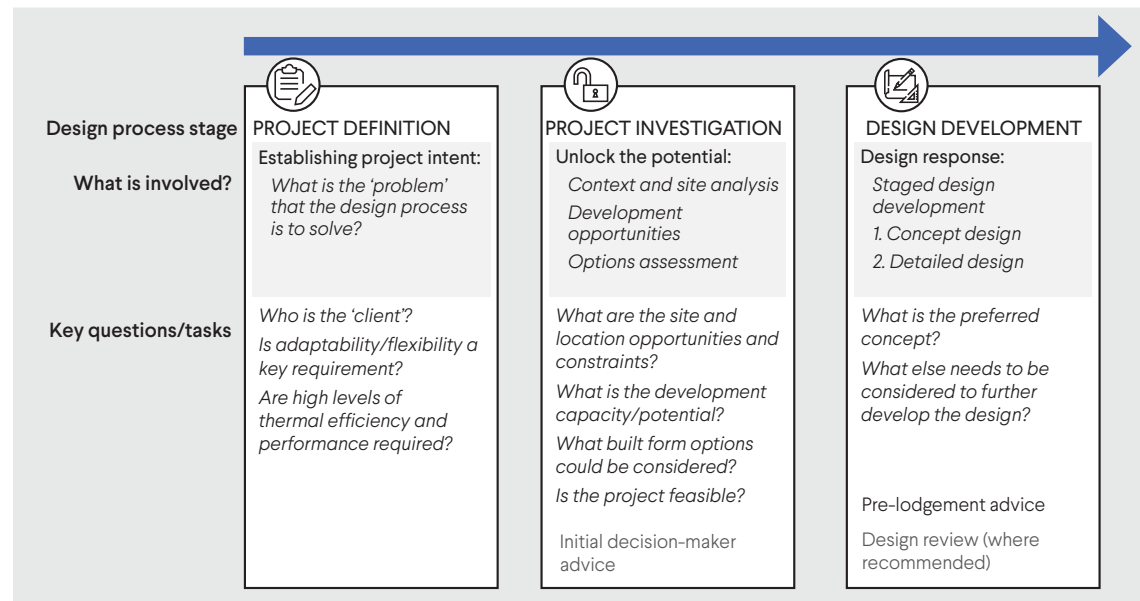

Figure 2.1a Design process stage

2.0 Design process (cont.)

Stage 2 – Project investigation

Context and site analysis

Good **residential development** responds to the **site**, **streetscape** and neighbourhood context, as well as to the requirements of the R-Codes and relevant **local planning framework**. To support this, context and site analysis should be undertaken early in the design process.

Context and **site** analysis involve investigating the physical and cultural characteristics of the locality and the **development site**, so that development opportunities and constraints are understood. Analysis should also include consideration of statutory planning requirements, including relevant provisions of the **local planning framework**.

Outcomes from context and **site** analysis can then inform the design development phase, so that the design response:

- capitalises on-site opportunities and addresses constraints; and
- contributes to the existing or desired **streetscape** and **local character**.

Appendix 2 *Context and Site Analysis* of the R-Codes Vol.1 recommends a list of documentation for the context and **site** analysis. Further investigations and documentation to address relevant provisions of the **local planning framework** or site-specific considerations may also be required by the **decision-maker**.

The figure below identifies important considerations for various scales of context analysis, from the neighbourhood level through to the immediate **site** context.

Development options

Each **development site** can typically support a variety of built form types and land tenure arrangements.

The density coding for the **site** and **site area** concessions and requirements available under the R-Codes for different **dwelling** types, including **single houses**, **grouped dwellings** and **multiple dwellings**, determine the potential dwelling yield (refer Part D, *1.1 Site Area* for site area provisions).

Testing a range of built form options will help determine the best development response for a **site**. Built form types, tenure arrangements, **dwelling** yield and feasibility, site conditions, and **streetscape** character should all weigh into the decision process of a preferred option. Different approaches will deliver different outcomes for **amenity**, gardens, site-responsiveness, and streetscape character compatibility.

2.0 Design process (cont.)

Context and site analysis

Figure 2.2a Neighbourhood context plan

The neighbourhood context plan considers local planning framework and urban structure of the locality (within 400m of the site). The analysis should outline the zoning, land use, and the built and landscape features of the neighbourhood. This includes street layout and nearby open spaces; topography, drainage and vegetation patterns that impact on the site; services and future infrastructure requirements (if known); nearby public transport services (to determine Location A or B status) and heritage places / local landmarks.

Figure 2.2b Street context plan

This plan identifies the character of the street(s) in the immediate vicinity of the development site, including landscape, land use (including public space), street design and proportions, footpaths, subdivision pattern, and building scale and design.

Analysing the street context should involve reference to the local planning framework as it may identify an intended character. For areas undergoing change, this may mean development is to be designed to 'fit' with a planned future character rather than the existing streetscape. Where local character is not defined in the local planning framework, the street context analysis should inform a reasoned assessment of character and an appropriate design response.

Figure 2.2c Site context plan

This plan provides the site details relative to neighbouring properties, including adjacent buildings and public spaces. It considers existing vegetation and trees (including verge trees), fences/walls (including retaining), on-street parking, overshadowing and privacy considerations.

At this scale site specific factors such as orientation, views, slope, geology, infrastructure, easements, and stormwater management can be understood to inform site responsive design.

 Proposed development site	 Development site boundary	 Railway line
 Local shops	 Existing buildings	 Train station
 Education facility	 Public open space	 Bus route

2.0 Design process (cont.)

Stage 3 - Design Development

The design development phase takes the project brief, the context and **site** analysis, and early design thinking, and begins to shape a built form design response. Typically design **development** proceeds from general concepts to specific details, and from the macro to the micro-scale. Design development may include early sketches for concept design and pre-lodgement meetings with the **decision-maker**, or design review where available.

Concept design

At concept design stage, plans are typically unresolved sketches and conceptual drawings, showing elements such as **building** footprint, zones for living areas and bedrooms, and garden areas. The aim at this stage is to provide enough information to communicate the proposal effectively for the purpose of feedback, rather than to have fully resolved drawings.

The concept design should respond to findings from the project investigation phase and identify a preferred design response for the **site** that can achieve the relevant R-Codes provisions, including **site cover**, **building setbacks** and **deep soil areas**.

Figure 2.2d Built form design response analysis

2.0 Design process (cont.)

Early engagement

Pre-lodgement engagement with decision-maker

Pre-lodgement engagement with the **decision-maker** is highly recommended. Depending on the complexity of the proposal, pre-lodgement engagement could be a phone conversation, over-the-counter advice, or a meeting. In the case of an application that is to be determined by a Development Assessment Panel, pre-lodgement advice should be sought from the relevant local government or agency undertaking the assessment.

During pre-lodgement engagement, the **decision-maker** may advise the proponent of specific considerations, requirements, or processes that apply under the adopted **local planning framework** and that will require further resolution by the proponent to achieve a resolved development application. For large-scale or more complex **development** proposals, this may include design review.

Initial pre-lodgement engagement is recommended during the project investigation phase, with further advice sought prior to lodgement of the development application to confirm the application meets submission requirements. Effective pre-lodgement engagement is a known success factor for improving design outcomes and minimising approval timeframes, particularly for more complex proposals.

Design Review

Design review is a process of obtaining independent, expert advice on the design quality of a **development** proposal. **Decision-makers** are increasingly using formal design review processes, carried out by a panel of multi-disciplinary built environment professionals, to provide objective and constructive design advice prior to development application lodgement and during the assessment process. Design review can offer feedback and observations that improve the quality of the design and may be particularly useful for more complex developments, or where there are specific **streetscape** character, heritage or other requirements to be met.

For complex **developments** that adopt a **design principle** pathway, design review may also assist in the assessment of the proposal. Review can be helpful to both the proponent and **decision-maker** when creative and innovative design solutions are proposed. To prepare for design review, proponents are encouraged to submit a design statement that demonstrates how the proposal responds to the **Ten Design Principles** of SPP 7.0.

Design review, undertaken early in the design process has the best potential to improve design outcomes, without significantly impacting on costs or delaying development.

For further information regarding design review, refer to SPP 7.0, the *Design Review Guide* (WAPC, 2019), or consult the relevant **decision-maker**.

Design Resolution

At design resolution stage, the design is finalised for lodgement with the **decision-maker**. This will include a drawing package consisting of site plans, elevations, sections and preliminary details indicating **building** structure and materials, **landscaping**, and servicing requirements. The design resolution phase should build upon the concept design to 'firm up' the proposal in preparation for development assessment.

The application for **development** approval should be accompanied by all the documentation and other material required by the **decision-maker** to facilitate the assessment, refer to Appendix 3 *Application Documentation* of the R-Codes Volume 1.

3.0 Local planning framework

3.1 General

The R-Codes recognises that there are variations across Western Australia in terms of **local character**, community need, climate and the environment, and that **local planning frameworks** can amend, replace or augment **deemed-to-comply** provisions of the R-Codes in order to cater to these different contexts.

However, there are some provisions for which it is unlikely there would need to be modifications, irrespective of location.

The **deemed-to-comply** provisions of the R-Codes are carefully calibrated to ensure that development can achieve the objectives and **design principles** of the R-Codes. For example, street and **lot boundary setbacks**, **site cover** and **building height** requirements ensure that development is of a scale and density appropriate to a **site's** R-Coding; however, changing one of those provisions may require a change to another provision.

Given the above, any modifications to the **deemed-to-comply** provisions in **local planning frameworks** need to be equally carefully calibrated by local government and proponents.

3.2 Scope of modifications by Local Planning Frameworks

Local planning framework instruments that may amend, replace and/or augment provisions of the R-Codes include **schemes**, **local planning policies**, precinct **structure plans** and **local development plans**. The provisions of the R-Codes that may be amended, replaced and/or augmented by each type of local planning instrument are identified in Part A, 3.2 of the R-Codes Volume 1. Local planning framework instruments are to clearly outline which **deemed-to-comply** provisions are being amended, replaced and/or augmented by reference to the design element.

Where **WAPC** approval for a modification to the **deemed-to-comply** is not required, the local government should carefully consider modifications against the criteria in Part A, 3.1 of the R-Codes Volume 1 and the guidance within these Guidelines.

Each design element within Part C provides design guidance and some contain more specific **local planning framework** guidance to assist local government/proponents and decision-makers when considering modifications to the **deemed-to-comply** provisions through local planning frameworks. A future review of the explanatory guidelines is intended to include similar guidance for the design elements in Part B, however in the interim the guidance in Part C is still useful.

3.2.1 Regional considerations

The R-Codes are designed to apply throughout Western Australia. It is recognised that local governments and/or proponents may wish to prepare a **local planning policy** or **local development plan** to vary a particular aspect of some of the design elements in recognition of a regional circumstance. Regional circumstances may present themselves in the form of climatic extremes, topographical variations or physical landform and geomorphologic differences. Regional local governments have an additional set of **deemed-to-comply** provisions that may be modified without **WAPC** approval, however the criteria in Part A, 3.1 of the R-Codes Volume 1 and the guidance within these Guidelines is still to be carefully considered.

3.2.2 Heritage considerations

In **heritage areas**, it is appropriate for certain aspects of the R-Codes to be modified in order to ensure the maintenance of the **local character** of the heritage place. Local governments have an additional set of **deemed-to-comply** provisions that may be modified without **WAPC** approval for heritage areas, however the criteria in Part A, 3.1 of the R-Codes Volume 1 and the guidance within these Guidelines is still to be carefully considered.

3.0 Local planning framework (cont.)

3.3 Process for WAPC approval of a local planning policy

Where **WAPC** approval is required under Part A, 3.2 of the R-Codes Volume 1, a **local planning policy** that proposes to amend, replace and/or augment a **deemed-to-comply** provision is to be prepared in accordance with Part 2 of Schedule 2 of the *Planning and Development (Local Planning Schemes) Regulations 2015* (the deemed provisions) and additionally, follow the procedures set out below.

3.3.1 Pre lodgement advice

Prior to a resolution to commence advertising of a **local planning policy**, the local government is encouraged to provide the **WAPC** with a copy of the proposed local planning policy and a written statement detailing:

- the rationale for the proposed modification to the R-Codes Volume 1 **deemed-to-comply** provisions;
- the extent to which the proposed modification meets criteria (i) – (v) set out at Part A, 3.1 of the R-Codes Volume 1; and
- any other matter the local government considers relevant.

Within 30 days (or another period agreed to) of receiving the proposed **local planning policy**, the **WAPC** may advise the local government or proponent of any modification required to the local planning policy before commencing advertising. A local government that has not received advice from the **WAPC** within 30 days (or another period agreed to), may resolve to advertise the local planning policy as if the **WAPC** had provided advice that no modification is required.

While the above procedure is not a requirement of the deemed provisions, it may ensure consistency from draft (as advertised) **local planning policies** through to endorsement, ensuring stakeholder expectations are satisfied.

3.3.2 Post-advertising WAPC approval process

Upon completion of advertising, the local government must not resolve to commence operation of the policy until approval of the **WAPC** has been granted under cl.4(3A), of the deemed provisions.

The local government is to provide the **WAPC** with a copy of the proposed **local planning policy** and a written statement detailing:

- the rationale for the proposed modification to the R-Codes Volume 1 **deemed-to-comply** provisions;
- the extent to which the proposed modification meets criteria (i) – (v) set out at Part A, 3.1 of the R-Codes Volume 1;
- a summary of submissions; and
- any other matter the local government considers relevant.

Within 60 days of receiving the proposed **local planning policy**, including any modifications made following the expiry of the submission period, the **WAPC** will determine whether to:

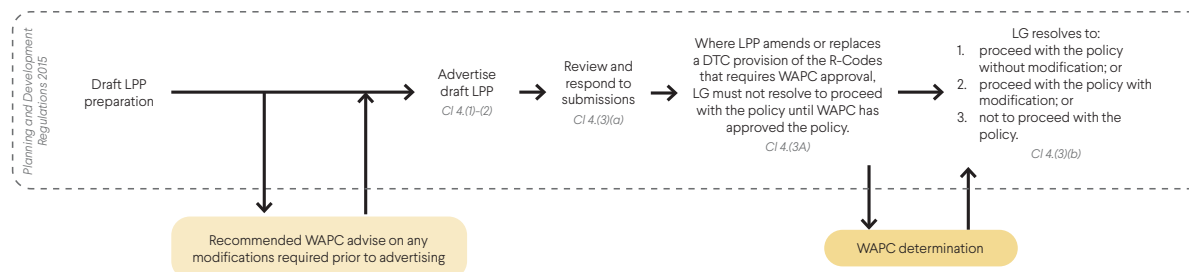

- i. advise the local government that it approves the local planning policy with no further modification; or
- ii. advise the local government that it approves the local planning policy subject to minor specified modifications; or
- iii. advise the local government that it does not approve the local planning policy without further modification being made.

The **WAPC** must be satisfied that the proposed modification to the **deemed-to-comply** provision(s) is consistent with criteria (i) – (v) set out at Part A, 3.1 of the R-Codes Volume 1. Where the **WAPC** provides advice under (ii) or (iii) above, it should also provide a reason for the decision to the local government.

Where the **WAPC** provides advice under (i) or (ii) above, the local government may commence operation of the **local planning policy** after completing the requirements of cl.4 of the deemed provisions.

Where the **WAPC** provides advice under (iii) above, the local government may re-consider and/or re-advertise the **local planning policy**.

A **local planning policy** that requires **WAPC** approval to modify provisions of the R-Codes shall not come into effect until the approval of the **WAPC** has been granted in accordance with the R-Codes Volume 1 and the deemed provisions.

3.0 Local planning framework (cont.)

3.4 Process for local government and WAPC approval of a local development plan

Where the local government or a proponent proposes to amend, replace and/or augment a **deemed-to-comply** provision of the R-Codes Volume 1 through a **local development plan**, the local development plan is to be prepared in accordance with Part 6 of Schedule 2 of the *Planning and Development (Local Planning Schemes) Regulations 2015* (the deemed provisions) and additionally, follow the procedures set out below.

3.4.1 Pre-lodgement advice

Prior to lodgement with the local government, the proponent is encouraged to provide the local government with a copy of the proposed **local development plan** and a written statement detailing:

- the rationale for the proposed modification to the R-Codes Volume 1 **deemed-to-comply** provisions; and
- the extent to which the proposed modification meets criteria (i) – (v) set out at Part A, 3.1 of the R-Codes Volume 1.

Within 30 days (or another period agreed to) of receiving the proposed **local development plan**, the local government may advise the proponent of any modification required to the local development plan before it is lodged and advertised.

A proponent that has not received advice from the local government within 30 days (or another period agreed to), may lodge the **local development plan** with the local government as if the local government had provided advice that no modification is required.

While the above procedure is not a requirement of the deemed provisions, it may ensure consistency from draft (as advertised) **local development plans** through to endorsement, ensuring stakeholder expectations are satisfied.

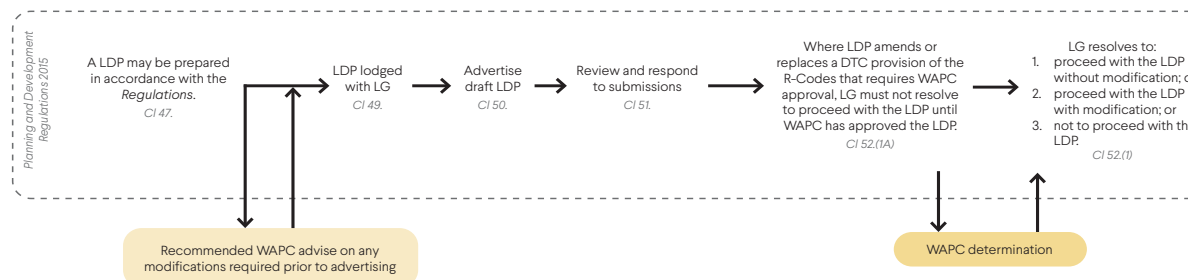

Where **WAPC** approval under Part A, 3.2 of the R-Codes Volume 1 is required, local government and proponents are also encouraged to seek pre-lodgement advice from the WAPC subject to the same process and timeframes as above.

3.4.2 Post-advertising WAPC approval process

Upon completion of advertising, the local government must not resolve to commence operation of the **local development plan** until approval of the **WAPC** has been granted under cl.52(1A), part 6 of Schedule 2 of the Regulations.

The local government is to provide the **WAPC** with a copy of the proposed **local development plan** and a written statement detailing:

- the rationale for the proposed modification to the R-Codes Volume 1;
- the extent to which the proposed modification meets criteria (i) – (v) set out at Part A, 3.1 of the R-Codes Volume 1;
- a summary of submissions;
- whether the local government supports the local development plan; and
- any other matter the local government considers relevant.

3.0 Local planning framework (cont.)

Within 30 days of receiving the proposed **local development plan**, including any modifications made to the local development plan following the expiry of the submission period, the **WAPC** will determine whether to:

- i. advise the local government that it approves the local development plan with no further modification; or
- ii. advise the local government that it approves the local development plan subject to minor specified modifications; or
- iii. advise the local government that it does not approve the local development plan without further modification being made.

The **WAPC** must be satisfied that the proposed modification to the **deemed-to-comply** provision(s) is consistent with criteria (i) to (v) set out at Part A, 3.1 of the R-Codes Volume 1.

Where the **WAPC** provides advice under (ii) or (iii) above, it should also provide a reason for the decision to the local government.

Where the **WAPC** provides advice under (i) or (ii) above, the local government may commence operation of the local development plan as provided for in cl.52, part 6 of Schedule 2 of the Regulations.

Where the **WAPC** provides advice under (iii) above, the local government may re-consider and/or re-advertise the local development plan.

A local development plan that requires **WAPC** approval shall not come into effect until the approval of the WAPC has been granted in accordance with this provision

PART B

Single houses R40 and below

Grouped dwellings R25 and below

Multiple dwellings R10-R25

4.0	CONTEXT	20
5.0	STREETSCAPE	33
6.0	SITE PLANNING AND DESIGN	41
7.0	BUILDING DESIGN	54
8.0	SPECIAL PURPOSE DWELLINGS	70

4.0 CONTEXT

GENERAL (Clause 5.1 of R-Codes Volume 1)

Physical and natural attributes combine to define the character of an area. It is important that development maintains and enhances local or neighbourhood character. In situations where areas are undergoing transition, good design will reflect the future desired character of the area as outlined in the **local planning framework**. However, if no future desired character has been set out, **development** should respond to the existing character of the area, in terms of its scale, function and visual appearance.

Consideration of the surrounding development context

Most suburban **streetscapes** are open, with direct views along the **street**, and generally direct (although sometimes **screened**) views across the street between houses. This visual relationship is shaped by the width of the roadway and verges, the public and private **landscapes** with the edges defined by **buildings** as they are set back from the street and each other. The heights and **setback** of buildings, area dedicated to private landscaping, and access **driveways** all contribute to the open, suburban appearance and function. There is an expectation that the built form is not the dominant feature of the suburban landscape.

Residential character is created by the relationship between **landscape** and built form. The visual character may be described as suburban and is shown in **Figure 3**.

An urban context is expected to have less of the open characteristics of a suburban area. Where an area of housing is dense, for example in many inner city and inner suburban precincts, the urban **landscape** is visually dominated by the built form and is shown in **Figure 4**. The **buildings** are set close to, and sometimes right on, the street alignment, and close to or abutting each other.

However, prevailing patterns of development in Western Australia, with greater use of mid-range density codes used in both infill and greenfield areas, results in something of a hybrid between the open suburban and traditional closed urban characters. In these medium urban areas, care should be taken to protect elements of **setback** and open space to maintain the difference in context between high and medium urban density areas.

Figure 3 Example of suburban character

Figure 4 Example of urban character

GENERAL (cont.) (Clause 5.1 of R-Codes Volume 1)

Context analysis

Notwithstanding whether the **development** is occurring in a manner that is consistent with existing character or in a manner consistent with the desired character, a context analysis assists in establishing an appropriate design response, refer to **Figure 5**.

Neighbourhood context

The neighbourhood context analysis considers the proposed **development site** within the planning framework for the locality. The analysis should outline the zoning and land use of the development **site** and the surrounding neighbourhood, as outlined within the **local planning framework**.

At this level the appropriateness of a particular development proposal for the **site** can be identified, based upon the existing and likely future development in the locality.

Street context

The **street** context analysis establishes the existing character and features of the immediate area. Key considerations include:

- distribution and mix of land uses;
- subdivision pattern;
- scale and setting of adjoining built form;
- impacts from adjoining land uses;
- **building** articulation, materials and finishes;
- street design and proportions; and
- public spaces.

Site context

The **site** context analysis investigates the parameters of the site and the relationship with the **buildings** on the adjoining **lots** and opportunities for improving functionality and performance. Key considerations include:

- building **setbacks** and separation;
- active and passive areas on adjoining lots;
- open space and **landscaping**;
- orientation;
- existing vegetation and topography;
- views from public places; and
- location of existing on-street car parking.

Figure 5 Context analysis example

SPECIFIC DESIGN ELEMENTS (Clause 5.1 of R-Codes Volume 1)

This generic design element deals with significant factors that affect and contribute to the context of the **development**. The following are the design elements of Part B of the R-Codes Volume 1.

- 4.1 Street setback;
- 4.2 Lot boundary setback;
- 4.3 Open space;
- 4.4 Building height; and
- 4.6 Communal open space.

As outlined in 4.5, previous Site area provisions were deleted and replaced by Part D 1.1 in amendments dated 10 April 2024.

There is a strong relationship between elements of context and elements of **streetscape**; some streetscape elements are encompassed within context here, others are dealt with specifically in design element 5.2 *Streetscape* of the R-Codes Volume 1, respectively.

4.1 STREET SETBACKS (Clause 5.1.2 of R-Codes Volume 1)

GENERAL GUIDANCE

The urban design presumption is for the **street setback area** to be free from **buildings** and structures, enabling a clear view to and from the **street**. This provides a comfortable and secure relationship and transition between public and private space.

From a social point of view, the **street setback area** and how it is developed and managed allows for comfortable communication and interaction between residents, neighbours and passers-by or callers who may not be known to the occupants. This creates the opportunity for casual and safe interaction to enhance a sense of community and safety.

At the same time, an open **street setback area** provides for mutual surveillance between the street and **building**, enhancing security for the **building** (and its occupants) and for people passing by.

From a visual point of view, an open **street setback area** provides a more attractive setting for the **building**. The street setback area should also provide, depending on the location of essential services, adequate clearances from, and access to, essential services for reasons of safety and utility.

The same principles apply to **communal streets** and **rights-of-way** that provide the **frontage to dwellings**.

There will, of course, be exceptions, principally where the street is an arterial road carrying significant volumes of traffic.

Frontage streets

Street setbacks are an integral part of the **streetscape** and are fundamental to the amenity and particular character of residential localities. They may perform a number of different, but complementary roles:

- continuity of the streetscape;
- a visual setting for the **dwelling**;
- a buffer against noise and general activity on the public street;
- privacy for the **dwelling**;
- visual connection to the street, its users and to neighbours;
- space for car parking and access; and
- a transition zone between the public street and private dwelling.

These considerations apply particularly to public **streets** to influence orientation of the main **frontage to dwellings** as it presents to the street. Similar principles apply to **communal streets**, and **rights-of-way** used to provide frontage to dwellings. Secondary or side streets may also function in this way.

Side or secondary streets

Different **streetscape** characteristics usually occur on secondary or side **streets**, with the street alignments formed by the long side boundaries of corner **lots**. These are characterised by side fences or **walls** rather than open gardens, and a small **setback** to the **building**.

In many cases these **streetscapes** are being altered by urban redevelopment and infill, by the subdivision of corner **lots**, creating new **frontages** to the side **street**. Where this happens, similar considerations to those for **setbacks** to frontage streets will apply although there will be scope for common-sense rationalisation between existing houses which create the character of the street and infill **development**.

The **setback** area should be open but with a reduced setback for practical and **streetscape** reasons. **Private open space** may be located to one side of the **building** rather than a narrow strip along the rear.

Rights-of-way as streets

Many **rights-of-way**, especially in older areas, are becoming increasingly important, not only to provide vehicle access to the rear of properties, but in the case of subdivision also to provide **frontage** access for new **buildings**. In some cases the rights-of-way may become dedicated public roads or **streets**. In other cases they will remain as private rights-of-way to provide secondary access. Inevitably, the scale and character of these **streetscapes** are different, and a lesser **setback** is often appropriate, consistent with the narrowness of the rights-of-way and the principal function for resident access rather than for local through traffic.

Communal streets

Communal streets are those created as part of a **grouped dwelling** development. They are in private ownership common to a number of **dwellings**, whose owners are also responsible for maintenance. As semi-public spaces, they share some of the characteristics and roles of public **streetscapes** and share the need for design to address issues of visibility and security. Clear demarcation between private space and the communal street is important, as is the need for a transition area, a buffer against noise and glare and privacy for dwellings. However, the reduced scale, communal nature and use, and often informality of layout of communal streets, calls for a less rigid approach to **setbacks** for dwellings (refer to **Figure 2d** of the R-Codes Volume 1).

Measurement of street setback distances

The impact of a **building** on the **streetscape** is most commonly observed from the standpoint of a person moving parallel to the street alignment. Accordingly, the **street setback** is measured at right angles to the street alignment.

4.1 STREET SETBACKS (cont.) (Clause 5.1.2 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Appropriate street setback distances

In the case of new residential areas, the desirable **street setback line** is often fixed as an integral part of the subdivision, for example as part of **structure plan(s)** or **local development plan(s)**.

In the case of established residential areas with valued **streetscapes**, it will usually be the case that there is a consistent pattern of **street setbacks**. In these cases, new **development** should closely conform to the established pattern. Where the pattern varies, a setback mid-way between that of the **buildings** on either side may be appropriate.

In established areas, it may be desirable for the **decision-maker** to stipulate **setbacks** for a particular area by setting them out in the **local planning framework**. The R-Codes Volume 1 **street** setback requirements apply in all other cases.

The manner in which **street setbacks** may be reduced is illustrated in **Figure 2a** of the R-Codes Volume 1. This includes a provision allowing a street setback reduction of up to 50 per cent, providing the area of **building** (including any **garage**) forward of the required **street setback line** is compensated for by an equal or greater area of **open space** behind the street setback line.

The prime purpose of this provision is to only allow a reduced **setback** from the **street boundary** where this will create flexibility of design to achieve the design objectives for the area, and lead to a more varied and interesting **streetscape**. **Figure 2a** in the R-Codes Volume 1 illustrates situations where portions of the **dwelling** may intrude into the **street setback** provided there is a positive relationship with adjacent dwellings and the streetscape.

Other structures

In addition to **carports** and **garages** (subject to clause 5.2.1 of the R-Codes Volume 1), the following structures may be allowed in **street setback areas**:

- fences or **walls**, which are the subject of separate consideration;
- **landscape** or sculptural structures, ornamental features designed to enhance the relationship between street and **dwelling**; and
- appropriately scaled archways or gateways, provided they are in character with the **streetscape**.

In addition, **balconies**, **porches** and open **verandahs** may encroach into up to half the **primary street setback** required under **Table D** without the requirement to apply a compensating area for street setback averaging (refer to **Figure 2e** in the R-Codes Volume 1).

Similarly, for **lots** coded R15 or higher, these elements may be **setback** a minimum of 1.5m where the **dwelling** has its main **frontage** to a **secondary street**, **right of way** or **communal street**. The reduced **street setback** recognises that these design elements can contribute positively to **streetscapes** and promote **passive surveillance** and interaction with the **street**.

4.2 LOT BOUNDARY SETBACKS (Clause 5.1.3 of R-Codes Volume 1)

GENERAL GUIDANCE

Boundary **setbacks**, other than **street setbacks**, serve several objectives:

- to ensure adequate **daylight**, direct sun and ventilation for **buildings** and the **open space** associated with them;
 - to moderate the visual impact of **building** bulk on a neighbouring property;
 - to ensure access to **daylight** and direct sun for adjoining properties; and
 - to assist with the protection of privacy between **adjoining properties**.
- Related clauses in the R-Codes Volume 1 which deal with some aspects of these objectives are:
- clause 5.1.6 building height;
 - clause 5.4.1 visual privacy; and
 - clause 5.4.2 solar access for adjoining sites.

Calculation of boundary setbacks

The distance required to set back a **wall** from a boundary is a function of the height and length of the wall and whether there are **major openings** in the wall.

It is first necessary to consider whether an opening falls within the definition of a **major opening** under the R-Codes Volume 1. The intention of the definition is to restrict clear glazing that would impact on privacy. A 'highlight window' is also excluded from the definition of major opening; a window is considered a highlight if it has a minimum sill height of 1.6m. The intention is for the window glazing to be a minimum of 1.6m above floor height to avoid overlooking.

The **setback** requirements are set out in **Tables 2a** and **2b** or **Table 5** of the R-Codes Volume 1. **Tables 2a** and **2b** should be used for **walls** less than 10m in height and in the case of intermediate height and length measurements, the nearest higher setback should be used.

The matters to take into account in establishing the height and length of **walls** for the purpose of determining side **setbacks** is illustrated in **Figure Series 3** and **4** of the R-Codes Volume 1.

The **setback** at any particular point depends on the **wall height** at that point rather than the average wall height. This means that a wall which varies in height (in relation to the **natural ground level**) could require a varying setback along its length. Height of walls and **buildings** is calculated from the lowest point of natural ground level at the boundary adjacent to that point of the wall on the building.

Buildings built up to lot boundaries

Buildings built up to **lot boundaries** are subject to the provisions of clause 5.4.1 for overlooking and clause 5.4.2 in relation to solar access (overshadowing). The **deemed-to-comply** provisions adopt a conservative or risk-averse approach in recognition that the **decision-maker** would not be required to make a technical judgement.

Where a **wall** is built on the boundary, the surface of the wall facing a neighbour should be finished to the satisfaction of the **decision-maker**.

The **decision-maker** may adopt a **local planning policy** to vary the provisions in respect of **boundary walls** to require less or more exacting standards or require consultation with adjoining neighbours as a prerequisite.

4.2 LOT BOUNDARY SETBACKS cont. (Clause 5.1.3 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Basis of setback controls

The boundary **setback** provisions of the R-Codes Volume 1 have been designed, as closely as possible, to reflect the approach that a proponent would adopt when siting and designing a **building**.

The overarching principles which need to be considered in assessment of designs are:

- the taller and longer a **wall** adjacent to a boundary is, the further it should be set back;
- walls with no windows, with windows only to **non-habitable rooms** or with highlight windows, can be permitted to be closer to boundaries than those walls with windows to habitable rooms or with **balconies**;
- single **storey** walls are not usually problematic in terms of impact on **adjoining properties**;
- short walls built up to boundaries are often preferable to long walls set back a short distance;
- with the increasing tendency for infill **development** and more flexible design approaches, any distinction between rear and side boundaries has become largely obsolete;
- community acceptance of walls built up to side or rear boundaries is greater in medium-to high-density areas compared with low density areas;
- **outdoor living areas**, whether in the form of decks, **verandahs**, **balconies** or raised **terraces**, have an impact at least equal to, and usually greater than, those of indoor living areas, and hence ought to be treated similarly, in terms of setting back from boundaries; and
- **minor projections** and projecting sections of wall which do not increase the basic impact of a wall may be accepted. For long runs of wall it is best to relieve the run by using indented sections, at greater **setback** distance from the boundary.

The height of the **wall** adjacent to that boundary (side and rear) should generally be lower the closer that wall is to the boundary. The height of a wall in relation to the **setback** from the boundary should be measured in terms of its overall impact on an **adjoining property**. In the case of a **boundary wall** where there is an existing abutting boundary wall, the proposed wall should match the alignment of the other boundary wall.

It should be noted that boundary fences are not matters controlled by the R-Codes Volume 1. However, boundary fences are used as a means to address visual privacy.

Exceptions to basic setback provisions

Consideration of **setbacks** should have regard to the **natural ground level**, shape, **development** and orientation of adjoining **lots**.

A reduction to the R-Codes Volume 1 **deemed-to-comply setback** requirements should only be considered where it can be demonstrated this is preferable for practical or aesthetic reasons, and will not be to the detriment of the **amenity of adjoining properties**, particularly where the reduced setback may result in increased overshadowing, overlooking or lack of privacy. In these situations the **building** design would need to address the **design principles** of clause 5.1.3.

As illustrated in **Figure 4f** of the R-Codes Volume 1, in the case of a **battleaxe lot** only, the stated **setback** distance may also be reduced by half the width of an adjoining **right-of-way**, pedestrian access way or public open space reserve to a maximum of two metres.

4.3 OPEN SPACE (Clause 5.1.4 of R-Codes Volume 1)

GENERAL GUIDANCE

In the R-Codes, **open space** means that part of a **site** not covered by **buildings** and available for the use of residents, including those areas at ground level, covered for weather protection or shade but not used as part of the **dwelling**. Above ground areas, external to dwellings, readily accessible and sufficiently large to be usable, such as roof decks, may be included as part of the area allocated to open space. Note that roof decks, **balconies** and other **outdoor living areas** would be subject to visual privacy provisions of clause 5.4.1 of the R-Codes Volume 1.

SPECIFIC GUIDANCE

Open space serves several functions (**Figure 15**):

- a setting for **buildings**;
- access and car parking;
- leisure opportunities for a range of domestic activities: gardening; children's play; outdoor entertaining, and leisure as an extension of inside activities, the pursuit of hobbies; and
- space for functional purposes, such as clothes drying and **storage** of household items.

Open space is an important component of the character of a location. In suburban areas, greater open space is important to maintain the open, **landscaped** feel that is expected. In areas of higher density, lesser open space is warranted to support a more urbanised **streetscape**.

Private open space is synonymous with **open space** in the case of **single houses** and **grouped dwellings**.

As the manner in which **open space** is used may vary over the life of the **dwelling**, and is more likely to be reduced than increased, it is important to retain flexibility and, accordingly, the R-Codes Volume 1 should not unduly constrain how open space is provided. Adequate open space should, however, be retained for the life cycle of the dwelling.

Figure 15 Open space provides many functions on a residential lot

4.4 BUILDING HEIGHT (Clause 5.1.6 of R-Codes Volume 1)

GENERAL GUIDANCE

Measuring building height

Figure Series 7 of the R-Codes Volume 1 provide a standard method of height measurement designed to reduce ambiguity and confusion.

Building height is relatively straightforward to measure and administer as a control. There are two basic measures that can be used; one being height in **storeys** and the other height in metres. The former has problems of definition (for example, what constitutes a storey, use of roof spaces and mezzanines) and also can vary, depending on ceiling heights. For the purpose of the R-Codes Volume 1, the measure used is height in metres.

For administrative simplicity, limits are often taken from a single point usually the level at the centre point, or centroid, of the **site** or averaged over a site. However, this approach lacks precision and can lead to unintended outcomes. Therefore, the R-Codes Volume 1 refer to the height of the **building** as the distance between the point where the base of the **wall** meets the **natural ground level** and measured to the highest point of a wall or roof of a building vertically above that point (for measurement guidance refer to **Figure Series 7** of R-Codes Volume 1). This preferred method distinguishes it also from the measurement of the **height** of walls for the purposes of **setbacks**, where the height is measured from natural ground level at points on the boundary corresponding to the wall in question. In the first case, the concern is about the general impact on the locality. In the second case the concern is about the specific impact on the **adjoining property**.

Determining natural ground level

While most **sites** have reasonably constant slopes (less than a 1–2m fall across a **lot**), there may be cases where the terrain is irregular, as follows:

- fractured, so as to vary significantly from one point to another; or
- convex, humped or containing an isolated high point or points; or
- concave, hollowed out at one or more places.

In these cases common sense and sound **design principles** dictate that the natural contours should be interpolated so as to modify or smooth out such anomalies for the purposes of establishing a common level for height calculation (**Figure 7b** of the R-Codes Volume 1).

It has become common practice to provide level **sites** with boundary retaining **walls** at subdivision. In these cases, the levels so established at subdivision are deemed to be **natural ground levels**.

In accordance with the definitions:

- height shall be measured from the **natural ground level** immediately below the relevant point on the **wall** or roof;
- **natural ground level** may be taken as the levels resulting from **development** carried out as an approved part of a land subdivision; and
- **minor projections** such as chimneys, television aerials, satellite dishes and vent pipes are exempted.

Views

Obtaining and keeping views is a significant issue, particularly where a locality's housing values place a premium on an outlook or featured **landscape** views.

Because views are an important part of the **amenity** shared and enjoyed by many people in certain areas, a proponent should take into account the desirability of protecting those views enjoyed by neighbours, and the public to the extent that it is possible to design the **dwelling** to enjoy the view, but not to the exclusion or detriment of others.

While the R-Codes Volume 1 cannot guarantee the protection of views, the **decision-maker** may exercise a degree of control by **primary** and **secondary street setbacks** and height controls enhanced by **local planning policies** as permitted under clause 7.3.1 of the R-Codes Volume 1. Alternatively the decision-maker may consider the development of **local planning policies** or **local development plans** which target the protection of views. This approach would identify views ahead of potential **development** and may require visual assessment and reliance on technical opinion rather than advertisement for public comment and objections to specific proposal(s).

4.4 BUILDING HEIGHT cont. (Clause 5.1.6 of R-Codes Volume 1)

SPECIFIC GUIDANCE

The consumer/lifestyle trend towards double **storey** (and sometimes three storey) development raises issues of overshadowing, visual dominance and concern for privacy. The **building height** requirements of the R-Codes Volume 1 aim to address these matters (refer to **Figure 16**).

Common height limits

It is common for **decision-makers** to impose height limits on **residential development** in order to maintain consistency of **streetscapes** to minimise privacy conflicts and loss of views. However, there is a lack of consistency between decision-makers in terms of how **building height** is measured and the precise limits imposed. It is therefore desirable for the R-Codes to address height.

Regulation of **building height** and **setback** is fundamental to defining the **streetscape**, and in character areas or other places with special design sensitivity, the appropriate limits should be determined on a local streetscape basis, via **scheme** provisions, **local planning policies** or **local development plans**.

The R-Codes Volume 1 establish an objective set of **building height** limits that correspond approximately to one, two and three-**storey** building heights.

A default provision establishes Category B, corresponding to two **storeys**, as a limit in the absence of a **local planning policy**.

A **decision-maker** may adopt Category A or C for all or parts of its district as an amended requirement through the adoption of a **local planning policy**. A decision-maker may also adopt Category A or C for specific types of development, such as development upon rear battleaxe **sites**, through **local planning policies**.

Building height of a proposal may be considered appropriate where:

- the building height of the proposed **development** is consistent with the building heights of existing and adjacent **buildings** in the locality; or
- meets objectives identified in **local planning policies** and/or **local development plans** adopted for the locality; and
- has little or no adverse impact on the **amenity** of **adjoining properties**, including the public domain and natural areas.

Figure 16 Building heights in Part B of the R-Codes Volume 1 relate to one, two and three storey limits

4.5 SITE AREA (Clause 5.1.1 of R-Codes Volume 1)

Deleted and replaced by Part D, 1.1 Site Area by amendment dated 10 April 2024.

4.6 COMMUNAL OPEN SPACE (Clause 5.1.5 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Table D does not require mandatory provision of **communal open space**, however, it should be encouraged if considered appropriate within a **development**. Communal open space is open space provided for the exclusive use of a defined group of residents. It serves a similar range of functions to that of **private open spaces** and includes:

- a setting for **buildings**;
- space for active and passive recreation;
- other group activities, which may be very particular to a particular group of residents; and
- access to direct sun and **natural ventilation**.

Where **communal open space** is provided as part of a **grouped dwelling development**, some trade-off between private and communal open space should be allowed but not at the expense of the core provision of **private open space**.

5.0 STREETScape

GENERAL (Clause 5.2 of R-Codes Volume 1)

The **streetscape** contributes to **local character**. Streetscapes are created by the relationship between **landscape** and built form, often separating public from private domains. High quality design should be consistent with the existing streetscape character. In order to enhance streetscape, **buildings** should address the **street** and create a strong connection and relationship to the street.

Irrespective of the suburban or urban context of an area, there are a number of elements of **streetscapes** that have general impacts on **amenity**. Broadly, apart from the character of an area, residents expect to maintain views and vistas, have security and **passive surveillance**, **landscape** and shade, safety of access, privacy and **open space**, and an attractive setting.

SPECIFIC DESIGN ELEMENTS (Clause 5.2 of R-Codes Volume 1)

This design element deals with those factors that affect and contribute to the broader amenity of the **streetscape**. The following are provisions of Part B of the R-Codes Volume 1:

- 5.1 street surveillance;
- 5.2 street walls and fences; and
- 5.3 sight lines.
- 5.4 setback of garages and carports;
- 5.5 garage width; and
- 5.6 appearance of retained dwelling.

Any other factors affecting **streetscape** are dealt with in other elements of the R-Codes Volume 1.

5.1 STREET SURVEILLANCE (Clause 5.2.3 of R-Codes Volume 1)

Figure 31 An example of effective sight lines and surveillance

GENERAL GUIDANCE

Interface between buildings and streetscape – designed with consideration of public safety and passive surveillance

Given the importance of crime prevention through environmental design principles it is appropriate to design **buildings**, front fences and **walls** to ensure that a clear view exists between the building, particularly its main entry and the **street**. This not only provides opportunity for incidental street surveillance but also contributes to **streetscape amenity**.

Casual surveillance and sightlines

Casual surveillance involves the location and design of facilities to maximise visibility of the **site**. Maximising casual surveillance increases a sense of safety and can deter criminal activity. Clear sight lines, or the ability to see what is ahead along a route, or in a space, provide opportunities for casual surveillance. A clear sight distance provides an individual with both a perception of safety and adequate space to react to possible threats. Further information is provided in the **WAPC's Safer Places by Design – Crime Prevention Through Environmental Design Planning Guidelines (2023)**.

Entries to buildings are legible from the street

Entries that are clearly defined from the **street** provide a distinction between private and public areas. Minimising the number of **dwellings** that share a common entrance along the **frontage** can spread the activity along the street. Providing individual pedestrian access points off the street to ground level **dwellings** can also assist in providing activity and surveillance. Pedestrian access should be appropriately designed to provide clear and secure access to the dwellings and should be the main focus of access to the **site** in preference to vehicle access.

Orientate development to maximise street frontage for balconies, living areas and common areas

Buildings with street **frontages** that employ **balconies**, living areas and common areas contribute to increased casual surveillance of the street. This increases both actual and perceived levels of safety for pedestrians. The treatment of building frontages will reduce opportunities for concealment and entrapment, through safety by design.

5.2 STREET WALLS AND FENCES (Clause 5.2.4 of R-Codes Volume 1)

GENERAL GUIDANCE

Height of street walls and fences

In recent times and with the trend for larger houses and smaller **lots**, there is a tendency for some owners to construct high **walls** or fences at or near the **street**. This is often justified by the proponent for reasons of privacy, security or protection from traffic noise or headlights.

High **walls** and solid fences on the front boundary are undesirable because they visually affect the **streetscape** and generally separate residents from their street and what occurs in it (refer to **Figure 35**).

Provide a clear distinction between private and public areas

Buildings that facilitate a visual connection between the street and private spaces can provide opportunities for high levels of casual surveillance of the street. Appropriate treatment of street **walls** and fences can clearly define the boundary between private and public areas and contribute to an enhanced **streetscape**. This reinforces a visual connection between street users and private spaces.

Fencing is non-permeable and prevents visual connection between private and public property

Fencing is permeable and allows visual connection with the street while providing security and delineating private and public property.

Figure 35 Fencing should not impede visual surveillance of the street by either being too high and/or non-permeable

5.2 STREET WALLS AND FENCES cont. (Clause 5.2.4 of R-Codes Volume 1)

Figure 36 Traditional and low fences are acceptable

Figure 37 High walls are not acceptable unless in exceptional circumstances

Figure 38 High street walls should be limited to the minimum necessary and be visually permeable

SPECIFIC GUIDANCE

Fences (excluding pillars) higher than 1.2m should be **visually permeable** along all street types, including **communal streets** (refer to **Figure 12** in the R-Codes Volume 1). Where a **dwelling** fronts onto an arterial road carrying high traffic volumes, or where protection is needed from headlight glare from such a road, there may be a case to justify a high **wall** especially to provide privacy to an **outdoor living area**. In these circumstances a solid wall of up to 1.8m high would be acceptable for a minimal proportion of the **frontage**, on approval by the decision-maker and provided the remainder of the **frontage** provides for views to the street. **Design principles** are provided in the R-Codes Volume 1 to guide circumstances where a **decision-maker** could grant such approval.

Ideally, **outdoor living areas** should be located behind the **setback** line (R-Codes Volume 1 clause 5.3.1), however, in some circumstances the only possible location for an outdoor living area will be in the **street setback area**. Where a narrow **lot** faces north to the **street**, the street setback area may be the only possible area open to winter sun. In these cases, part of the area should be permitted to be **screened** from view for privacy. Where a private **courtyard** is unavoidable in the front setback area, screening with dense planting and/or a permeable fence that will provide reasonable privacy is appropriate (refer to **Figures 36 – 38**).

5.3 SIGHT LINES (Clause 5.2.5 of R-Codes Volume 1)

GENERAL GUIDANCE

Driveways need to maintain adequate **sightlines** where they intersect **streets, rights-of-way**, and footpaths to ensure visibility and safety. Also, the corner of **lots** located at intersecting streets should maintain adequate sight lines. **Walls** are to be reduced in height to 0.75m within a 1.5m truncation to meet the **deemed-to-comply** provision. This is illustrated in **Figure 9a** of the R-Codes R-Codes Volume 1 (refer to **Figure 41**).

Inadequate truncations are provided resulting in poor sight lines.

Adequate truncations area provided, however, the landscaping has not been designed to facilitate clear views to the street.

Truncations are provided to the street in a manner that enables a safe view of the pedestrian and vehicular traffic before leaving the property boundary.

Figure 41 Walls and fences should be truncated where the crossover meets the property boundary to ensure that vehicles can account for on-coming pedestrians and vehicles at the conflict point

5.4 SETBACK OF GARAGES AND CARPORTS (Clause 5.2.1 of R-Codes Volume 1)

SPECIFIC GUIDANCE

For the purposes of the R-Codes Volume 1, a **carport** means an **unenclosed** roofed structure designed to accommodate a motor vehicle and is without a door. Carports are unenclosed which limits it to being bound on no more than two sides. A **garage** door cannot be considered a **wall** when demonstrating a carport enclosure. All other structures for housing vehicles, including open-sided carports with solid doors, are deemed to be garages.

Because many houses in established suburbs were built without provision for vehicles, street-side parking and parking in **street setback areas** have become essential, especially where rear access to the property is not available. With increasing affluence, car ownership rates have increased, as has the desire to provide a roof over vehicles.

Consequently it is accepted that, where no feasible alternative exists, the **street setback area** may be used for **carports** and unroofed parking spaces. Carports are acceptable, because they allow a clear view between a public **street** and a private **dwelling**. **Garages** are not acceptable except as provided by clause 5.2.1 **C1.1**, unless they can be accommodated without obstruction to views between street and house at ground level. Such exceptions are likely to be rare.

The R-Codes allow for a **carport** to be built in the front **setback** area with up to 50% reduction of the **setback** requirement of **Table D** where the carport is compatible in form, materials and design to that of the **dwelling**. Careful consideration is required, particularly when there are extensions or additions to an existing dwelling, so that materials, colours and the design of the carport is compatible with the dwelling, and considerate of the **streetscape** character.

It is desirable for **carports** in an existing **setback area** to be set back sufficiently clear of any window of the **dwelling** so as not to unduly obstruct light to that window. Car parking spaces should not intrude into traditional **verandahs**. In the case of complete redevelopment of a **site** in an established **streetscape**, any **garage** or carport accessed from the **street** should be set back in accordance with the general **building setback** unless:

- the area, dimensions or shape of the site make this unfeasible; or
- there is an established, consistent, pattern of carports within the setback area.

5.5 GARAGE WIDTH (Clause 5.2.2 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Garages and supporting structures are potentially dominant and often imposing elements on **dwelling** appearance and **streetscapes**, especially the now common double garages which occupy a large **frontage** of increasingly narrow width **lots**. To avoid the dominance of garages and the visual impact this has on the streetscape, it may be appropriate to consider single garages, **carports**, tandem parking, and/or two **storey development** for narrow frontage lots.

The R-Codes Volume 1 limit the proportion of **frontage** and **building façade** that may be occupied by a **garage** (Figure 8c of the R-Codes Volume 1). Assessment will need to weigh up the safe and convenient access to garages while maintaining a **streetscape** not dominated by garage doors. **Decision-makers** may encourage the integration of garages and supporting structures into the design of the **dwelling** by considering changes to **setback** provisions when assessing proposals that address **design principles** relating to streetscape refer to Figure 42).

Figure 42 Garage doors, particularly on narrow lots, can be an imposing element in the streetscape

5.6 APPEARANCE OF RETAINED DWELLING (Clause 5.2.6 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Under **deemed-to-comply** clause 5.2.6 C6, where an existing **dwelling** is to be retained as part of a **grouped dwelling** development, the appearance of the retained dwelling is to be upgraded externally to an acceptable maintenance standard as the rest of the development.

Ordinarily this would be required as a condition of development approval to the **development**. **Decision-makers** may prepare a **local planning policy** to provide guidance on acceptable maintenance standards.

This provision would not apply if the **development** would result in the subsequent subdivision of the existing **dwelling** as a **single house** (either **green title**, **strata** or **survey strata** without **common property**).

There is no ability to require upgrading of the existing (grouped) **dwelling** once the **lot** title of the property containing the existing dwelling has been separated from that of the **development site**.

6.0 SITE PLANNING AND DESIGN

GENERAL (Clause 5.3 of R-Codes Volume 1)

The **development site** needs to accommodate all the functionality requirements to ensure that the **amenity** for residents is maximised by the provision of high quality facilities that are well located and accessible, while minimising impact of the **development** on adjoining land users.

Outdoor living areas provide outdoor **amenity** for users of **dwelling**s. The **landscape** treatment of **open spaces** such as those within **street setback areas** is important in creating consistent and attractive communal **streetscapes**.

Natural topographical features of the land contribute significantly to **local character**. **Development** should aim to respect the natural topography of the area by minimising cut and fill of land. Significant fill is discouraged, as privacy and overshadowing issues often result.

It is important for a **site** to effectively deliver facilities and areas for use by residents, such as **outdoor living areas**, **landscaping**, parking, and access.

SPECIFIC DESIGN ELEMENTS (Clause 5.3 of R-Codes Volume 1)

This design element deals with matters that affect the physical planning and design of **development**. Provisions that relate to Part B of the R-Codes Volume 1 include:

- 6.1 Outdoor living areas;
- 6.2 Landscaping;
- 6.3 Parking;
- 6.4 Design of car parking spaces;
- 6.5 Vehicular access;
- 6.6 Site works;
- 6.7 Retaining walls;
- 6.8 Stormwater management; and
- 6.9 Pedestrian access.

6.1 OUTDOOR LIVING AREAS (Clause 5.3.1 of R-Codes Volume 1)

GENERAL GUIDANCE

At least one outdoor area for each **dwelling** is required for entertaining and leisure that is:

- large enough to be functional and usable;
- directly accessible from **primary living space**; and
- with access, if possible, to winter sun.

Outdoor living areas should be oriented to make best use of northern **sunlight**, (where climatically appropriate) and provide opportunities for **natural ventilation** by cooling breezes.

Additionally, where an **outdoor living area** is provided in the **street setback area**, it should have **visually permeable** fencing or balustrading (for **balconies**) to facilitate casual street surveillance.

SPECIFIC GUIDANCE

Because of the importance of providing shade in summer, especially in conjunction with **outdoor living areas**, a part of the outdoor living area (up to one-third) can be roofed (refer to **Figure 13** in the R-Codes Volume 1). The unroofed area(s) is to ensure access to natural light from the outdoor living area and **primary living space** is maintained.

This clause should be read in conjunction with 5.3.2 *Landscaping* to ensure tree planting and associated areas are taken into consideration in the design and assessment of this area.

6.2 LANDSCAPING (Clause 5.3.2 of R-Codes Volume 1)

GENERAL GUIDANCE

The **landscaping** of **street setback areas** for all **dwelling** types, makes an important contribution to the **streetscape**. Landscaping is even more important in the case of **grouped** and **multiple dwelling developments**, because of the intensity of development and land use, and because the development makes such a large contribution to the overall **streetscape** (refer to **Figure 49**).

Landscaping for all **dwelling** types should be designed and installed with regard for the following aspects:

- the desirability of creating attractive **streetscapes**;
- meets the projected needs of the residents of all ages and abilities;
- enhances security and safety for residents;
- provides new trees and vegetation for shade;
- the desirability of protecting existing trees where possible;
- the considered design and choice of materials for surfaces, such as vehicle access ways and **crossovers**, parking areas and **outdoor living areas**;
- **solar access** throughout the year that will influence the choice of trees and plants and their placement; and
- the need for shade structures, such as **pergolas**, to complement shade trees and enhance microclimate.

The tree requirements of **C.2.2** are to apply to all **dwellings**, including **single houses**, **grouped dwellings** and **ancillary dwellings**, as well as to **multiple dwelling sites**. These requirements also apply to existing dwellings retained within new **developments**. The tree requirements however do not apply to extensions to existing dwellings, or to ancillary structures, such as **carports** and **outbuildings**.

Retained existing trees may be included to satisfy the minimum tree requirements of this provision.

Maximise areas for natural planting

Maximise **deep soil area** and limit **impervious** (hard) **surfaces** to provide sufficient areas for trees and other **landscaping** to grow which also maximises the amount of water penetration to the soil. Refer also section 6.8 of guidelines regarding clause 5.3.9 of the R-Codes Volume 1 – stormwater management. The R-Codes Volume 1 limits the use of impervious surfaces within the **street setback area**. The table below gives guidance on materials that would constitute impervious.

It is anticipated that larger **developments** will need to provide a greater number of canopy trees and tree planting areas to contribute to **streetscape** and **sense of place**.

Permeable	Impervious
Lawn	Brick and other solid paving
Mulch	Artificial
Garden	Concrete
Grass pavers	
Decking	
Permeable paving systems	

Provide planting types in appropriate locations to respond to site and climate

The **landscaping** on a **site** can impact **solar access** to **habitable rooms** and private **outdoor living areas**. The selection of vegetation and planting locations should also ensure that **solar access** of both residents and neighbouring properties will not be adversely affected in the future once the vegetation matures. The selection of trees and plants should also respond to the climate, soil type and rainfall profile of the location.

Landscaping enhances outlook from apartments as well as facilitating stormwater infiltration.

Figure 49 Landscaping provided to complement the appearance and function of the building

6.2 LANDSCAPING (cont.) (Clause 5.3.2 of R-Codes Volume 1)

Dense landscaping provided between the building and the street, however, visual surveillance is maintained. The landscaping is a key feature in defining the building.

Figure 50 Landscaping provided to maintain visual surveillance and define the building

Plan landscaping to avoid obstructing pedestrian and vehicle sight lines

Landscaping can be used to define entry points and specific **building** elements. It is important, however, to consider the impact of the landscaping on sight lines, ensuring that they do not compromise the casual surveillance across the **site**, or obscure sight lines at pedestrian and vehicle crossings (refer to **Figure 50**).

Design **landscaping** along the **streetscape** to reflect the existing or future desired character of the area.

Where there is a **streetscape** character defined by **landscaping**, such as continuous street tree plantings or hedges, design the landscaping to be consistent with that established streetscape character.

Private open space

Private open space is developed to suit the requirements of occupants and is likely to be modified over time as occupiers' requirements and **landscaping** trends change.

Consequently, the R-Codes Volume 1 require the provision of **landscaping** as part of the development of **communal open space**, and where required, **common property**, but not of **private open space**.

Communal open space

Although **grouped** and **multiple dwellings** (under Part B of the R-Codes Volume 1) are not required to provide **communal open space**, it should not be discouraged if considered appropriate within a **development**. Communal open space is **open space** provided for the exclusive use of a defined group of residents (refer also to section 4.6, of guidelines and clause 5.1.5 of the R-Codes Volume 1). It serves a similar range of functions to that of **private open spaces** that include:

- a setting for **buildings**
- space for active and passive recreation
- other group activities
- access to direct sun.

6.3 PARKING (Clause 5.3.3 of R-Codes Volume 1)

GENERAL GUIDANCE

Provision of car parking

The R-Codes Volume 1 adopt the basic position of requiring adequate on-site provision of parking to the assessed need. The **decision-maker** can exercise technical judgement where appropriate and is justified to relax on-site parking requirements when:

- the applicant can demonstrate that actual demand is lower; or
- satisfactory alternate parking provision is available and accessible in close proximity other than on-site.

There is a long accepted principle that the demand for car parking generated by a **residential development** should be accommodated on the **development site**. The main exceptions to this are:

- In most cases visitors' car parking for **single houses** (that is, low density development) can be accommodated in the **driveway** or **street** (via on-street/verge parking where permitted).
- In many older areas, pre-dating widespread ownership and reliance on private cars, off-street car parking provision is not feasible without a detrimental change to character housing and the **streetscape**, especially as these areas tend to be developed with small **street setbacks** and narrow **lots** and often where no on-street/verge parking is permitted.

The need for on-site provision for car parking relates to the availability of parking on the **street**. Where a street has exceptionally wide verges which can be used for parking, the actual need for on-site parking may be quite small, although some owners who wish to secure their vehicle would still prefer on-site parking to be provided.

Calculating car parking requirement

Where **deemed-to-comply** provisions for on-site parking require a fraction of a space, it must be rounded up to the nearest higher whole number.

Tandem car bays

In the case of **single houses**, **grouped dwellings** and **multiple dwellings**, two cars bays in tandem would be considered two bays where they relate specifically to one **dwelling**.

Reduced car parking requirements

Clause 5.3.3 of the R-Codes Volume 1 detail that smaller **dwellings** (either by size or number of bedrooms) may have reduced car parking requirements. This is based on the premise that smaller dwellings tend to have less demand for car parking, as the anticipated inhabitants per dwelling is lower. In addition, a further reduction is provided for when the dwelling is located in close proximity to convenient public transport.

When measuring a **walkable catchment**, refer to *Liveable Neighbourhoods* (Appendix 3) walkable catchment technique.

On-street car parking

On-street car parking should be limited in circumstances where:

- there is heavy traffic in the street and kerbside parking may be unsafe,
- or even prohibited, at least during peak hours;
- **frontages** are narrow and **crossovers** frequent, limiting the length of
- kerb available for parking;
- the street is too narrow; and/or
- space for kerbside parking is taken up by other uses or activities.

Where parking capacity is available on-street or in other off-street parking, on-site parking requirements can be reduced

On-street parking is a valuable community resource that serves a variety of social and economic needs including residential uses. **Decision-makers** need to consider how to achieve a balance between different uses in areas with high and/or competing needs. While no one particular use should be favoured, satisfaction of some of the demand for residential parking, especially visitor and service/delivery parking, is a reasonable use for on-street parking.

In locations where there are existing parking facilities with capacity, arrangements can be made to provide parking off-site through contract. Where it is determined through a traffic management study that there is capacity in the on-street parking system, on-site parking requirements can be reduced.

6.4 DESIGN OF CAR PARKING SPACES (Clause 5.3.4 of R-Codes Volume 1)

GENERAL GUIDANCE

The design of parking and manoeuvring spaces is set out in AS/ NZS 2890.1:2004, Parking facilities: Off-street car parking and AS 2890.1:2004/ Amdt 1:2005, Parking facilities: Off-street car parking. The R-Codes Volume 1 reference these standards in as much as they relate to residential properties.

Parking areas should be designed and located to minimise impacts on the residents of the **building** as well as **adjoining properties**. The location and design should have consideration for the impact of light (from both the headlights of vehicles as well as the fixed lighting of any parking areas), noise, odour and **stormwater** run-off. For external car parking areas and manoeuvring areas, acoustic **screen** fencing is effective in controlling the transmission of sound to adjoining properties (refer to **Figure 51**).

Visitor parking

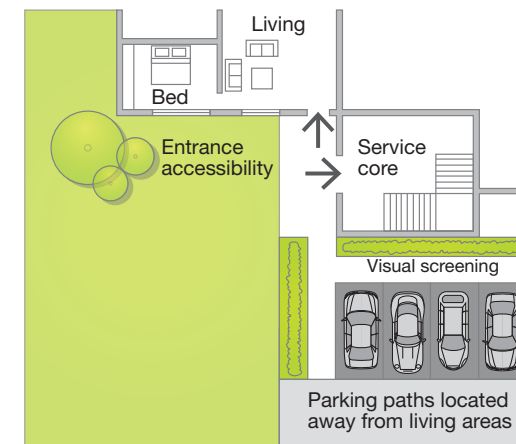

Visitor parking spaces required by clause 5.3.3 **C3.2** of the R-Codes Volume 1 (section 6.3 of guidelines) shall be provided in a location that is accessible at all times, in addition to the **dwelling** parking requirement. Visitor parking should be clearly identified as visitors' parking bays and located in a location allowing unimpeded access.

Visitor parking spaces should not be located within a secured private or common parking **garage** that requires a key, handset or other electrical or mechanical device to gain access.

Location of parking is inappropriate and has adverse impacts on the residents.

Figure 51 Incorporate parking spaces and manoeuvring areas into the design of the building so they are not located in close proximity to habitable rooms and openings at ground level

Car parking is well located, reducing impact on residents and providing convenient building access.

6.5 VEHICULAR ACCESS (Clause 5.3.5 of R-Codes Volume 1)

GENERAL GUIDANCE

Location of parking spaces and crossovers

Car parking spaces, manoeuvring areas and access ways are potentially intrusive, physically, visually and acoustically. This is particularly evident for **grouped dwelling** and **multiple dwelling** developments where multiple parking spaces and access is required. Car parking consumes space and does not generally make a positive contribution to the **streetscape**. Consequently, location is a major factor in **amenity** as well as security and safety.

The issue of location of **carports** and **garages** in relation to the **primary street setback area** is dealt with in clause 5.2.1 of the R-Codes Volume 1. The advantages of not having vehicle access directly from the primary street are identified in clause 5.3.5 of the R-Codes Volume 1 and include:

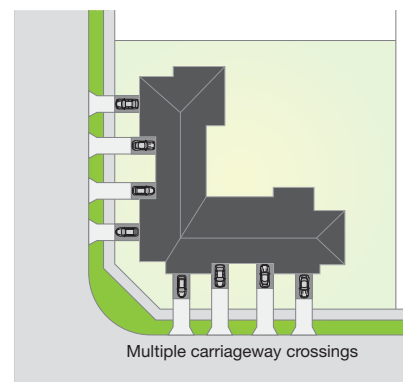

- the **streetscape** will be less dominated by carports, garages and parked vehicles;
- there will be fewer **driveways** and so more useable space for **street** trees and kerbside parking for visitors; and
- there will be fewer conflicting movements of vehicles, pedestrians and cyclists.

The number of driveway **crossovers** from **residential development** into the street affects the quality of a **streetscape** (refer to **Figure 53**).

Too many **crossovers** cause a loss of kerbside parking space, lack of space for **street** trees and furniture, interruption to pedestrian use of footpaths and increased hazards for cyclists.

To achieve a good balance between on-**street** and off-**street** parking design it is important to reduce the number of driveway **crossovers** by integrative access design, especially for **multiple dwelling development**. This will allow a greater run of uninterrupted kerbside available for street parking, much of which can be used by visitors.

Access to on-**site** parking is encouraged to be from a **right-of-way** or **communal street**, where available for lawful use, or from a **secondary street**. Access is to be provided from the **primary street** only where there is no secondary street, communal street or right-of-way.

Individual crossovers should not be provided.

Part of the site is given up for the creation of a shared access way. Shared access arrangements with adjoining properties should be investigated where appropriate.

Figure 53 Vehicle access should be designed to minimise the impact on the street network and provide for safe ingress and egress from the site

6.5 VEHICULAR ACCESS (Clause 5.3.5 of R-Codes Volume 1)

Car parking is provided in a manner that increases the proportion of the frontage that is dedicated to vehicular access

Car parking is located away from view of the street and accessed via a single consolidated access point

Locate vehicle access and accommodation to the rear of the site where possible. Encourage shared access by utilising a single crossover with adjoining development

By minimising the number of vehicle access points along the **streetscape**, there is more opportunity for on-street parking and the retention or improvement of the streetscape character. Vehicle access should not double as pedestrian access. Pedestrian access arrangements should be provided in a location that is separated from vehicle movements (refer to Figure 54).

The location of the **crossover** should be provided in response to the nature of the **street(s)** onto which the **development** fronts. If there is more than one **street frontage** (including rear lanes), the vehicle access should be provided onto the street that carries the lowest volumes of traffic. However, the crossover should also be provided in a location that provides clear sight lines in both directions along the street, is separated as far as possible from any intersection, does not impact on on-street services such as public transport stops, accounts for posted speed limits, and is designed in accordance with any built-up median.

Vehicles can be slowed by creating a clearly different environment at the entry of the **site**. This can be achieved through the use of texture in the paving surface, creating a perceived narrowing of the carriageway, and use of planting and short access legs to limit the ability for cars to pick up speed across the area. Through appropriate design, the use of speed humps can be avoided.

SPECIFIC GUIDANCE

Vehicular access is required to include **driveways** of an adequate width to allow for the movement of vehicles as per 5.3.5 of the R-Codes Volume 1.

A driveway width of 3m is adequate for driveways serving four **dwelling**s or less but a minimum of 4m that is designed to allow for two-way access is required for driveways serving five or more dwellings.

Note that a **driveway** is also required to be **setback** 0.5m from a side **lot boundary** for purposes not limited to **stormwater** management, **landscaping** and **utilities**. The total minimum width for vehicle access may therefore be required to be at least 4m or 5m to allow 0.5m on either side of a driveway between two **lot boundaries**.

For a proposed **battleaxe lot**, where vehicle access is within the battleaxe leg, the proposal will also be subject to the requirements of Development Control Policy 2.2 *Residential Subdivision*.

Figure 54 Consolidate vehicular access points to reduce impact on streetscape.

6.6 SITE WORKS (Clause 5.3.7 of R-Codes Volume 1)

GENERAL GUIDANCE

Retaining the natural topography and ground level

Variations in topography make an important contribution to **local character** and to a **sense of place**.

In many locations, the land form (topography) allows views out of the locality. These views are highly valued and can only be optimised, that is, shared by the maximum number of **dwelling**s, by respecting the natural topography and maintaining a consistent scale in **building**. This also has an effect on the potential for privacy and overlooking, which is an issue dealt with in clause 5.4.1 of the R-Codes Volume 1 (refer to section 7.1 of guidelines).

The extensive earth working of residential **sites** removes remnant vegetation, disturbs soil profiles, expends energy and creates greenhouse gas emissions. It also adds to the cost of housing.

Development of land should avoid major interference with the natural or pre-existing **site** levels, to preserve the natural topography and minimise development costs. **Natural ground level** is the level of land before land development has occurred or that resulting from the pre-existing development.

Because much of the State's housing was built before accurate contour mapping was available, it is often not possible to know precisely the levels that preceded **development**. In these cases, it may be necessary to refer to other evidence in order to establish, as closely as possible, the relevant levels.

Housing design which proposes extensive excavation, fill and re-contouring of a **site**, without regard to neighbouring properties and their **amenity**, should not be supported. The R-Codes Volume 1 call for skillful and site-sensitive design to make the best of the natural terrain, in turn resulting in diversity of housing styles and a **sense of place** and neighbourhood identity.

Take advantage of the natural topography for view sharing and retention of the visual impression of the natural level of the site

By stepping a **building** to correspond with the natural topography, less cut and fill is required and the visual impression of the natural level of the **site** is retained (refer to **Figure 55**).

Changes to topography at subdivision

In cases where the original subdivision involved changes from the natural levels, the relevant levels to take are those established at subdivision, prior to **buildings** being erected.

It is common for new finished levels to be established through the **building** of retaining **walls** at boundaries. Where this occurs, and for the purposes of establishing boundary **setbacks** and heights, retaining walls may be regarded in the same light as natural topographical features.

Proposed changes of level at subdivision should be examined just as carefully as level changes via **development**.

Excavation and retaining walls

Development below **natural ground level** only rarely affects neighbouring **sites**, although it may be necessary to take account of the location of essential services, particularly where protected by a registered easement. By contrast, filling above natural ground level, especially where, it results in replacing a natural slope with level ground and retaining **walls**, is usually visually prominent.

Excavation below natural level is not usually as visually obtrusive as filling above natural level. Consequently, excavation behind the **street setback line** is normally acceptable, provided the resulting spaces and rooms conform to BCA standards.

Minimise impacts on neighbours and public streetscape in the design and selection of materials for retaining walls

Where a **building** cannot be designed to correspond to the natural topography, the result is often retaining **walls** that are visually prominent. The design of these walls should minimise their height and length through terracing and articulation. Materials should be selected for the walls that are visually interesting and integrated into the surrounding **landscape**.

Development ignores the natural slope of the land, resulting in diminished character of the area and increased development impact

Development acknowledges the natural slope of the land and minimises impact on adjoining land.

Figure 55 Development on steep or undulating sites should be designed to minimise the amount of cut and fill required. **Buildings** should have a form that responds to the natural topography of the area

6.7 RETAINING WALLS (Clause 5.3.8 of R-Codes Volume 1)

Clause 5.3.8 Retaining walls deleted by amendment dated 2 July 2021.

GENERAL GUIDANCE

Filling of land

Any significant filling of land is likely to have a potential impact on **adjoining properties** concerning overlooking and overshadowing (clause 5.4.1 of the R-Codes Volume 1 and section 7.1 of the guidelines). For these reasons, retaining **walls**, unless they are 0.5m in height or less, should be treated as though they were **building** walls and should be set back from property boundaries accordingly.

Retaining **walls** that are provided as part of an approved subdivision or part of a previous **dwelling** which establish levels are excluded from these requirements. For the purposes of the R-Codes Volume 1, such walls are regarded as representing the finished level of the **site** prior to new **development**.

Calculating retaining wall or excavation setbacks

Clause 5.3.7 **C7.2** of the R-Codes Volume 1 requires retaining **walls** or excavation that alters the height of a **site** by more than 0.5m to be set back in accordance with **Table D**. The **deemed-to-comply** provisions also allow for retaining **walls**, fill and excavation located between the **street setback** and **street boundary** to exceed a height of 0.5m, where this is necessary to satisfy certain objectives including provision of **universal access**.

6.8 STORMWATER MANAGEMENT (Clause 5.3.9 of R-Codes Volume 1)

GENERAL GUIDANCE

Water-sensitive urban design is recognised as an important aspect of environmental conservation and **sustainable** development. It is critical to land subdivision, but also in relation to **development** of individual **sites**.

Important aspects that should be taken into account are:

- managing water balance by encouraging infiltration and groundwater recharge;
- ensuring that the quality of water leaving a **site** is acceptable; and
- encouraging water conservation, including re-use of **stormwater** and minimisation of mains supply water for **landscaping**.

At this stage, widespread re-use of recycled water is limited, however, third pipe systems are progressively becoming feasible in new **developments** and redevelopment areas. It is possible, nevertheless, to contain all **stormwater** on-site in almost all **residential developments**, ensuring both recharge of groundwater and the avoidance of discharge into public drainage systems.

Exceptions to this will be in:

- areas where soil conditions make on-site infiltration or absorption unachievable;
- some inner city areas where the density of **development** precludes on-site discharge; and
- areas where the intensity and duration of precipitation makes significant on-site absorption impractical.

Recover stormwater for use within the site where practical

Stormwater can be collected and stored on-**site** for irrigation or grey water systems (for example, for toilets). It can also be directed to root zones to reduce the need for additional irrigation. It is easier to plan for stormwater collection at the onset of planning a **building** rather than trying to retrofit a system afterwards (refer to **landscaping** provision 5.3.2 of R-Codes Volume 1 and section 6.2 of guidelines).

Minimise impacts of stormwater release on adjoining sites

Where it is not practical for **stormwater** to be recovered, stormwater should be slowly released from the **site** through retardation systems or returned to the ground via soak wells or leaching pits.

6.9 PEDESTRIAN ACCESS (Clause 5.3.6 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Pedestrian and vehicular access points are to be adequately separated

There are many preventable injuries and fatalities which involve cars and children in **driveways**. The location of vehicular access points should be separated from pedestrian access points, to reduce the potential for conflicting movements.

Safe pedestrian access from the **street** or car parking to private **dwellings** is equally important for **single houses**, **grouped dwelling** and **multiple dwelling developments**.

Accordingly, the R-Code Volume 1 provisions are designed to encourage the provision of good sight lines, and ensure a smooth uninterrupted path of travel between car parking and the **building**.

7.0 BUILDING DESIGN

GENERAL (Clause 5.4 of R-Codes Volume 1)

This design element deals with matters that affect **building** design, including the protection of privacy and **solar access**, meaning primarily the prevention of areas being overlooked by neighbours or overshadowed by **buildings**, which has become a significant issue in recent years. In addition to the building itself, many forms of **incidental development** such as **external fixtures** and **outbuildings** can also have visual impacts.

The level of impact upon the character and density of the area is to be considered in relation to **building** design. The level to which a proposal meets other requirements (for example, height and **setback** requirements) might also assist in determining what reasonable action is needed in managing impacts on privacy and **solar access**.

With increases in density, there is an expectation that there will be a commensurate increase in impact of **buildings** on privacy and **solar access**. There is an expectation of greater tolerance, and therefore allowance, of these impacts at higher density. A level of impact not appropriate in an area of low density is likely to be more acceptable, and more tolerated, at higher densities.

SPECIFIC DESIGN ELEMENTS (Clause 5.4 of R-Codes Volume 1)

This element deals with the following provisions of Part B of the R-Codes Volume 1:

- 7.1 Visual privacy;
- 7.2 Solar access for adjoining sites;
- 7.3 Outbuildings;
- 7.4 External fixtures; and
- 7.5 Utilities and facilities.

7.1 VISUAL PRIVACY (Clause 5.4.1 of R-Codes Volume 1)

GENERAL GUIDANCE

It is recognised that side **setbacks** alone cannot achieve absolute visual privacy because the setback distances required are much greater than those which can be feasibly provided in an urban area.

Setbacks need to be complemented by thoughtful design and supplemented by various **screening** measures, as appropriate.

Privacy is a valid cause for concern and plays an important role in residential **amenity**. However, aside from cases of poor design, there is a large degree of subjectivity, often related to cultural perceptions and concerns.

A sufficient level of privacy must be reached by good design to satisfy reasonable concerns. It is not the intent of the R-Codes Volume 1 to require 100 per cent privacy at the expense of inconsistent **building** orientation, access to **daylight**, winter sun, ventilation, security or poor relationship to neighbours.

Sources of overlooking

Overlooking from areas on or close to **natural ground level** is not subject to control in terms of clause 5.4.1 of the R-Codes Volume 1. This applies equally to **outdoor living areas** and **habitable rooms** which are less than 0.5m above natural ground level. The basis for this is that the view from such areas can be readily limited by a standard 1.8m high boundary fence, and while this may not restrict sight lines in an upward direction, the impact of overlooking **major openings** to habitable rooms or **balconies** situated above natural ground level would be limited.

While it may be possible to overlook an **adjoining property** from many situations, clause 5.4.1 only seek to control overlooking between:

- **primary living space, active habitable spaces, and outdoor living areas** of the **development site**; and
- the **habitable rooms** and **outdoor living areas** of the adjoining residential properties.

Overlooking and the cone of vision for privacy design

The impact of a particular **development** on the privacy of a neighbouring property can be assessed by applying the concept of a **cone of vision** at any point where a person is likely to be able to look on to that property, as illustrated by **Figure Series 10** of the R-Codes Volume 1.

The relevance of the **cone of vision** is readily apparent. The cone of vision is defined by the extent of the opening (**Figure 10a** of the R-Codes Volume 1). The concept of a cone of vision is a useful tool also for the design of **screening** devices.

For the purposes of assessing **setbacks** and privacy provisions, all **balconies, verandahs, terraces** and other **outdoor living areas** raised more than 0.5m above **natural ground level** should be regarded as **habitable rooms** with a **wall height** of 2.4m above the floor level. All such areas, together with active indoor spaces, should be designed to minimise overlooking of neighbouring properties.

Overlooking from bedrooms and studies, which may be occupied infrequently, mainly at night, without noise, and by relatively few people, is more easily tolerated than overlooking from active areas.

Of most concern are **active habitable spaces**, for example, living rooms, kitchens, activity rooms, **balconies** and **outdoor living areas** that are at levels higher than 0.5m above **natural ground level**.

Prevention of overlooking

There are four basic ways of preventing or ameliorating overlooking:

- designing windows, **balconies** and decks to face away from boundaries with neighbouring properties, especially side boundaries;
- providing greater than normal **setbacks**, to achieve an effective privacy separation distance;
- providing intervening **screening**; or
- ensuring that overlooking windows cannot be opened and are opaque or highlight windows.

Often the most effective results will come from a combination of these.

Effective location of **major openings** and outdoor **active habitable spaces** to avoid overlooking is preferred to the use of **screening** devices or obscured glass.

Where these are used, they should be integrated with the **building** design and have minimal impact on residents' or neighbours' **amenity**.

Where opposite windows are offset from the edge of one window to the edge of another, the distance of the offset should be sufficient to limit views into adjacent windows (refer to **Figure 56** and **57**).

7.1 VISUAL PRIVACY cont. (Clause 5.4.1 of R-Codes Volume 1)

Privacy separation distances

A desirable degree of privacy requires a significant separation between the areas concerned, in most cases greater than the **lot boundary setbacks** required under clause 5.1.3 of the R-Codes Volume 1. In practice, some degree of compromise is necessary.

Because it is not always possible to predict how a neighbouring **site** may be developed in the future, privacy separation distances can most realistically be applied between the proposed **development** and the property boundary, that is, as line of direct sight **setbacks**. The way in which setbacks should be determined is illustrated in **Figure 10c** of the R-Codes Volume 1 using the **cone of vision** (refer to **Figure 58**).

Screening devices used to provide for increased visual privacy between developments.

Figure 56 Angled louvre blades on balconies near the property boundary reduce the potential for overlooking while allowing natural daylight into the unit

Screening devices used to limit views between internal spaces of one dwelling and the balcony of the adjoining building.

Figure 57 Screening devices allows developments within close proximity to mitigate direct overlooking

Figure 58 Privacy design

7.1 VISUAL PRIVACY cont. (Clause 5.4.1 of R-Codes Volume 1)

The R-Codes Volume 1 provide a set of privacy **setbacks**, based on these considerations, to operate in the absence of detailed and acceptable consideration of the use and **development** of affected properties. These are set out as **deemed-to-comply** provisions, which do not require the discretion of the **decision-maker**. For that reason, they are conservative, providing a relatively high level of protection from overlooking, but not absolute, protection.

In many cases, more effective and mutually beneficial outcomes can be achieved through the application of good design, directed at meeting the relevant **design principles** (Refer to **Figure 59**).

Acceptable point-to-point privacy distances can be calculated by aggregating the privacy **setbacks** of the **deemed-to-comply** provisions.

In the case of **primary living spaces, active habitable spaces**, including **outdoor living areas** and **balconies**, an effective privacy separation distance would be of the order of 15m or more. Clearly, this is not realistically achievable. An acceptable compromise **setback**, where intervening **screening** is not provided, would be in the order of 7.5m for active habitable spaces, 6m for living areas and 4.5m for bedrooms in areas coded R50 or less and 6m, 4.5m and 3m respectively in areas coded higher than R50.

The **deemed-to-comply** provisions for this design element provide for the **setback** of **major openings** in the **cone of vision** or permanent **screening**, as the alternative measure to protect the privacy of **adjoining property**. Measurement of **setback** distances is to be taken from the major opening to the boundary, and accordingly, should be measured from the external face of the opening.

This is illustrated in **Figure 10b** of the R-Codes Volume 1.

The measurement of privacy **setbacks** varies from that used for normal boundary setbacks only in that the line of the measurement in the case of privacy setback is to be based on the **cone of vision**. Accordingly, there will be situations in which the measurement is not at right angles to the boundary. It is important to understand that the setback distances included in the **deemed-to-comply** provisions represent minimum separation, which will be measured to the closest point of the boundary in the cone of vision.

Figure 59 Increased fence heights or offsetting of windows are measures that may prevent overlooking

Where a proposed **development** involves a departure from the **deemed-to-comply** provisions with respect to the separation distances specified in clause 5.4.1, assessment should be undertaken in accordance with the **design principle**, as illustrated by **Figure 60**. This will involve consultation with potentially affected **adjoining property** owners, who should be requested to provide comment on the proposal, and information about the location of any **habitable room**, windows or **outdoor living areas** which may be affected.

Assessment of applications which involve a proposal that addresses the **design principles** generally will require plotting the position of the adjacent **dwelling**, the location of any **major openings** to **habitable rooms** and any associated **outdoor living areas**. This will enable identification of areas and openings which fall in the **cone of vision**.

Evaluation of proposals should take into account only the potential impact of sight lines within the **cone of vision** where separation distances do not meet the **deemed-to-comply** provisions. Where separation distances accord with the provisions with respect to the cone of vision, the standard of privacy protection is satisfactory.

Figure 60 Example of a development that would not be deemed-to-comply, however, could meet the design principle

7.1 VISUAL PRIVACY cont. (Clause 5.4.1 of R-Codes Volume 1)

Screening for privacy

Screening can be employed to limit the **cone of vision**, and therefore, the privacy distances which otherwise would be required. However, it is important to note that in order for such screening to be taken into account for the purposes of the **deemed-to-comply** provisions, it must be regarded as permanent. Proposals that address the **design principles** would provide for alternative solutions from the deemed-to-comply provisions, and in such circumstances, alternatives to permanent screening may be considered, subject to appropriate consultation with relevant **adjoining property** owners.

Privacy **screening** can occur in various forms, including:

- vegetation
- permanent elements such as fences, balustrades and louvres
- translucent or opaque (that is, non-transparent) glazing and other similar materials (refer to **Figure 61**).

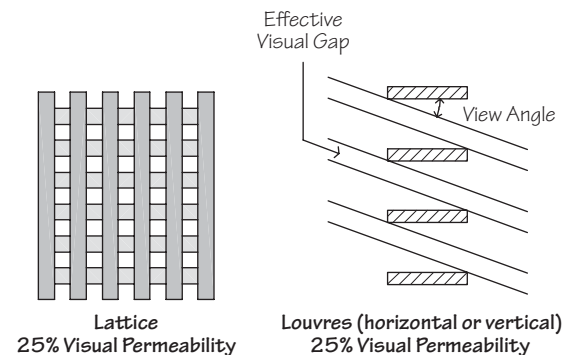

Figure 61 Example of screening by which visual permeability can be limited. Note that a view angle of 45 degrees to the side is the limit of the cone of vision as defined in the R-Codes Volume 1, and no screening is required outside these limits

Vegetation

Vegetation in the form of **screen** planting or selective placement of suitable trees or shrubs can provide effective screening for privacy control, and also can enhance **development** and residential **amenity**. A drawback of this mitigation is that potentially affected property owners and occupiers may need assurance that the vegetation will remain in place, and any such screening should be assessed in terms of the **design principle** and in consultation with relevant property owners.

Subject to consultation with the adjoining owner, the necessary planting may be located on the **development site**, and would be the subject of a condition of development approval to run with the land. As an alternative, arrangements might be made for the developer to provide or contribute towards the cost of **screen** planting on the affected property, which would then become the responsibility of the affected property owner to maintain.

Fences and balustrades

Fences and balustrades are effective forms of **screening** and require little further explanation where they take the form of a solid **wall**. The design and location of such features must not infringe on other relevant requirements for **development**, such as **setbacks**, shading, **daylighting** and in the case of fences, the requirements of the Dividing Fences Act 1961, and associated local laws.

Screening may be perforated to some degree to allow the circulation of air, providing it meets the objective of protecting visual privacy. Because of the absence of a prescriptive standard applicable to partial screening, such proposals generally should be assessed in terms of the **design principles** and in consultation with any potentially affected property owners.

Perforations should constitute no more than about 20 per cent of the total surface area, with an upper limit of 25 per cent. However, it also is important that the size of individual gaps are not such as to prejudice the visual privacy of adjoining properties, and a maximum 50mm visual gap is suggested as reasonable. This compares with a minimum gap of 50mm referred to in the definition of **visually permeable**.

In the case of lattice **screening**, the **visual permeable** definition would be met by 50mm slats at a spacing of 50mm (that is 75 per cent coverage with gaps no greater than 50mm). Where fixed louvres are used either for vertical or horizontal screening, the spacing required to meet the same visual permeability standards will depend on the angle of view and the width of the louvre blades (refer to **Figure 62**).

Louvres, which are proposed to be relied on for **screening**, must be fixed or have a physical and permanent limitation on opening, to ensure the level of **visual permeability** does not exceed the specified standard. Such standards may be subject to a discretionary variation taking into consideration any comment and/or agreement from the relevant **adjoining property** owner.

Figure 62 Horizontal screening

7.1 VISUAL PRIVACY cont. (Clause 5.4.1 of R-Codes Volume 1)

Translucent or opaque

The use of this form of **screening** generally does not involve the exercise of any discretion on the part of the **decision-maker**. However, where such measures take the form of sheet glass of the type which could be easily replaced, as distinct from glass block work for example, it generally would be appropriate to apply a condition to ensure the screening remains in place (for example, in the event of breakage, it is replaced to meet the same specification). Because of the limitations on the use of planning conditions through the **building** permit process, this necessitates an application for development approval.

Building to boundaries

Privacy may be enhanced, for both the **development** and its neighbour, by **building** a portion of the **dwelling** up to the common boundary as provided in clause 5.1.4 of the R-Codes Volume 1. This overcomes the problem of overlooking from that **wall**, and in most cases allows more freedom of design on the **site** to ensure privacy for **outdoor living areas** and windows. However, the use of **boundary walls** does need to consider other aspects of design and neighbour **amenity**, such as the possibility of overshadowing neighbouring dwellings or outdoor living areas.

SPECIFIC GUIDANCE

Location of protected areas

Habitable rooms and **outdoor living areas** are identified in clause 5.4.1 of the R-Codes Volume 1 being the areas which are to be the subject of privacy protection. In the case of habitable rooms, **major openings** should be the focus of attention, while in the case of outdoor living areas, priority should be given to areas required to be allocated for this purpose under clause 5.3.1 of the R-Codes Volume 1 (an area of **open space** directly accessible from a living area and having a minimum dimension of 4m).

Protection from overlooking is not required for **open space** other than that defined as **outdoor living areas**. Protection from overlooking generally is not necessary for extensive areas of garden which are well separated from the **dwelling** to which they relate. Those outdoor areas likely to be occupied for extended periods of time, and where it is reasonable to expect a relatively high degree of privacy, should be the focus of attention in terms of any restrictions to be applied to overlooking from **adjoining properties**.

A lesser need for privacy protection is usual in the case of front gardens and areas visible from the street, and this principle should also be carried over to other public places, such as parks. The basis for this acceptance is that control of overlooking for areas visible from public places would be largely ineffective in terms of privacy protection and also could limit outlook over, and surveillance of, the public places themselves, thus compromising safety and security.

The **deemed-to-comply** provisions are limited to protection of areas of any **adjoining property** behind its **street setback line**.

While the **deemed-to-comply** provisions do not seek to protect areas in front of the **adjoining property's street setback line**, a proposal that addresses the **design principles** may need to be considered in the case of corner **lots** adjacent to a **development site**.

Prior to **development** of a corner **lot** in a greenfield area, the determination of **primary** and **secondary streets** will generally be unknown and, therefore, **deemed-to-comply** provisions which relate to the location of the **street setback line** will be undefined. This indicates the need for the exercise of discretion, and in these circumstances, a proposal that addresses the **design principles** would be appropriate. In such cases consultation with the relevant **adjoining property** owners may be required to inform the **decision-maker**. In circumstances where an **outdoor living area** (associated with a corner lot) is situated adjacent to the secondary street **frontage** and where the **street setback line** (generally taken to be the line which delineates the **street setback area**) is only 1.5m from the **street** alignment, some difficulty would be encountered in meeting the deemed-to-comply provisions. Similar difficulties may arise where the **dwelling** on a corner **site** is built up to the secondary street setback (1.5m) with **major openings** facing the side boundary and subject to overlooking from an adjoining dwelling situated at its standard **setback**.

Where there is an **outdoor living area** adjacent to the **secondary street**, or **major openings** in an area which otherwise might have been the **primary street setback area**, application of the normal **deemed-to-comply** provisions could impose unreasonable constraints on the adjoining **development**, for example, no front **balconies** or major openings to habitable spaces above ground level. In such circumstances, consideration should be given to the **design principle**, with a view to limiting potential conflicts, however, the concessional provisions which allow for reduced **secondary street setbacks** for corner **lots** should not be allowed to unduly prejudice development of **adjoining property**.

7.1 VISUAL PRIVACY cont. (Clause 5.4.1 of R-Codes Volume 1)

Taking neighbouring properties into account

The proponent and the **decision-maker** should take into account the effect of the new **development** on existing or proposed **dwellings** on **adjoining properties**.

Design of new **development** should avoid overlooking into adjacent **habitable room** windows, especially of living rooms, balconies, **terraces** and other outdoor living spaces which are frequently occupied.

Protection from overlooking has high priority where the proposed **dwelling** has limited **outdoor living space**, and especially where its location is fixed, for example, adjacent to indoor living areas. Protection from overlooking is not necessary for extensive areas of garden, especially where these can provide their own vegetation **screening** (refer to **Figures 63** and **64**).

Figure 63 Upper windows facing the rear garden are generally acceptable

Application of design principles

Minimisation of overlooking should not be interpreted as an absolute prohibition on visual interaction. The objective for this element is to minimise the impact of **development** on the visual privacy of nearby residents. It is clear that absolute protection of privacy is not realistically achievable. Limits to the protection of privacy are also borne out by reference to the general approach to separation, as an alternative to the interruption of sight lines, to achieve an acceptable compromise.

With reference to the application of the **design principles** the focus should be on what constitutes a reasonable level of privacy in the circumstances, and what is realistically achievable. This may vary depending on the circumstances, with generally higher levels of visual privacy achievable in low-density areas than is practical in higher-density areas. Differing community expectations in different situations should also be kept in mind.

Figure 64 Upper windows facing a neighbouring property are generally not acceptable

In some cases, there may be mutual benefit to be gained by a relaxation of the privacy standards, and subject to consultation with potentially affected property owners, alternatives should be considered in this light. For example, where adjoining **sites** are orientated east to west with views or outlook to the north, relaxation of privacy standards may enable a better design outcome in which **solar access** to, and views from, the north side of the site are maximised.

Applicants seeking approval through an application for a proposal that addresses the **design principles** are required to provide a written submission in support of the proposal. Where a **major opening** to an **active habitable space** is proposed closer to the nearest point of common boundary in the **cone of vision** than the **setbacks** specified in **deemed-to-comply** clause 5.4.1 C1.1i of the R-Codes Volume 1, the following additional information is to be provided, in accordance with clause 3.3.1(b) of the R-Codes Volume 1:

- The position and dimensions of any **balcony** or major openings to any active habitable space in any **wall** of an adjoining **building** which is visible from the **development site** and is located within 6m of a boundary of the development site.
- The position and level of any accessible area (for example, lawn, paving, decking, **balcony** or swimming pool) on any **adjoining property** and within 6m of a boundary of the development site.
- Provision of additional or marked-up plans and sections showing the cone of vision and critical lines of sight from those major openings as they relate to the adjoining property.
- Details of **screening** or other measures proposed to be used to reduce overlooking.

7.2 SOLAR ACCESS FOR ADJOINING SITES (Clause 5.4.2 of R-Codes Volume 1)

GENERAL GUIDANCE

Western Australia encompasses a variety of regions with different climates, ranging from temperate in the south-west to hot-arid in the interior to hot-humid in the north (refer to **Figure 65**). Consequently, it is not possible for the R-Codes Volume 1 to adopt a uniform set of climatic design requirements for **residential development**. It is possible, however, to express general guidelines and principles and to allow local planning as the most appropriate avenue to introduce this aspect of design control to suit local conditions.

A majority of new **development** occurs in, or close to, the Perth metropolitan region and so there is some value in establishing standards suitable for the Perth coastal climate.

Accordingly, much of the guidance regarding **solar access** applies directly to the Perth metropolitan region, and appropriate adjustments need to be made for other regions.

While specific **deemed-to-comply** requirements for **solar access** are provided in the R-Codes Volume 1, solar access guidelines have been included in these explanatory guidelines and may be taken into account in the consideration of applications according to the **design principles**.

Codifying climate-sensitive design

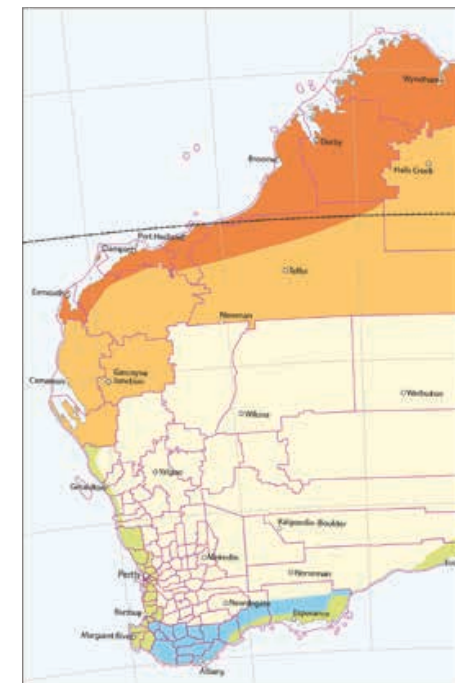

In terms of **residential development**, the three main aims of climate-sensitive design are to reduce energy consumption, optimise on-site **solar access** and protect solar access for neighbouring properties.

However, it is difficult to translate these aims into **development** provisions. This is not because the issues are subjective but because conditions vary greatly from one situation to another, making it difficult to establish universally valid rules. To give an obvious example, a narrow east-west oriented **lot** on the south side of a **development site**, especially where the terrain slopes to the south, is highly vulnerable to being overshadowed, even by a relatively low **building** set back from the common boundary. By contrast, where lots are oriented north-south, even tall **buildings** built up to the common boundary have little potential for overshadowing. In other cases, the shadows cast may largely fall on blank **walls** or roofs.

Site location, orientation and topography must be taken into account by the proponent in the design of the development.

Because it is impossible to adequately codify and enforce good design practice, the R-Codes Volume 1 deal with the issues in three ways:

- by setting out relevant factors for design of a **development**;
- by setting down conservative **deemed-to-comply** limits to overshadowing, which should be satisfactory for most developments, especially for **single houses** in low to medium-density range areas; and
- by encouraging proponents and **decision-makers** to use the **design principle** approach in difficult or complex cases.

Climatic Zones - Western Australia

Zone 1 - High humidity summer, warm winter	Zone 5 - Warm temperate
Zone 2 - Warm humid summer, mild winter (NA to WA)	Zone 6 - Mild temperate
Zone 3 - Hot dry summer, warm winter	Zone 7 - Cool temperate (NA to WA)
Zone 4 - Hot dry summer, cool winter	Zone 8 - Alpine (NA to WA)
	Local Government Area Boundary

Figure 65 Extracted from Climatic Zone map of Australia published by ABCB (last amendment August 2015)

7.2 SOLAR ACCESS FOR ADJOINING SITES cont. (Clause 5.4.2 of R-Codes Volume 1)

Protecting solar access for neighbouring properties

Development should be designed so that it does not seriously affect **solar access** for neighbours. The R-Codes Volume 1 include maximum allowable percentages of overshadowing of:

- **adjoining properties** generally; and
- the north facing **major openings** to **habitable rooms** and roof mounted **solar collectors** of adjoining properties.

In most cases this means avoiding very tall **walls** close to southern boundaries, so that excessive shadows are not cast across the north-facing openings adjacent. In some cases, overshadowing by west or east-facing **walls** may also be important (R-Codes Volume 1 **Figure 11a**).

As with overlooking, but even more so, the potential for a **building** to overshadow a neighbouring **site**, or be overshadowed itself, varies enormously from case to case. The variables are several and complex and include:

- the density of **development**;
- the height of **buildings**, existing and proposed;
- the position of buildings, existing and proposed, in relation to boundaries;
- the orientation of the **development site** and its neighbours, that is, the relative position of the sun;
- the relevant dimensions and shape of the **development site** and of affected neighbouring **sites**; and
- the degree and orientation of slope of the land.

It is clear that the **sites** most vulnerable to overshadowing are narrow east- west orientated sites, on the south side of a **development site**, especially if they are also lower or on a south facing slope. In such cases, even a relatively low **building** may cast mid-winter shadow over a greater proportion of the site than allowed under **deemed-to-comply** provisions. In some instances, such a **lot** may abut two or more properties to the north, and would be subject to overshadowing by two or more properties. The deemed-to-comply provisions of the R-Codes Volume 1 therefore reduce the amount that some lots can overshadow proportionate to the property boundary they share (R-Codes Volume 1 **Figure 11b**). It is possible, however, that some overshadowing is unavoidable. In these cases,

careful consideration as to what is being overshadowed, rather than the extent of overshadowing, should be judged on merit and the **design principle** applied (refer to **Figure 67**).

In other cases a shadow cast by a proposed **building** may exceed the allowable limits in theory, but in practice may simply be casting a shadow onto a **boundary wall** or roof or both, with minimal adverse effect.

A shadow may not exceed the limit but may fall over the only available **outdoor living area**, or living room window of an adjoining **dwelling**.

Note: These diagrams illustrate concept only. Actual summer and winter sun angles can vary greatly throughout the State and local information should be used for each development.

Figure 66 Orientating outdoor living areas and major openings to habitable rooms to the north maximises light penetration opportunities to reduce heating and cooling costs

7.2 SOLAR ACCESS FOR ADJOINING SITES cont. (Clause 5.4.2 of R-Codes Volume 1)

Calculation of overshadowing

The assessment of the shadow cast by a **building** at midday 21 June is straightforward, and shown in **Figure 11a** of the R-Codes Volume 1. The methodology for determining the shade cast can be found in the *Sunshine and Shade Australasia*, Phillips, R.O., Commonwealth Scientific and Industrial Research Organisation (Australia), Division of Building Construction and Engineering, Canberra, ACT 1992. Reference should be made to the specific tables in this document.

In general terms the shadow cast is calculated by:

- selecting the vertical sun angle from the following chart that lists the major urban centres from Albany to Wyndham;
- transposing the length of shadow on to the site plan, taking care to correctly orientate the **building** and allow for the slope of the land (R-Codes Volume 1 **Figure 11a**); and
- not including dividing (boundary) fences up to a height of 2m.

City/town	Latitude (S)	Vertical sun angle
Albany	35	31
Perth	32	34
Kalgoorlie	31	35
Geraldton	28	38
Carnarvon	25	42
Port Hedland	20	47
Broome	18	49
Wyndham	15	52

Building does not allow for solar penetration to adjoining property to the south.

Amenity of the adjoining property is not adversely affected by the design of the building, allowing solar access into the adjoining building.

Setting taller elements back from common boundaries provides a more appropriate scale minimising the impact of the new development on existing built form.

Figure 67 By stepping the upper levels of a building back, adequate solar access to habitable rooms and open space on adjoining property is provided

7.2 SOLAR ACCESS FOR ADJOINING SITES cont. (Clause 5.4.2 of R-Codes Volume 1)

SPECIFIC GUIDANCE

Design for climate: energy conservation and comfortable living

The south of the State enjoys a climate suited to outdoor living and comfortable living indoors, throughout the year.

The important factors to take into account for the temperate south-west, and southern regions of the State, including the Perth metropolitan region, and also much of the State with hot dry climates (generally zones 4, 5 and 6 in **Figure 65**) are as follows:

- The sun is further north in winter than in summer, and its angle is much lower. This means that a simple, properly calculated, north-facing roof overhang will allow the winter sun in and keep the summer sun out.
- **Dwellings** should be laid out so that at least one living area, preferably the one used most of the day, faces north or within 15 degrees of north. An **outdoor living area** is also best located on the north side of the dwelling.
- **Pergolas** with removable, adjustable, solar-orientated awnings or deciduous vegetation can be designed and planted to provide **solar access** for desired times in the winter, while excluding solar access for desired times in summer.
- The sun is most fierce in summer in the afternoon. At this time it comes from the west or west-south-west, so areas of glass facing in that direction should be avoided. Protect the dwelling with trees or vegetation (preferably deciduous, so as to allow in the sun in winter), **pergolas** or **verandahs**.
- The morning sun comes more directly from the east in summer, but will generally have moved to the north and then west before the ambient temperature rises. Therefore, east-facing **walls** are not as critical as west-facing, but the use of glass should still be kept to a minimum, unless **screened**.

- The sun never hits the south face of a dwelling in winter: large areas of glass on the south will allow heat to escape in winter.
- Cooling breezes in summer come to the Swan coastal plain from the south-west; design should allow for letting these in while protecting windows from the sun, and avoiding crowding vegetation so close that they will hinder breezes.

All of these factors need to be verified for relevance to other regions. For example, sun angles vary significantly with latitude, and the time and direction of cooling breezes varies with proximity to the ocean and other factors. In the hot humid regions, thorough ventilation, and hence space around **buildings**, and shade are more important than solar penetration in winter (refer to **Figures 68 - 70**).

Figure 68 Some principles for the siting of a dwelling in the temperate zone

7.2 SOLAR ACCESS FOR ADJOINING SITES cont. (Clause 5.4.2 of R-Codes Volume 1)

Achieving solar access on site

The shape and orientation of **lots** sometimes makes it difficult to achieve optimum solar layout of a development. This may also conflict with the principle of **dwelling**s facing the **street** and often a compromise will have to be made.

It should be the practice of **decision-makers** to assist, where necessary, by making concessions in particular cases, especially by modifying side **setbacks** to allow **solar access**, provided that neighbours' privacy or solar access is not affected. These concessions may include **building** up to a side boundary.

In other cases, the only available private north facing **open space** may be within the **street setback area**. The R-Codes Volume 1 recognise this, for example, by modifying the provision for fencing in the **street setback area** to allow for private **outdoor living space**.

Reflective roofs

Reflective roofs are useful and effective in reducing the heat absorbed by a **dwelling**. However, very highly reflective roofs sometimes cause glare and discomfort to neighbours.

In some situations it may be desirable or necessary to use a material or finish, such as Colorbond, in a light but less reflective colour. Conversely, dark roofs increase absorption of heat and should be avoided.

Energy-efficient design

The **WAPC** has made provision for energy efficient **lot** design in Liveable Neighbourhoods. For guidance on the requirements of energy efficient **design principles** and minimum construction standards, reference should be made to the BCA.

Figure 69 Solar pergola and deciduous trees

Figure 70 Calculated eaves overhang on north side, Perth

7.3 OUTBUILDINGS (Clause 5.4.3 of R-Codes Volume 1)

All **outbuildings** could, in theory, be regarded as **buildings** and made to comply with the same design guidelines as the main building or buildings. However, Australia has a long tradition of backyard sheds, workshops, **garages** and other similar buildings, including outside laundries and toilets, and these have always been regarded in a different light to the main buildings they serve. The tradition is changing because contemporary living standards have led to the demise of the outside laundry and toilet, in part because the spacious quarter acre block has since given way to smaller **lots**, and also because urban lifestyles have changed.

Nevertheless, there is a case for relaxed standards for some **outbuildings**. The criteria should be that they do not detract from the essential functions of **private open space**, the visual **amenity** of neighbours or the **streetscape**. This means that any outbuilding that is to be exempt from the residential or **dwelling** standards should be:

- relatively small in area;
- relatively low in height;
- sited so as to preserve the use and **amenity** of **open space**;
- set back sufficiently from boundaries;
- confined to **single houses** and **grouped dwellings**; and
- excluded from **street setback areas**.

Other common private garden or backyard constructions such as **pergolas**, cubby houses and play fixtures, and dog kennels have not been included in the definition of **building** and are exempted from planning control, although some **decision-makers** do have policies to control certain backyard constructions (for example, cubby houses).

Outbuildings are classified as either:

- small outbuildings; or
- large and multiple outbuildings.

This is to provide a **deemed-to-comply** pathway for both types. Smaller **outbuildings** may encompass two **boundary walls**, however, larger and multiple outbuildings are to be **setback** in accordance with **Table 2a**. The **lot boundary** setbacks required to large and multiple outbuildings are to manage cumulative impact, and bulk and scale of multiple or larger outbuildings.

Separate **building** code requirements may also be applicable for **outbuildings**.

7.4 EXTERNAL FIXTURES (Clause 5.4.4 of R-Codes Volume 1)

External fixtures include items attached to or emerging from **buildings**, including:

- **solar collectors**
- television, radio, other antennae and satellite dishes
- plumbing vents and pipes
- external hot water heaters
- air conditioners
- rain water tanks.

The BCA encourages water and energy efficiency of all housing in Australia. It is therefore an objective of the R-Codes Volume 1 to assist in the widespread adoption of technologies that may improve the **sustainability** of urban housing.

The location of **solar collectors** determines their efficiency, hence their positioning needs to be **site**-specific and is therefore permitted as of right. Television antennae of the standard type, essential plumbing vents above the roof line and external roof-water down pipes are accepted as minor and **deemed-to-comply**.

Any other **external fixtures**, which in the opinion of the **decision-maker**, may have greater potential to detract from **amenity** and **streetscape**, should be subject to planning control, and may be the subject of **local planning policies** (refer to **Figure 75**).

Rooftop plant and infrastructure dominates appearance of the building.

Figure 75 External fixtures can be unsightly and detract from the streetscape

7.5 UTILITIES AND FACILITIES (Clause 5.4.4 of R-Codes Volume 1)

For the purposes of the R-Codes Volume 1, **utilities** and facilities fall into two categories:

- essential facilities, such as clothes drying, general **storage** and rubbish bin storage; and
- optional facilities, such as a tennis court, swimming pool, gymnasium, gazebo, security fencing and gates, or below ground car parking.

Adequate provision for the above essential facilities is required in all **grouped dwelling** and **multiple dwelling developments** because they are important to the functionality of these developments.

8.0 SPECIAL PURPOSE DWELLINGS

SPECIFIC DESIGN ELEMENTS (Clause 5.5 of R-Codes Volume 1)

Part B of the R-Codes Volume 1 encompass five types of **special purpose dwellings**:

- 8.1 **ancillary dwellings**;
- 8.2 **aged or dependent persons' dwellings**;
- 8.3 **single bedroom dwellings**;
- 8.4 **accessible dwellings**; and
- 8.5 **small dwellings**.

These **dwelling** types may require discretionary approval under the relevant **scheme**.

The provisions for these sections are only applicable to Part B of the R-Codes Volume 1. **Aged or dependent persons' dwellings** and **single bedroom dwellings** may take the form of either **grouped** or **multiple dwellings** with the associated **site** area variations outlined in Part D only applicable to sites zoned R25 and below. For higher density coded land, site area variations are instead provided for **accessible dwellings** and **small dwellings** in Part D.

8.1 ANCILLARY DWELLINGS (Clause 5.5.1 of R-Codes Volume 1)

SPECIFIC GUIDANCE

To encourage diversity in accommodation types, and to provide a means for residents to live in proximity but with autonomy, the R-Codes Volume 1 provide for **ancillary dwellings**, sometimes referred to as granny flats. This is essentially an independent **dwelling**, which may or may not be physically attached, on the same **lot** as a **single house**. Such dwellings would include, for example, 'Fonzie Flats' (**studios** located above garages); separate rear studios; and self-contained quarters within a single house; for example, a second **storey** or separate ground floor wing that may have a shared lobby/entry or separate external access.

There is no longer a restriction regarding occupancy of **ancillary dwellings** by family members of the primary **dwelling**. Ancillary dwellings can however, support those living independently or semi-dependently, at various life stages. Ancillary dwellings should be designed to have a positive visual relationship with their surroundings. This includes considering whether the dwelling design, and colours and materials selected are compatible with the main dwelling. Importantly, this does not imply replication or imitation of the main dwelling, but rather a compatibility that creates a positive design dynamic between both **buildings**. Substandard buildings such as sheds, dongas and shipping containers (that have not been re-purposed) would generally be considered incompatible.

While an **ancillary dwelling** is a self-contained **dwelling**, the extent of facilities provided would be at the discretion of the landowner. It is generally accepted that a separate kitchen and bathroom would be provided. The provision of a laundry would not be essential from a planning point of view. Meeting BCA requirements may, however, require the provision of laundry facilities.

Services also may be shared; the rental of an ancillary accommodation would function in a similar manner as a boarder; however, utility providers may have specific requirements for the separate provision of services, for example, separate water, power, sewer, gas and telecommunications.

Subdivision (for example, into **strata lots**, built-strata lots or **green-title lots**) is not permissible as specified by the definition of **ancillary dwellings** under the R-Codes Volume 1 which confirms that an ancillary dwelling must be on the same site as the primary dwelling. The **single house** (primary **dwelling**) and ancillary dwelling are considered two dwellings on one **lot**. Subdivision could only occur subject to meeting minimum lot size requirements (and other R-Code Volume 1 provisions) of the density code of the **site** under a **scheme** as **grouped dwellings** or two single houses.

Ancillary dwellings are limited in size to 70m². **Development** is required to meet requirements set out in Part B – Design Elements for all **single house(s)**; all **grouped dwellings**; and, **multiple dwellings** in areas with a coding of less than R30, as they relate to single houses (for example, **setbacks**) or as specifically provided for (for example, parking and compatibility in design and finishes) with the exception of:

- 5.2.3 street surveillance (except where located on a **lot** with **secondary street** or **right of way** access); and
- 5.3.1 outdoor living areas.

The **development** of an **ancillary dwelling** should not preclude the primary dwelling from meeting the **open space** and **outdoor living area** requirements.

8.2 AGED OR DEPENDENT PERSONS' DWELLINGS (Clause 5.5.2 of R-Codes Volume 1)

SPECIFIC GUIDANCE

The intention of this provision is to encourage the **development** of small-scale specialised housing in local communities, as an alternative to larger scale, relatively segregated retirement village/nursing home-type complexes. Because aged or dependent persons' **dwellings** are generally smaller than conventional dwellings, and the occupants do not usually have a high car ownership ratio, the R-Codes Volume 1 under **deemed-to-comply** clause 5.1.1 **C1.4i** of the R-Codes Volume 1 allow the reduction of the **site area** by one-third of that provided for by the R-Code applying to the site and clause 5.3.3 provides for reduced car parking standards.

To prevent these concessions from being abused, for example as a back door way of increasing density for standard housing without re-coding an area, the concessions are subject to four constraints:

- there is a limit on the size of such **dwellings**;
- they must be purpose-designed;
- there is a minimum of five dwellings in a single **development**; and
- they are subject to a legal agreement to restrict occupancy.

The **development** of aged or dependent persons' **dwellings** is otherwise required to comply with all other R-Code Volume 1 provisions as relevant. Only clauses pertaining to the type (such as **grouped dwellings** or **multiple dwellings**) of development proposed are applicable.

In relation to the minimum number of **dwellings** in a single **development**, the **decision-maker** may make **local planning policies** that reduce the minimum number where it determines appropriate to facilitate additional aged or dependent persons' dwellings.

The design of aged or dependent persons' dwellings must incorporate, or at the very least, allow for future incorporation of features that are required to serve the special needs of aged or dependent persons, such as ramps and wider doorways and passageways to accommodate wheelchairs and handrails in bathrooms and toilets.

It is important that aged or dependent persons' dwellings are designed to allow for ageing in place, whereby **dwellings** cater for an individual to remain in their chosen place of residence even though their physical and sensory abilities may change in the future. Certain minimum standards, as set out in appropriate Australian Standards must be part of the original construction, or can be introduced (retrofitted) with ease in the future. In particular, this would include designs with minimal use of varying floor levels and stairs, adequate passageways and door widths, roofed car parking spaces, accessible **utilities** and slip resistant floors for kitchens, laundries, bathrooms and toilets as described in AS 4299:1995, *Adaptable Housing*. This would result in such dwellings being more flexible to accommodate the changing needs of older people.

In addition, it is necessary to stipulate an age threshold of 55 years in the case of **aged persons' dwellings**, however, there is no constraint on the dwelling type. The concessions apply equally whether they involve **single houses** or **grouped** or **multiple dwellings**.

It is also not necessary that the whole of any particular **development** comprise **special purpose dwellings**, or even consist of the same type of **dwellings**. It is possible, for a development to comprise a mix of dwelling types to cater for different ageing in place needs. An integrated facility may comprise a variety of dwelling types incorporating **aged persons'** dwellings for low-care/independent residents, serviced apartments for medium-care residents and nursing home type accommodation for high-care residents.

8.3 SINGLE BEDROOM DWELLINGS (Clause 5.5.3 of R-Codes Volume 1)

SPECIFIC GUIDANCE

One or two-person households now make up over half of all households in Western Australia. **Single bedroom dwellings** provide an important source of alternative and affordable housing for singles, students and couples. To encourage their **development**, and because **dwellings** of this nature result in a low population density per dwelling unit, they do not generate the same demands for car parking as two or three bedroom dwellings, and result in less building bulk. The R-Codes Volume 1 allow the same **site area** concessions as for aged or dependent persons' dwellings (clause 5.1.1 **C1.4i** of the R-Codes Volume 1), however, there are no constraints on the age of occupants and there is no requirement for special facilities to be provided.

To prevent these concessions from being abused, and to ensure that affordable housing options are provided through these concessions, it is important to ensure that floor area and site plans clearly propose a **dwelling** that would only support single or couple living arrangements in accordance with the definition of **single bedroom dwelling** under the R-Codes Volume 1.

The development of **single bedroom dwellings** is required to comply with all R-Code Volume 1 provisions as relevant, except as specifically exempted (for example, **site area** concession of Part D 1.1 of the R-Codes Volume 1). Only clauses relevant to the type of **development** proposed would be relevant, such as provisions related to either **grouped dwellings** or **multiple dwellings**, depending on the form of development proposed.

8.4 ACCESSIBLE DWELLINGS (Part B, Clause 5.5.4 the R-Codes Volume 1 – R30 to R40 – single houses only)

(refer Part C Clause 2.7 the R-Codes Volume 1 – R30 and above – grouped dwellings and multiple dwellings)

INTENT

There is a growing demand for **dwellings** that incorporate design features for people with limited mobility. **Accessible dwellings** enable people of all abilities to continue to live well in their own homes by ensuring that dwellings can meet the ongoing needs of occupants. Accessible dwellings benefit all members of the community, including older people, visitors and those with a permanent or temporary disability.

DESIGN GUIDANCE

The **deemed-to-comply** standards and accompanying checklist (**Appendix A4**) refer to minimum Silver and Gold requirements from the publication, *Livable Housing Design Guidelines*, prepared by Livable Housing Australia (<http://www.livablehousingaustralia.org.au/>) and the Australian Building Codes Board *Livable Housing Design Standard* 2022.

ASSESSMENT GUIDANCE

More information on **accessible dwellings** can be found on the Livable Housing Australia website (<http://www.livablehousingaustralia.org.au/>).

Where Livable Housing Design certification is not provided, applicants are to demonstrate how compliance with **Element 5.5.4** has been achieved. To assist assessment, the checklist (**Appendix A4**) should be completed with **accessible dwellings** annotated on plans to accompany application drawings.

Where a proponent is seeking a gold level **site area** variation as per **C1.1.6**, a restrictive covenant should be applied at the subdivision stage and should allocate the subject **site** and/or **lots**.

Figure 76 This development, designed for adaptability and universal access, has a considered entry sequence with a wide, obstacle free path to the entry

8.5 SMALL DWELLINGS (Part B, Clause 5.5.5 the R-Codes Volume 1 – R30 to R40 – single houses only)

(refer Part C Clause 2.9 the R-Codes Volume 1 – R30 and above – grouped dwellings and multiple dwellings)

INTENT

One or two-person households now make up more than half of all households in Western Australia (ABS 2016). **Small dwellings** provide an alternative approach to meeting different housing needs, including providing for more affordable options, housing diversity and facilitating ‘downsizing’ opportunities. To encourage uptake, the R-Codes allows a **site area** concession to support the development of small dwellings.

Part B of the R-Codes previously included provision only for **single bedroom dwellings**. Changing lifestyles, demographics, working habits and other needs has meant that space that could be used for a second bedroom or study is becoming more desirable in single bedroom dwellings. The removal of the single bedroom limit for higher density housing provides greater flexibility for these homes to provide for the needs of the occupants while still providing diverse housing outcomes. Efficient planning and design is required to achieve additional habitable spaces and functions within the same **dwelling internal floor area**.

These elements apply to **small dwellings** that are using the **site area** concession of **Part D, C1.1.6**. Other small dwellings may be proposed but would not need to meet the requirements of this element when not applying for the concession.

DESIGN GUIDANCE

When selecting a suitable **site** and designing a **small dwelling**, consider the following:

- small dwellings should diversify the housing choice available within a given locality and should not be the only or predominant **dwelling** type fronting the same **street** or within the same street block;
- small dwellings should be located in areas with good access to public transport, open space, retail uses and community facilities;
- small dwellings should capitalise on and contribute to existing **local character** and **amenity**, such as views to open space and **streetscape**; and
- small dwellings should include flexible and adaptable spaces.

The **internal floor area** limit of 70m² for single houses is typically enough space for one or two bedrooms. Where additional bedrooms are proposed, care should be taken to ensure that the bedrooms and other **habitable rooms** within the dwelling are functional and useable and do not compromise the **amenity** and liveability of the occupant.

ASSESSMENT GUIDANCE

A **small dwelling** can be provided in the form of a **single house, grouped** or **multiple dwelling**. **Part C Clause 2.9** applies to **grouped** or **multiple dwellings**.

Small dwellings should comply with all relevant elements of the R-Codes as they would apply to **single houses**.

For **sites** created for **small dwellings**, appropriate measures (such as a notification under section 70A Transfer of Land Act 1893 registered on the Certificate of Title or a restrictive covenant) to limit **development** of the site to a small dwelling should be considered.

Figure 77 Small dwellings may provide an opportunity to retain existing dwellings and trees

PART C

Single houses R50 and above; R100-SL; R-AC

Grouped dwellings R30 and above; R100-SL; R-AC

Multiple dwellings R30-R60

1.0	THE GARDEN	78
2.0	THE BUILDING	90
3.0	NEIGHBOURLINESS	112

1.0 THE GARDEN

The garden connects the home to the outdoors, bringing in sunlight, natural ventilation and an attractive outlook that contributes to the liveability and amenity of the dwelling. Gardens can be private, like a backyard, or communal space, such as a shared roof terrace or courtyard for apartments.

The elements in the garden section work together to encourage site planning that prioritises private open space and tree canopy.

- 1.1 Private open space
- 1.2 Trees and landscaping
- 1.3 Communal open space
- 1.4 Water management and conservation

1.1 Private open space

♦ INTENT

Well designed and oriented **private open spaces** (including **courtyards**, **terraces** or **balconies**) connect occupants to the outdoors through outlook and connection to **landscape**. A private open space that is accessed from the **primary living space** extends the **dwelling's** living area. Private open spaces should be designed for functionality, **amenity** and to support good passive environmental performance of the dwelling.

The **primary garden area** requirement applies to **single houses** and **grouped dwellings** only. For **multiple dwellings**, the **private open space** may be in different forms, such as **balconies** and **courtyards**. Where a **primary living space** is proposed on an upper level for a single house or grouped dwelling **development**, private open space (such as a **balcony** or a **rooftop terrace**) is required (refer **C2.1.2**).

Figure G1.1a Optimum siting of the primary garden area for regional climate zones

DESIGN GUIDANCE

Responding to Climate - primary garden areas

The **primary garden area** should be located to respond to siting and orientation of the **dwelling** informed by the climate zone and **lot** orientation.

Locating the **primary garden area** between north-west and east of the **dwelling** in climate zones 4, 5 and 6 enables effective control of **solar access** to the dwelling through eaves and shading devices to an adjacent **primary living space**. This can facilitate passive solar heating and cooling and deliver energy efficient house designs. In climate zones 1 and 3, primary garden areas should be located to capture prevailing breezes and to enable **natural ventilation** through the dwelling, refer **Figure G1.1a**. Development should also consider additional covered areas and shading in climate zones 1 and 3.

Designing for comfort is important as **primary garden areas** may be used for extended periods and during different seasons and times of the day. Designing for comfort may involve providing weather protection and shading structures, such as **pergolas** (with or without planting), shade sails or **patios**. In climate zones 4, 5 and 6, these structures should be designed and located to maintain **solar access** into the **primary living space** of the **dwelling**.

Where maximum permanent roof cover is met and additional usable space is required, consider structures which permit **sunlight** into the **primary living space** such as **pergolas**, trellis, fixed open louvres and/or shade sails.

For some developments it may be appropriate to provide a secondary outdoor space to the **primary garden area**, such as a front **porch** or **verandah**. Multiple outdoor areas with different orientations allow use during different seasons and times of the day, as well as providing spaces for simultaneous use by different members of the same household.

Photo G1.1a A well located primary garden area contributes to the amenity and functionality of the home (PC)

1.1 Private open space (cont.)

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Where the ability to provide **private open space** is constrained due to a pre-existing **site** condition (for example, adapting a retained **dwelling** or apartments fronting busy roads), providing an alternative secondary living space and/or increasing the **communal open space** may be acceptable. A larger area of communal open space to offset decreased private open space may also be appropriate where the **development** aims to facilitate communal living, such as student, supported or co-operative housing.
- In cooler climates and for **buildings** exposed to extreme weather or noise, **balconies** may not be appropriate and providing winter gardens (glazed **enclosed** balconies) to apartments could be a suitable alternative.
- Where the **primary living space** is provided on an upper floor, it may be appropriate to reduce the size of the **primary garden area**, where a private open space area (such as a **balcony** or rooftop **terrace**) is provided in accordance with **Table 1.1a**. The reduced primary garden area should be 100% uncovered and open to the sky without restricting the site from achieving **deep soil area**, tree planting and **soft landscaping** requirements.
- For **single houses** and **grouped dwellings** where it is necessary to provide a primary garden area within the **street setback area**, it should be designed to facilitate street surveillance between the dwelling and the **street** and minimise the use of visually impermeable or solid front fences above 1.2m in height. Further levels of privacy can be achieved by **screening** portions of the space with **landscaping**, while maintaining **sightlines** to **major openings** and dwelling entrances.
- For primary garden areas where the **deemed-to-comply** maximum covered area has been met, additional covered areas may be provided where it can be demonstrated that required deep soil area, **solar access** to the primary living space, **site cover** and soft landscaping can be achieved.

Photo G1.1b A ground floor apartment may be provided with a courtyard garden that includes trees and productive garden beds

Photo G1.1c A generously sized balcony can function as an extension of an apartment's living space. This balcony retains a good external outlook from the primary living area

Functionality and use

The **private open space** should be of sufficient size and dimension to be used in a flexible way for different functions, including socialising, recreating and resting. The design of private open spaces, in particular **balconies**, should consider providing:

- a water tap for plants / pets, space for a barbeque, and power points for appliances; and
- additional space and **screening** for clothes drying, **storage** and air conditioning units.

An appropriate size, location and configuration for the **private open space** will depend on the **site** context, **dwelling** size, site orientation, as well as relationship to **landscape** and views.

For **balconies**, as a minimum, the dimensions should be enough for a table and chairs supporting use by the likely maximum number of **dwelling** occupants.

The extent of paved surfaces and **landscaping** of **private open space** should be apportioned to enable a range of uses and daily activities including paving for alfresco, **service areas**, access to carparking, **storage** and **utilities**.

Outbuildings are not to be included in the calculation of **primary garden area**.

An area of **private open space**, connected to the **primary living space**, should be provided for the exclusive use of each **multiple dwelling**. It may be in the form of a **balcony**, **terrace**, **courtyard** or equivalent.

Where possible, avoid locating air conditioning units on **balconies**. Where this cannot be achieved, orient the exhaust away and appropriately screen from the functional areas of **private open space**, especially seating areas.

1.1 Private open space (cont.)

Outlook versus privacy

The design of **balconies** should balance the need for occupant and neighbour privacy, while providing an outlook from the **dwelling** to external spaces. Consider orienting balconies to minimise the need for visual privacy **screening** as this can restrict **daylight** access and outlook from the **private open space** and adjoining **habitable rooms**.

C1.1.4 limits the extent of **screening** of **balconies** to a maximum of 75% of the total perimeter to ensure **solar access**, **natural ventilation** and outlook is maintained to the **dwelling**. For a recessed **balcony** with **walls** on three sides (which equate to ¾ of the balcony's perimeter), this provision requires that the remaining fourth side is unscreened. In this case, alternative effective methods need to be considered to satisfy the visual privacy provisions of element 3.10 *Visual privacy*.

Examples of unscreened balustrades include any balustrade below 1.6m in height, and any balustrade 1.6m, or greater in height with a material less than 75% obscure including clear glass panel, perforated metal and clear polycarbonate.

Walls 1.6m or greater above floor level, and are visually obscured through the use of textured, opaque and/or translucent materials are considered to be **screened**.

Design integration

For **multiple dwellings**, integrate **balconies** into the overall form and aesthetic of the **development**. For example:

- projecting **balconies** should be compatible with the **building** design, including the design and finish of soffits and fascias;
- operable screens, shutters, hoods and **pergolas** should complement the main building materials; and
- **balcony** drainage should be integrated within the building **façade**.

Photo G1.1d Early planning can make private open spaces function well by making provision for a gas point for a BBQ, a screened space for laundry drying, and a tap for watering (PC)

ASSESSMENT GUIDANCE

When calculating the **primary garden area**, the following spaces can be included*:

- **deep soil areas** and **landscaped** areas (refer **Figure 1.1a**);
- **pergolas**, **patios**, **unenclosed** alfresco dining/living areas, unroofed **terraces**, areas under eaves and **balconies**, decks and steps with a floor level not greater than 0.5m above **natural ground level**;
- **street setback areas** where functional, useable areas are proposed;
- swimming pools and spas; and
- **service areas** such as clothes drying, air conditioning units and the like.

**Provided that the minimum length and width dimension can be met.*

Spaces under eaves are included in the **primary garden area** (to a maximum 0.75m eave depth) as they allow for functional use of the space while performing an important role in achieving climate responsive design and shading of **walls**, windows and openings.

Where permanent roof cover is provided and attaches to an eave, the portion of eave is to be included in permanent roof cover calculations.

When calculating **private open space** for a **multiple dwelling**, exclude **service areas** such as bin storage, clothes drying, air conditioning units or other similar **utilities**. The private open space is required to have direct and physical access from the **primary living space**.

1.2 Trees and landscaping

► INTENT

Landscape design that responds to climate, topography, soil conditions and existing significant **landscape** features allows **developments** to contribute positively to **local character** and neighbourhood **streetscape** appeal.

Retaining existing trees and providing space for new trees is a priority. Trees in the urban environment provide a range of important services including mitigating carbon pollution, improving urban air quality, reducing urban heat island impacts, and conserving energy.

Deep soil areas provide for **sustainable** urban **stormwater** management. These services provide substantial qualitative and quantitative benefits for people and ecosystems. Trees provide shade and fauna habitat, enhancing **dwelling** outlook and can contribute to privacy.

*The R-Codes require a **landscaping** plan to be included with an application for five or more **grouped dwellings** or for a **multiple dwelling development**. Refer to Appendix 3 Application documentation of the R-Codes Vol.1 for full requirements. For a **single house** proposal, the extent location and species of trees and landscaping is to be illustrated on the site plan.*

DESIGN GUIDANCE

Trees and Deep Soil areas

Deep soil areas support and sustain the development of tree canopy and the retention of existing trees. A deep soil area is an area of soil that is free of built structure above and below, has sufficient area to support tree growth and enable the infiltration of water. **Site** planning should seek to locate deep soil areas in locations best suited for healthy tree growth.

Deep soil areas are to be located wholly on **site** and be of a sufficient dimension and area to protect and sustain healthy root systems for new and retained trees and to receive rainwater infiltration. Deep soil areas should be identified as part of initial site planning, with prioritisation given to co-locating **private open spaces** and/or communal spaces with retained trees.

Residential development that removes trees or diminishes the long-term growth of healthy trees creates negative **site** impacts as well as broader cumulative impacts for neighbourhoods. Ensuring the health and viability of trees (both new and retained) is a priority for housing design. Refer to relevant local government Urban Forest Strategies or species selection list (where available) for guidance on suitable species, planting locations and approaches to tree provision and retention.

Careful consideration should be given to the location of trees to limit tree roots and canopy from traversing **lot** boundaries while noting that the minimum dimension and **deep soil area** is required to be provided on **site**. Generally, tree canopy diameter at maturity is not intended to fall outside of the **development site**, particularly where this may impact a neighbours' **amenity** regarding **sunlight** and views.

Trees should be located to ensure canopy (at maturity) and root systems are clear of **buildings**, buildings over and footings to ensure healthy tree growth and reduce impact on structures. Where this cannot be achieved, consider species with an appropriate canopy and root system for the location.

Tree location, size and species selection should permit winter **sunlight** to enter into the **primary living space**. In climate zones 4, 5 and 6 where a **private open space** is located to the North-West to East of the primary living space careful consideration should be given to planting location. When retaining a **significant existing tree**, the primary living space should likewise be located to ensure sufficient **winter solar gain**.

Where a different quantity and size of tree is proposed to **Table 1.2a**, or where a **significant existing tree** is retained, ensure an equal or greater amount of **deep soil area** is provided to support sufficient tree canopy and healthy tree growth.

Where trees are proposed to be planted by others as part of a development application, **decision-makers** should condition the tree requirement.

Photo G1.2a Waterwise planting contributes to the streetscape and creates an effective transition between the public realm of the street and private realm of the apartment site

1.2 Trees and landscaping (cont.)

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- **Appropriate preparation of site ground/soil conditions is often needed to ensure good long-term health of planting. Considerations may include:**
 - o **contouring of soil to ensure stormwater flows away from structures and towards soft landscaping areas;**
 - o **soil stripping to loosen soil compacted during construction process;**
 - o **preparation of sub-soil membranes and drainage;**
 - o **conditioning of soil to enhance the water and nutrient retention capacity; and**
 - o **use of structural cells for new trees adjacent to hard stand areas/structures with compacted soil.**
- In climate zones 1 and 3, where it may be difficult to accommodate the **deep soil area** and tree requirements, alternative landscaping responses and shading devices may be appropriate.
- A reduction in overall deep soil area may be considered where one or more trees are proposed on the same site and are adjacent to each other. For example, where two trees are proposed in the **street setback area** for a **grouped dwelling**. This reduction should support the healthy growth of both trees with appropriate space for roots and tree canopy.

Retaining existing trees

Retention of **significant existing trees** should be prioritised, as small, newly planted trees are usually no substitute for the value of larger retained trees in terms of **amenity**, micro-climate, fauna habitat and ecological benefits.

Where an existing tree within a **site** (or an adjoining tree) is identified for retention or on-site relocation, advice from an arborist is recommended to ensure the tree is protected during and post-construction.

A tree protection zone (TPZ) should be established to protect an existing tree from the impacts of **development** and ensure that the tree remains viable. The radius of a TPZ is calculated for each tree by multiplying the trunk diameter (measured at 1.4m above ground) by 12 (refer **Figure G1.2a**). More detailed guidance is provided in Australian Standard 4970-2009 and covers tree protection on construction **sites** and outlines the recommended approach for protecting and retaining trees within developments.

To prioritise the long-term health of existing trees, TPZ's should be identified at the **site** planning stage and the subsequent location of all **building** services, footings, soakwells and structures should be avoided within the TPZ.

Where a retained **significant existing tree** dies during the **development** construction period, the required **deep soil area** must still be provided, and the local government may require a suitable replacement tree of similar size to be planted.

General landscaping

Landscape design and installation should have regard to the following:

- meeting occupant requirements, including the need for security and safety (**sightlines**, lighting), comfort and low maintenance;
- using durable and **sustainable** surface materials for vehicle **driveways** and parking areas; **primary garden areas**; **communal open spaces**; and **private open spaces** (examples include light coloured materials and permeable paving);
- minimising potential impacts on **amenity** (visual, odour, noise) from outdoor equipment such as barbecues and lighting;
- bushfire risk management where located in an identified bushfire prone area (refer *SPP 3.7 Planning in bushfire prone areas*); and
- safety, including incorporation of Crime Prevention Through Environmental Design principles.

Photo G1.2b Planting on structure – a green wall at the entry to an apartment building

1.2 Trees and landscaping (cont.)

Landscape should be designed to be **sustainable**, with consideration to enhancing the micro-climate and improve the thermal performance of **buildings**. Strategies to consider include:

- providing a balance between evergreen and deciduous trees for shading in summer and **solar access** in winter, and using shrubs and vines/creepers to shade east and west facing windows (climate zones 4, 5 and 6) to reduce heat load on buildings;
- locating trees to ameliorate building bulk and scale;
- incorporating shade structures, such as **pergolas**, to complement trees and enhance the microclimate;
- greening roofs or **walls/façades** to shade and cool the building;
- using materials with high reflectivity and low heat conductivity;
- minimising turf (e.g. using loose aggregate, mulch and/or trafficable planting areas as alternatives) unless sustainable water harvesting, and reuse systems are used;
- maximising **permeable surfaces** to allow infiltration of rainwater and irrigation; and
- eco-zoning and hydro-zoning plants, and subsurface irrigation to minimise irrigation needs.

Water Corporation provides a range of online resources for waterwise **landscaping**. (www.watercorporation.com.au/Waterwise)

Semi-permeable surfaces and alternatives to impervious paving

The use of grass paver systems, permeable paving, porous concrete and loose aggregate surfaces is encouraged as an alternative to **impervious surface** areas to support water infiltration, moisture retention, improved plant health and the reduction in radiant heat. Appropriate soil profiling, sub-grade treatment and detailing is required for each of these permeable paving strategies.

Where loose aggregate is used as an alternative to paved surfaces, the type, depth and detailing (e.g. ground preparation, soil profile and edging/kerbing) of the loose aggregate should be considered to ensure that it supports the intended function

of the **site/garden** area and enables safe access and efficient maintenance.

The use of loose aggregate, grass paver systems and porous concrete for **driveway** and car parking spaces is encouraged where the surface is appropriately durable and robust, and where planting areas can be provided directly adjacent to the space.

Planting and soft landscaping

Soft landscaping areas can include areas under eaves and **building** projections, planting on structure, and planting over sewers and services, and can be included in soft landscaping calculations where the planting area has a minimum dimension of 1m.

Soft landscaping can include planting, lawn and organic mulch. It does not include pools, rockeries and ornamental ponds. Semi-permeable surfaces such as grass pavers, decks, loose aggregate, permeable concrete paving systems and porous concrete systems, while providing some level of water permeability are not to be included in soft landscaping calculations.

Figure G1.2a Establishing a tree protection zone

A range of planting of various scales, including shade trees, shrubs and groundcovers, should be identified on **landscape** plans. Local native plants are encouraged as they can benefit the local urban ecology and, once established, generally require less water and maintenance than exotic species. Refer to relevant local government species lists (where available) for guidance on suitable plant selection.

When considering the appropriateness of pools, rockeries and ornamental ponds these are not to impact the extent of required **soft landscaping**.

Planting design (including consideration of location, size, species, habit) should be coordinated with hydro-zoning (grouping of species or vegetation types with similar water requirements) and irrigation strategies, micro-climate and built form to ensure long-term viability and maximum benefit to the **amenity**, function and performance of the **dwelling**.

Photo G1.2c Soft landscaping and deep soil area provided to the primary garden area (PC)

1.2 Trees and landscaping (cont.)

Landscaping in the street setback area

Landscaping within **street setback areas** should enhance **streetscape** character and soften the built form. Aim to maximise planting areas and limit **impervious surfaces** (refer **Photo G1.2a**). This includes making provision for trees and landscaping in and around vehicle access and parking, while maintaining safe **sightlines**.

Consider tree planting and **landscaping** within the verge where **local planning frameworks** allow this. This can make a significant contribution to community tree canopy targets, street micro-climate, water infiltration, and **streetscapes**.

Photo G1.2d Provision of trees in the street setback area enhances the streetscape character and softens built form (PC)

Landscaping in the communal street

Landscaping of communal streets should incorporate appropriate planting and provide a high-quality landscape environment, giving consideration to:

- appropriate interface of the communal street with **primary living spaces** and **habitable rooms**, by providing privacy and acoustic attenuation
- legible definition and separation of **dwellings** from the communal street
- shading of the communal street with **soft landscape** areas adjacent to, and/or integrated with, the communal street
- opportunity for semi-permeable paving surfaces including use of grass paver systems, porous concrete and loose aggregate surfaces to **driveways**
- integrated features and elements that encourage slower vehicle speeds and safe, shared-use with pedestrians.

Planting on structure

Planting on structure can assist with **landscaping** constrained spaces (refer **Photo G1.2b**) and includes:

- **wall** supported planting (including trellis structures attached to walls);
- green roofs, particularly where roofs are visible from the public domain or other parts of the **development**;
- large scale planter boxes suited to small or medium trees; and
- green walls, living walls and/or vertical gardens.

Planting on structure solutions need to respond to local climatic conditions, as some solutions may not be viable. Plant species selection should have regard to micro-climates and plant longevity. Soil profile and volume should facilitate good plant growth. Consider modifying depths and widths to suit plant species and irrigation frequency, and providing sufficient volume for tree anchorage.

Depending on scale, successful planting on structure may require technical expertise. Planters may need to be supported by reinforced structures to deal with additional saturated soil weight.

ASSESSMENT GUIDANCE

Trees

Development is to provide sufficient space for healthy tree growth and tree canopy. Where trees are proposed to be planted, the submitted plans are to clearly identify the corresponding **deep soil areas** consistent with the dimensions specified in **Table 1.2b**. The deep soil area is to be free from all encroachments and underground structures, including soakwells and any semi-permeable surfaces.

Deep soil areas

A **deep soil area** can be an irregular shape, provided the relevant minimum required dimension is achieved. Minimum dimensions relate to tree size and refer to the minimum length and width of all areas that contribute to the deep soil area.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Local governments are often able to provide more regionally and climate-specific guidance on appropriate species selection and soil conditions. They can also identify locally significant trees that are critical to retain for both the ecological benefits as well as the community value they contribute.

*The following matters may assist when considering modifications through a **local planning framework**:*

- Establish species selection lists that are responsive to the region, considering factors such as:
 - Soil and climate conditions
 - Waterwise planting
 - Endemic species
- Establish a local significant tree register in order to identify and protect locally **significant existing trees**.

1.3 Communal open space

♦ INTENT

Communal open space provides occupants of grouped and **multiple dwelling developments** with space for recreation and socialisation beyond their **private open space** and **primary garden areas**. It also creates room between buildings for trees and **landscaping**.

DESIGN GUIDANCE

Communal open space may include outdoor spaces that are **unenclosed**, semi-enclosed and/or partially covered. Spaces can be located at ground or on upper levels and should be sized and designed to be functional, attractive and accessible to all occupants of the **development**.

Communal open space may include improvements such as:

- seating, shared BBQs, and play areas connected to high amenity **landscaping** and **deep soil areas**;
- vegetable gardens;
- planting on structures; and
- recreation facilities.

For smaller **sites**, **communal open space** should be provided as a single consolidated area to maximise its functionality. On larger sites, a series of well-integrated, communal **open spaces** offering complementary uses may be more appropriate.

Communal open space should be well-lit for evening use (with consideration given to potential light impacts to **dwellings** and adjacent properties) and be open to **passive surveillance** from adjoining dwellings and/or the public realm. The cost for maintaining communal open space is typically shared by owners. The design of communal open space should therefore have regard to ongoing maintenance costs and programming.

ASSESSMENT GUIDANCE

Communal open space should promote gathering and social interaction. It does not include primary external circulation areas for vehicles or pedestrians however a seating niche or small gathering space within a circulation area could be included. Covered communal facilities connected to **open space** and publicly accessible communal open space within the **development site** (if provided) can contribute to communal open space requirements. Communal open space may be co-located with **deep soil areas** and **soft landscaping**. Public open space contributed as a requirement of other **WAPC** policies is not included in communal open space calculations.

Communal open space may be provided in multiple areas, provided the minimum dimension of 4m is achieved. Minimum dimension refers to the minimum length and width of all areas that contribute to the communal **open space**.

For larger **sites** with more than one **multiple dwelling building** on the site, the **communal open space** should be evenly distributed or provided as a consolidated central space, whichever provides greater benefit to the residents.

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Where a **development** is located close to a high **amenity** area (within approximately 100m) that offers a choice of accessible recreation and community facilities for the residents of that development, it may be appropriate to reduce the required amount of **communal open space**. In such instances, at least one useable communal open space area should be provided within the **development site**.
- Where all **dwellings** within a development are provided with larger **private open space** a reduction in communal open space may be appropriate.

Photo G1.3a A rooftop communal open space to an apartment building provides opportunities for social interaction between residents and guests (PC)

Photo G1.3b Communal open space with landscaping and trees

1.4 Water management and conservation

► INTENT

Water sensitive urban design (WSUD) measures should be considered at all stages of the **development** process, from **site** planning for on-site or off-site **stormwater** disposal, through to **building** design to capture and recycle stormwater for gardens and occupant use. WSUD measures should also respond to regional variations.

Photo G1.4a Compact rainwater tanks can be neatly located within the primary garden area

DESIGN GUIDANCE

Due to the wide variation in rainfall patterns and **site** conditions across Western Australia, water management solutions must respond to local conditions. In all instances it is necessary to plan for **stormwater** management at the onset of planning a medium density **development**, as this will be easier than retrofitting a system post-development.

In locations where on-site **stormwater** retention is required, designs should maximise **deep soil areas** for infiltration and groundwater recharge at the source. Consideration should also be given to diverting and recovering stormwater for use within the **site**, such as for garden areas and rainwater tanks, rather than directing runoff to soakwells. Refer to the Department of Health for guidance on the use of rainwater tanks (<https://www1.health.gov.au/internet/main/publishing.nsf/Content/ohp-enhealth-raintank-cnt.htm>).

Where climatic, local soil or groundwater conditions are insufficient to support on-**site** retention, consider the use of rainwater storage tanks (e.g. infiltration cells and soakwells).

Stormwater should be directed to a district or local stormwater drainage system where permitted by the local government. This approach limits unnecessary fill on **site** and ensures that stormwater is managed to avoid potential flooding. For **development** within Perth, refer to the Department of Water and Environmental Regulation's Perth Groundwater Map (<https://www.water.wa.gov.au/maps-and-data/maps/perth-groundwater-atlas>).

Photo G1.4b Permeable pavers planted with hardy waterwise plants can provide trafficable areas

Where off-**site** disposal is required, **stormwater** management should ensure that the quality of water leaving the site is equivalent to, if not improved from, the quality of water received, with particular consideration given to potential sources of pollution and sediment control.

When designing a **development**, consider opportunities to incorporate WSUD measures, including within **buildings**, gardens, vehicle access areas, and verges. Effective WSUD may include:

- incorporating raingardens, tree pits and vegetated swales into the **landscape** design for infiltration and groundwater recharge at source;
- reducing runoff and peak water flows by minimising **impervious surfaces** and/or substituting impervious surfaces with permeable paving (refer **Photo G1.4a**) and landscaping; and
- minimising potable water use through water efficient appliances and irrigation, low-water gardens, rainwater tanks and greywater re-use.

Greywater re-use systems must be approved for use in Western Australia and comply with the *Code of Practice for the Reuse of Greywater in Western Australia 2010* (Department of Health).

The Department of Water and Environmental Regulation and Water Corporation provide online resources for urban water management. (<https://www.water.wa.gov.au/urban-water/urban-development/urban-water-design>) (<https://www.watercorporation.com.au/Our-water>)

ASSESSMENT GUIDANCE

The water management and conservation requirements will vary between local government jurisdictions and may depend on soil type, climatic conditions or the capacity of local drainage and water management systems. For some localities it will be appropriate for **stormwater** to be retained on-**site**, however in other jurisdictions, drainage to off-site stormwater systems may be required. The **deemed-to-comply** provisions provide for both scenarios.

This page has intentionally been left blank

2.0 THE BUILDING

'The building' includes the dwelling and the associated structures that make up a home. The elements in the building section of the R-Codes Volume 1 work together to guide the design of dwellings so that they perform well, feel good, and allow occupants to use their homes flexibly.

Designing the building to ensure living spaces have optimal orientation and connection to the outdoors, bringing in sunlight, winter solar gain, natural ventilation and providing an attractive outlook, contributes to the liveability, amenity and sustainability of a home.

As lot sizes decrease the need for efficient and flexible dwelling design increases and providing spaces that can do more than one thing and can adapt to changing needs, becomes more important.

INDOOR AMENITY

- 2.1 Size and layout of dwellings
- 2.2 Solar access and natural ventilation

The elements within this sub-section promote internal dwelling spaces that are well-proportioned, functional and integrated with gardens and outdoor space. These attributes contribute to occupant amenity and support climate responsive dwellings that are comfortable throughout the year.

FUNCTION

- 2.3 Parking
- 2.4 Waste management
- 2.5 Utilities
- 2.6 Outbuildings

As lots get smaller, the spaces within and around dwellings need to be more efficient and work harder to ensure functionality while supporting amenity. Designing functional dwellings means considering how spaces and uses can work simultaneously or adaptively, depending on the need, time of day, week or year.

HOUSING DIVERSITY

- 2.7 Universal design
- 2.8 Ancillary dwellings
- 2.9 Small dwellings
- 2.10 Housing on lots less than 100m²

The R-Codes aim to diversify housing to broaden the choice for Western Australians, supporting affordability, ageing-in-place, alternative housing types and accessible and adaptable dwellings.

Indoor amenity

2.1 Size and layout of dwellings

► INTENT

The size and dimensions of **habitable rooms** should be adequate for functional use of the space. Minimum room areas / dimensions and **dwelling** sizes are included for **multiple dwellings** to ensure each dwellings can accommodate required furnishings and provide for flexible use and occupant amenity. Guidance regarding the location of habitable rooms away from sources of noise, light spill and odours will help protect occupant amenity.

The location of the **primary living space** adjacent to **private open space** ensures sufficient **solar access, natural ventilation** and connection between internal and outdoor living.

Storage requirements help preserve living spaces, reduce the need for off-site storage, and enable residents to pursue hobbies and lifestyle choices.

DESIGN GUIDANCE

Primary living space

The floor area of the **dwelling** and the dimensions of individual rooms should allow for different furniture arrangements based on occupant needs. Location of doors, windows, circulation spaces and electrical fittings should support flexible and functional use of spaces and enable privacy.

The shape and dimensions of the **primary living space** should consider the functionality of the space and furniture placement, including kitchen cabinetry and lounge / dining areas.

The **primary living space** should be located for **natural ventilation** and optimal orientation for the climatic zone, and have physical and visual access (e.g. sliding glass door, bi-folds or alternative suitable **major opening**) to the **primary garden area** or **private open space** (refer **Photo G2.1a**). See also design guidance in 1.1 *Private open space – Responding to climate – primary garden areas*.

For **multiple dwellings**, ceiling height contributes to the perceived spaciousness of interiors. Room width, depth and height should be considered together to create well-proportioned spaces. Correct proportions, along with generous sized windows can improve **daylighting**, thermal performance and facilitate good **natural ventilation**.

Where minimum dimensions for the **primary living space** of a **multiple dwelling** cannot be achieved, additional ceiling height should be considered to ensure the living space is proportionate to the size of the **dwelling** and provides adequate **amenity**.

The maximum depth of a **single aspect primary living space** for **multiple dwellings** can be increased where it can be demonstrated that appropriate levels of **daylighting** can still be achieved e.g. the extent of glazing is increased such as through the provision of full height glazing.

Avoid geometries, dimensions and proportions for **open plan** living areas that create functional inefficiencies and are impractical to furnish.

Transitions between internal spaces should be considered to enable separation of functions, privacy and mitigation of acoustic impacts where appropriate. Door swings and alignment should be appropriately considered to ensure that the functionality and use of spaces is not compromised.

Limiting internal **dwelling** circulation (while meeting **universal access** requirements) can allow better use of spaces. Strategies may include:

- integrating circulation spaces into the functional layout of rooms; and
- zoning rooms or areas within the dwelling that have compatible functions to minimise passageways.

Photo G2.1a This well-proportioned and planned primary living space has been designed to flow to the private open space (PC)

Indoor amenity

2.1 Size and layout of dwellings (cont.)

💡 DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Where minimum **deemed-to-comply** floor areas of **C2.1.1** and **C2.1.5** cannot be achieved, applicants should demonstrate that the **dwelling** and rooms are functional, provide **amenity** and can be adequately furnished. A floor plan should be submitted demonstrating sufficient space for accurately scaled furniture arrangements.
- Where direct access between the **primary living space** and **primary garden area** cannot be achieved, visual access using a **major opening** should be demonstrated. The major opening should have at least 50% transparent glazing, of sufficient dimensions and be located to provide an outlook to the primary garden area. This may be of benefit for **dwellings** where a view may be desired from the primary living space and the primary garden area is not located in the orientation of the view.
- Where there are no other alternatives available for a **grouped dwelling**, an outlook may be provided to the **communal open space** or other **landscaped** area (including landscaped **street setback area**) subject to achieving the **solar access** requirements of **C2.2.4**.
- The splitting of a **storage** area to provide smaller spaces over separate locations is discouraged. Where multiple storage locations are unavoidable, the total area should exceed that shown in **Table 2.1b** to ensure that the spaces are functional and appropriate. Where minimum dimensions cannot be met, the applicant should demonstrate that a dedicated storage area can be provided for the use of each **dwelling** and is of adequate size to enable the storage of bulky items such as sporting and gardening equipment to address **P2.1.5**.

Habitable rooms

The shape and dimensions of **habitable rooms** should support the functionality of the space and furniture placement, including beds, bedside tables, cabinetry and desks. The minimum bedroom areas specified for **multiple dwellings** include robes and built-in cabinetry.

Major openings to ground floor **multiple dwellings** are not permitted to open directly onto carparking areas unless provided with a sufficient setback. This is to minimise the impact of potential noise sources and light spill.

Where this cannot be achieved, the window may be provided with **landscaping** (e.g. trees and/or shrubs) to separate the window from the carparking area. **Screening** is not considered appropriate.

Where access to a **dwelling** is directly from a carpark area, the design should mediate the transition to the dwelling's internal areas utilising strategies including:

- a **landscape** buffer
- a covered entry point
- a recess in the built form (e.g. alcove entrance)
- vertical separation (where easy access for pedestrians can still be ensured).

Photo G2.1b and c This storage area has been neatly integrated into the design of the balcony, is conveniently located, is of useful size and proportions, weatherproof, and screened from view

Storage

Storage areas are to be provided for all **dwelling** types, including **single houses**, grouped, multiple and **ancillary dwellings**. Storage should be readily accessible and can be located either internal or external to the dwelling – for example either in a **garage**, or accessible from the **balcony** and **screened** from view or adjacent to a dwelling entry.

Storage areas should be proportionate to the size of the **dwelling** and capable of accommodating larger items, such as sporting equipment, bicycles and barbeques. Storage should be fit for purpose, weatherproof, secure, and easily and safely accessed.

Within a grouped or **multiple dwelling development**, **storage** areas should be located away from the main activity areas/communal areas. The location of and access to storage should have good **passive surveillance** and be well lit.

Indoor amenity

2.1 Size and layout of dwellings (cont.)

ASSESSMENT GUIDANCE

When measuring internal **dwelling** and room floor areas, measurements are taken from the finished internal surface of the **wall** (refer **Figure G2.1a**).

A **single aspect open plan primary living space** would have most of the source of **daylighting** from a window or openings on one **wall**. Where another window is provided on an alternative wall and provides an alternative source of daylighting to the open plan primary living space, it would not be considered as single aspect. **Balconies** are excluded when measuring the maximum depth for single aspect open plan primary living spaces.

Designated primary living space

Where a **dwelling** has multiple living spaces, one of these areas should be designated as the **primary living space** and shown as such on the **development** drawings.

For **multiple dwellings** the minimum dimension required for **primary living space** is exclusive of built-in cabinetry along **walls** that reduce the size of the space, for example cabinetry such as pantries, shelving and the like. However other cabinetry internal to the room that does not impede the usable space, such as island benches, are excluded.

Figure G2.1a Measuring internal floor area

Storage

When locating **storage** in a **garage** or **carport**, the plans should show a clear and dedicated storage space in addition to any space dedicated to parking. The storage (and its adjacent circulation space) should not serve as an additional parking space where the maximum parking limits of **Table 2.3a** have been reached. Where storage is located within a garage or carport, careful consideration should be given to the manner and ease of accessibility to the storage area when the garage or carport is occupied.

Where **storage** is proposed on a **balcony**, the balcony is measured exclusive of that storage area.

Functional utilities and services can be co-located with **storage** areas, provided they do not impact on the minimum dimensions and volume required for the storage (refer **Table 2.1b**).

Indoor amenity

2.2 Solar access and natural ventilation

► INTENT

Designing for the climate creates comfortable and more energy efficient living spaces. As densities increase, **building orientation, solar access and natural ventilation** can offer the most affordable and effective way to manage indoor air quality, lighting and temperature, reducing or removing the need for mechanical ventilation and air-conditioning.

Requirements however vary according to **climatic zones**, and this must be factored into the design process.

*The **climate zones** referred to in the R-Codes are those used by the Australian Building Codes Board (ABCB) for thermal design and published in the National Construction Code (NCC), available for download: <https://www.abcb.gov.au/Resources/Tools-Calculators/Climate-Zone-Map-Western-Australia>.*

*Western Australia has vastly different climate regions, leading to locations around the State having varied heating and cooling requirements. To account for these differences, the **NCC** energy efficiency provisions vary from location to location and, for simplicity, locations with approximately similar climates are combined to create eight **climate zones** across Australia. For ease of use, the climate zone boundaries are aligned with local government areas and may be amended from time to time by the ABCB.*

*The **deemed-to-comply** provisions of Part C respond to the different **climate zones** by differentiating between climate zones 1 and 3, and climate zones 4, 5 and 6. No locations within Western Australia fall within climate zones 2, 7 or 8.*

DESIGN GUIDANCE

Solar access and natural ventilation requirements are dependent on climate:

- in **climate zones 4, 5 and 6**, the objective is to maximise **winter solar gain** and to minimise **sunlight** in summer, while maintaining good natural ventilation.
- in climate zones 1 and 3, the objective is to minimise solar access during all seasons, while maintaining **daylighting** and prioritising natural ventilation to keep **dwellings** cool and minimise internal humidity levels.

Solar access in climate zones 4, 5 and 6

Passive heating can be readily achieved by orienting living areas and windows to the northern aspect to allow low-angle winter **sunlight** and using horizontal shading to exclude high-angle summer sunlight. As a general rule, the preferred orientation for living area windows is within 15 degrees west of north and 25 degrees east of north to allow for passive **solar access**. However consideration should be given to local climate and conditions including prevailing breezes, colder temperatures and how the house is intended to be used.

Photo G2.2a Adjustable louvres are an effective way to control sun, glare, privacy and ventilation through the day and year (PC)

Generally, to maximise **winter solar gain** to the **building**, orientate the **dwelling** primarily to the north and prioritise north facing **major openings**. Consider also:

- dual aspect dwellings or dwellings with shallow layouts to maximise the benefits of northern orientation;
- high ground floor ceilings and mezzanines;
- tall north facing windows, bay windows, clerestory windows and skylights; and
- planting deciduous trees and shrubs to allow winter solar gain to dwellings and to provide shade in summer.

To minimise summer sun entering the dwelling consider:

- horizontal shading devices such as eaves, shutters or hoods to openings;
- locating **patios, carports** and **garages** to the west of the dwelling;
- tree planting and **landscaping** to the west and east of the dwelling; and
- minimising openings to the west and/or providing vertical shading devices to mitigate heat gain.

Shading in climate zones 1 and 3

To minimise sun entering the **dwelling** consider:

- deep eaves, awnings and **verandahs** to shade all windows and openings;
- climatically appropriate trees and **landscaping** to shade the dwelling and openings;
- minimising glazing and providing vertical shading to the east and west of the dwelling; and
- locating verandahs and **carports** east and west of the dwelling.

Indoor amenity

2.2 Solar access and natural ventilation (cont.)

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Where a **primary living space** does not meet the orientation requirements of **C2.2.4** and **C2.2.5** in order to capture a view/ outlook or to address quiet house requirements (refer *SPP 5.4 Road and rail noise*), a clerestory window or similar may be an appropriate alternative to capture northern **solar access**.
- Where **single houses** and **grouped dwellings** aren't able to meet **C2.2.4**, proponents should use solar access diagrams to demonstrate solar access is being achieved through **P2.2.1** & **P2.2.2**. Refer Technical Guidance Sheet 4.1 *Solar and daylight access* on how to demonstrate solar access for **multiple dwellings**.
- In most instances an openable window should be provided for **habitable rooms**. However, in some exceptional circumstances such as fire separation in the **NCC**, or bushfire areas, windows to habitable rooms may be required to be fixed. In this instance assessment would need to consider the requirements of the **building** codes and/or relevant local and state planning frameworks such as *SPP 5.4 Road and rail noise* and *SPP 3.7 Planning in bushfire prone areas*.

Natural ventilation

Appropriate layout and depth of a **dwelling** will facilitate good **natural ventilation**. Generally, as a room or **building** gets deeper, effective airflow reduces. Reducing the dwelling depth can improve natural ventilation.

To allow for **natural ventilation**, **habitable room** windows need to be openable.

Natural ventilation can be enhanced by locating openings towards prevailing breezes and providing dual aspect **dwellings** designed for cross-flow ventilation (refer **Figure G2.2a**).

For **climate zones** 1 and 3, including openings, louvres and breezeways oriented towards prevailing breezes assists with natural cooling. Consider also elevating the finished floor level of the **dwelling** and permeable fencing to allow breezes to enter the **site**.

Figure G2.2a Natural ventilation for passive cooling

Bathrooms should be located and designed to have at least one openable window for **natural ventilation**. For bathrooms that do not have an external **wall**, an openable skylight or **lightwell** and/or mechanical ventilation may be necessary.

Where the only external **wall** to a bathroom adjoins a covered **unenclosed** area (for example a communal circulation space), this wall should have an openable window where appropriate.

Courtyards

Courtyards are useful in providing adequate **solar access** and **natural ventilation**, so long as they are proportionate to the **building height** and provide adequate privacy and building separation. **Lightwells** are not suitable as a primary source of **daylight** to a **habitable room**, however, may provide a suitable option for a secondary source of daylight and natural ventilation. The key differences between **courtyards** and **lightwells** are:

- Courtyards can be **enclosed** on three or four sides and generally have proportions where the width is at least half the height.
- Lightwells are enclosed on four sides and have proportions where the width is less than half of the height (Refer **Figure G2.2b**).

Figure G2.2b Lightwell width to height ratio

Indoor amenity

2.2 Solar access and natural ventilation (cont.)

Figure G2.2c Regional variation of eave depths to achieve solar access and shading

Table G2.2a Midday winter solstice (approximately 21st June) vertical sun angles by latitude

City/Town	Latitude (S)	Vertical Sun Angle
Albany	35	31
Esperance	34	32
Bunbury	33	33
Perth	32	34
Kalgoorlie	31	35
Geraldton	28	38
Carnarvon	25	42
Karratha	21	45
Port Hedland	20	47
Broome	18	49
Wyndham	15	52

ASSESSMENT GUIDANCE

The size of glazed area in aggregate may be calculated across more than one openable external window to a **habitable room**. This may be necessary for larger (master) bedrooms.

Solar access

In **climate zones** 4, 5 and 6, covered **patios**, alfresco or equivalent within **primary garden areas** or **private open space** areas need to be located and/or designed to allow the **solar access** requirements of **C2.2.4** for **primary living spaces** to be achieved.

As **sunlight** angles can vary greatly throughout the State, local information should be used for each **development** proposal (refer **Table G2.2a** and **Figure G2.2c**).

No orientation requirements apply to primary living areas located in **climate zones** 1 and 3.

For **climate zones** 4, 5 and 6 optimum **solar access** is achieved through at least two hours of **sunlight** into key living spaces of the **dwelling** measured between 9am and 3pm on the 21st June.

Photo G2.2b A trellis for deciduous creepers provides an alternative to a patio while permitting solar access to the primary living space (PC)

Photo G2.2c Orienting windows to the north provides effective winter passive heating to primary living spaces (PC)

Function

2.3 Parking

► INTENT

Parking should cater for a range of transport modes, including cars, bicycles and scooters / motorbikes, and be commensurate with occupant and visitor needs.

Being efficient with how parking is designed, provided and used are important considerations for all **developments**, as the space allocated to parking can be significant and compromise how much room is left for internal living, outdoor areas, trees and gardens.

The R-Codes adopts the basic position of requiring adequate on-site provision of parking to be proportionate to the assessed need.

*There is a long-accepted principle that the demand for car parking generated by a **residential development** should generally be accommodated on the **development site**. However, the space allocated to vehicles (for both parking and manoeuvring) occupies a significant proportion of a **site** and can be detrimental to the overall design and living quality of the dwelling as well as the **amenity** and attractiveness of the broader neighbourhood. Extensive use of **garage** doors and wide **driveways** can adversely affect **streetscapes**, neighbourhood character and pedestrian safety. Reducing private vehicle use by promoting the use of alternative transport modes (including public transport and cycling) has both environmental and financial benefits.*

DESIGN GUIDANCE

The design, layout and provision of parking should balance and respond to considerations including:

- built form typology and tenure;
- occupant and visitor needs;
- access to available public transport and active transport infrastructure;
- topography (e.g. sloping **sites** may be more conducive to **basement** parking);
- impact on **streetscape** and resident amenity;
- site planning, in particular the preferred location and orientation of **dwellings** and associated **primary garden areas** and **private open space**.

On-site car parking requirements may be provided underground in **basement** parking, as uncovered above-ground bays, or in **carports** or **garages**. All parking layouts, bay sizes and design should be based on relevant Australian Standards.

Photo G2.3a Undercroft parking reduces the visual impact of parking on the street and provides an opportunity for flexible use of the space when not required for car parking

Strategies to consider when reducing the amount of space given over to car parking include:

- designing **unenclosed** parking spaces for multiple purposes, such as locating parking adjacent to **primary garden areas** to extend available outdoor space;
- combining parking spaces into a consolidated parking area and unbundling parking from tenure (unbundling parking refers to the practice of selling or leasing parking spaces separate from the **dwelling**);
- providing tandem parking;
- providing car stackers; and
- **building over** parking, for example undercroft, semi-basement or basement parking.

Consolidating parking into a single area away from **dwellings** reduces the amount of space needed to accommodate vehicles in **garages**. The parking area may also be used flexibly for other uses when cars are not parked.

Tandem parking allows car parking areas and vehicle manoeuvring to take up a smaller area. They may be a suitable option when developing a front-loaded **lot** with a narrow **frontage**.

Photo G2.3b The visitor parking is easy to find and is located outside the development's security gate for accessibility

2.3 Parking (cont.)

💡 DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- For **grouped** and **multiple dwellings**, parking is generally not supported in the **primary street setback area**. However, this may be acceptable where the application demonstrates a better design outcome will be achieved and the parking will not dominate the development or **streetscape**.
- In Location B it may be appropriate for a development to provide less than the minimum parking requirements of **Table 2.3a** where parking is communal and shared between **dwellings**, recognising the efficiencies this arrangement can provide.
- Some local governments may support a reduction in on-**site** car parking spaces where parking may be located off-site. An agreement should be made between the proponent and the local government.

Integrating parking with development

Where communal parking or visiting parking is provided, consider adequate **screening** or locating car parking away from **major openings** to ground floor **habitable rooms** to avoid light and noise pollution.

Parking should be integrated with the **landscape** design by extending planting and materials into the parking areas, planting shade trees, and incorporating permeable paving systems.

Ventilation grills or **screening** devices for car park openings or **basement** parking that protrude above ground should be integrated into the **façade** and **landscape** design of the **development**.

Address climate considerations in the location and design of parking. This may include weather protected walkways between visitor parking and **building** entrances, and in the warmer climates it may be appropriate to locate visitor parking centrally on the **development site** to reduce walking distances.

Visitor bays are readily accessed from the primary vehicle entry. Where located inside security gates intercom controls to facilitate visitor access must be provided.

When proposing visitor car parking bays consider visibility from access points into the **site** or **lot**. It is preferable to enable visitors to see whether visitor parking is available/occupied to minimise the need for additional traffic systems or dedicated turning bays.

Photo G2.3c Providing a carport rather than a garage reduces the visual impact of vehicles on the street or communal area, is usually less expensive to construct, and can be located in the front setback area

Photo G2.3d Incorporating EV charging stations and share vehicles in larger developments can contribute to reduced greenhouse gas emissions and reduced demand for car parking spaces

2.3 Parking (cont.)

Bicycle parking and supporting alternative transport modes

The design and location of bicycle parking should respond to the type and intensity of **development**. For example, smaller developments may make provision for bicycle parking within the **dwelling**, whereas for larger developments, shared bicycle parking in communal areas may be preferable.

Bicycle parking is to be additional to **storage** requirements. Bicycle parking is best provided in communal areas, on the ground floor level and should be as accessible as possible to encourage their use.

Where no occupant parking is proposed consider providing an exclusive space for bicycle parking.

Consider incorporating or making provision for future electric vehicle (EV) charging points for resident / visitor parking. Also consider providing **universally accessible** charging points for electric bikes and mobility scooters.

Photo G2.3e Bike parking is provided in a covered, accessible location that is accessible to visitors and residents of the development

Considerations for on-street parking

Where narrow **lot frontages** are proposed with vehicle access from the **primary street** ensure on-street parking can still be achieved. This is particularly important where narrow lot development is proposed along the length of a street as extensive hardscaping for **driveways** and **crossovers** prevents **landscaping** and parking of vehicles on the street.

Parking in mixed use development

For **mixed use development** residential parking should be separate from non-residential tenant and visitor parking or designated as resident parking.

It may be appropriate for tenants in a non-residential component of **mixed use development** to share access to a **building**, however individual access to residential lobbies and non-residential entries should be separate.

ASSESSMENT GUIDANCE

A tandem **garage** is considered to be two car parking spaces.

Where a car parking space is provided vertically above another car parking space (for example through a car stacker) this is considered an additional car parking space.

The maximum requirements of **Table 2.3a** are for **garages** and **carports** only. There are no maximums for uncovered parking spaces.

When measuring a **walkable catchment**, refer *Liveable Neighbourhoods* walkable catchment technique (Appendix 3).

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Carefully consider local context and access to alternative modes of transport when increasing or decreasing parking requirements.

*The following matters may assist when considering modifications through a **local planning framework**:*

- The need for on-site car parking can relate to the availability of parking on the **street**. Consider whether the road reserve (including verges) is wide enough to contain on-street parking without impacting the functionality of the street (for example waste collection and emergency service vehicles). This may assist in established urban areas, where narrow **lots** and small **street setbacks** may constrain on-site parking, and where verge and street parking is already permitted as an alternative to on-site parking.
- Proximity to public transport which provides access to places of work as well as essential services.
- Frequency of public transport during peak and off peak period.
- Proximity to cycling and pedestrian infrastructure, allowing for active transport to essential services.

Function

2.4 Waste management

► INTENT

Storage areas for rubbish and recycling bins are to be located for convenience and accessibility, while limiting potential visual impacts.

The Waste Avoidance and Resource Recovery Strategy 2030 sets targets to reduce the amount of waste going to landfill, the amount of waste generated per person and Western Australia's overall footprint.

*For Perth and Peel, a three bin Food Organics and Garden Organics (FOGO) system will be implemented for all **dwelling**s by 2025. This is the preferred kerbside waste collection system and is considered the most suitable for achieving the target of 65% diversion of waste from landfill by 2030.*

DESIGN GUIDANCE

Storage areas for rubbish and recycling bins should be addressed as part of early **site** planning to be integrated into the design. Proponents should engage with the local government to establish the requirements that apply in the relevant jurisdiction.

Waste and recycling storage should be located in positions that support easy, direct and convenient access for occupants. They should be located for easy transfer of bins for convenient collection. Suitable locations for bin storage may include:

- within **garages** (where dedicated space is provided in addition to the area required for vehicle parking);
- in a **screened** enclosure that is compatible with the **building(s)**;
- close to building exits (for **multiple dwellings** in particular); or
- in **basement** car parks.

For single and small **grouped dwellings**, kerbside pick-up is preferred as it minimises the need for large vehicles to enter and manoeuvre within the **site**, which can have a negative impact on residential **amenity** and safety.

For large grouped and **multiple dwellings**, kerbside pick-up may not be possible or available. Where internal pick-up is required, a clear path of travel should be provided with sufficient clearance distances (horizontal and vertical) and **sightlines**.

Presentation points are the locations in which the bins containing waste and recyclables are presented for collection by waste service providers. Consideration should be given early on in the design process to how bins will be collected. As a general rule 1 square metre should be allocated for each 240L bin at a presentation point. When designing for presentation points consideration should be given to the required number of bins and access (which may be limited by **crossovers** and **lot frontage** width). Also consider potential limitations or obstructions (such as verge trees and light poles) which may impact the presentation of bins to the street and potential collection.

Where **buildings** are built to both side **lot** boundaries and accessed from the **primary street**, **screened** waste storage areas should be integrated into the design of the **development**.

Refer to *WALGA WasteNet Planning for Waste Management* for further advice.

Photo G2.4a and b This conveniently located bin storage area is neatly integrated into the service area and screened from view

2.4 Waste management (cont.)

ASSESSMENT GUIDANCE

Plans should show a dedicated area for the storage of either a communal bin(s) or the required number of rubbish and recycling bins (depending on local government requirements). The area needs be sufficient in size, accessible, **screened** from public view and located in a secure and convenient location for residents and collection. Refer **Figure G2.4a** for examples of bin storage sizes. Plans should also show suitability of presentation point. Where a waste management plan is required, the proponent should submit the plan to the satisfaction of the local government to establish compliance with the relevant requirements.

Figure G2.4a Approximate bin storage requirements for different sized bins

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Local governments often have different waste bin requirements, varying in size and number of bins.

The following matters may assist when considering modifications through a local planning framework:

- The types of bins the waste collection vehicles are able to service.
- Whether sufficient space is provided for the required number of bins.

Function

2.5 Utilities

♦ INTENT

Quality **development** ensures that **utilities** are integrated into the design of the **building** and **landscape** to minimise the impact on the **streetscape**.

Early planning, coordination and design of **utilities** will ensure the siting and appearance of functional and **service utilities** does not compromise the amenity of the **development** and that infrastructure can be safely accessed, maintained and used.

Refer to the definition of **utilities** which includes the below sub-categories:

- service utilities;
- functional utilities; and
- external fixtures.

DESIGN GUIDANCE

Integrating service and functional utilities with dwelling design

Where **service utilities** are located in the **street setback area**, ensure they are within or behind **landscaping** or street **walls**, beneath **driveways** with trafficable covers, or wall mounted in vehicle access ways, while making sure required clearances are adhered to.

Design solutions for the location of air conditioning units include:

- on roofs, where not visible from the public realm;
- within **lot boundary setbacks**, where not visible from the public realm; or
- within **screened** recesses.

Air conditioning units may be located within the **private open space** where this will not have a detrimental impact on the **amenity** or useability of the space.

Downpipes should be integrated with the façade of the **building**.

Photo G2.5a and b Effective screening of water meters within the front setback area of this development reduces visual impact and allows for easy access and maintenance when required

Sustainability infrastructure

The **NCC** encourages water and energy efficiency of all housing in Australia. It is therefore an objective of the R-Codes to assist in the widespread adoption of technologies that improve the **sustainability** of housing.

The positioning of **sustainability infrastructure**, such as **solar collectors**, roof vents and **rainwater tanks**, is **site-specific** and should maximise functionality and performance.

Roof design, orientation, pitch and area should support optimal arrangements of roof mounted services such as photovoltaic solar arrays and solar hot water systems. In addition, roof finishes and colour should be selected to minimise heat gain of the **dwelling** and urban heat island effects for the neighbourhood.

Fire service infrastructure

Where fire service infrastructure is required, engagement with the Department of Fire and Emergency Services (DFES) should occur prior to development application lodgement to identify a suitable location. The fire service infrastructure should not impede access to or egress from a **building** and must be located at the front or on the approach to the building. There should be unobstructed access between the booster and where the emergency vehicle needs to access the **site** (refer GL-11: DFES site planning and fire appliance specifications on DFES website).

2.5 Utilities (cont.)

Photo G2.5c Landscaping effectively screens the essential service utilities in this communal street, whilst maintaining convenient and safe access

ASSESSMENT GUIDANCE

Where located on a **balcony**, the space that is required for the air conditioning unit and associated **screening** should be excluded from the minimum area and dimension calculations required for the balcony under **C1.1.3**.

Service utilities and **functional utilities** may be located in the **primary garden area**.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Any other **external fixtures**, which in the opinion of the **decision-maker**, may have greater potential to detract from **amenity** and **streetscape**, should be subject to planning control, and may be the subject of local planning policies.

2.6 Outbuildings

► INTENT

Outbuildings are an optional part of a **development** that may be constructed to provide additional space for **storage**, a workshop or equipment. The location and design of outbuildings should not detract from occupant, neighbour and **streetscape** amenity.

*Australia has a long tradition of backyard sheds, workshops, **garages** and other similar **outbuildings**. As densities increase, the space available is more constrained and therefore the need to accommodate outbuildings is best addressed at the design stage with the overall development.*

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Regional local governments often modify **outbuilding** provisions to cater for resident's different lifestyles and hobbies to residents within metropolitan local governments.

*The following matters may assist when considering modifications through a **local planning framework**:*

- It may be appropriate to have a larger **outbuilding** or multiple outbuildings, which would not meet **deemed-to-comply**. In these circumstances, local government should be satisfied that the amended provisions are consistent with community expectation and not have a detrimental impact on the amenity of the **streetscape** and neighbouring properties.
- Amended provisions should not reduce **private open space**, **soft landscaping**, and tree and **deep soil area**.

DESIGN GUIDANCE

The **outbuilding** should be sited to maximise functional use of the **primary garden area** and other outdoor spaces. For **site** efficiency, consider integrating outbuildings with **boundary walls** between sites (refer **Figure G2.6a**).

Design and positioning of **outbuildings** should not detract from the visual **amenity** of neighbours or the **streetscape**. An outbuilding should be relatively small in area, low in height and should generally not be located in the **street setback area**.

Refer **C2.6.2**. Where a proponent is considering increasing the **wall height** for the **outbuilding**, the level of quality of the construction should be compatible with the primary **dwelling**. 'Compatible' does not mean the outbuilding must 'match' the dwelling design, but should be constructed of sufficient quality, materials and finish to warrant being permitted the additional height. (It is not intended to be an off-the-shelf product). The outbuilding may also respond to the design intent of the dwelling, local context and/or **streetscape**.

Figure G2.6a Outbuilding as a boundary wall

ASSESSMENT GUIDANCE

Other common private garden or backyard constructions such as cubby houses, play fixtures, and dog kennels have not been included in the definition of **building** and are not subject to the **deemed-to-comply** provisions. Refer to cl.61 in Schedule 2 of the *Planning and Development (Local Planning Schemes) Regulations 2015* for works that does not require planning approval.

Where **garages** are detached from the **dwelling**, for example for rear-loaded **lots**, they are to be assessed as **outbuildings**. **C2.6.2** allows increased **wall heights** for this scenario subject to the detached-garage (outbuilding) being consistent in colour and materials of the dwelling. Provisions of 3.7 Access (for example **sightlines**) apply.

Where a proponent proposes a form of **development** that does not require a **building** permit and reduces the **primary garden area**, **soft landscaping**, trees and **deep soil area** or other landscaping provisions; **development** approval is required.

Other common private garden or backyard constructions such as **pergolas**, cubby houses and play fixtures, and dog kennels are not included in the definition of '**building**' and are exempted from planning control, although some **decision-makers** do have policies to control certain backyard constructions.

Housing diversity

2.7 Universal design

► INTENT

There is a growing demand for **dwelling**s that incorporate design features for people with limited mobility. Accessible and **adaptable dwelling**s enable people of all abilities to continue to live well in their own homes by ensuring that dwellings can meet the ongoing needs of occupants. Accessible and adaptable dwellings benefit all members of the community, including older people, visitors and those with a permanent or temporary disability.

Photo G2.7a This development, designed for adaptability and universal access, has a considered entry sequence with a wide, obstacle free path to the entry

DESIGN GUIDANCE

The **deemed-to-comply** standards and accompanying checklist (Appendix A4) refer to minimum Silver and Gold requirements from the publication, *Livable Housing Design Guidelines*, prepared by Livable Housing Australia (<http://www.livablehousingaustralia.org.au/>) and the *Australian Building Codes Board Livable Housing Design Standard 2022*.

The **design principle** pathway allows the option of accessible or **adaptable housing** (or a combination of the two), with the minimum number of **dwelling**s to be proportionate to the size of the **development**. The expectation is that the greater the development dwelling yield, the more accessible or adaptable dwellings should be provided.

Adaptable housing is different to accessible housing and is specifically designed to allow for the future adaptation of a **dwelling** to accommodate an occupant's changing needs. Refer to *Australian Standard 4299 - Adaptable Housing* for design standards.

While the **universal design** provisions apply to **grouped** and **multiple dwelling**s, designers are encouraged to incorporate the principles of **universal design** in all dwellings.

ASSESSMENT GUIDANCE

More information on accessible and **adaptable dwelling**s can be found on the Livable Housing Australia website (<http://www.livablehousingaustralia.org.au/>).

The application of **C2.7.1** only applies where a **development** application is lodged for 10 or more grouped or **multiple dwelling**s. Demonstration of silver level universal design is not required at subdivision stage. However, where proposed in a development, plans should clearly indicate which **dwelling**s are designed to Silver level universal design.

Where Livable Housing Design certification is not provided, applicants are to demonstrate how compliance with Element 2.7 has been achieved. To assist assessment, the checklist (**Appendix A4**) should be completed with **accessible dwelling**s annotated on plans to accompany application drawings.

In the application of **C2.7.2** where a proponent is seeking a gold level **site area** variation as per **C1.1.6** or **C1.1.7**, a restrictive covenant should be applied at the subdivision stage and should allocate the subject **site** and/or **lots**.

Housing diversity

2.8 Ancillary dwellings

► INTENT

An **ancillary dwelling** is an additional small, self-contained dwelling on the same **site** as a **single house**, grouped or a **multiple dwelling strata lot**. Ancillary dwellings are self-contained (containing kitchen and bathroom facilities) to allow occupants to live either independently or semi-dependently to the occupants of the main **dwelling**. This can assist in meeting different housing needs by providing for dwelling diversity, housing affordability and ageing in place.

DESIGN GUIDANCE

Ancillary dwellings should capitalise on existing **amenity**, with openings, views and direct access to the **primary garden area**, **private open space**, or **communal open space**.

Ancillary dwellings may be either attached or detached. Detached ancillary **dwellings** include 'granny flats' developed as separate structures to the main house; 'Fonzie flats' located above a **garage** and re-purposed garages (subject to necessary approvals). **Dual key dwellings** (sometimes referred to as 'dual occupancy') are attached ancillary **dwellings** that are integrated into the design of a main dwelling.

For **lots** with **laneway** access, an **ancillary dwelling** above a **garage** with its own **street** entrance may be a suitable option.

When siting an **ancillary dwelling**, consider impacts on the **amenity** of the **development** including occupant access to prevailing breezes and **solar access**. This becomes more critical for ancillary types such as Fonzie flats which are two **storey**.

A **dual key dwelling** as part of a **multiple dwelling development** can offer an alternative living arrangement for multi-generational living (refer **Figure G2.8a**).

An **ancillary dwelling** may be a self-contained **dwelling**, with the extent of facilities provided being to some extent at the discretion of the landowner. For example, the provision of a laundry would not be essential, however, a separate kitchen and bathroom would typically be provided. Meeting **NCC** requirements must also be considered.

Services may also be shared. The rental of an **ancillary dwelling** would function in a similar manner as a boarder, however, utility providers may have specific requirements for the separate provision of services, for example, separate water, power, sewer, gas and telecommunications.

Figure G2.8a Dual key apartment

Housing diversity

2.8 Ancillary dwellings (cont.)

Photo G2.8a This ancillary dwelling is built above the garage (Fonzie Flat) and is independently accessed from the laneway (PC)

ASSESSMENT GUIDANCE

Application plans must clearly identify an **ancillary dwelling** and its relationship to the primary **dwelling** on the **site**.

A **single house** or **grouped dwelling** (primary dwelling) and **ancillary dwelling** are considered two **dwellings** on one **lot**. Subdivision (for example, into **strata lots**, built-strata lots or **green-title** lots) to contain the ancillary dwelling on a separate lot or **site** from the main dwelling is not permitted under the R-Codes. Subdivision could only occur subject to the **development** meeting minimum **site area** requirements and other relevant R-Code provisions applicable to the density code of the site, with the resultant development being regarded as two grouped dwellings or two single houses.

For **multiple dwelling developments**, only **dual key dwellings** are permitted. Dual key **dwellings** may provide shared areas such as a lobby/entry, kitchen and laundry. Similar to the above, a dual key dwelling must be shown on the built **strata plan** on the same built **strata lot** as the related dwelling and cannot be individually strata titled.

Refer **Table 2.8a**. For **multiple dwellings** the maximum number of **ancillary dwellings** permitted includes:

- 1-19 **dwellings**: 1 per **development**
- 20 or more dwellings: 2 per development plus an additional 1 ancillary dwelling for each additional 10 dwellings above 20 dwellings. For example, for 29 dwellings a maximum of 2 ancillary dwellings would be allowed, for 30 dwellings 3 would be allowed, and for 35 dwellings 3 would be allowed.

There is no restriction limiting occupancy of an **ancillary dwelling** to a family member that is related to the occupants of the primary **dwelling**. They are a useful form of accommodation for carers, young people, downsizers or ageing relatives.

Ancillary dwellings are not to be included when calculating dwelling yield using average **site area**.

Housing diversity

2.9 Small dwellings

► INTENT

One or two-person households now make up more than half of all households in Western Australia (ABS 2016). **Small dwellings** provide an alternative approach to meeting different housing needs, including providing for more affordable options and facilitating 'downsizing' opportunities. To encourage uptake, the R-Codes allows a **site area** concession to support the **development** of small dwellings.

*In earlier editions of the R-Codes, provision was made for **single bedroom dwellings**. Changing lifestyles, demographics, working habits and other needs has meant that space that could be used for a second bedroom or study is becoming more desirable in single bedroom dwellings. The removal of the single bedroom limit for medium density housing provides greater flexibility for these homes to provide for the needs of the occupants. Efficient planning and design is required to achieve additional habitable spaces and functions within the same **dwelling internal floor area**.*

*This element applies to **small dwellings** that are using the **site area** concession of Part D, **C1.1.6** or **C1.1.7**. Other small dwellings may be proposed but would not need to meet the requirements of this element when not applying for the concession.*

DESIGN GUIDANCE

When selecting a suitable **site** and designing a **small dwelling**, consider the following:

- small dwellings should diversify the housing choice available within a given locality and should not be the only or predominant **dwelling** type fronting the same **street** or within the same street block;
- small dwellings should be located in areas with good access to public transport, **open space**, retail uses and community facilities;
- small dwellings should capitalise on and contribute to existing **local character** and amenity, such as views to open space and **streetscape**; and
- small dwellings should include flexible and adaptable spaces.

The **internal floor area** limit of 70m² allows for a single or two-bedroom **dwelling** as a **single house** or **grouped dwelling**. The **internal floor area** limit of 60m² allows for a single or two-bedroom **dwelling** as a **multiple dwelling**.

ASSESSMENT GUIDANCE

A **small dwelling** can be provided in the form of a **single house**, grouped or **multiple dwelling**.

Small dwellings should comply with all elements of the R-Codes Part C as they apply to the dwelling type (**single house, grouped dwelling or multiple dwelling**).

The size of a **small dwelling** is limited by definition. For **sites** created for small dwellings, appropriate measures (such as a notification under section 70A *Transfer of Land Act 1893* registered on the Certificate of Title or a restrictive covenant) to limit **development** of the site to a small dwelling should be considered.

Photo G2.9a Small dwellings may provide an opportunity to retain existing dwellings and trees

Housing diversity

2.10 Housing on lots less than 100m²

► INTENT

Housing on lots less than 100m² provides an affordable option for buyers that would prefer to live in a single house, rather than a grouped or multiple dwelling.

*Housing on lots less than 100m² have been selectively developed as a way to meet different housing needs, to assist in providing for housing affordability, create **dwelling** diversity and facilitate 'downsizing' opportunities. Provision of housing on lots less than 100m² in Western Australia has been increasing.*

*Previous editions of the R-Codes did not provide provisions for housing on lots less than 100m². As a result of this **local development plans** were used to coordinate development. The R-Codes now provide specific provisions for housing on lots less than 100m² on sites coded R100-SL, ensuring the **development** of smaller, constrained sites deliver good **streetscapes** and built form consistent with the intent of the R-Codes.*

*Housing on lots less than 100m² need to be integrated with the **streetscape** and surrounding **development** but must not be the predominant housing type in a **street**. Its location needs to be undertaken as part of comprehensive planning carried out for new urban areas and redevelopment of existing urban areas through the **scheme** or through a precinct or **standard structure plan**. Refer to the **WAPC's** Position Statement – Housing on lots less than 100m² for locational criteria.*

DESIGN GUIDANCE

Where housing on lots less than 100m² adjoin each other and are front loaded, vehicle access points should be consolidated to reduce **crossovers** to the **street**, allowing for verge trees and street parking (refer to **Figure G3.7a** and **Photo G2.10b**).

Refer to Part D, 1.1 *Site area* of these guidelines for more information on the subdivision component of housing on lots less than 100m².

If modifications to design elements are sought refer to the **design principles** in the corresponding element. For example, when varying **site cover** refer to the design principles of the site cover element.

Photo G2.10a An attached terrace house is an efficient built type for lots less than 100m²

ASSESSMENT GUIDANCE

Lots that are suitable for this type of **development** are identified with a coding of R100-SL. Modified **deemed-to-comply** standards applicable to housing on lots less than 100m² are set out in **Table 2.10a** of **C2.10.1**. Where a deemed-to-comply requirement does not apply, consideration against the relevant **design principle** is not necessary.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

*The following matters may assist when considering modifications through a **local planning framework**:*

- If further modifications are sought to **Table 2.10a** the **design principles** of the relevant element should be addressed.
- The respective design and assessment guidance, and local planning framework considerations of the relevant element should be considered.

Photo G2.10b Consolidated vehicle access points reduce crossovers to the street and allow for street parking

This page has intentionally been left blank

3.0 NEIGHBOURLINESS

In higher density development residents live closer to their neighbours. Well-designed housing can foster social interaction and good neighbourhood amenity. It provides choice of housing that, when well located, benefits residents by providing access to high amenity areas, public transport, employment and community infrastructure.

The elements in this section work together to place the building within its neighbourhood context, having regard to the local streetscape and neighbourhood character, residents' amenity and community connection.

BUILT FORM

- 3.1 Site cover
- 3.2 Building height
- 3.3 Street setbacks
- 3.4 Lot boundary setbacks
- 3.5 Site works and retaining walls

The elements considered within the built form sub-section address the primary controls for development. Site cover, building height and setback controls determine the maximum extent of development on a site. These elements operate together to ensure the building responds well to the site and its context.

CHARACTER

- 3.6 Streetscape
- 3.7 Access
- 3.8 Retaining existing dwellings

The elements within the character sub-section establish and control the relationship between the building and the street. This relationship is of critical importance for well-designed places. The cumulative effect of a positive streetscape interface at each site leads to streets, precincts, neighbourhoods, towns and cities that are enjoyable to live in, walk through and visit.

COMMUNITY

- 3.9 Solar access for adjoining sites
- 3.10 Visual privacy

The community sub-section of the R-Codes Vol. 1 is aimed at balancing the impact of new development with the amenity of adjoining properties, including in relation to solar access and privacy. As density increases in an urban context, it is important these aspects are adequately resolved through well considered site planning, building layout and design.

3.1 Site cover

♦ INTENT

Site cover is the extent of **building** that covers a **site**. Limiting site cover allows **open space** between **buildings** for **natural ventilation**, **daylight** and **solar access**, as well as space for gardens.

Site cover controls should respond to the desired character of the **streetscape** and neighbourhood and inform the bulk and scale of **development**. Maximum **deemed-to-comply** site cover percentages increase with density, leading to more urban **building forms** and streetscapes.

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Where an application for **grouped dwellings** includes all **sites** within the same **parent lot**, it may be appropriate to provide some flexibility enabling **site cover** to be redistributed between grouped dwelling sites, provided that the total site cover across the combined sites (excluding **common property**) does not exceed the maximum percentage for the applicable density code in **Table C**. This allows flexibility for some sites within a grouped dwelling **development** to have greater site cover than others. Refer to **Table G3.1a** for an example of how this can be applied.

DESIGN GUIDANCE

Proposed **site cover** should be compatible with the desired **streetscape** character and achieve adequate space between **buildings** for **natural ventilation**, **solar access**, **landscape** and outdoor use.

Planning and design strategies that limit **site cover** are encouraged, recognising that over the lifecycle of a **development** it is probable site coverage will increase. Strategies include:

- limiting **building** footprints through multi-**storey** development;
- efficient building design and internal layouts;
- use of **pergolas**, operable louvres or shade sails in lieu of **patios**; and
- replacing **garages** and **carports** with open car parking spaces.

Where an application does not meet the **deemed-to-comply** provisions for **site cover**, a careful assessment of the variation is required. Generally, variations should be minimal, respond to a **site** constraint, and trees and **soft landscaping** should be maintained. A variation should achieve:

- adequate consolidated **open space** to accommodate the requirements of a **primary garden area** (where applicable), trees and soft landscaping;
- well performing **solar access** and **natural ventilation** for each **dwelling**; and
- mitigation of negative impacts on the **amenity** of neighbouring properties.

Photo G3.1a This grouped dwelling development with a retained dwelling has carefully managed site cover to create useable outdoor spaces around each house (PC)

3.1 Site cover (cont.)

ASSESSMENT GUIDANCE

Development should not exceed the maximum **site cover** of **C3.1.1**.

Calculating the percentage of a **development's site cover** is achieved by dividing the sum of all areas defined as site cover (as per the definition) by the site area and multiplying by 100.

See equation below:

$$\frac{\text{areas defined by site cover}}{\text{site area}} \times 100 = \text{percentage of site cover}$$

For **grouped dwelling developments**, the area of **common property (communal street)** is excluded from **site cover** calculations.

The **site cover** requirement has been established and balanced with other **open space** and **landscaping** requirements. Therefore a proposal that seeks to exceed the site cover requirement will likely require a creative and innovative design response to meet the objectives of the element.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

*The following matters may assist when considering modifications through a **local planning framework**:*

- **Site cover** may be increased through a local planning framework where the **primary garden area, soft landscaping**, trees (and **deep soil areas**) and **solar access** and **natural ventilation** requirements can still be achieved.
- It may be appropriate to decrease site cover and restrict the **building** footprint to force multi-storey development and more compact typologies.

Table G3.1a Example of applying site cover where distributed between grouped dwelling sites (see Design Tip).

Lot characteristics		Site area calculations			
Coded R40 Parent lot area of 728m ² 3 survey-strata lots with common property Maximum 65% site cover permitted	One development application lodged for 3 grouped dwellings. <i>Application of design tip mentioned above</i>		Site area	Site cover area	Site cover %
		Dwelling 1	180m ²	95m ²	$\frac{95\text{m}^2 + 140\text{m}^2 + 140\text{m}^2}{610\text{m}^2} \times 100 = 61\%$
		Dwelling 2	210m ²	140m ²	
		Dwelling 3	220m ²	140m ²	
		Common property	118m ²		
		Parent lot	728m ²		
		Parent lot less common property	610m ²		

3.2 Building height

♦ INTENT

The height of **development** should be appropriate to the intended **streetscape** and **neighbourhood** character and be responsive to topography.

Building height should also be used to define **street** edges and the proportions of streets and public spaces. It should also have regard to the visual and physical **amenity** of the public and private realms, with consideration to the potential for negative impacts such as overlooking and overshadowing.

*The height of new **development** sometimes dominates discussions about planning; however, it is not the most significant factor impacting neighbourhoods. Well-designed taller **buildings** with good siting, **setbacks**, **open space** and articulation can be significantly better for neighbourhoods than poorly-designed low-rise buildings with maximised site coverage and poor consideration of context.*

*Earlier editions of the R-Codes measured **building height** in metres without mention of **storeys**. However, this can result in attempts to include additional storeys within the overall height limit which compromises the appearance and the **amenity** of a **building** while reducing internal amenity. To address this issue, building height is now measured in both metres and storeys. By measuring in storeys, it allows more flexibility for designers and encourages generous floor to ceiling heights for improved internal amenity. The maximum height and storey in metres (**Table 3.2a**) provides certainty for community and clarity for assessors.*

DESIGN GUIDANCE

Consider orientation, prevailing breezes, views and outlook when determining the preferred height for a **building**, including the potential impact on adjacent properties in terms of **solar access** and visual privacy.

Where **development** is proposed for a sloping site, consider stepping the **building height** along the slope (refer **Figure G3.2a**).

For **development** of three or more **storeys**, consider increasing the **lot boundary setbacks** for the upper level to reduce the impact of **building** bulk and overshadowing (where applicable) on **adjoining properties**, particularly where surrounding existing **development** is predominantly single storey and unlikely to change in the near to medium term (refer **G3.2a**).

For corner **lots**, placing the highest **building** elements towards the **street** corner can create a defining edge to the street and have less impact on the **amenity** of **adjoining properties**.

Photo G3.2a Where narrow lots are proposed it may be appropriate for building heights to increase. This example sets back the third storey to minimise impact on adjoining properties

💡 DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Increasing maximum **building heights** may be acceptable in locations where the proposed **development** would not unreasonably impact on the **amenity** of **adjoining properties** and **streetscape** character. This may include the following circumstances:
 - larger **development sites** (such as amalgamated sites) where taller **buildings** can be set back sufficiently from adjoining properties;
 - development sites that abut non-residential **lots**;
 - to enable an innovative and creative design response to a **site**;
 - where the development would provide an appropriate transition in scale from existing or planned tall, multi-**storey** development;
 - where the development would contribute to a unifying streetscape character; and/or
 - where the development is compatible with a steeply sloping site.

3.2 Building height (cont.)

ASSESSMENT GUIDANCE

Development should comply with the **building height** limits (expressed in metres and **storeys**) set out in **Table 3.2a**, except where modified by the **local planning framework**, in which case development is to comply with minimum and/or maximum building height limits set out in the applicable local planning instrument.

The maximum total **building height** is the sum of the **wall** and roof height (refer **Table 3.2a**), and varies according to the following roof types:

- Concealed, gable or skillion roof – these roofs typically locate their highest point towards the **lot boundary**.
- Pitched or hipped roof – these roofs typically locate their highest point towards the centre of the **building**, hence why more building height allowance is provided for these roof types.

Roof design can vary and may not conform with the nominated types in the **deemed-to-comply**. The **decision-maker** should determine the most appropriate roof type for assessment of a particular **development** and consider the above points regarding the impact of roof design on adjoining neighbours.

A **building** that complies with the height (in metres) while exceeding the number of **storeys** requires assessment against the relevant **design principles**.

Measuring building height

The calculation of **wall height** and total **building height** is to be measured as the vertical distance from **natural ground level** to the highest point at any part of the **building**.

To determine **building height** on sloping sites, the height of a building is taken as the highest point of the **development** immediately above **natural ground level** (refer **Figure G3.2a**). On a sloping site, the building form should correspond to the natural ground level with separate **storeys** complementing the slope of the land without exceeding the maximum height in **Table 3.2a**.

Where the slope of the site is not uniform, the natural contours should be interpolated so as to modify or smooth out any anomalies in order to establish the deemed **natural ground level** (refer **Figure 3.2a**).

Minor projections and plant equipment (including overruns for lifts) are excluded from the measurement of **building height**.

Habitable rooms within a roof space are a **loft** and, as per the definition of **storey**, are not counted as an additional storey.

Unroofed rooftop **terraces** are not counted as a **storey**, however provisions such as maximum **wall height**, **lot boundary setbacks** and visual privacy apply.

Where rooftop **terraces** propose open structures such as canopies or **pergolas**, a **design principle** pathway should consider the **amenity** impact (e.g. visual privacy, overshadowing) of the structure on neighbouring properties and the **streetscape**.

Where covered areas such as **patios**, BBQ areas, or roofed **communal open spaces** are proposed this should be considered an additional **storey**. Total **building heights** of **Table 3.2a** apply.

Figure G3.2a Building height for sloping sites

3.2 Building height (cont.)

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

The following matters may assist when considering modifications through a local planning framework:

- Express **building height** provisions in **storeys** and metres to:
 - provide flexibility for design solutions at ground and roof levels
 - promote generous floor to ceiling heights
 - provide opportunities for future building adaptability.
- When adjusting height controls, test in tandem with other primary controls to ensure the settings are well aligned.
- **Site**-specific **building** envelopes and heights can be developed within a local planning framework, including for large or complex sites such as those on steep slopes and those with variable topography.
- Ensure the maximum building height allows for architectural roof features such as articulated roof planes, and/or the provision of **communal open space** at the roof top.
- Where rooftop **open space** is desired, ensure adequate maximum height is provided and consider secondary height controls for lift/stair access and shade structures.
- It may be appropriate to determine heights by relating them to features within the existing **streetscape** or locality such as topography or heritage elements. This may include:
 - defining an overall height or **street wall heights** to key datum lines, such as key architectural features
 - aligning floor to floor heights of new **development** with existing built form.
- Consider secondary height controls to transition built form, for example:
 - a street wall height to define the scale and enclosure of the street
 - a step-down in building height at the boundary between two R-codes.
- Take into account the viability of development types and efficient use of land when setting height controls. The **NCC** has certain requirements based on the effective height of a building, such as fire protection systems, fire resistance and vertical transportation. When setting height controls, consider these thresholds as they impact on the feasibility of a development.
- It may be appropriate to increase building heights to facilitate **terrace** typologies which support efficient **lot** layouts and reduced **site cover**. This may assist in supporting retention of significant trees, increasing **landscaping** and desired future residential character.

Character

3.3 Street setbacks

♦ INTENT

Consistent **street setbacks** help to establish a consistent, legible **streetscape** with space for trees and other **landscaping**. As residential densities increase, street setbacks typically reduce to reinforce a more urban character.

The purpose of **street setbacks** (in accordance with Table 3.3a) is to:

- enable a clear view between the **dwelling** and the **street**;
- provide a transition between the public and private realm;
- provide an area for **landscaping**; and
- promote a consistent and harmonious **streetscape** reflective of the urban intensity.

For established residential areas with valued **streetscapes**, there is often a consistent pattern of street setbacks. New **development** should respond to the established pattern. Where the pattern varies, a setback mid-way between that of the **buildings** on either side may be appropriate. The **decision-maker** may stipulate setbacks for a particular area in the **local planning framework**. The R-Codes street setback requirements apply in all other cases.

In areas undergoing transition from lower to higher densities, street setbacks should respond to the intended future character of the **street**.

In the case of new residential areas, the desirable street setback may be fixed as part of **structure plan(s)** or **local development plan(s)**.

DESIGN GUIDANCE

While Table 3.3a provides a minimum **street setback line** with no averaging requirement, designers should aim to avoid blank and/or flat **façades** through the incorporation of:

- **verandahs, porches** and **balconies**;
- **building** articulation (see below); and
- entries and windows.

Carports, patio, porches, verandahs and **balconies** built forward of the **street setback line** should be designed and built from materials compatible with the **dwelling**.

Building articulation can be achieved through the coordination of built form elements and visual interest in the building **frontage**. **Dwellings** should not present to the **street** as a flat **façade** and should demonstrate articulation through:

- well-defined entry points;
- appropriate, well-detailed materials;
- consideration of rhythm, proportion and scale of built form elements within the context of the building frontage and the broader **streetscape**;
- coordination of vertical and/or horizontal building elements (e.g. **minor projections** and shading elements); and
- integrating aspects of daily household activity within the design of the building frontage (e.g. site entries, letter box, access path, **verandahs**).

ASSESSMENT GUIDANCE

Refer to Figure G3.3a for annotation of **street setback**, **street setback area** and **street setback line**. Where the actual street setback of a **dwelling** is greater than the minimum street setback line prescribed in Table 3.3a, the street setback area is measured to the street setback line.

Where the **street setback** is 1.5m or greater, the area can support tree planting and associated **deep soil areas** (refer to Tables 1.2a and 1.2b).

Setback of garages and carports

The **setback** of **garages** in areas coded R30 and R35 is designed to enable a vehicle to park in the **driveway** in front of the garage and minimise obstruction of an adjacent footpath (refer C3.3.4).

The **setback** of **garages** in areas coded R40 and above is in accordance with the minimum **street setback** requirements of Table 3.3a. The **deemed-to-comply** setback for garages in R40 is minimum of 3m. This distance is not intended to have a vehicle parked in the setback area as it may have the potential to overhang a footpath.

The **street setback area** should generally be open and free from structures that obstruct views and **passive surveillance** of the **street**. However, **carports** may be acceptable in the **street setback** (refer C3.3.5) as they allow a clear view between a public **street** and a private **dwelling**. When assessing carports, gates are not to be considered as doors.

Figure G3.3a Street setbacks, street setback areas and street setback lines

3.3 Street setbacks (cont.)

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- **Buildings** forward of the **street setback line** may be appropriate where consistent with **adjoining properties** and the **streetscape**, or where necessary to retain an existing tree.
- With respect to corner **lot** truncation setbacks (**C3.3.3**), it may be appropriate to reduce the **setback** for an upper **storey** subject to the **development** not restricting **sightlines**.

Photo G3.3a Street setbacks include landscaping and articulation to the dwelling facade (PC)

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Providing a consistent **street setback** is an important aspect of creating or retaining a distinct **streetscape** character. The **decision-maker** may stipulate **setbacks** for a particular area in the **local planning framework**.

Setting **street setbacks** for **buildings** should begin with consideration of the desired or existing **streetscape** character. The proportions of a **street** are established by the distance between opposing building **frontages** in combination with the height of buildings, with this aspect of streetscape character directly affecting how the street will be perceived and used.

*The following matters may assist when considering modifications through a **local planning framework**:*

- Determine **street setback** controls relative to the desired **streetscape** and character, for example:
 - define a future streetscape in a transitional area:
 - consider existing **development**:
 - provide appropriate setbacks to maintain views towards significant **buildings**:
 - retain significant trees: and
 - use a setback range where the desired character is for variation within overall consistency, or where **lot** boundaries are at an angle to the **street**.
- Consider parameters for articulation of building frontage through **balconies**, **landscaping**, porticos, awnings etc. where these elements are included in the street setback.
- Identify the quality, type and use of **open space** and landscaped areas facing the street so **setback** areas can accommodate landscaping and **private open space**.
- In conjunction with height controls, consider street setbacks for upper levels to:
 - reinforce the desired scale of buildings at street level: and
 - reduce overshadowing of the street and other buildings.
- Where **dwellings** are likely to front a rear **right-of-way** or **laneway**, consider additional setback requirements to improve the quality and **amenity** of housing facing laneways.
- Ensure provisions for street setbacks respond to local government policies regarding on-street parking.

3.4 Lot boundary setbacks

► INTENT

Lot boundary setbacks help govern the extent of the **building footprint** and are scaled according to **building height** to address perceptions of bulk and scale. Lot boundary setbacks are important for maintaining separation between buildings for **solar access** and **natural ventilation**, and for managing **amenity**, including overshadowing and the visual privacy of neighbouring properties. They are also important for moderating the visual impact of building bulk on a neighbouring property, creating usable outdoor space and preserving **deep soil areas** for trees, **landscape** and outdoor use.

Smaller **lot boundary setbacks** are typical for medium and high-density residential character, compared to larger setbacks in suburban contexts.

DESIGN GUIDANCE

The size and location of **setbacks** should ensure adequate **daylight**, **solar access** and **natural ventilation** for **primary living spaces** and **active habitable spaces** within **developments** and on **adjoining properties**.

Consider **boundary walls** (where appropriate) to maximise **site** efficiency and free up useable outdoor spaces for gardens and recreation. Boundary walls should be co-located with and match the alignment and extent of existing boundary walls to minimise the impact of overshadowing, visual privacy and to coordinate **building frontages** to **streetscapes**.

Greater **setbacks** may be required to retain trees within the **site** accommodating sufficient **deep soil area**. This could also be considered to accommodate adjoining tree/s.

Photo G3.4a When proposed in a coordinated manner, two storey boundary walls support efficient design and construction outcomes with minimal impact on adjoining properties

Lot boundary setbacks

A reduction to **lot boundary setbacks** should only be considered where it can be demonstrated that functional outdoor and indoor spaces can be achieved. The **decision-maker** should also be satisfied that the **amenity of adjoining properties** is not negatively impacted, particularly where the reduced setback may result in increased overshadowing, overlooking or lack of privacy. In these situations, the proposed **development** would need to address the **design principles** of this section.

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- It may be appropriate to vary **lot boundary setbacks** and **boundary wall** provisions where the **development site** abuts non-residential land.
- Reduction in setbacks may be necessary due to the irregular shape or topography of the **lot**. In such instances the **decision-maker** should have regard to the **amenity of adjoining properties**, including potential impact on existing trees, overshadowing and visual privacy.
- Reduced lot boundary setbacks for single **storey dwellings** may be appropriate where this allows more functional use of the dwelling and a consolidated **primary garden area**.
- Where all dwellings in a **grouped dwelling** proposal are included in a single development application, it may be appropriate to increase the boundary wall length on **site** boundaries subject to the overall boundary wall length being no greater than two-thirds the length of the **parent lot** boundary.

3.4 Lot boundary setbacks (cont.)

ASSESSMENT GUIDANCE

Lot boundary setbacks

C3.4.3 enables structures including **carports**, **verandahs** and **patios** to be built to the **lot boundary** behind the **street setback line**, however **NCC** provisions may apply.

Where a **lot** has an angled boundary and the **wall** of the proposed **development** is not parallel to that boundary, the entire length of the wall must be set back the minimum required distance (refer **Figure G3.4a**).

Figure G3.4a Lot boundary setbacks where walls are not parallel with the lot boundary

Boundary walls

Two **storey** (7m high) **boundary wall** provisions for R50-R100 **lots** (subject to **frontage** width) have been included in the **deemed-to-comply** to accommodate **development** of two or more **terrace** type **dwellings**.

The 14m maximum two **storey boundary wall** length (refer **Table 3.4b**), where separated by a **setback** of 3 x 3m can be continued with an additional boundary wall to the same **lot boundary** (refer **Figure 3.4h**). Notwithstanding **deemed-to-comply boundary walls**, overshadowing requirements still apply.

When measuring the maximum length of a second **storey wall** (refer **C3.4.2**), walls which are set back less than 3m from the **lot boundary** are to be included in calculations. (Refer **Figure G3.4b**)

In R50-R100 coded areas where a **boundary wall** abuts an existing boundary wall of similar or greater dimension the boundary wall is permitted to the extent of height and length of the existing boundary wall at which point it should be **setback** from the **lot boundary**.

Where A is less than 3m, the length of B is to be included in calculations for maximum two storey boundary wall length (C). Refer **Table 3.4b**.

Figure G3.4b Measuring two storey boundary walls

3.4 Lot boundary setbacks (cont.)

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Modifications to the **lot boundary setback** provisions through the **local planning framework** may be made to suit the local context and intended **development** outcome. These modifications may define specific setback provisions to promote particular built form outcomes or respond to site-specific conditions.

*The following matters may assist when considering modifications through a **local planning framework**:*

- Undertake testing of **lot boundary** setbacks with height controls to understand the impact on:
 - potential for overshadowing of the site, adjoining properties and **private open space**;
 - **streetscape**;
 - visual privacy; and
 - tree retention.
- Consider appropriate settings for streetscapes or neighbourhoods that respond to the distinctive **local character** including existing heritage, housing typologies and urban grain.
- In established streetscapes which largely contain boundary-to-boundary **development**, consider whether new **setback** constraints to **boundary walls** are appropriate.
- On sloping sites, consider increasing the lot boundary setbacks to minimise overshadowing (subject to orientation) and overlooking of lower sites.

3.5 Site works and retaining walls

► INTENT

Development of sloping sites should respond to the natural topography and aim to minimise the amount of cut and fill required. This is because extensive site earthworks are resource intensive, removes vegetation, disturbs the soil profile and hydrology, and affects **local character**.

Photo G3.5a This row house development steps down with the slope of the site

DESIGN GUIDANCE

Development of land should be designed to correspond to the topography of the **site**.

Retaining walls can be visually prominent. Where retaining is unavoidable, the design of retaining walls should seek to minimise their height and length by responding to the slope of the **site** through terracing and articulation or by balancing the extent of excavation and fill. For sloping sites, a mix of cut and fill should be proposed as opposed to one method. The integration of **buildings** with retaining walls is encouraged to minimise resource consumption and visual impacts, and improve the efficiency of site planning. The materiality of retaining walls should complement and integrate with the surrounding **landscape**.

Significant fill and retaining walls above **natural ground level** can also be visually prominent. Where it is necessary, consideration should be given to potential privacy and overshadowing issues arising from the increase in height. Significant fill can in some circumstances impact localised soil and hydrological conditions which potentially limits future tree and plant growth.

Because much of the State's housing was built before accurate contour mapping was available, it may not be possible to know precisely the **natural ground level** that preceded **development**. Where there is evidence of ongoing **site** works over time, it may be necessary to refer to other evidence in order to establish as closely as possible the relevant natural ground levels.

Excavation may be beneficial to the **development** outcome, including allowing for undercroft / **basement** parking and **storage** areas. When excavation is proposed, it is necessary to address engineering requirements and account for essential services, particularly where protected by a registered easement.

ASSESSMENT GUIDANCE

Housing design which proposes extensive **site** works re-contouring the site without regard to neighbouring properties and their **amenity**, should not be supported.

The height of retaining walls, excavation and fill are to be measured directly from the **natural ground level** (above or below).

Visual privacy provisions under element 3.10 *Visual Privacy* should be applied for fill and retaining walls greater than 0.5m above **natural ground level**.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Modifications to the site works and retaining walls provisions may be necessary for areas which contain sloping sites.

*The following matters may assist when considering modifications through a **local planning framework**:*

- Undertake testing of site works and retaining walls to understand the impact on:
 - **lot boundary** setbacks
 - **street setbacks**
 - potential for overshadowing of adjoining properties and **private open space**;
 - **streetscape**; and
 - visual privacy.

3.6 Streetscape

♦ INTENT

A well-considered interface between **buildings** and the **street** ensures a successful transition from the public to private realm and contributes to the **sense of place** and character of the street. Attractive and pedestrian-friendly **street frontages** incorporate well-considered arrangements of planting, fencing, **screening** and site entries.

Street fences delineate the private realm from the public realm, and contribute to **streetscape** character. They can frame gardens within the **street setback area** and assist in balancing surveillance, privacy and impacts of noise.

Garages and supporting structures are potentially dominant and often imposing elements on the **streetscape**, impacting **dwelling** appearance as well as the visual connectivity between the dwelling and the **street**.

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- When the optimal location for the **primary garden area** and/or **private open space** is in the **street setback area**, **walls** and fencing should provide a balance of visual permeability and visual privacy, utilising **screening** and **landscaping**.

DESIGN GUIDANCE

Building elevations fronting the **street** should be of a human scale and proportionate to the **streetscape**. This can be achieved by using the following design solutions:

- well composed horizontal and vertical elements;
- variations in floor heights to enhance the human scale; and
- design elements that are proportional and arranged in patterns.

Building entries should be readily identifiable and accessible. Where there are multiple **buildings** and/or entries, architectural detailing, materials, colours and **landscape** treatments can be used to differentiate **dwellings** and improve legibility for residents and visitors.

Blank **walls** facing the **street frontage** should be avoided where possible. Blank walls can be broken up with **major openings**, fencing, **landscaping** and other elements that provide visual interest and surveillance when viewed from the **street**.

Raising the ground floor height of a **dwelling** by 0.5m-1m from **natural ground level** at the **street boundary** can provide an appropriate balance between **passive surveillance** to the **street** and privacy for residents.

Incorporating **verandahs**, **porches** and **balconies** in the **street setback area** can provide residents with **passive surveillance** and interaction opportunities with the wider community, improving **sense of place**.

The integration of and access to essential services **utilities** such as power and water meters and fire service infrastructure requires careful consideration in the **building** design. Consult early with relevant authorities to resolve functional requirements through an integrated design solution. Refer to element 2.5 *Utilities*, for more information.

For **sites** that have more than one **street frontage**, it is important to address the **secondary street** through the built form and **landscaping**.

Where a **right-of-way** is proposed to be the **primary street frontage**, the **street setback area** should be treated in the same way as a primary **street setback** including provision of **landscaping** and clearly identifiable entries.

Impact on garages

Consider single or tandem **garages** and **carports** instead of double garages as they have less visual impact on the **streetscape**. Recessing garages behind the **dwelling alignment** reduces the visual dominance of the garage and may also provide additional parking space between the garage and **street boundary**. The use of porticos or **porches** in front of the supporting structures of garages may also assist in reducing the visual impact on the streetscape.

Photo G3.6a Trees and visually permeable fencing contribute to attractive streetscapes

3.6 Streetscape (cont.)

Street fences

Street fences include lightweight structures as well as masonry **walls** used to delineate between the public and private realm. All street fencing should be designed to balance the need for privacy and security with the promotion of strong community connection and **streetscape amenity**. This can be achieved through the use of low walls, **visually permeable** materials and limiting the extent of walls and fencing.

Consider the incorporation of low fencing and **walls** (less than 900mm) along the **street boundary** to clearly demarcate public and private space. Ideally low walls should be integrated with the **landscape**, letterbox design and access points such as gates and **driveways**.

For climate zones 1 and 3, permeable fencing should be used for **street** fences/walls for **natural ventilation**.

Where non-permeable fencing to the height of 1.8m is proposed to attenuate traffic noise or headlight glare, anti-graffiti material or paint coating should be considered.

Photo G3.6b Carports forward of the street setback line supporting visual connectivity between the street and dwelling

ASSESSMENT GUIDANCE

For **multiple dwellings**, it may not be possible for all **dwellings** to address the **street**, however, all dwellings which front the street are to address the street. Where **private open space** areas of ground floor apartments front the street, privacy can be achieved while maintaining a street presence as per the provisions of street **walls** and fences (**C3.6.7** to **3.6.9**).

When measuring the percentage of **garage** width and supporting structures, piers and **porches** proposed forward of the supporting structures are to be excluded from calculations (refer **Figure G3.6a**).

Carports are roofed and **unenclosed** with a maximum of two **walls** behind the **street setback line**. When proposed forward of the **primary street setback line**, they are to be without walls (excluding post and pillars less than 450mm by 450mm). Carports are to be **developed** without doors to the **crossover/driveway**, to ensure visual connectivity between the **dwelling** and the **street** in perpetuity. Gates do not constitute a door but should not impact visual continuity to the street.(refer **Photo G3.6b**).

Figure G3.6a Piers and porches forward of garages excluded from garage width calculations.

Street fences

Where **street** fencing incorporates a retaining **wall**, the height of a retaining wall (measured from **natural ground level**) is to be included in the calculation of the total wall/fence height.

A **street** fence, including all footings, is to be located wholly within the **lot** boundaries.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

The following matters may assist when considering modifications through a local planning framework:

- The proportion of **garage** width to individual **lot** width may be increased where it can be demonstrated that the total proportion of garage width along the same side of the **street** does not exceed the requirements in **C3.6.5**. And should support the following:
 - **soft landscaping** and tree planting within the **street setback area**;
 - ability for parking within the street;
 - ability to provide street trees within the verge; and
 - suitable space for waste collection and **service utilities**.
- Where **development** adjoins public parks, pedestrian access ways, **open space** or bushland, the **dwelling(s)** should respond to this interface. Potential considerations include:
 - pedestrian paths connecting the dwelling(s) to the open space and clearly defined **building** entries;
 - low, uniform fences and planting that clearly delineate between communal and **private open space** and the adjoining public open space; and
 - minimising the use of blank walls, solid fences and ground level parking.

3.7 Access

♦ INTENT

Access connects pedestrians and vehicles from the **street** into the **development**. The design of vehicle access points and common areas such as **communal streets** should balance the requirement for safe and efficient vehicle access with the needs of pedestrians, bicycle riders and other road users, and minimise the impact on the **streetscape**.

The **communal street** is a shared use area designed to balance the movement and access needs of pedestrians, bicycle riders and vehicles, and should limit the extent of paved **impervious surfaces**.

*Car parking spaces, manoeuvring areas and access ways are potentially intrusive – physically, visually and acoustically. This is particularly evident for grouped and **multiple dwelling developments** where multiple parking spaces and access is required. Vehicle access and parking consumes space and does not generally make a positive contribution to the **streetscape**. Consequently, location and materials of vehicle access and car parking areas are major factors in **amenity** as well as security and safety.*

Communal streets are created as part of a grouped or **multiple dwelling development** and are in private ownership common to a number of **dwellings**, whose owners are also responsible for maintenance.

DESIGN GUIDANCE

Consider design solutions to minimise the visual impact of vehicle entries and circulation areas within the **site**, while allowing for appropriate **sightlines** and safety considerations, such as:

- locating and designing vehicle entries to minimise the number and length of **driveways**;
- where required, incorporating aesthetically pleasing and effective traffic calming devices that are integrated into the design, such as changes in paving material or textures;
- minimising the visual impact of unavoidable long driveways through changing alignments and screen planting; and
- minimising the interruption to the verge by consolidating vehicle access points (refer **Figure G3.7a**).

Where a separate pedestrian access is required (refer **C3.7.13(ii)**), consider using **landscape**, level changes and varied trafficable finishes, materials or patterns to clearly delineate from vehicle access.

Hardscaping across the site should be minimised and areas of **landscaping** maximised. The following strategies to reduce hardscaping are strongly encouraged:

- the use of strip paving or permeable paving in **driveways**;
- using impervious paving for the minimum area required for driveways, vehicle parking, circulation areas, and pedestrian access; and
- creating paths within garden beds from stepping stones or loose aggregate.

Minimising the number of vehicle access points along the **street** provides more opportunity for on-street parking and the retention or improvement of the **streetscape** character. When locating vehicle access points, consider the location of any street trees, infrastructure, and/or relevant obstructions. The distance of **crossovers** from street trees should ensure clear **sightlines** and viable tree growth (refer **WALGA Guidelines and Specifications for Residential Crossovers**).

Driveways must maintain adequate **sightlines** where they intersect **streets**, **rights-of-way** and footpaths to ensure visibility and safety. Sightlines must be kept clear from obstructions – including fences, walls, **landscape** features and vegetation.

Communal Streets

As a semi-public space, **communal streets** share some of the characteristics of public **streetscapes** including the need to address visibility, security and privacy. They should be designed to provide clear demarcation between private and communal space and to create a consistent, attractive streetscape through appropriate use of **landscape** and pavement treatments.

Communal streets should be clear and legible, and designed to prioritise the movement of pedestrians and bicycle riders and may use different surface treatments to manage shared space. For **developments** consisting of less than 10 **dwellings**, the communal street can be used for pedestrian access.

Figure G3.7a Pairing of vehicle access points

Character

3.7 Access (cont.)

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Where it may be necessary to be reduce the width of the **communal street** and battleaxe leg (for example for retaining an existing **dwelling**), the **building setback** to the communal street and battleaxe leg may be reduced to nil provided that the minimum **driveway** width (3m) and clearances (0.3m either side) is maintained.

Photo G3.7a Incorporating landscaping contributes to attractive communal streets and outlook for residents, as well as providing environmental benefits

Dwellings should front the **communal streets** (where this is the principal **frontage**), in the same way they would address a public **street**.

For larger **development sites** or where existing block patterns are deep, **site** accessibility may be best served by introducing a network of new **communal streets** and **laneways**, rather than a continuous, long **street**.

Trafficable, semi-permeable, **permeable surfaces** or strip paving within **communal streets** are strongly encouraged.

Consider design solutions that provide multi-use opportunities, legible and comfortable access for pedestrians, and attractive outlook from adjacent **dwellings**. Surface treatments of **communal streets** should minimise heat gain and heat island impacts while supporting **stormwater** infiltration.

Where traffic calming devices are required within **communal streets**, ensure that they are integrated with **landscaping**, drainage, and allow for **continuous path of travel** for pedestrians.

Photo G3.7b This shared driveway space has been designed and constructed to be fully permeable, and includes planted areas and a gravel surface

ASSESSMENT GUIDANCE

Driveways can be provided as strip paving or permeable paving for vehicle access and manoeuvring areas.

For corner **lots** where the lowest hierarchy **street** is undefined, the **decision-maker** should determine which **street frontage** is most appropriate for vehicular access to the proposed **development**.

A **driveway** width of 3m is adequate for driveways serving four **dwellings** or less and does not require passing points.

C3.7.6 requires **driveways** for **grouped** and **multiple dwellings** to be 5.5m wide at the **street boundary**, this ensures a vehicle can safely enter the **development** off a primary distributor or integrator arterial at the same time a vehicle is exiting the **site**.

The minimum driveway width of 3m and 0.3m setback either side of the driveway aligns with Australian Standards AS2890.1. The setback is required for vehicle clearances. The combination of the driveway and clearances make up the **communal street** and battleaxe leg.

Landscaping features within the **communal street** such as lighting, pavement treatments and planting areas should be detailed in a landscaping plan, this may also include **deep soil areas** for tree planting where proposed.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

The following considerations may assist when considering matters through a local planning framework:

- Restricting the location and width of **driveways** may be a suitable option where proposing street parking bays via a **Local Development Plan**.

3.8 Retaining existing dwellings

♦ INTENT

Retaining an existing **dwelling** can support housing diversity and reduce the embodied energy and waste impact associated with demolition and new construction. It may also help to maintain an established **streetscape** and **local character**, depending on the location and condition of the dwelling on the **lot**.

DESIGN GUIDANCE

Retaining an existing **dwelling** on a **development site** can be achieved through well-considered **site** and project planning. When retaining an existing dwelling, consider the following:

- the desired **streetscape** and **local character**;
- the quality (both design and structural) warrants its retention and/or upgrade;
- its location on a **lot** facilitates an integration into the broader **development**; and
- housing diversity in the locality.

Ensure that the location of strata subdivision permits the retained **dwelling** to meet the requirements of the R-Codes. In particular, ensure boundary **setbacks** internal to the **lot** are adequate to meet the requirements of **C3.4.1**.

Where it is not possible to meet all of the **deemed-to-comply** requirements of this element, a merit-based approach via the **design principle** pathway is encouraged. Achieving the **private open space** requirement for the retained **dwelling** should be prioritised.

ASSESSMENT GUIDANCE

Upgrading the appearance of the existing **dwelling** may be required as a condition of subdivision or **development** approval. **Decision-makers** may prepare a **local planning policy** to provide guidance on acceptable upgrade standards.

C3.8.1 does not apply where the existing **dwelling** is to be retained as a **single house** (either **green title**, strata or survey strata without **common property**) as there is no planning mechanism to require upgrading to a retained dwelling that is on a separate title (and potentially in different ownership) to that of the remainder of the **development**.

Lot boundary setbacks are to be calculated to the new proposed site or lot boundaries, not existing lot boundaries to adjoining properties.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Retaining existing **dwellings** may be preferred where a specific **streetscape** character is recognised. Further modifications to this element may be required in order to ensure the existing dwelling maintains the existing streetscape character.

Community

3.9 Solar access for adjoining sites

♦ INTENT

Siting and design of **dwelling**s should respond to climatic conditions and have regard to resident **amenity** both within the **development site** and **adjoining properties**.

*In terms of **residential development**, the three main aims of climate sensitive design are to reduce energy consumption, optimise on-site **solar access** and protect solar access for neighbouring properties.*

Photo G3.9a This dwelling is designed to reduce the impact of development overshadowing primary garden area of adjoining lot (PC)

DESIGN GUIDANCE

Development should be designed so that it does not significantly impact **solar access** for neighbours, in particular:

- north facing openings to **primary living spaces**;
- outdoor **active habitable spaces**; and
- roof mounted **solar collectors**.

Similar to considerations for visual privacy, the potential for a **building** to overshadow a neighbouring site, or be overshadowed itself, varies from case to case. There are several variables which range in complexity, including:

- the density of **development**;
- the height of buildings, existing and proposed;
- the position of buildings, existing and proposed, in relation to **lot** boundaries;
- the orientation of the **development site** and its neighbours, that is, the relative position of the sun;
- the relevant dimensions and shape of the development site and of affected neighbouring **sites**; and
- the degree and orientation of the slope of the land.

Early design analysis should be undertaken to optimise the orientation of the **buildings** on a **site** to achieve the objectives and provisions of the policy as they apply to **solar access**.

Sites that are most vulnerable to overshadowing are narrow east-west oriented sites, on the south side of a **development site**, especially if they are also lower or on a south facing slope. In such cases, even a relatively low **building** may cast mid-winter shadow over a greater proportion of the site than allowed under **deemed-to-comply** provisions.

In some instances, a **lot** may abut two or more properties to the north and would therefore be subject to overshadowing by two or more properties. **C3.9.3** reduces the amount that some lots can overshadow proportionate to the **lot boundary** they share (refer **Figure 3.9e**).

C3.9.1 also limits overshadowing to diagonally adjacent **lots**, recognising that at certain lot orientations, both the **adjoining property** and the diagonally adjacent lot may be impacted by overshadowing (refer **Figure 3.9b**).

When calculating overshadowing where multiple **sites** are being proposed at differing stages (for example two out of three **grouped dwellings** issued for **development** assessment), consider whether the final site, when proposed, would exceed the limits of **Table 3.9a**.

In climate zones 4, 5 and 6, the siting and design of a **development** should aim to limit overshadowing of **adjoining properties**, particularly spaces used predominantly during the day (i.e. **primary living space** and outdoor **active habitable space**). Strategies can include:

- where possible, orientating and focusing **building height** so that it overshadows blank **walls**, car parking areas, **driveways** and roofs;
- increasing **setbacks** of upper levels; and
- breaking up building mass and orienting development perpendicular to the adjoining **lot boundary**.

In all climate zones, **development** should avoid overshadowing **solar collectors** within the development and on adjoining properties.

💡 DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Due to **lot** orientation, it may be necessary in some cases to exceed the overshadowing limits of **Table 3.9a**. In such cases, careful consideration should be given to the types of spaces being overshadowed when judging merit and applying **design principles**. **Solar access** should be prioritised for spaces on **adjoining properties** that are likely to be used most frequently during the day, such as **primary living spaces** and outdoor **active habitable spaces**.

3.9 Solar access for adjoining sites (cont.)

ASSESSMENT GUIDANCE

The assessment of the shadow cast by a **building** at midday 21 June is shown in **Figure 3.9a**. The methodology for determining the shadow cast can be found in the *Sunshine and Shade Australasia*, Phillips, R.O., Commonwealth Scientific and Industrial Research Organisation (Australia), Division of Building Construction and Engineering, Canberra, ACT 1992. Reference should be made to the specific tables in this document. (Refer 2.2 *Solar access and natural ventilation*).

In general terms, shadow cast at midday 21 June is calculated by:

- selecting the vertical sun angle from the following chart that lists the major urban centres from Albany to Wyndham; and
- transposing the length of shadow on to the site plan, taking care to correctly orientate the **building** and allow for the slope of the land.

Figure G3.9a Dividing fences excluded from overshadowing calculations

Drafting software also provides capabilities for demonstrating **solar access** to adjoining **sites** in accordance with the requirements of this element. The use of such software is encouraged for accuracy and convenience, particularly in calculating shadow cast for multiple times across the day. (refer **Figure G3.9b**).

When measuring overshadowing to **adjoining properties**, the percentage of overshadowing is measured per **site**. For example, this would be the individual strata sites for **grouped dwellings**. Measuring overshadowing percentages on a per site basis supports **amenity** for each effective **site area**.

When calculating overshadowing from **grouped dwellings** onto a **parent lot**, all grouped dwellings should be included in the calculation.

Figure G3.9b Software can assist when calculating overshadowing

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Where **development** is undertaken in a coordinated manner, it may be appropriate to reduce the requirements of **solar access** for adjoining **sites** for typologies such as **terraces** on narrow **lots**. In particular, east-west oriented sites, especially where the levels of the sites fall to the south.

The following considerations may assist when considering matters through a local planning framework:

- Likely subdivision layout of the site; and
- Likely **building** typology proposed within the site.

Community

3.10 Visual privacy

♦ INTENT

New **development** needs to balance the need and desire for outlook, **solar access** and **natural ventilation** from **major openings** with an appropriate level of visual privacy to the main living spaces of adjoining **dwellings**.

*Overlooking from areas on or close to **natural ground level** (0.5m or less) is not subject to control in this element. Overlooking at these levels can be readily limited by a standard 1.8m high boundary fence. While this may not restrict the line of sight in an upward direction, the impact of overlooking to **major openings** of **habitable rooms** or **private open space** would be limited.*

Photo G3.10a The upper level windows on this apartment have been oriented toward the communal space to help address visual privacy

DESIGN GUIDANCE

Setbacks alone cannot achieve absolute visual privacy as the setback distances required to achieve this are much greater than those that can feasibly be provided in an urban area. The design of **dwellings** should prioritise a sufficient level of privacy to satisfy reasonable concerns. It is not intended for the R-Codes to require 100 per cent privacy at the expense of **building** orientation, access to **daylight**, winter sun, **natural ventilation**.

Privacy setbacks should be accompanied by thoughtful design solutions, including the orientation, placement and design of openings to limit overlooking. **Screening** of openings may also be required but should be used carefully, as screens for privacy can create dark, constrained internal spaces that compromise resident **amenity**.

Overlooking from bedrooms, studies and other rooms that are used less frequently or mainly at night, without noise, and by relatively few people, can be tolerated more than overlooking from active areas. Design should limit overlooking from frequently used spaces including **active habitable spaces**, for example, living rooms, kitchens, activity rooms, **balconies** and **private open space** with a floor level 0.5m or more above **natural ground level**.

Recording the location of existing **major openings** and **active habitable spaces** on adjoining properties during the site analysis phase is required and will assist in planning for appropriate levels of visual privacy.

Outlined below are different approaches that are generally appropriate in addressing the visual privacy objectives and requirements.

Offsetting major openings

Windows may be offset rather than positioned directly opposite existing windows of an adjacent **dwelling** to limit overlooking from a bedroom or study. The distance between the edge of one window and the edge of other is considered to be sufficient to achieve visual privacy.

When offsetting windows to interrupt the line of sight on upper levels, it is important to ensure that any overlooking of lower level **major openings** and **active habitable spaces** in the **cone of vision** is also addressed.

Depending on the separation between **buildings** and size of the openings, the 1.5m offset (refer **C3.10.3**) may not completely interrupt the line of sight between windows. This intervention however will ensure the main outlook from a **major opening** is not directly into an adjacent window and is included as an acceptable **deemed-to-comply** solution.

Location and/or orientation of sources of overlooking

Where possible, **major openings** to **habitable rooms** and outdoor **active habitable space** should direct outlook away from other **dwellings**. Orienting windows away from the **lot boundary** can interrupt the line of sight while still providing **solar access** and **natural ventilation** for the **development** (refer **Figure G3.10a** and **G3.10b**).

Figure G3.10a Window placement to avoid direct overlooking

3.10 Visual privacy (cont.)

Vertical or horizontal building elements, planter box or fins

The use of window hoods, vertical or horizontal fins, permanent planter boxes, wide bay windows and fixed angle louvres can minimise downward or horizontal overlooking of **adjoining properties** while maintaining an outlook for residents. These **screening** methods restrict the line of sight in specific directions. The dimensions and positioning of screening will depend on the size and location of adjoining **major openings** or **active habitable space**, and the angle of the line of sight (refer **Figure 3.10c**).

Planter boxes incorporated into the design of **walls** and **balcony** balustrades can effectively limit the line of sight to lower levels of an **adjoining property**, while providing an opportunity for additional **landscaping** (refer **Figure 3.10d**).

Landscaping

Landscaping in the form of planting or selective placement of suitable trees or shrubs can provide **screening** for privacy, whilst enhancing residential **amenity**. However, as landscaping can be temporary the **decision-maker** needs to be satisfied as part of a **design principle** pathway assessment that the landscaping will remain in-situ. This may entail consultation with the relevant property owner(s).

Figure G3.10b Angle windows to avoid direct overlooking

Fences, walls and balustrades

Fences (including dividing fences) and balustrades are effective forms of **screening** and require little further explanation where they take the form of a solid **wall**. The design and location of such features must not impinge on other relevant requirements for **development**, such as **setbacks**, shading, **solar access**, and in the case of fences, the requirements of the *Dividing Fences Act 1961*, and associated local laws.

Obscure glazing

Obscure glazing can be used to limit the line of sight while maintaining a level of **solar access** and **daylighting** into rooms, and when openable, **natural ventilation**. While obscure glazing can be an effective means for addressing visual privacy, it restricts outlook for residents, and therefore alternative design solutions may be more appropriate.

The area of obscure glazing should only be provided up to a height of 1.6m above floor level. It is preferable that any glazing above this height is transparent to maximise **daylighting** and maintain some outlook from the **dwelling**.

Photo G3.10b The privacy screening on this development has been effectively integrated into the building design

Where obscure glazing is proposed and an openable window is required, consider providing the openable portion above a height of 1.6m above floor level to ensure visual privacy is maintained.

Raised sill height

Raising the sill height of a window to a **habitable room** to at least 1.6m above floor level, means it is no longer considered a **major opening** as per the definition. This results in the visual privacy requirements no longer being applicable. While this can provide an effective measure for mitigating visual privacy issues, high windows limit outlook for residents, and alternative design solutions should be prioritised.

Figure G3.10c Screening considerations for future development of adjoining lots

3.10 Visual privacy (cont.)

DESIGN TIPS

The following design responses may assist in addressing a design principle(s):

- Suitable established trees, shrubs and other **screening** plants may provide an acceptable means of interrupting the line of sight into a **major opening** or **active habitable space** of an adjoining **dwelling** for the purpose of satisfying visual privacy **design principle** requirements. Subject to consultation with the adjoining owner, the necessary planting on the **development site** would be the subject of a condition of development approval to run with the land. Additionally, arrangements may be made between the proponent and landowner of the affected property for the proponent to also provide or contribute towards the cost of installing screen planting within the affected property.

Screening

Where **screening** is proposed, it should be permanent, integrated with the **building** design and have minimal impact on the **amenity** of residents and neighbours. Screening devices do not always need to cover the entire window and should be made from durable materials.

Excessive visual privacy **screening** is strongly discouraged as it can result in negative impacts such as reduced outlook, **solar access**, **natural ventilation** and internal **amenity**.

Screening should be perforated to allow the circulation of air, provided that it meets the objective of protecting visual privacy. In the absence of a prescriptive standard for partial screening, such proposals generally should be assessed against the **design principles** and in consultation with any potentially affected property owners. However, it also is important that the size of individual gaps do not compromise the visual privacy of adjoining properties, and a maximum 50mm visual gap is suggested as reasonable. The definition of **visually permeable** can be used to guide what constitutes sufficient screening.

In the case of slatted or lattice **screening**, 50mm slats, spaced at 50mm, would be appropriate. Where fixed louvres are used, either for vertical or horizontal screening, the spacing required

to achieve acceptable screening will depend on the view angle and width of the louvre blades, suitably interrupting the line of sight (refer **Figure G3.10d**).

Louvres intended for **screening** must be fixed or have a physical and permanent limitation on opening, to ensure the level of visual permeability does not exceed the specified standard. Such standards may be subject to a discretionary variation taking into consideration any comment and/or agreement from the relevant **adjoining property** owner.

Building to boundaries

Privacy may be enhanced for both the **development** and its neighbour by **building** a portion of the **dwelling** up to the **lot boundary** as provided in **C3.4.4** and **C3.4.5**. This overcomes the problem of overlooking from that **wall**, and in most cases allows more freedom of design on the **site** to ensure privacy for **private open space** and windows. However, the use of **boundary walls** does need to consider other aspects of design and neighbour **amenity**, such as the possibility of overshadowing **adjoining properties**.

Where **development** adjoins a vacant residential **lot**, it may not be known how the land will be developed in the future. Visual privacy should be addressed by **major openings** or outdoor **active habitable spaces** (excluding bedrooms) being:

- set back from a **lot boundary** in accordance with **Table 3.10a**;
- oriented at right angles to the lot boundary to direct outlook away from the **adjoining property**; or
- **screened**.

There are no **deemed-to-comply** provisions for bedrooms facing a **lot boundary** of a vacant residential **lot** as future **development** can respond to privacy considerations through **C3.10.1** to **C3.10.3**.

Where a previously vacant **adjoining property** is **developed** with a **dwelling(s)**, modifications to or the removal of **screening** may be appropriate in consultation with the **decision-maker**.

Figure G3.10d Permeability of screening

Community

3.10 Visual privacy (cont.)

ASSESSMENT GUIDANCE

The provisions of this element are applied in context to whether the **adjoining property** is vacant or developed with **dwelling(s)**:

- where the proposed **development site** adjoins an existing dwelling, the **cone of vision** assessment of **C3.10.1** and **C3.10.2** should be applied.
- where the proposed **development** overlooks an adjoining vacant residential **lot**, the **setback**, design and **screening** requirements of **C3.10.6** should be applied.

When applying **Table 3.10a** and the **adjoining property** is dual coded, the lower coding will apply unless development has been approved or built to the higher coding.

Sources of overlooking

While it may be possible to overlook an **adjoining property** from multiple vantages, the provisions of this element only seek to control overlooking between:

- **active habitable spaces** and **habitable rooms** with a floor level more than 0.5m above **natural ground level** of the **development site**; and
- the active habitable space and habitable rooms of the adjoining property.

Visual privacy requirements do not apply in the **street setback area**. The basis for this is that control of overlooking for areas visible from public places would be largely ineffective in terms of privacy protection and also could limit outlook over, and surveillance of the public places themselves, thus compromising safety and security.

LOCAL PLANNING FRAMEWORK CONSIDERATIONS

Where **development** is undertaken in a coordinated manner, it may be appropriate to remove or reduce visual privacy requirements for typologies such as **terraces** (on narrow **lots**).

Active habitable spaces

The **deemed-to-comply** provisions aim to maintain an adequate level of privacy to **major openings** and **active habitable spaces** that are located behind the **street setback line** on **adjoining properties**. A site survey is required to include the location, dimensions and levels of major openings and **unenclosed** outdoor active habitable spaces on adjoining properties.

For the purpose of assessing visual privacy, adjoining **active habitable space** may include:

- **habitable rooms** with a floor area greater than 10m² – typically living rooms, kitchens, dining rooms and bedrooms; and
- outdoor **private open space** – typically swimming pools, decks, **patios**, **verandahs**, **courtyards**, **balconies** etc that are likely to be occupied for extended periods of time;

but excludes:

- **service areas** and areas for **functional utilities** such as clothes drying; and
- other areas of **open space** such as **lot boundary setbacks** containing blank walls and/or minor openings.

Cone of vision and line of sight

The impact of a **development** on the privacy of an **adjoining property** should be assessed by applying the **cone of vision** from the **source of overlooking**. The three-dimensional cone of vision is measured from the source of overlooking towards the affected site in accordance with **C3.10.1**.

The three-dimensional **cone of vision** is a wedge shape (refer **Figure 3.10a**) that captures the area being overlooked on the **adjoining property**. Privacy only becomes an issue for design and assessment where the cone-of-vision captures any portion of either a **major opening** or outdoor **active habitable space**.

The design of the **development** can then respond by limiting or interrupting the line of sight to the **major opening** or **active habitable space** within the **cone of vision** (refer **C3.10.2**). The line of sight refers to what a person can see from the **source of**

overlooking within the cone of vision.

Measurement of the **cone of vision** and line of sight should be undertaken in accordance with **Figures 3.10a** to **3.10i**.

To demonstrate that the line of sight has been limited in accordance with **C3.10.2**, plans should include:

- clear identification of the **sources of overlooking** and the established **cone of vision**;
- the position and level of any **major openings** and **active habitable spaces** on the **adjoining property** within the established cone of vision;
- marked-up plans and elevations should show the established cone of vision and line of sight, measured from a standing position (1.6m above floor level) and/or seated position (1.1m above floor level), 0.5m in from the major opening (refer **Figure 3.10c** and **3.10d**), as they relate to the adjoining property; and
- any solution(s) (e.g. a horizontal fin) used to interrupt or limit the line of sight (refer **Figure 3.10a** to **3.10i**).

Photo G3.10c This window hood effectively restricts overlooking of the neighbouring property's rear garden without compromising amenity for the dwelling

PART D

Land

1.0 LAND

138

1.0 LAND

The size, shape and configuration of lots has a bearing on built form outcomes. Consideration should be given to both subdivision and development design to improve development outcomes.

1.1 Site area

1.1 Site area

◆ INTENT

The **site area** requirements are determined by the density coding allocated to land through the **local planning framework**. **Lots** and **strata lots** created through subdivision and amalgamation processes must comply with these requirements. This ensures that the density and type of **residential development** is appropriate for its context.

DESIGN GUIDANCE AND ASSESSMENT GUIDANCE

Lot design achieved through subdivision will influence yield and built form typology. For example, the creation of several lots with narrow **street frontages** could promote a **terrace** built form typology, whereas the creation of a wider frontage lot may be more suited to a low-rise apartment. It is therefore important that the desired built form outcome informs subdivision design and is considered prior to commencing the subdivision process.

Amalgamation is the process of combining two or more **lots** into a larger lot. This can have positive built form benefits including more coordinated **development** outcomes and design efficiencies, such as those achieved through shared vehicle access, communal spaces and the retention of **significant existing trees**. Larger, amalgamated lots are also capable of supporting diverse projects, including a combination of grouped and **multiple dwellings** or **mixed use development**.

Calculation of dwelling yield

The density coding applicable to a **site** and the corresponding **site area** provisions of **C1.1.1** determine the **dwelling** yield potential of a **development**.

The **dwelling** yield of a **lot** can be calculated by dividing the lot area by the average **site area** requirement for the relevant dwelling type and density coding (refer **Table D**).

$$\frac{\text{lot area}}{\text{average site area}} = \text{dwelling yield}^*$$

**rounded down to nearest whole number.*

Development can consist of a mix of **dwelling** types. For example, a development may include **grouped dwellings** and **multiple dwellings** on the same **lot**. To calculate the dwelling yield potential of a lot that includes both grouped and multiple dwellings, apply the following formula:

$$\text{lot area} \geq \left(\frac{\text{number of grouped dwellings}}{\text{grouped dwelling ave site area}} \right) + \left(\frac{\text{number of multiple dwellings}}{\text{multiple dwelling ave site area}} \right)$$

Table G1.1a provides scenarios for calculating **dwelling** yield for developments consisting of grouped and **multiple dwellings** on the same **lot**.

Multiple dwellings and mixed-use development

Table D provides an average **site area** requirement for calculating the yield of **multiple dwellings** (R10-60). This is different to the **plot ratio** method used for higher density apartments in R-Codes Volume 2. Plot ratio can have the unintended consequence of delivering mostly smaller apartments (1 and 2 bedroom) to maximise **development** yield. The average site area approach allows consideration of a mix of apartment types, including larger apartments suitable for families, without foregoing yield.

The average **site area** approach also simplifies yield calculations for mixed **dwelling** type proposals consisting of grouped and **multiple dwellings** on the same **lot**; further encouraging diversity and affordability in the housing market.

The **site area** per **dwelling** requirement only applies to the residential component of a **mixed use development**. For any guidance on the floorspace of non-**residential development**, refer to the **local planning framework**.

1.1 Site area (cont.)

Measuring the minimum site area

The minimum area of a **development site** should be equal or greater than the minimum required in **Table D** and permit a useable area for **development**. Factors that should be accounted for that may reduce or increase its capacity to accommodate **residential development**, include:

- the area lost to corner truncations (to a maximum of 20m²), as these may be indistinguishable from the **lot** itself, and can be visually part of the development; and
- in the case of **battleaxe lots**, exclusion of some or all of the vehicle and **pedestrian access leg** and associated truncations.

For **grouped dwelling** developments, the minimum **site area** excludes areas of **common property** (although common property is included for the purpose of calculating average site area).

Site area variations

The minimum and average **site area** in **Table D** may not be varied except where the **WAPC** is satisfied that the proposal addresses **P1.1.2** and **P1.1.3** and approves the application. This provides some flexibility to accommodate minor reductions to minimum and average site areas and includes the creation of a **green title lot**, **survey-strata lot**, or **strata lot** for an existing authorised grouped and **multiple dwelling** development that does not meet the minimum and average area requirements specified in **Table D**.

As the **WAPC** is the only **decision-maker** that may approve a variation to the minimum or average **site area**, **multiple dwelling** development approved by the local government (including where a Joint Development Assessment Panel is the decision-maker), will need to comply with the average site area requirement. This is distinct from multiple dwelling development subject to the R-Codes Volume 2 where all decision-makers have discretion to vary the **plot ratio** requirements. **Grouped dwelling** development in advance of an approved subdivision is similarly required to comply with the minimum and average site area requirements where the local government is the decision-maker.

Notwithstanding this, there are a range of **site area** concessions available for proponents to use to gain additional **dwelling** yield, subject to meeting certain criteria.

The subdivision of land and ability to vary minimum and average **site area** requirements is also subject to other **WAPC** policies, in particular *Operational Policy 2.2. Residential Subdivision*.

Site area concessions (aged or dependent persons' dwellings or single bedroom dwellings) – Part B

Single houses, grouped dwellings and **multiple dwellings** may be proposed as aged or dependent persons' dwellings and **single bedroom dwellings** and accordingly afforded **site area** concessions which apply to Part B only.

A **site area** concession for an aged or dependent persons' dwelling and **single bedroom dwellings** is incorporated under **C1.1.5** of Part D – *Land for lots* coded R25 and below. The concession is calculated by reducing the minimum and/or average site area requirements by one-third and calculating the number of aged or dependent persons' dwellings or single bedroom dwellings accordingly. For example, under the R20 Code, each **dwelling** requires a site area of 450m². Application of the site area concession reduces this to 300m². In the case of a 1,200m² site coded R20, the concession could potentially allow four aged or dependent persons' dwellings or single bedroom dwelling units instead of the usual two.

The **site area** concession does not mean that the coding of a **lot** is amended, with consequences for other requirements. For example, application of the site area concession to a lot with an R-Code of R20 does not mean that the coding is increased to R30, or that the **street setback** or **open space** requirements of the R20 code are replaced by those of R30.

1.1 Site area (cont.)

Site area concessions (accessible dwellings or small dwellings) – Part B and Part C

Single houses, grouped dwellings and multiple dwellings may be proposed as **accessible dwellings** and **small dwellings** and accordingly afforded a **site area** concessions which apply to Part B (R30-R40 single houses only) and Part C.

To promote **dwelling** diversity, C1.1.6 and C1.1.7 enables the minimum and average **site area** requirements of **Table D** to be reduced by up to 35% for **accessible dwellings** and **small dwellings**, subject to the development meeting the **deemed-to-comply** provisions and/or **design principles** of Part B elements 5.5.4 *Accessible dwellings* and 5.5.5 *Small dwellings*, and Part C elements 2.7 *Universal Design* and 2.9 *Small dwellings*.

The **site area** concessions recognise that these types of **dwellings** are typically smaller, have fewer residents, and less demand for parking. The 35% site area concession is limited to 50% of dwellings in the R30-R40 coding for **developments** of 4 or more dwellings. This is to ensure dwelling diversity and density appropriate to locality.

In R50 and above coded land, the **development** of **accessible dwellings** is not limited as this density coding is generally appropriately located in proximity to key services.

To calculate the minimum and average **site area** for **small dwellings** or **accessible dwellings**, apply the following formula:

$$\text{Concession min or ave site area} = \left(\text{min or ave site area} \times 0.65 \right)$$

To calculate the **dwelling** yield of a **lot** that includes either **small dwellings** or **accessible dwellings**, together with non-concessional dwellings, apply the following formula:

$$\text{lot area} \geq \left(\frac{\text{no. of concession dwellings}}{\text{concession ave site area}} \times \right) + \left(\frac{\text{no. of dwellings}}{\text{ave site area}} \times \right)$$

Table G1.1b provides scenarios for calculating **dwelling** yield when including **site area** concessions.

Site area concession (retaining significant existing trees) – Part C – R30 to R60 multiple dwellings

A **site area** concession is afforded where retaining a **significant existing tree** on a **site** subject to a **development** proposal for a **multiple dwelling**. When proposed, the average site area may be reduced by 10%. However, the reduction cannot be applied to **dwellings** already subject to other site area concessions. It is recommended that the proponent and the **decision-maker** agree to a suitable arrangement for the ongoing protection of the tree, such as conditions of development approval.

Mixed use development sites

Part D applies to mixed use developments in areas coded up to R60. For areas coded R80 and above or R-AC, refer to R-Codes Volume 2.

Retained existing dwellings

In accordance with element 3.8 *Retaining existing dwellings*, ensure strata subdivision allows the retained **dwelling** to meet the requirements of the R-Codes. In particular, ensure **lot boundary** setbacks meet the requirements of **C3.4.1**.

Housing on lots less than 100m²

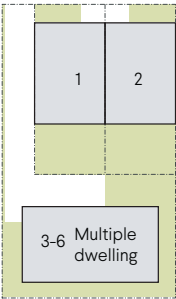

Dwelling development on **lots** less than 100m² are to be selectively used as a transitional **building** typology between high-density urban environments (i.e. multi-storey commercial, mixed use and apartment **developments**) and low-density suburban environments (i.e. single and two-storey **single house** and **grouped dwelling** developments). They should be located close to public **open space** and other high **amenity** areas, with ready access to active transport modes.

Lots less than 100m² can only be created where the land is coded R100-SL in a **scheme** or approved **structure plan**. For further guidance, refer to *Position Statement – Housing on lots less than 100m²*.

Where site area concessions have been applied, appropriate measures (such as a notification under section 70A Transfer of Land Act 1893 and / or Restrictive Covenant registered on the Certificate of Title) may be appropriate to limit **development** of the **site** to achieve the concession criteria and ensure subsequent purchasers are aware of this restriction.

APPENDICES

G1 THE R-CODES AND SCHEMES

146

Appendix G1

THE R-CODES AND SCHEMES

The R-Codes apply to all residential development throughout Western Australia and provide a consistent set of design standards for residential development. The R-Codes refer to the State planning objectives and these are to be taken into account by the decision-maker in assessing a residential development proposal.

The R-Codes provide for an appropriate choice and distribution of housing types and densities to meet the needs of the community as a whole, appropriate to local conditions and amenity.

The design principles of the R-Codes should be considered by local planning or housing strategies, taking into account local context and planning issues and reflected in its objectives. Both State and local objectives may then be referenced in the assessment of a residential development proposal.

It is important for schemes and local planning strategies to provide the local context within which design and development proposals can be considered, and to ensure that they identify the best applicable R-Coding and provisions, after properly considering and addressing:

- lot size, shape and variation from the average lot area within each zone;
- capacity of infrastructure to service housing at the density proposed;
- community values, both protecting what has value from the past, and new opportunities for the future;
- access, transport and proximity to movement networks;
- access to social infrastructure such as open space, schools, hospitals, sporting and community facilities;
- mixture of housing types, density and social diversity; and
- proximity to economic activity such as employment centres, ports, and activity centres.

Although the R-Coding will be designated on the scheme map, the local planning strategy will explain the designation of the particular R-Coding for particular local areas in the scheme.

Where there are individual needs, the R-Codes may need to be supplemented by a local planning policy, structure plan, local development plan or a special control area which may be implemented through schemes.

G1.1 Local planning strategies

A local planning strategy provides the rationale and vision that underlies the regulatory provisions of the scheme, including the specific R-Code designations of the scheme.

The local planning strategy includes a section on housing within the Community, Urban Growth and Settlement theme. The issues that are relevant in the housing component of a local planning strategy, and the selection of the relevant R-Code for the various parts of the municipality, include:

- recognition of the regional demand for a range of densities/development intensity and dwelling types;
- socioeconomic and demographic profiles, both existing and likely in the future;
- existing lot sizes;
- current and future infrastructure, including the road network, sewerage, water supply, power, significant employment centres, social and recreational facilities and public transport facilities;
- age and condition of existing housing stock;
- existence of sites suitable for new housing development, redevelopment or infill;
- trends and market demand for various forms of housing;
- heritage and streetscape values;
- existing and desired character of particular precincts; and
- land values and the effect of proposed density changes on them.

This list is not exhaustive or ranked in order of importance. The issues are useful for analysing the appropriateness of existing or proposed R-Codings.

G1.2 Local planning schemes

The R-Codes are implemented through local planning schemes and applied to zones that allow residential land use. There is flexibility in their application by providing a choice of R-Codings to facilitate a range of residential development types and densities (ranging from traditional low-density suburban development to higher-density activity centres).

The R-Codes aim to provide certainty for assessing development proposals and to increase flexibility to allow the consideration of good design and innovation, while meeting the objectives of the R-Codes and any relevant local planning objectives.

G1.3 Density control

The application of the minimum site area requirements of the R-Codes R-Codes Volume 1 will assist in the achievement of housing density targets determined during the strategic planning process. Before making a decision as to the R-Code to be applied to a particular area, the decision-maker should first examine the density targets and housing character specified in its local planning strategy for each precinct or locality. It will then be necessary to identify which R-Code is most likely to promote the density targets and reflect the desired housing character.

For existing urban areas the process of allocating an R-Code in a scheme requires careful assessment of the relationship between the lot sizes prevailing in a locality, current trends in demand for particular types of housing, and any adopted strategic planning policy relevant to residential density/development intensity.

Appendix G1

G1.4 Changes in housing density

Sometimes planning and design problems arise from a change in the R-Code designation between different areas or neighbourhoods. Issues of setback, visual dominance, overlooking and privacy are often evident. Due consideration needs to be taken when identifying where an R-Code density will change.

Local planning provisions need to give due consideration to neighbourhood design. A scheme will need to carefully consider such factors when delineating R-Codes and changes from one R-Code density to another. Development sites should respect adjoining properties where land use or zoning differs, particularly where two residential lots with different R-Codings adjoin, or where a commercial zone (mixed use) adjoins a residential zone.

An R-Code boundary along the rear of a property boundary, aligned along a rear laneway or right-of-way, may in some cases be preferable. However, it is often the rear of existing housing developments (such as bedrooms, private spaces and courtyards) which generally has a higher need for privacy, daylight and overshadowing (refer to **Figure A1.4a**).

G1.5 Restricted coding

The assignment of a particular R-Code to a given area will normally mean that all the varying housing types (such as single, grouped and multiple) included in that R-Code under **Table D** will be permissible, or at the very least, discretionary within that area.

There may be areas where the decision-maker may wish to secure a given density but without permitting the full range of housing types available under the relevant density code.

For example, consider an area which contains **lots** of 1,000m² occupied by single houses. The decision-maker may decide that it wishes to allow for some increase in residential density, but retain the single house appearance and character of the area. It is prepared to see single houses or grouped dwellings on small lots, on a limited basis, where they have frontage to a public street.

To achieve this:

- the area is coded R25 on the scheme map; and
- a clause is inserted in the scheme text which reads: "Within the area bounded by (name the streets or otherwise clearly define the area) that is coded R25, a single house or grouped dwelling may not be constructed unless the frontage is at least 10m to a public street".

Site responds to the setting, adjoining the different residential densities that surround it.

Figure A1.4a Development needs to consider the surrounding development context

Appendix G1

G1.6 Expanded or dual coding

The opposite of restricted coding is an expanded coding where the decision-maker may wish to permit specific dwelling types not included in the selected code under **Table D** of the R-Codes Volume 1.

For example, in the case of expanded coding the **decision-maker** determines that a particular part of the residential zone should comprise primarily single houses on lots with a minimum lot area of 700m² but it is also prepared to consider, on its merits, applications for the construction of a pair of grouped dwellings, notwithstanding that grouped dwellings are prohibited in the zone as a whole, provided a lot has a minimum area of 1,000m².

To achieve this:

- the area is coded R12.5 on the scheme map; and
- a clause is inserted in the scheme text which reads: “Within the area bounded by (name the streets or otherwise clearly define the area) coded R12.5, the decision-maker may permit the construction of not more than two grouped dwellings in accordance with the standards of the R20 code on any lot of not less than 1000m²”.

Examples of dual coding might include:

- i. an area undergoing change and being redeveloped by the replacement of single houses on large lots by grouped dwellings at a higher density; or
- ii. an area which has servicing constraints that is, reticulated sewerage and requires coordinated development with staged upgrading of servicing infrastructure.

Some of the older housing stock may be structurally sound and of a particular heritage or character that the decision-maker wishes to preserve. Although the existing lots are large for single houses (for example, 1,000m²), there would be positive planning advantages if two or more lots were amalgamated for redevelopment. The decision-maker determines that the R20 density code is generally appropriate but it would be prepared to accept the R30 code if certain criteria were met.

To achieve this:

- the area is coded R20/30 on the scheme map; and
- a clause is inserted in the scheme text which reads: “Within the area coded R20/30, development to the density and standards of the R30 code shall be permitted only if the development: a) involves not less than four nor more than six grouped dwellings or single houses; b) retains any existing house(s) that the decision-maker considers worthy of retention; and c) is consistent with the requirements of the scheme and any local planning policy”.

G1.7 Housing in non-residential zones

Most schemes provide for residential development to be possible in one or more non-residential zones, or zones which are not exclusively residential in nature.

Depending on the type of housing that is desired or acceptable, the decision-maker should designate the appropriate R-Code to apply within that zone or part of the zone, just as for the residential zone or zones. Where residential use is permitted in a zone but no specific R-Code is allocated, the R-AC3 code can be used as an indicative guide to assist in the absence of any other provision in the local planning framework.

G1.8 Short-term accommodation

Whether or not the provisions of the R-Codes apply to the development of short-term accommodation (including serviced apartments), will be determined by the way in which the scheme deals with this type of land use.

Short-term accommodation may be proposed where a density coding applies but should be assessed under the R-Codes based on the form of development proposed.

Short-term accommodation which is proposed where no density coding applies must be assessed under the provisions of the scheme and the relevant design elements of the R-Codes used to guide and inform the decision-making process, particularly, where the short-term accommodation is not serviced or attached to a hotel/motel (such as self-contained accommodation with integral cooking and laundry facilities for each dwelling unit.)

G1.9 Residential buildings

Where it is proposed to develop a residential building as defined by the R-Codes, the extent to which the provisions of the R-Codes should be applied to the development of the building will be determined by the scheme and relevant provisions under the Health Act 1911, relating to residential buildings or lodging houses.

A residential building may be proposed where no density coding applies and should be assessed under the provisions of the scheme. In this case the relevant provisions of the R-Codes could be used to guide and inform the decision-making process.

Appendix G1

G1.10 Heritage matters

Heritage and character are issues addressed in schemes and local planning strategies. The R-Codes therefore make no specific provisions related to heritage places and areas. Provision is made in clause 12 of the Deemed Provisions for the decision-maker to vary any site or development requirement specified in its scheme for the conservation of a heritage area. The decision-maker therefore has the ability to vary any site or development requirement within the R-Codes, where desirable, to enhance or preserve heritage values in a heritage area.

G1.11 Residential precincts or localities

Precinct or locality-based planning recognises key housing differences, for example, in density, type and style of housing, landscaping and streetscape. It is often these parameters which contribute to a sense of place and create neighbourhoods. This is a big contributor to the quality of life and experience offered in many residential areas.

Planning by precincts is particularly relevant in established residential areas, places where redevelopment or infill development is taking place or where there is a mix of land uses and activity which present valued living experiences for residents.

In such cases, precinct or locality-based planning provides the best basis on which to allocate R-Code density, as well as identifying local character differences and responding to these with focused objectives.

Greenfield housing development sites on the peri-urban fringe and large-scale urban infill sites (for example, former industrial sites) are more suited to comprehensive structure planning through Liveable Neighbourhoods and/or local development plans.

Some of the criteria that may be used in defining residential precincts include:

- well-defined areas with common existing and desired future characteristics;
- perception of precinct as an entity;
- broader than individual streets, but smaller than suburbs;
- recognisable similarities or patterns in terms of land use, age and period of development, subdivision pattern and lot sizes, and type, scale and style of housing;
- well-defined edges, defined by clear transition of use or character, busy streets, natural features such as a major park; or
- different land use and activities, divorced from surrounding areas of different density or character.

G1.12 Special control areas

In localities or precincts of distinctive character it may be appropriate for the decision-maker to designate a special control area by amendment to the scheme. Special control area provisions might typically deal with issues that aim to protect the special character of an area or to promote a particular development theme in order to establish and reinforce a sense of place. This may involve controls on the demolition of existing buildings, particular design or siting requirements or controls in relation to the materials of construction. Other matters may include seeking control of street setbacks, building heights, roof pitches, street fencing and external appearance.

Planning Bulletin 114/2024

Residential Design Codes Volume 1 and 2:

Deferred Gazettal, Special Transition Period
and Relationship with Pre-Existing Local
Planning Frameworks

8 March 2024

1. Purpose

To assist stakeholder understanding of when to apply *Residential Design Codes Volume 1 (R-Codes Vol.1)* and *Volume 2 (R-Codes Vol.2)* as gazetted in 2024, and the relationship with the existing local planning framework.

2. Definitions

Throughout this planning bulletin –

Deemed provisions – means schedule 2 of the Planning and Development (Local Planning Schemes) Regulations 2015.

Local planning instrument – means a local planning scheme, precinct structure plan, activity centre plan, standard structure plan, local development plan or local planning policy.

R-Codes Vol.1 2021 – means the version of the R-Codes Volume 1 gazetted on 2 July 2021.

R-Codes Vol.1 2024 – means the version of the R-Codes Volume 1 publicly released in 2023 which will be gazetted (with amendments) on 10 April 2024.

R-Codes Vol.2 2019 – means the version of the R-Codes Volume 2 gazetted on 24 May 2019.

R-Codes Vol.2 2023 – means the version of the R-Codes Volume 2 publicly released in 2023 which will be gazetted on 10 April 2024.

WAPC – means Western Australian Planning Commission

3. Background

A revision of *Residential Design Codes Volume 1* and consequential amendments to *Residential Design Codes Volume 2* were released by the Minister for Planning in February 2023. A 'deferred gazettal period' was put in place with the new policy provisions

scheduled to come into effect on 1 September 2023. This date was further deferred pending further amendments to address concerns raised by the Minister for Planning. A revised gazettal date of early 2024 was subsequently advanced.

The amended revision of *Residential Design Codes Volume 1* and consequential amendments to *Residential Design Codes Volume 2* were released by the Minister on 8 March 2024 with the new policy provisions to come into effect on 10 April 2024.

The 'deferred gazettal' period is followed by a 'special transition period' that will apply to some Volume 1 development applications in certain scenarios, generally greenfield and brownfield developments. The 'special transition period' is 24 months from the date of gazettal as outlined in the R-Codes Vol.1 2024, ending 10 April 2026.

Parts of local planning frameworks will similarly be subject to a 'special transition period' of 24 months following gazettal. During this period, it is expected that the framework will be updated to align with the R-Codes Vol.1 2024 and be implemented by 10 April 2026 at the conclusion of the 'special transition period'.

The 'deferred gazettal period' and 'special transition period' were developed following extensive targeted consultation with local government, planning consultants, land developers and the housing construction industry, and was subjected to an independent peer review.

In greenfield development areas and some brownfield developments, building designs and lot sizes are almost always inextricably linked. Often, these designs have been contracted many months or even years before building commences.

In such cases, lots that have been created to accommodate a building design compliant with the R-Codes

Vol.1 2021 (and site specific local development plans) may not necessarily provide for development compliant with the updated *R-Codes Vol.1 2024*.

The 'deferred gazettal period' and 'special transition period' provide time for contracted designs to obtain a development approval or a development approval-exempt building permit (where applicable) under existing planning frameworks.

3.1 Local Planning Frameworks and Residential Design Codes Volume 1

Part A, Section 3 of *R-Codes Vol.1 2024* outlines the deemed-to-comply provisions that may be amended or replaced by local government either with or without WAPC approval

These provisions ensure that the design and development of dwellings can respond to specific local requirements and context, while maintaining consistency with the relevant element objectives and design principles.

This can be achieved through the following local planning instruments:

- local planning policies;
- local development plans;
- precinct structure plans (including what were previously called activity centre plans); and
- local planning schemes

It is also noted that many pre-2015 structure plans also amend or replace deemed-to-comply provisions.

Many local governments have adopted local planning policies or local development plans for development in structure plan areas that incorporate provisions based on *Planning Bulletin 112/2024* (previously *Planning Bulletin 112/2016*).

4. Applications submitted prior to gazettal

Part A, Section 4 of the *R-Codes Vol. 1 2024* outlines transitional arrangements for local planning instruments and certain development applications.

The following further articulates the WAPCs position in regard to particular circumstances:

4.1 Development for which development approval is not required

4.1.1 Single houses and other works on the same lot as a single house or grouped dwelling (all codings)

For the purposes of clause 61(1) (a) of the deemed provisions contained in Schedule 2 of the Planning and Development (Local Planning Schemes) Regulations 2015, during the 'deferred gazettal period' the *R-Codes Vol.1 2021* (including as modified by local planning instruments) is the version of the *R-Codes* applicable for items 6 and 7 in the table (where column 2 specifies that the works need to comply with the deemed-to-comply provisions).

For the avoidance of doubt, during the 'deferred gazettal period', the ungazetted *R-Codes Vol.1* should not be used to assess a development for which development approval is not required.

4.2 Development applications submitted prior to public release but not yet determined

4.2.1 Single houses, grouped dwellings (all codings), multiple dwellings in areas coded less than R40

The *R-Codes Vol.1 2021* is the version of the *R-Codes* applicable during the 'deferred gazettal period'.

In accordance with clause 2.5.4 of the *R-Codes Vol.1 2021*, any development application that meets the deemed-to-comply provisions of the *R-Codes Vol.1 2021* (including as modified by

local planning instruments) and the relevant provisions of the applicable local planning scheme shall not be refused.

Where deemed-to-comply provisions are not met, an assessment of the application primarily against the relevant design principles (of the *R-Codes Vol.1 2021*) should be undertaken and, in accordance with clause 67(2) of the deemed provisions, due regard be had for the relevant provisions of the *R-Codes Vol.1 2024*.

4.2.2 Multiple dwellings in areas coded R40 to R60

The *R-Codes Vol.2 2019* is the version of the *R-Codes* applicable during the 'deferred gazettal period'.

The *R-Codes Vol.2 2019* is a performance-based code, requiring development to meet all element objectives. In accordance with clause 67(2) of the deemed provisions, due regard should be had for the relevant provisions of the *R-Codes Vol.1 2024*.

4.2.3 Multiple dwellings in areas coded R80 and higher

As the consequential amendments to the *R-Codes Volume 2* are confined to the removal of R40-R60 related provisions, there is no need to consider the *R-Codes Vol.2 2024* until it is gazetted.

4.3 Development applications submitted after public release but prior to the gazettal date

As outlined in planning case law¹, it is well established that a development application is to be determined on the basis of the law as it stands at the time of the determination. In this regard, a development application lodged prior to the gazettal of the *R-Codes 2024* but not yet determined following the gazettal will be required to be determined on the basis of the *R-Codes 2024*. Officers assessing applications should give careful consideration to the likely timing of a decision based on the timeframes in clause 75 of the deemed provisions.

¹ *Miller v City of Stirling [2007] 247*, paragraph 35

5. Arrangements during the special transition period

5.1 Special transitional deemed-to-comply provisions for certain circumstances

Part A, Section 4.1 of *R-Codes Vol.1 2024* outlines the provisions that are either not required to be met or are substituted during the 'special transitional period'. The special transitional deemed-to-comply provisions will cease to have effect on 10 April 2026.

Dwellings designed under existing local planning frameworks may not necessarily comply with *R-Codes Vol.1 2024*. Recognising this, Part C, section 4 of the *R-Codes Vol.1 2024* provides a set of transitional deemed-to-comply provisions for single houses within areas coded R50 and above subject to an approved structure plan and/or local development plan (as specified in Part A, section 4.1.1) that will apply for the duration of the 'special transition period'.

In addition, Part A section 4.1.2 provides a further special transitional provision that relates to single house and grouped dwelling development subject to Part C, Element 3.1 – Site cover, whereby Site Cover requirements are replaced with Open Space requirements in accordance with Part C, Section 5 for the duration of the 'special transition period'.

Except with respect to those deemed-to-comply provisions that are not required to be met, where the local planning instrument provides a deemed-to-comply provision, the local planning instrument's provision prevails. For example, if a local planning instrument specifies the size of an outdoor living area, that outdoor living area requirement will prevail over the special transitional provision for private open space.

Where a provision of Part C is not required to be met via a special transitional deemed-to-comply provision, there is no further requirement to demonstrate compliance with the relevant design principle(s).

The special transitional deemed-to-comply provisions will cease to have effect on 10 April 2026.

6. Local planning instruments

6.1 Existing local planning policies

As outlined in Part A, Section 4 of the *R-Codes Vol.1 2024*, at the conclusion of the 'special transition period', the *R-Codes Vol.1 2024* will prevail over local planning policies that modify deemed-to-comply provisions of the *R-Codes Vol.1 2021*, excluding Part B development (single houses in R40 and below, grouped dwellings and multiple dwellings in R25 and below). This is regardless of whether they were previously subject to a WAPC approval or not. In order to have the effect of modifying deemed-to-comply provisions after the conclusion of the 'special transition period', existing local planning policies will need to be reviewed by local government, amended as necessary and approved.

Such reviews should seek alignment with the *R-Codes Vol.1 2024*.

Where WAPC approval is required for provisions, the review of these local planning policies should be prioritised by the local government and the Department of Planning, Lands and Heritage.

6.2 Local planning policies incorporating R-MD Code provisions

Local governments are strongly encouraged to undertake a review of any local planning policies incorporating R-MD Code provisions to remove amendments to the R60 density code standards in a timely manner, and to publish these in accordance with clause 6 of the deemed provisions at the conclusion of the special transition period – no earlier or later.

Where an endorsed structure plan or a scheme provision designates an area or lot with a density code of R60 as being subject to R-MD Code provisions, the Commission has determined that, following the revocation of these policies, the deemed-to-comply provisions contained within the *R-Codes Vol.1 2024* Part C will apply (subject to any modifications elsewhere in the local planning framework).

6.3 Existing approved local development plans

As outlined in Part A, Section 4 of the *R-Codes Vol.1 2024*, all approved local development plans that modify deemed-to-comply provisions of the *R-Codes Vol.1 2024* will remain valid until their expiry date.

When considering an amendment to an approved local development plan, the validity period should not be extended.

Notwithstanding, the local government may agree to an extension to the validity period if the instrument is modified to align with the *R-Codes Vol.1 2024*.

Local governments are encouraged to review local development plans that have an expiry after 19 October 2025 with a view to alignment with the *R-Codes Vol.1 2024* within five years of the gazettal of the *R-Codes Vol.1 2024*.

Where possible, this review should align with the report of review for a local planning scheme prepared under r.66 of the Planning and Development (Local Planning Scheme) Regulations 2015.

6.4 Local development plans in active preparation but not yet approved

During the 'deferred gazettal period', local government was expected to continue to approve local development plans consistent with *R-Codes Vol.1 2021* as would have otherwise occurred had the *R-Codes* not been updated with the option of a restricted validity period where appropriate.

Where a local development plan was not lodged with sufficient time for consideration and approval prior to the gazettal date, approval should be based on consistency with the *R-Codes Vol.1 2024* including demonstrated need. The WAPC may have regard to its previous decision making under the *R-Codes Vol.1 2021*, the rationale provided by the proponent and any other matter it considers relevant. However, the WAPC is not bound by its previous decision making, given the new policy provision.

6.5 Existing approved standard structure plans and precinct (activity centre) structure plans

As outlined in Part A, Section 4 of the *R-Codes Vol.1 2024*, all WAPC approved standard and precinct

structure plans that modify deemed-to-comply provisions of the *R-Codes Vol.1 2024* will remain valid until their expiry.

When considering an amendment to an approved structure plan, the validity period should not be extended.

Notwithstanding, the WAPC may agree to an extension to the validity period if the instrument is modified to align with the *R-Codes Vol.1 2024*.

Local governments are encouraged to review the structure plans within their area that have an expiry after 19 October 2025 with a view to alignment with the *R-Codes Vol.1 2024* within five years of gazettal. Where possible, this review should align with the report of review for a local planning scheme prepared under r.66 of the Planning and Development (Local Planning Scheme) Regulations 2015.

The WAPC will consider amendments to structure plans upon request following such a review.

6.6 Standard structure plans in active preparation but not yet approved

As standard structure plans do not vary the *R-Codes*, the WAPC does not make decisions on built form controls when determining a standard structure plan.

Proponents are advised to consider whether their structure plan design will support future development consistent with the *R-Codes Vol.1 2024* and modify as necessary.

6.7 Precinct structure plans in active preparation but not yet approved

During the 'deferred gazettal period', the WAPC continued to approve precinct structure plans consistent with *R-Codes Vol.1 2021* as it otherwise would have had the *R-Codes* not been updated with the option of a restricted validity period where appropriate. Precinct structure plan should be submitted to the WAPC for approval prior to the gazettal date.

Where a precinct structure plan is not submitted prior to the gazettal date, it is recommended that the precinct structure plan is modified to align with the *R-Codes Vol.1 2024* prior to submission to the WAPC.

6.8 Local planning schemes

Local governments are encouraged to review scheme provisions that modify the R-Codes with a view to alignment with the *R-Codes Vol.1 2024*. This should be done as part of any omnibus or other relevant amendments the local government is preparing, but otherwise at the next scheme review.

6.9 Plot ratio for multiple dwellings and mixed use development

The R-Codes Volume 2 previously applied to multiple dwelling development (and mixed use development) in R40-R60 areas, using a plot ratio requirement to control built form and dwelling yield. The plot ratio requirement also includes any non-residential component in a mixed-use development. Many local planning instruments modified the plot ratio acceptable outcome requirement.

The *R-Codes Vol.1 2024* now uses an average site area per dwelling to control dwelling yield. The average site area per dwelling requirement in the *R-Codes Vol.1 2024* will apply from the date of gazettal and, as outlined in the *R-Codes Vol.1 2024*, development applications are not able to seek variations to the deemed-to-comply site area requirement (variations may only be sought through a subdivision application).

The absence of a plot ratio requirement in the *R-Codes Vol.1 2024* should not be construed as voiding any plot ratio requirements in local planning instruments. Proponents and decisionmakers should still have due regard to the plot ratio requirement in line with the due regard status of the existing local planning instrument.

6.10 Conversion of design elements

Appendix 1 contains a list of design elements of the previous *R-Codes Vol.1 2021* compared with the design elements of the *R-Codes Vol.1 2024*. This can be used to assist in interpreting local planning instruments that refer to previous *R-Codes Vol.1 2021* provisions to understand which design element is applicable.

6.11 Manner and form – WAPC assessment of local planning instruments

The WAPC has provided manner and form assessment templates to assist in preparation of local planning policies and local development plans and the seeking of WAPC approval of modifications to the R-Codes.

Local governments and proponents are requested to use the prepared templates as soon as these are available.

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

BACKGROUND

Subject area

The Joondalup City Centre Development – Boas Place (subject area), relates to four lots where the City of Joondalup Administration Building, Joondalup Reception Centre, Civic Centre, Joondalup Library and Lotteries House building are currently located. The subject area is 34,807m² in area and is bound by Boas Avenue to the north, Central Walk to the west, Central Park to the south and Lakeside Drive to the east (refer to Figure 1 below).

The lots included within the subject area include the following:

- Lot 496 (70) Davidson Terrace, Joondalup – Lotteries House and public carpark.
- Lot 507 (90) Boas Avenue, Joondalup – City of Joondalup Administration Building.
- Lot 497 (102) Boas Avenue, Joondalup – Joondalup Library, Joondalup Reception Centre and Joondalup Civic Chambers.
- Lot 66 on Diagram 95155 – Right of Way.

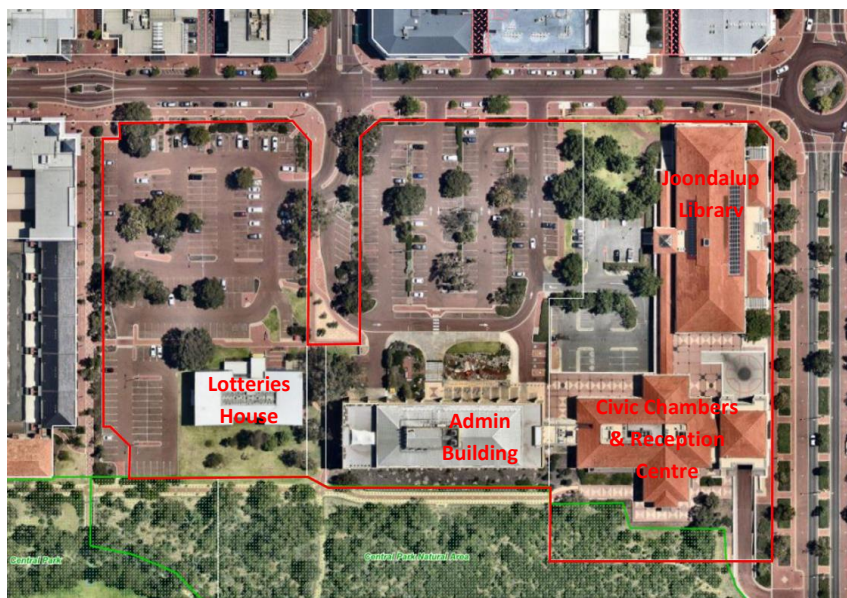

Figure 1 – Aerial image of 'Boas Place' subject area

All four of these lots are owned and/or managed by the City of Joondalup and represent an important asset which is currently underutilised considering the aspirations of the Joondalup City Centre.

Although Boas Place has been identified as a focal point for the future redevelopment of the City's land, the Project Philosophy and Parameters allows for a more holistic and strategic approach to the project should development opportunities arise on other City-owned land throughout the city centre.

Framework

The State Government has identified Joondalup City Centre as a 'strategic metropolitan centre' under its *Perth and Peel@3.5 million* (March 2018) and *State Planning Policy 4.2: Activity Centres* (July 2023) land use planning and infrastructure frameworks. This category of centre is classified as a higher order, regional

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

activity centre which falls only below Perth City as one of the key economic, commercial and social hubs throughout the Perth Metropolitan area.

Strategic metropolitan centres are generally characterised as high-density urban areas with activated frontages and public spaces, and mid to high-rise residential and commercial tower developments. *Perth and Peel@3.5 million* makes specific reference to Joondalup City Centre by encouraging:

“...strategic economic and employment opportunities, intensification of land use, capitalising on existing rail infrastructure and accommodating industries that can complement and support existing regional level facilities. While the majority of the centre is already developed, there are several large undeveloped and under-developed sites that are capable of delivering high density housing and providing additional employment opportunities as the centre matures.”

The subject area is zoned ‘Central City Area’ under the *Metropolitan Region Scheme* (MRS) and ‘Centre’ under the City’s *Local Planning Scheme No. 3*. (LPS3). The subject area is also located within the ‘City Centre Precinct’ of the City’s *Joondalup Activity Centre Plan* (JACP). It is the ‘City Centre Precinct’ which represents the central hub of Joondalup City where the highest intensity of mixed-use development and land uses are envisioned.

History

The City has previously explored various development opportunities for the subject area. In April 2008, the City undertook an Expression of Interest (EOI) process to engage a private consultant to investigate the feasibility of constructing a commercial office building at the site. Jones Lang LaSalle Property Consultants were appointed, and their report was presented to the City’s (former) Strategic Financial Management Committee (SFMC) in February 2009. Subsequently, following endorsement by SFMC, a project philosophy and parameters report was presented to and endorsed by Council at its meeting on 25 May 2010 (CJ083-05/10 refers).

An extensive due-diligence process and project investigation was undertaken over the next eight years which included (but not limited to):

- Creation of an Office Development Committee to provide advice and made recommendations to Council on the project.
- Two separate expression of interest (EOI) processes were initiated by the City to identify potential development partners for the project.
- Subsequently, appointment of Devwest Group Pty Ltd (Devwest) as the preferred partner for the project.
- Submission of a response to the State Government’s request for EOI for a Joondalup Office Accommodation proposal (which was eventually awarded to Primewest for the construction of the Department of Water and Environmental Regulation office building on the corner of Davidson Terrace and Shenton Avenue).
- Development of draft design guidelines and multiple concept plans for the subject area.

Due to a number of reasons, the City and Devwest were unable to reach an agreement on the future direction of the project and in 2018 ceased its partnership.

Following the cessation of negotiations with Devwest, Council agreed to the preparation of an Order of Magnitude Business Case (OMBC) for the project. The main purpose of preparing an OMBC was to provide Council with the appropriate information to enable an informed decision on the future of the project and the impact on the City’s financial position. The OMBC also allowed the City to provide potential developers/interested parties with sufficient information on the benefits of collaborating with the City to develop Boas Place.

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

On 9 March 2020, a report was presented back to the Major Projects and Finance Committee which included the outcomes of the OMBC, and resolved the following:

- 1 *NOTES the Joondalup City Centre Development Project Status Report;*
- 2 *NOTES the outcomes and recommended “next steps” of the Boas Place – Order of Magnitude Business Case;*
- 3 *NOTES the Boas Place – Order of Magnitude Business Case provided as Attachment 1 to this report; and*
- 4 *REQUESTS the Chief Executive Officer to continue to pursue opportunities to develop the Joondalup City Centre Development – Boas Place and to present a report to the Major Projects and Finance Committee, at a future date, on the status of the project.*

Following further investigations, a report was presented to Council at its meeting on 13 December 2022 (CJ231-12/22 refers), where a new vision for the Joondalup Central Business District (CBD) Project Cluster was endorsed. The Joondalup CBD project cluster includes the Boas Place Development, the Joondalup Performing Arts and Cultural Facility, a Second Multi Storey Car Park, the Joondalup Administration Building Redevelopment and the Joondalup City Centre Place Activation project. Council resolved the following:

- 1 *ENDORSES the Vision for the CBD cluster as outlined below:*

“The Joondalup City Centre is an iconic and recognisable business address known for its exciting innovation, technology, education and health industries. The outlook is dominated by quality, well-designed, sustainable buildings that complement the natural surroundings. The Joondalup City Centre offers abundant and varied employment opportunities for a locally-based workforce. Residents, workers and visitors enjoy high-amenity community spaces that have a vibrant, lively atmosphere. Places are integrated and interconnected and there is overall sense of flow.”

- 2 *NOTES the actions to achieve this vision requires the City of Joondalup to:*

- *Promote the City Centre as a desirable location for long-term capital investment.*
- *Encourage and support development projects that generate ongoing employment opportunities in the City Centre.*
- *Progress the development of cultural and artistic venues and spaces in the City Centre.*
- *Deliver distinctive, high amenity public open spaces in the City Centre.*

The philosophy and parameters have subsequently been reviewed and is the first step of the process to enable the City to secure resources to manage the project, evaluate options and progress the business case. The philosophy and parameters articulate the intent of Council progressing the project and address objectives and the reason the project is proposed.

PHILOSOPHY / PROJECT VISION

Strategic Community Plan 2022-2032 & Corporate Business Plan

The Joondalup City Centre Development – Boas Place falls within the ‘Place’ theme under the City’s 10-Year Strategy Community Plan (“Joondalup 2032”).

The City’s *Corporate Business Plan 2023-2027* identifies the project as one of the key non-capital priority projects for 2023/24. The milestone under the CBP for 2023/24 financial year states:

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

“Investigations into future opportunities for the development of Boas Place in the Joondalup City Centre to incorporate a variety of land uses.”

Vision

The vision for the project is as follows:

The Joondalup City Centre Development – Boas Place project will enhance the vitality and vibrancy of the city centre by providing high-quality, well designed and sustainable developments which attract residents, businesses and visitors to the area. A mix of land uses will be provided which encourage passive recreation and commercial activities that activate the public realm and strengthen the local economy.

Purpose

The purpose of the project is to:

- Evaluate a variety of different options and scenarios.
- Provide a strategic approach to the development of nominated City-owned land within the city centre.
- Provide Council with a business case that supports the vision.
- Ensure that the options and recommendations are aligned with key stakeholders.

OUTCOMES AND OBJECTIVES

Outcomes

The key outcomes of the project are as follows:

- Vibrant and activated spaces with a mix of land uses and high-quality urban design outcomes.
- Community and stakeholder engagement, with strong collaboration with potential partners.
- The project is financially sustainable to the City taking account of both the one-off establishment costs and the recurring impacts.
- Provides a range of community benefits, with a high Social and Economic Return on Investment.
- Alignment with other City Centre projects and Council strategies/plans.
- An integrated and connected movement network which is pedestrian orientated and draws visitors into the City Centre.
- Facilitates social interactions, community and cultural events and provides a strong link between the private and public realm.
- The project is a desirable and attractive proposition for development partners and businesses, with a strong emphasis on local economic growth.

Objectives

The table below summarises the project objectives. These will be used to evaluate options as part of the business case and used thereafter to evaluate the success of the project:

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

No	Objective	Success Criteria	Measurement
1	<p><u>High-quality urban environment</u></p> <p>Provides high-density, mixed-use developments which are attractive, have a strong sense of architectural identity and add visual interest and enrichment to the City Centre.</p>	<ul style="list-style-type: none"> The development responds to the existing/future characteristics of the local area and positively contributes to the amenity of the streetscape. The development is appropriately located, and is of a scale and size which reflects the aspirations and importance of the Joondalup City Centre. A mix of residential and non-residential uses are incorporated within the development. Landscaping and social infrastructure is provided which adds to the visual interest of the development. Environmentally sustainable design elements are integrated within the project. 	<ul style="list-style-type: none"> A detailed planning and design framework is followed which strives towards excellence in architectural design and built form outcomes. This could include using both existing/established planning policies as well as the development of additional planning mechanisms which set detailed development standards for the area. The project, including concepts and detailed design drawings, are reviewed periodically by experts in planning, landscape design, architecture and place making where appropriate. A site analysis document is prepared to identify the context and character of the area and is used to inform the location, design and planning phase/s of the project.
2	<p><u>Pedestrian orientated and integrated movement network</u></p> <p>Connection to the broader movement network, and services the development well by providing a high level of amenity, infrastructure and way finding features.</p>	<ul style="list-style-type: none"> The development is legible and prioritises pedestrians over vehicles. Established vistas, landmarks and way finding elements are included within the development to provide clear connections in and around the area. Pedestrian routes include added amenity and visual interest to enhance the experience. The development is well connected and integrated with the existing vehicle/pedestrian network. 	<ul style="list-style-type: none"> A transport study (or similar) is provided which demonstrates the movement network capacity is appropriate and meets relevant standards. Pedestrian paths are provided which are direct and link key features within and around the precinct. Key locations within the development site are identified and designated as landmarks – clear pedestrian line of sight is provided to these spaces. Landscaping, public art and high amenity public infrastructure is included (i.e. seating, awnings, bike racks etc) along key pedestrian routes.

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

No	Objective	Success Criteria	Measurement
3	<p><u>Activated Public Realm</u></p> <p>A public space/s is provided (where appropriate) which draws visitors into the City Centre, and acts as a social, cultural and community hub that is functional, adaptable and facilitates interaction between the public and private realm.</p>	<ul style="list-style-type: none"> • The scale, dimensions and design ensure a 'town square' or similar public space is provided within the City Centre which is multifunctional and adaptable to a wide range of community and cultural uses/events. • The public realm is easily accessible, highly visible and a prominent feature within the project area. • Buildings are designed to interact with the public realm to increase activation. 	<ul style="list-style-type: none"> • The public realm is developed to a high standard and is a key feature within the project area. • The 'town square' or similar public space is of a size which is compatible with, and can accommodate local events, markets, performances, public functions, and ceremonies. • The finished levels and overall design of the public realm provides an appropriate transition and allows for interaction between surrounding land/buildings.
4	<p><u>Stakeholder engagement and collaboration</u></p> <p>The development reflects the vision of the community and is a desirable project for stakeholders, developers and potential business partners.</p>	<ul style="list-style-type: none"> • Strong partnerships with the private and public sector are established which contribute towards progressing the development. • Stakeholders are engaged throughout the process and contribute to the development. • The project reflects the desired outcomes and vision set by Council. • The development facilitates social interactions and provides environments which are inclusive for a wide range of people. 	<ul style="list-style-type: none"> • Implementation of a targeted consultation process to seek feedback on any proposal from key stakeholders. • Business case is developed which explores options in relation to potential joint-venture partnerships with the private sector and/or other public authorities. • Various consultation methods, studies, strategies and corporate plans (e.g. Strategic Community Plan, Joondalup City Centre Place Activation Plan) are utilised to gauge community sentiment and stakeholder expectations regarding the project. • The development provides a mix of both private and public areas for visitors/users to interact. • Inclusion and accessibility practises are incorporated in the project area.

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

No	Objective	Success Criteria	Measurement
5	<p><u>Strategic alignment</u></p> <p>The project is aligned with the overall vision of the Joondalup CBD and associated Council strategies and plans.</p>	<ul style="list-style-type: none"> The development supports place activation and development of the City Centre. The development meets the intent and objectives of relevant strategies and plans. 	Options will be evaluated as part of the business case through an Multi Criteria Assessment to ensure they align with other relevant strategies and plans.
6	<p><u>Financial sustainability – One-off</u></p> <p>There is financial capacity for the City to facilitate the preferred option/s. and to act as a catalyst for the development where necessary.</p>	<p>The one-off costs of the project will consider all potential funding opportunities and ensure the investment is affordable to the City, including the following:</p> <ul style="list-style-type: none"> Reserve funds. Disposal proceeds of land used within the development. Grant opportunities. Borrowing. <p>The City will seek to maximise the private investment from developers, but the City will also consider how it can use it's available funds to support the development.</p>	The net one-off establishment costs paid by the City will be evaluated within the business case and evaluated within the Strategic Financial Plan. The business case will evaluate the impact on the COJ Financial Sustainability Indicator and key financial indicators, including the reserve indicators and debt ratios.
7	<p><u>Overall Financial sustainability -</u></p> <p>The project is financial sustainable on an on-going basis once developed and operational.</p>	<p>Ideally the project will provide a positive financial outcome to the City taking account of all whole-of-life costs i.e. new rates income offsets one-off establishment costs and other recurring costs. However, the project may assess options that provide a negative financial outcome to the City, these could only be proposed if they were offset with social/economic benefits and the negative financial impacts were affordable i.e. within the thresholds of the City's financial targets.</p>	<p>The business case will evaluate the costs associated with potential development options and a separate financial evaluation report will also be prepared. The financial evaluation report will have its own Multi Criteria Assessment based only on financial assessment, which may include evaluating the impact on the following:</p> <ol style="list-style-type: none"> COJ Financial Sustainability Indicator and key financial indicators. Financial capacity for the one-off establishment costs. Operating results before depreciation. Operating results after depreciation. Cashflow evaluated over a 50-year period. Financial risks / opportunities.

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

No	Objective	Success Criteria	Measurement
8	<p><u>Social and Community Benefit</u></p> <p>The project has a positive impact on the community, and delivers high social and economic return on investment.</p>	<p>A Social and Economic Return on Investment (SROI) analysis will be prepared to evaluate the impacts and calculate the Benefits Cost Ratio (BCR) for all options.</p>	<p>The project will prepare a Social and Economic Return on Investment (SROI) analysis to evaluate the impacts and ensure a high return.</p> <p>A BCR will be calculated and a threshold for new projects is a score between 1.5 to 3.0, ideally being above 3.0 where possible.</p>

DEPENDENCIES / INTERDEPENDENCIES

City of Joondalup Major Projects

The project relates to other current and future projects and activities in the Joondalup City Centre, including, but not limited to:

- Joondalup Performing Arts Centre.
- Multi Storey Car Park City Centre.
- Land Acquisition Strategy.

Policies, Plans and Strategies

There are several strategic documents that have reference to this project:

City of Joondalup

- Strategic Community Plan 2022-2032
- Corporate Business Plan
- Joondalup City Centre Place Activation Plan
- Local Planning Scheme No. 3
- Joondalup Activity Centre Plan

State Government

- Perth & Peel @ 3.5million
- North-West Sub-regional Planning Framework
- Metropolitan Region Scheme
- State Planning Policy 4.2: Activity Centres

Federal Government

KEY PARAMETERS

Governance

Project Philosophy and Parameters – Joondalup City Centre Development (2024)

- Incorporation of high ethical standards.
- Probity, legal and legislative compliance.
- Appointment of suitably qualified consultants.
- Consistency with adopted Council strategies and plans.

Land Use and Built Form

- To achieve a high-quality built form outcome which is ambitious and reflects the importance of the Joondalup City Centre as a key commercial and business centre for the north-west corridor of Perth.
- A social hub which activates the city and creates a sense of place, acknowledging the local character and historic/cultural significance of the area.
- Incorporates high density, mixed-use development with both residential and non-residential land uses.
- A meeting place which encourages interactions between private and public spaces.
- Utilisation of contemporary architecture reflecting innovation in design and materials that create a presence and adds considerable value to the public domain.
- Provides an interconnected and pedestrian orientated movement network, with linkages to other key locations within the Joondalup City Centre.

Fiscal Responsibility and Commerciality

- Assessment of commercial viability and the investigation of potential partnerships and joint venture arrangements.
- Retaining ownership of land where practical, whilst considering alternative ownership/lease arrangements with partners/developers.
- Creation of asset/s that maintains capital value in real terms over its economic life cycle/investment period.
- Consideration of incentives for significant external investment, development and/or occupancy.

Sustainability Considerations

- Achievement of best practice in environmentally sustainable design, allowing for renewable features, materials and technologies, as well as reuse and adaptability of buildings and spaces where appropriate.
- Provide interactive landscaped spaces for the public which contribute to and reflect the urban environment.

Liaison Protocol

- Identification of, and ongoing liaison with, strategic user groups and relevant stakeholders.
- Ongoing communication with development partners and consultants engaged in the project.
